Then she stepped back upon the bare bit of deck outside the door, and danced a measure of a wild fandango. But in an instant she stopped—almost before the captain realized that she had well begun—and said:

"That's all, sir. It won't be any harm, will it?"

"Well, I guess we'll have to see that you aint disturbed," said the captain. "Step right along with me, miss," he said, and led the way down the narrow stairs to the broad middle deck, where the awnings were flapping gaily in the brisk breeze and the camp-chairs were piled up in huge stacks, awaiting the coming of more passengers.

Few people were on board now, but at every landing many were sure to come, until at last the decks would be crowded with excursionists, all jostling and pushing in order to secure the best chairs, the shadiest places and the most room.

"It won't be long," explained the captain, "before the rush sets in. Now here's where you'd better do your dancing; and if you aint treated right, just let me know."

Dorothy makes a Collection for the Hospital.

With this the captain left her to go below and issue an order that she should not be molested.

Presently the boat stopped at a thriving town, where twenty-five or thirty people came on board, gathering at one side of the deck.

Now was Dorothy's opportunity. She trembled violently as she stepped out upon the open space which the captain had pointed out to her; but the sound of her banjo seemed to reassure her. She danced and sang her best, and when with pale face she passed her cap around afterward, coppers, five-cent pieces, and even dimes were dropped into it.

More people arrived, and Dorothy danced again and again. No one insulted her; but it was not an easy task at best. After a time it grew stiflingly warm, and Dorothy's hair clung in wet, loose curls about her temples. Her cheeks were flushed with the exertion of dancing, and her feet burned from their contact with the hot deck.

By and by people came who began to make rude remarks about her. She pretended not to hear, but they cut her just the same. She heard one pretty girl say to her companion:

"She dances well, of course, but she must be a bold, forward thing to be willing to do it before people, like this. But then, I suppose such girls have no modesty, anyway."

Dorothy had very hard work to restrain her tears, but she kept resolutely on. Her pocket, into which she dropped the money she collected, grew quite heavy, and its load chinked merrily when she danced, encouraging her by its sound.

At noon she took a little rest, and managing to slip away to the restaurant-counter, bought a thick, coarse sandwich, and ate it in the darkest corner of the cabin, where she crouched in order to be out of sight of the gaping crowd.

On the deck the sun blazed down on the white awnings. Babies wailed; children quarrelled. Mothers made fretful complaint, and fathers railed against everything in general and excursions in particular. Dorothy got very little in her cap now, for the boat had made its last landing on the up-trip, and was about to turn upon its homeward course. There were no new passengers to be amused by the novelty of her dancing, and the old ones were too tired, warm and impatient to care about it longer.

But she never gave up; and after a time the breeze grew cooler and more refreshing. Then the spirits of the pleasure-seekers returned, and the pennies and nickels accumulated in her cap.

As it grew later in the afternoon the children who were fretful before from the heat grew fretful now from sleepiness, and Dorothy could not help feeling sorry for the wretched little bodies who were slapped and scolded and scared into waking.

From the depth of her heart Dorothy pitied the children, and played her liveliest tunes and danced her most difficult measures to entertain them and keep them awake. But it was so hard to make her feet go now! They felt like lumps of lead, and her head was throbbing painfully.

At five o'clock the boat stopped at a wharf not a great distance from her own landing-place. As it neared the wooden pier she saw that it was crowded with people. A deck hand said there had been a sale of fine horses in the place.

"Regular thoroughbreds," said he; "real blooded animals, owned by the swells round about. There's a lot of them nobs comin' on board."

Many of the excursionists crowded to the side of the deck to get a glimpse of the new passengers. But Dorothy did not venture from her place, and when the boat started again commenced her dancing with a grateful sense that it was the last time.

In a moment several gentlemen appeared before Dorothy's tired eyes, watching her as she danced, and making low-voiced comments upon her manner and appearance.

She was so weary that she could scarcely see the boards upon which she trod; but suddenly she felt her knees grow weak beneath her, her brain swim and the fingers fall upon her banjo stiff and lifeless. She was looking straight into Colonel Everest's eyes. He was standing by the door-way. His face was pale, but he showed no other sign of unusual feeling.

He simply looked at her fairly—and did not acknowledge her.

For an instant she felt as if some one had dealt her a stunning blow; then, with a mighty effort, she recovered herself, and with a tightening at her heart and a mad throbbing in her throat went on with her dance.

"He is ashamed of me! He won't let them know," she thought. "Perhaps he will send me away after this—because he is so ashamed. But if he doesn't want them to know, I will act as if I were not his—his—but I must not stop. I must go on, for it is for the sick ones—the ones like Helen who may not—may not—get—well."

She saw, as she danced, some one step up to her father and seem to ask him a question. He nodded his head in assent at first, and then, to some later inquiry, shook it in denial, and the gentleman turned away. It was Mr. Beech.

How long Dorothy danced she did not know, but at last she ceased. Then came the hardest part of all; the going about with her out-held cap in dumb petition for contributions.

Silver, paper money, and even a gold-piece was dropped into the cap.

As she passed among the gentlemen she wondered in a dull way if she should fall at her step-father's feet, or if it could really be that she would be able to stand before him and live through his cold, silent renunciation of her—his treating her as if she were a poor beggar whom he would cast money to, but naught else.

She made her way to him and held out her cap. He dropped a gold coin into it, and then looked directly down at her, his eyes stern and angry as she had never seen them before,—as she had not known they could be,—his face set and severe.

She looked up at him with her flushed face pathetic in its weariness, her eyes large and dark with trouble and pain, and a grievous droop in her mouth that was pitiable to see.

Her expression was full of pleading and dumb entreaty; but as their eyes met she found no answering softness in her father's face. With a stifled sob and a quivering of her lip she turned aside and went forward on her way until she had made a complete circuit of the deck.

Then she was about to pass into the cabin, but was recalled and made to dance again—dance again before her father, who would not recognize her; dance again when she had thought she must die before!

But she went bravely through it, and it was only when the boat blew its shrill whistle announcing its arrival at the pier, that, flinging a graceful little nod to her enthusiastic audience, she suddenly disappeared through the cabin-door and was seen no more.

As the gentlemen sauntered ashore Dorothy went to the pilot-room to thank the captain.

"You look clean beat out," said the good-hearted man, gazing down at her sympathetically.

Dorothy's chin quivered, but she only shook her head; she could not speak. She shrouded herself in her long cloak, and holding out a small, unsteady hand, bade him a silent good-by. Then she left the boat and toiled up the hill and along the endless way that lay between her and her home.

It was late when she reached her step-father's house. Stealing noiselessly in through the rear door, she found refuge in her own room at last. Almost too weary even to think, she sank down upon her bed and lay there for some time as

Digitized by Google

though she were dead. In her heart she wished she were dead. She was overpowered by the sense of her humiliation. She had been slighted, scorned, despised, and what she had meant for good had turned to be only ill.

What did her father mean by treating her so? Did he not understand, or was it a crime she had committed, and she too wicked to be able to recognize it? Had she grown so bad that she did not know right from wrong?

No, it couldn't be that. He must have understood the reason of it all, but he wanted to disown her and— There was a throbbing, beating pain in her head, and a dull ache in her quivering limbs.

The door opened and some one entered. Dorothy did not even turn her head. She felt a hand upon her shoulder, and then the voice of her mother fell on her ear.

"Dorothy," she said, "Christine told me she had seen you come in. One of the men saw you go aboard the *Mollie Elwell* this morning, so we knew, at least, where you were. But we did not know what you were doing until—until your father was forced to witness your disgrace and—and—his own. But I will not say any more to you now. You must be worn out and in need of rest."

Dorothy felt the hand withdrawn from her shoulder, and knew that her mother was about to leave her. She leaped to her feet.

"O mamma, mamma," she wailed, "say it all to me now! I don't know what you mean, but say it—say it! Only don't leave me as if you didn't care. I am not too tired to listen. I—I—"

Here her strength forsook her, and she sank back upon the bed and sobbed. Her mother returned to her side, but only to look down at the prostrate, writhing form, not to touch it with her soothing, tender hand.

"I am sorry to see you like this, Dorothy," she said. "But after all, it is only what you have brought upon yourself. I cannot feel that your punishment is more severe than you merit, for you have been more self-willed and obstinate than I supposed it was possible for you to be. To disgrace yourself—to humiliate us all for the sake of your paltry pride; for I will not believe it is hate of Helen that makes you refuse to wear the dress."

Dorothy leaped up, looking at her mother with wild, dilated eyes. "Dress!" she cried; "what do you mean? What—why —"

Then she stopped, as if she were slowly gaining some faint idea of her mother's meaning, but could not, would not comprehend it yet.

"Why, the dress Helen sent you from Paris, and that you said you would not wear to the Tournament. You cannot deceive me, Dorothy! I cannot help knowing what you are going to do with the money you all but *begged* to-day. Your father said you actually went about collecting money in your cap—money from strangers in such a way! O Dorothy, how could you humiliate us so, and degrade yourself, and all to get money to buy a—dress?"

The tone of her mother's voice as she said these words cut Dorothy like a two-edged sword.

For a second she was perfectly silent. Her sobbing had ceased; and then she said, in quite an altered voice, harsh with excitement:

"And you think I did it for a—dress?"

Mrs. Everest waited a little before replying.

"There is nothing else left for me to think, Dorothy. I would like not to believe it, but I must not try to blind myself because I would wish to think you less worthy of blame. You have changed so, lately, and—I cannot—understand you, child. I cannot understand you!" Her voice was unsteady with tears.

For answer Dorothy rose slowly to her feet, and stood before her mother with no color in her face except the dark shadows encircling her eyes. When she spoke it was in a strange, hollow voice, and her words were as cold and clear as though they had been breathed from a frozen heart.

"No," she said, slowly, "you don't understand me—you never will, now. I did not think—but it is all no matter. I am tired—I—I—will you go away, please, and let me rest?"

In a moment she was alone.

Her mother had taken Dorothy at her word—had gone away from her without a kiss, without a caress; had gone away from her as she had never gone away before in all her life, and left her to—rest!

She cast herself upon the floor in a passion of grief and despair.

"O God," she wailed, "I want to die! I *want* to die! I can't be good. Nobody understands me—when I'm good. They all think—but only let me die and I won't care! It is too hard—too hard! And I am so tired and so sick, and no one—no one—cares."

Then with a sudden burst of anger she vowed that, let them think what they would, she would never tell them the truth.

(To be continued.)

THE STORM.

Its roar speaks more than a language spoken;
Wordless and wonderful, cry on cry—
The sob of an earth that is vexed and broken,
The answering sob of a broken sky.

For the Companion.

UNCLE GABRIEL.

Uncle Gabriel was going on a journey—not a very long one, to be sure, but none the less important in his eyes. It was a fact which he seemed anxious to impress upon the minds of two of his neighbors who had come down to his little cabin to see him off.

"Yes, I'se bin plannin' dis trip for a right smart spell," he said, as he brushed his rusty old beaver hat for the twentieth time, "dough I cyan't say dat my min' wuz fully made up on de subjec' till I got Jim's letter las' night.

"Yer see, I'se bin kinder hol'in' back in de hopes dat he'd come to see me befo' de summah was gone; but when Miss Julie read me his letter sayin' dat he's done got mah'ed, an' dat he cyan't fin' de time ter pay me a visit, says I ter myse'f: 'Ef Jim cyan't come ter see his ole daddy, den hit stan's ter reason dat his ole daddy mus' go ter see him;' an' my min' wuz made up dat berry instan'.

"Hit's been two yeahs an' mo' sence I done seed dat boy; an' I jes' aint gwine ter wait a day longer. 'Sides, I wanter see what so't ob 'oman he's got hisse'f mah'ed to. Yer aint blamin' me fur *dat*, is you, Sistah Greene?"

He turned to a lank, solemn-faced woman, who was trying to crowd a couple of ruddy-cheeked apples into an already well-filled satchel.

"Co'se I aint blamin' you fer wantin' ter see Jim's wife; but you jes' wait till Jim sen's fer you, or axes you ter come. Dat's my 'vice. You'se too ole ter be gwine on a junney all by yo'se'f. W'y, man, you haint got de strength ter tromp dem fo'teen miles. You'll gin clean out 'fo' you gits half-way dar."

"Doan' you fool yo'se'f, Sistah Greene! I knows whut I'se able ter do. Whut's fo'teen miles? An' I knows dat road like a book. I aint gwine ter git los', if dat's whut you'se afeared ob; an' I'se jes' ez spry ez you en Brutus, dar, ef I is a hundred yeahs ole."

"Now, jes' lis'n ter dat man!" exclaimed Sister Greene, with an impatient toss of her turbaned head. "What make you say you'se a hundred yeahs ole? Haint Miss Julie done tole you ober en ober agin dat you aint mo'n sebenty-nine? An' wasn't me an' you fellow-servants befo' an' endurin' de wah, an' doan' *I* know 'bout how ole you is? Co'se I does! Yo' mem'ry is sho'ly 'ginnin' fer ter fail you, Brudder Gab'el."

"My mem'ry's jes' ez good ez yoze," retorted the old man, as he brushed an imaginary speck of dirt from his white waistcoat, and settled his hat more firmly on his head. "Miss Julie doan' prezac'ly know my age, ef she was my young mistress. But *I* keeps count, an' I knows I'se a hundred yeahs ole. I knows hit, I say, an' I doan' want you ter be 'sputin' my word."

"I aint gwine ter 'spute yo' word," said Sister Greene. "Ef you wants ter b'lieve you'se a hundred yeahs ole, w'y, den b'lieve hit. Whut's bodderin' my min' at de presen' time is how you spec' ter tote dis heah big satchel. Whut in de name ob goodness is you got in heah, anyhow, fer ter make hit so heaby?"

"Lemme see whut all I has got in dar."

Uncle Gabriel sat down on the door-step to think.

"Two clean shirts," said he; "free pa'r ob socks; two hankerchers; my pipe an' 'baccy; some goober peas—dem's fer Jim's wife; a pone ob co'n light bread—dat's fer me ter eat on de way; five apples —"

"Seben!" corrected Sister Greene. "I jes dis minute squeezed in two pippins."

"Much obleeged, Sistah Greene. I'll take dem pippins ter Jim. Seben apples, two pomgrannies, my ole cap, an' a box ob fish-hooks. I b'lieve dat's all."

"Fer de lan's sake, man, whut you gwine do wid a whole box ob fish-hooks?" inquired Brutus, who was seated astride the rail-fence chewing a straw. "You'll spen' de mos' ob yo' time in bed, tryin' ter git de soreness en stiffness out'n dem ole bones ob yoze."

Uncle Gabriel rose from the door-step, and laughed loud and long.

"I knows whut's de mattah wid you, Brutus," he said, in a patronizing tone, when he was done laughing. "You'se jes' jealous ob me! You hates ter see me lookin' younger an' spryer dan you, en dat's de truf. Well," he said, picking up his satchel and throwing it over his shoulder, "dat sun's gittin' purty high, an' hit's time I was settin' off on my junney."

Picking up his walking-stick with a proud and self-conscious air, he started down the road.

"Far'well, Sistah Greene. I'se much obleeged fer yo' 'sistance dis ere mawnin. Good-day, Brutus. I hopes ter fin' you bofe in yo' ushal good helf when I retu'ns."

"Dat ole man aint got no mo' min' dan a baby!" muttered Sister Greene, when he had disappeared in a bend in the road. "Well, I hopes he'll git dar all right, an' dat triflin' Jim 'll be glad fer ter see him; but I doubts hit. Dat boy allus did neglec' his ole daddy."

The morning was bright and beautiful. In the brown stubble fields grew clumps of flaming sumach; the meadows and roadsides were gay with goldenrod, and here and there in the reddening woods were patches of sombre green, where some stately pine or drooping cypress waved its luxuriant foliage.

Uncle Gabriel's dim eyes grew bright and his step more brisk when, after walking a mile or more along the broad, dusty road, he turned into a narrow footpath fringed with willows.

Beyond were steep hills to be climbed, and dank, lonesome hollows to be crossed; but here the way was so smooth and pleasant that his eyes no longer ached from the heat and dust, and his heavy satchel ceased to be a burden.

The seeded plumes of the tall sweet-fern sent out a spicy fragrance under his heavy tread; a few birds chattered noisily in the trees, and the faint, musical murmur of hidden brooks pulsed through the quiet woods.

Once a rabbit ran across the path. Flinging down his satchel, Uncle Gabriel chased the creature some distance into the woods.

This pastime proved somewhat dangerous, for the tall, tangled grasses were full of matted vines that reached out long tendrils as snares for his unwary feet. After much panting and scrambling, he returned to the path and proceeded more leisurely on his way.

Presently the road grew steep and rough; and by the time he had climbed the first hill he was forced to sit down and rest a while.

"I'se got de whole day befo' me, an' dar aint no use in breakin' my neck ter git dar," he mused, as he leaned against a tree, and mopped his face.

"Les' see, dar's free mo' hills ter clim' 'fo' I gits inter de big road agin; den I'se got ter go fru de aige ob de bottom fer fo' miles, den up two mo' hills, en fru two mo' hollers, an' den I'se at Jim's. Won't dat boy be tickled mos' ter def, dough, when he sees me! Spec' he'll wanter keep me dar de whole wintah. Well, he's de oniest chile I'se got, en ef he wants me, w'y den he kin hab me."

He sighed a little when presently he got up, and started on his way, for he was beginning to feel stiff and sore, and there was a strange, giddy feeling in his head. "I wish I hadn't wasted my bref runnin' atter dat rabbit!" he muttered. "Well, I'se ober ha'f-way dar an' I haint gin out yit, like Sistah Greene proph'sied."

At noon he stopped under a shady tree, and ate his loaf of light bread, washing it down with a long draught from a cool spring that bubbled up close by.

When he had finished he felt a strong inclination to take his usual after-dinner nap, and in fact was just dropping off into a pleasant doze, when a stray pig came up and began to investigate the contents of the open satchel.

This little episode, which resulted in the loss of the two pippins, had the effect of arousing Uncle Gabriel's wrath to such a degree that all thought of sleep was abandoned, and he set off in a brisk trot, with the resolution not to loiter again by the way.

The early twilight was falling, when, tired, dusty and aching in every limb, he came in sight of Jim's cabin. The door stood wide open, and in the light that streamed through it, he could see the whole interior of the little room.

Jim was standing by the window cleaning a gun, and his wife—a tall, gaunt woman—sat sulking in front of the fire. A lean, hungry-looking cat prowled about among the unwashed dishes on the supper-table, and sundry pots and pans were scattered about here and there on the floor.

It was evident from the appearance of Jim and his wife that there had been a quarrel. Uncle Gabriel stopped irresolutely on the threshold, and gave a little preliminary cough.

"In de name ob goodness, is dat you, pap?" exclaimed Jim, looking up.

His black face wore anything but a pleased expression, as he looked at the bent, dust-begrimed figure in the door-way.

"Yes, hit's me, honey! Tuk you by s'prise, didn't I? Well, dat's whut I done sot out ter do!"

There was a little tremor in Uncle Gabriel's voice, and he glanced somewhat apprehensively at his daughter-in-law, who was looking at him with a dull, ugly stare. Jim laid down his gun and gave his father a rather feeble hand-shake.

"Whut in de wurl put hit inter yo' head ter come down heah?" he asked, his face still angry and scowling. "You sholy didn't walk all de way?"

"Ebery step ob de way, chile. When I got yo' letter sayin' you wuz mah'ed, and dat you couldn't fin' de time ter pay me a visit, my min' was made up den an' dar. Sez I ter myse'f: 'Ef Jim cyan't fin' de time ter come see me, den I'se gwine ter see Jim.' So I packed up, an' heah I is. Aint you gwine ter make me 'quainted wid yo' wife, honey?"

Jim hitched his chair nearer the door, and broke into a laugh that was not pleasant to hear.

"M'lissy's in one ob her poutin' spells," he said. "'Taint no use ter speak ter her when she's in dat away. When she gits ober de sulks she'll talk quick enuff. Den I spec' you'll wish she'd kep' still! M'lissy's got an orful tongue when she gits started."

M'lissy tossed her head and threw him a contemptuous glance, but said nothing.

"Aint you glad ter see me, Jim?" Uncle Gabriel asked. There was a look of piteous entreaty in his dim old eyes.

"Co'se I'se glad ter see you, pap; but de truf is, we aint fixed ter hab you heah, an' dar aint no use in sayin' we is. I 'lowed ter sen' fur you in de spring."

"De spring is fur off, an'—an' hit's lonesome up in dat cabin, Jim!"

"Well, long as you'se heah, I s'pose we'll hab ter fin' a place fur you. Heah, drink dis coffee an' eat a piece ob dis hoe-cake. I clean furgot ter ax you ef you wuz hongry."

"I aint hongry a bit," said Uncle Gabriel, with a weak little smile. "I'se jes' tired an' gin out, f'um climbin' dem steep hills."

"Den you'd bettah go ter bed. You'll hab ter sleep on a pallet in de shed-room, kase dar aint no udder place ter put you."

Picking up the candle, Jim led the way to a closet-like room at the back of the cabin. Uncle Gabriel followed him with a dazed expression on his face. His head ached with a dull, strange pain, his hands were hot and feverish.

"Now, de bes' t'ing you kin do is ter go straight ter sleep," remarked Jim, as he spread the pallet. "You look clean gin out, en ef you was ter git down sick heah, I doan' know whut in de name ob sense we'd do wid you, kase I'se got no time ter nuss nobody, an' M'lissy haint got de leas' bit ob patience wid sick folks, mo' 'speshly when dey's as ole an' childish as you.

"I spec' de bes' t'ing I kin do in de mawnin' is ter hitch up de mule in de wagin en take you back home, fur hit's my belief dat you'se eeder gwine ter be sick or you'se losin' yo' min'. You do look mighty quar 'bout de eyes."

Shaking his head solemnly, Jim took up the candle and went away.

For a long time Uncle Gabriel lay quite still, gazing with wide-open eyes at a ray of moonlight that came through a chink in the wall. Then he suddenly sat up, and, pressing his hot, trembling hands to his head, tried to think.

There was a loud, buzzing noise in his ears, and he felt weak and sick and giddy. What was it Jim said when he went away with the candle? Was he losing his mind?

What was it which Sister Greene had said to him about losing his memory? And would his ungrateful son and his hard-hearted wife send him to the asylum?

His heart gave a great throb of fear at the thought. Springing up, he hastily drew on his clothes, and opening the door, slipped noiselessly out into the yard.

He must go back to his cabin. In the morning he might be too sick to go, and Jim and M'lissy wouldn't like that. Why should he wait, when the night was so cool and sweet, and he knew the way so well?

How sweet it would be to lie down on his clean, white bed, and sleep! Would it be morning, he wondered, before he got home?

When he reached the edge of the thick woods the moonlight had faded; dark, threatening clouds were hurrying up from the west, and a low, dismal wind was sighing fitfully among the trees.

How solemn and lonesome it was down here under the drooping cypress boughs!

By and by he heard the soft patter of rain in the leaves overhead, and the shadows around him grew blacker. A sudden sense of his helplessness—a feeling that he was lost—dawned on his clouded brain, and caused his heart to beat wildly with fear.

Crouching down in the wet weeds, he folded his

Digitized by Google

trembling hands and tried to pray; but he could think of nothing except a verse Miss Julia had taught him, and this he repeated softly:

"Den up t'ro' de gloomerin' meadows,
T'ro' de col' night rain an' win',
An' up t'ro' de gloomerin' rain-paf,
Whar de sleet fa' pierein' thin,
De po' los' sheep ob de sheep-fol'
Dey all comes gadderin' in;
De po' los' sheep ob de sheep-fol'
Dey all comes gadderin' in!"

After that he felt strangely comforted, and, getting up, he plodded patiently on, the cold rain beating against his face, his bent, tottering figure the only moving object in the murky night.

In the morning Sister Greene and Brutus found him lying on the bed in his little cabin; and so quiet and composed was his face that at first they thought him only sleeping. But when they had touched it and found it icy cold, they knew he had journeyed to that world where there is no unkindness.

ADELAIDE D. ROLLSTON.

COMPENSATION.

Each tear we have shed is the seed of a smile;
Our griefs may rejoicings be after a while;
The doubts turn to sureties, the discords to tune,
And the cold dawn called "Life" into heavenly noon.

For the Companion.

DRIVING TOTE-TEAM.

My uncle, with whom I lived when I was a boy, had a large family of his own. He was one of the first settlers in Western Wisconsin, and besides carrying on a large farm on the banks of one of the principal lumbering streams, he took a large logging crew into the woods every winter.

The logging-camp was sixty miles up the river, and all the supplies for the men and the teams were hauled from home.

The team which did this hauling — the "tote-team," as it was called—made one trip each week from the time the men went into the woods in the fall until they came out in the spring.

The winter I was fourteen, my cousin Ted fifteen and his brother George thirteen, men were very scarce; and although we were rather young for such work, my uncle thought it safe to allow two of us to take charge of the tote-team.

I was always one of the two who went with the team, and Ted and George took "turn about," one going with me every other trip, while the other staid at home to do the chores.

We were tough, hardy boys, well used to handling horses; and although "toting" was anything but play, we enjoyed it greatly. We thought it made men of us to do men's work.

We had a great deal of sport, but some of the incidents of these toting trips were far from funny.

At one place the road ran through a large swamp or cranberry-marsh, upon the edge of which, along the banks of a small river, a band of Winnebago Indians encamped every winter. In this place game abounded, including fur-bearing animals which the Indians trapped. The site afforded them, besides, good opportunities to "swap" with the numerous tote-teams which travelled the road.

We sometimes bartered with the Indians such articles as flour, sugar, coffee, bacon and tobacco for buckskin moccasins and axe-helves. Nearly all the men at the logging-camps wore moccasins, and of course there was need of many axe-helves.

Many of these Indians were industrious, and could make the best of axe-helves. They were sharp traders, too; but some of them had the reputation of stealing everything they could get their hands on. We were always careful to treat them well, and gave them full value for all that we traded for.

There were so many of these Winnebagos—or "'Bagos," as we called them—scattered about that region that the whites were slow to do anything that was likely to provoke their ill-will.

We always arranged the front end of our sleigh before we reached the Indians' camp so that we could trade with them as expeditiously as possible. We would give them a quart-cup full of coffee for a good axe-helve, and twice as much for a pair of moccasins. Of sugar we gave them twice the amount we did of coffee, and of flour five times.

One time when we reached my uncle's lumber-camp we found our load short a ham or two, or several pieces of bacon, the loss of which we could account for only on the supposition that the 'Bagos had stolen the meat while crowding around the sleigh to do their trading.

My uncle scolded us a little for allowing the Indians to steal things "right from under our noses," as he put it. We made up our minds to keep a sharp lookout whenever we stopped at the camp again.

On our next trip the jingle of our sleigh-bells brought the whole camp out to the road, and when we stopped, the Indians all crowded around as usual.

It was a sharp, cold morning, and all had their long blankets wrapped closely about them.

Ted and I were soon busy dealing out "tobac," "coppee" and "soog" to this one and that one, when Ted noticed a sudden opening and closing of the blanket of a tall young Indian who stood leaning up against the back of the sleigh.

Keeping his eye on the fellow, he soon saw him move away from the sleigh, turn his back to us and walk slowly toward the camp.

Ted scrambled quickly to the rear of the load and found that one of the largest hams, worth two or three dollars, was missing.

"Here, you thieving rascal!" he shouted at the retreating Indian, "bring that ham back here, and be quick about it!"

The young 'Bago simply quickened his pace, without turning around or seeming to notice Ted's shouts. I was desperately afraid of getting into trouble with so many of these strapping red men, but Ted was not.

In fact, I never knew that boy to meet anything in the shape of man or beast that he was afraid of. He was large and very strong for his age, and almost as dark-skinned as an Indian.

Before I knew what he was about, Ted sprang to the ground and chased the 'Bago as fast as he could run. The young Indian ran toward his wigwam, which stood with the rest of the village, about two hundred yards back from the road. But Ted overtook him in little more than half the distance.

When the Indian saw that his pursuer was about to spring upon him, he turned around and faced Ted.

The Indian had a great advantage in size and strength, but he was heavily handicapped for a struggle by the necessity of keeping his blanket folded tightly about him in order to conceal the stolen ham. This kept both of his hands occupied, and all he could do in defence was to kick out vigorously with his moccasined feet.

He proved no mean antagonist as it was, for he was quick as a flash, and his legs were long and sturdy.

I expected to see the other 'Bagos run to the support of their comrade, but they seemed to think the young brave would have little trouble in handling the white boy, and laughed heartily as he wheeled first one way, then another, keeping his pursuer at a distance by his furious kicks.

Ted dodged his heels, and watching for an opening, suddenly leaped straight at the rascal, and caught him by the throat with both hands.

Quick as thought the Indian let go of the blanket,

Towing a Bad Indian.

ham and all, and seized Ted around the body. He had clung to the ham a little too long, however, for Ted had secured a hold which even the Indian's superior strength could not shake off.

Ted knew that he would be no match for the strapping fellow in an even-handed contest, and held to his throat with a grip of iron.

The struggle was short and fierce. Ted managed to keep on his feet, and tightening his grasp on the Indian's windpipe as he felt him begin to weaken, soon had the thief at his mercy.

His long arms suddenly relaxed their hold around Ted's waist, and dropped to his sides; his tongue hung out, and his eyes began to roll upward.

Then, just as he was about to fall, Ted gave him a tremendous push, which sent him headlong into the deep snow, and, snatching up the ham, hurried back to the sled with it upon his shoulder.

Now an Indian's sense of right and justice is often as keen as that of his white brother, and he can appreciate a plucky act as well. Perhaps these Winnebagos would have been just as well pleased if the young man had been able to escape with the stolen ham; but as it was, they could not help admiring the white boy's daring, and yelled with delight at the discomfiture of the young brave as he picked himself up out of the snow and skulked off to his wigwam.

"White papoose heap brave!" they shouted, as Ted came back to the sled. "Ketchum bad Injun stealum nam!"

We thought that would put a stop to the stealing from our load; but my uncle told us to be on our guard, for the young brave whom Ted had so disgraced in the eyes of his brothers would be sure to take revenge upon us in some way, if he could.

On the next trip up we traded with the Winnebagos as usual, and I was certain that nothing was stolen while we stopped at their village, for I had George keep strict watch of everything on the load while I did the trading. But when we unloaded that night in camp, a fifty-pound sack of flour was missing. What had become of it was more than we could tell.

I studied the matter over for several days, and came to the conclusion that some thieving 'Bago had been hidden behind a tree close to the road, just beyond the Indian village, and that after we had finished trading, and had seated ourselves on the front end of the load and started on, he had sprung out, snatched the sack of flour from the rear of our sleigh, and dodged back behind the tree until we were out of sight.

I told Ted about it when we reached home.

"I am perfectly sure that's just the way it was done," said he; "but just let them try that game again! We'll be ready for them next trip."

And so we were. It was George's turn to stay at home; and after Ted and I had arranged our load we took four heavy double-spring otter traps and set them around the rear end of our sleigh among the sacks of flour, bacon, hams and other supplies, fastening the chain of each securely to the sleigh-box, while over the top of everything we spread, as usual, a piece of limp canvas.

George and I, on the trip we had just made, noticed that the young fellow who had tried to steal the ham was not in the crowd which surrounded our sled the week before. Neither was he to be seen when Ted and I stopped at the village this time.

This was very much what we had expected.

My customers kept me busy dishing out cups of sugar and coffee, and Ted was trying to cut a plug of tobacco in two with his jackknife, for an Indian who wanted half a plug, when he slyly nudged me and pointed up the road with his thumb.

Without stopping my work I glanced in the direction Ted indicated, and saw about half a black head peering out from behind a big pine, which stood within three feet of the sled track, and about forty rods up the road.

We traded as long as the Indians had anything to barter, and then straightened up the load, mounted our seat in front, and drove leisurely on, looking neither to the right nor the left.

We had barely passed the big pine when we heard a swift movement behind us; and then, in an instant, we heard one of our traps close with a "click" and a kind of thumping noise.

Knowing that we must have the thief in tow, Ted carelessly cracked his whip at the team, and away we went at a brisk trot.

The road for several miles ahead ran along the stream, and was so level and smooth that the horses scarcely felt the load behind them; while we chatted and laughed as though nothing had happened, though of course we were really much excited, and felt an intense curiosity to look around.

We could hear the regular pat, pat, pat, of the captive's moccasined feet upon the well-packed snow as he kept pace with the team, but were careful not to turn our heads in his direction.

We must have driven in this way nearly a mile when the fatigue and pain, together with the hopelessness of trying to get his hand out of the trap, made it impossible for the thief to control his rage longer.

He uttered a yell that seemed almost to lift the caps from our heads, and when we turned around he shouted:

"White boy stop 'um horse! White boy stop 'um horse!"

But Ted only cracked his whip and made the team go faster. Then the 'Bago's black eyes sparkled with rage and fury, as he yelled at the top of his voice, at the same time making a leap as if to jump on the sled:

"White boy no stop 'um horse, let Injun go, Injun killum white boy!"

"Oh, you will; will you?" said Ted, as he grasped one of the newly purchased axe-helves and sprang to the rear of the load.

"Drive faster, Ben," he shouted to me, "and we will make him sing a different tune before he gets his hand out of that trap!"

I touched up the team, while Ted stood ready to strike the man if he attempted to board the sleigh.

I have heard it said that an Indian never sheds tears; but before we had gone half a mile farther, this young brave stopped his raving and threatening, and began to blubber like a little child.

I suppose he thought we meant to take him clear to camp with us, but when Ted thought he had punished him enough he called to me to bring the team down to a slower pace.

"Now," said he, "you bad Injun, you stealum white man's meat, stealum flour, stealum everything. You go stealum any more from white man?"

"No! No!" blubbered the Indian. "White man let Injun go, Injun stealum no more. Injun be white man's friend. No killum; no stealum."

"All right," said Ted; "then I'll let you go."

The trap had caught the fellow around the wrist, and would not have hurt him much but for his frantic efforts to escape, which bruised the flesh quite badly. Ted made him hold the trap on top of a sack of oats while he pressed down the heavy springs with his feet and released the 'Bago's swollen hand.

He started for home at a run the moment he was liberated.

My uncle was afraid this affair might cause us more trouble; but it did not. That was the last time the 'Bagos ever tried to steal anything from us.

MYRON B. GIBSON.

For the Companion.

CHINESE MORALS.

We think, and with good reason, that the moral system of the Christian nations is by far the best in the world, and yet I believe thoroughly that, hidden under the grotesque and often hideous surface of every heathen religion, there lies a more or less sound moral system. It is implanted in all men by their Maker.

The practical difference between the heathen and Christian man, as it appears to me,—and my life has been spent in nearly equal portions in a leading Christian land and in the largest, most polished and most intelligent of all heathen nations,—may be stated in few words.

The kinship of humanity is very strong between them. They have the same moral sense, to nearly an equal extent the same knowledge of right and wrong. When a heathen does wrong, he knows it, at least in most cases, just as surely as the Christian knows it. The moral sense of the Christian is strengthened and kept in vigorous and healthy action by a Christian faith. The moral sense of a heathen is deadened and corrupted by false and oftentimes horrible superstitions, and his power to resist what he knows to be wrong is lessened.

What is commonly called the Confucian religion in China is really only a code of morals, and as such is considered as final authority among that people.

Confucius lived about five hundred years before Christ, and occupies much the same place in Chinese history as that held by Socrates in the history of Greece. A careful comparison of the two philosophers would result greatly to the advantage of the Chinese sage.

Nowhere in his writings does Confucius claim to have originated the moral system laid down by him. On the contrary, he professes to have done no more than arrange and reduce to written form, principles and rules which were recognized and obeyed by wise men before him.

While some persons find a recognition of a Supreme Being in his writings, the only positive forms of worship taught in them are that of Heaven and that of ancestors; and both these existed in China long before the day of Confucius.

Since his death, the worship of Confucius himself has been added to the system. He is not worshipped as a Divine Being, but as a sage and as the patron saint of literature.

The writings of Confucius deal mainly with the duties of man to his family, his fellowmen and his rulers; and in these matters they deal far more with outward forms than with unseen and underlying principles of action. Indeed, his whole system is one rather of politeness and formal ceremony than of correct conduct as the natural outgrowth of right feelings in the heart. One often sees a Chinaman dressed externally in elegant satins and silks, whose undergarments are foul and ragged, and who has not taken a bath in several months. Such a man furnishes a fair illustration of Confucian morality.

The ideal held up in all the writings of the Chinese sage, is that of the man who is self-contained and well-balanced, who runs to no extremes, and never forgets what is due to himself and his own dignity. Goodness is not recommended for its own sake, but because, on the whole, it is most politic, pays best, and is most becoming to the man himself.

The principal defects in this code of morals, as it appears to foreign eyes, are the lack of any positive recognition of a Supreme Being or an after life, the selfishness which forms the core, the central thought, of the system, and the fact that in it all there is no place for woman. She is regarded only as a servant and a beast of burden.

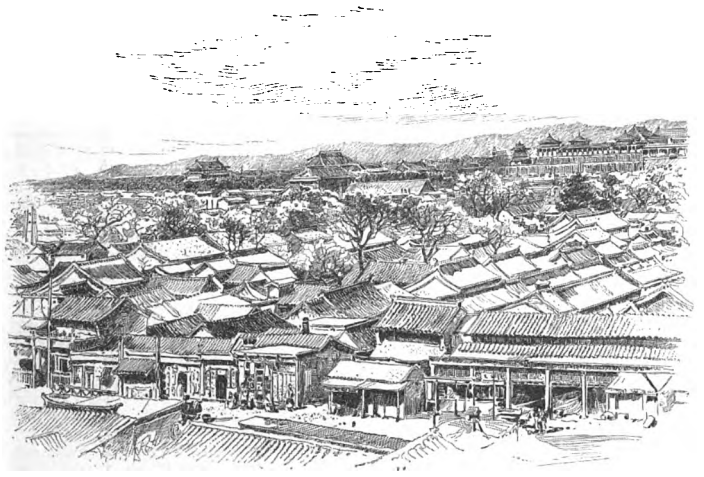
The most that can be said of any system of morals that ignores half the human race, and the half which trains the young, is that it is better than nothing.

If one were to judge of the practical morality of the Chinese from the records of the police courts, he might class them higher than any other people in the world. There are fewer offences of that class each day in Pekin, or any other city of a million inhabitants in China, than in any city of a hundred thousand people in the United States. This may seem a sweeping statement, but it is believed that the facts will fully justify it.

But there are certain reasons for this which have nothing to do with morality. In the first place, the vice of drink, which probably lies at the root of three-fourths of our criminal cases, is practically unknown in China. A worse evil, the opium habit, takes its place; but this drug stupefies its victims, and does not lead them into the sort of disorderly behavior which brings them within the grasp of the law.

Again, the poverty of the masses of the Chinese, and the long hours of work to which they are accustomed, with few or no holidays, leave no time for idleness, which is so frequently the parent of crime.

Still again, they are not a quarrelsome or fighting people. They are, indeed, somewhat given to wrangling, but it is of a comparatively harmless sort, and seldom goes beyond a little hair-pulling and a few finger-nail marks upon the face.



Profanity is unknown among the Chinese. Sometimes, in anger, they utter foul language, but there is literally not a profane word in their vocabulary. It is not to our credit to say it, but the only profane words ever heard from the lips of a Chinese are English; and they seem to be the first which he picks up from our tongue.

The position of woman in Chinese society has already been indicated. It is hardly that of a

Digitized by Google

human being. She has no voice in her marriage; she has no place in the world or in life except at home, and there only as a drudge.

A man is quite at liberty to take as many wives as he pleases, and all of them are practically prisoners. He can divorce a wife at his own will, and with no other formality than a bit of paper stating that he does not want the woman.

General View of Pekin.

At the same time it must be said that the family relation is held very sacred in China.

The two great vices of the Chinese people are the opium habit and lying. Upon the first-named a book might be written, and still fail to give a just conception of the curse which this habit is to the entire nation. It is more deadly in its effect than the vice of drink, and cure is far more hopeless. It impoverishes the people and eats away the very foundations of their moral, intellectual and physical vigor.

It is almost impossible to break off the habit, and even in cases where a cure is effected, the entire system is found to be broken down, and the victim almost invariably dies of some acute disease in a short time.

It destroys all the natural affections. Husbands have been known to pawn their wives, and fathers to sell their daughters into slavery, in order to obtain money with which to purchase the drug.

While it is not literally true that the use of opium was introduced into China by foreigners, or that they are wholly at fault for the growth of the habit among the people, it is true that they have for the past fifty years stood in the way of any serious effort on the part of the government to suppress the vice.

The first war between the Chinese and any foreign power was the result of a determined effort on China's part to stop the importation of opium from India. Prior to that time little opium was either imported or grown in the country, and the authorities were strict in their efforts to suppress the vice. They even went so far as to enter dwellings at night and smell the breath of the occupants in order to detect the victims of the habit, who were at once taken into custody and punished.

But the direct effect of that war was to force the Government of China to pay for a large quantity of opium owned by the English, which Chinese officers had seized and destroyed; and through fear of more trouble, to tie their hands against any further serious effort to suppress the vice.

It is but simple justice to say that for the past fifty years the so-called Christian Government of Great Britain, for the sake of the enormous revenue derived from the trade, has forced opium upon the Chinese, has dictated the amount of import duty which may be levied upon it, and has practically prevented all effort by the Government of China to remove this awful curse from its people.

The result has been that the importation has quadrupled and the growth of the poppy in China has increased tenfold. Hardly a year has passed in which an urgent appeal has not been made by the Chinese authorities to the British Government upon this subject, but in no single instance has this appeal met with serious attention. In my opinion, a large portion of the suspicion, distrust and dislike with which the masses of the Chinese regard all foreigners, is due directly to the unjustifiable action taken by the leading foreign power in China in this matter.

I once saw a Christian missionary preaching to a crowd of people upon the street of an inland Chinese city. A man about fifty years of age stopped to listen. He was a complete wreck from opium. After listening for a moment he said:

"Ugh! You come and talk to us about Jesus, with a ball of opium in one hand and a Bible in the other, and you expect us to believe you. Rid us of opium, you foreign devil, before you talk about your religion!"

Such cases—or at least such ideas—are by no means uncommon.

Much might be said about the other vice mentioned,—that of falsehood,—but space is lacking. Lying is almost universal in China, as in all Oriental countries. Much of it is the outgrowth of the system of etiquette and courtesy, under which it is far worse to say anything rude than to tell a lie. A flat refusal must never be spoken; but an excuse, which both parties know to be invented, must take its place.

Lying is rather an accomplishment than a dishonorable trait, and the only feeling which the average Chinese has on the subject is a certain chagrin in case he is detected. Hence it is almost a hopeless task, when dealing with them, to get at the absolute truth in any matter.

Upon the whole, however, the Chinese people stand high in practical morality, and while they may learn some things from so-called Christian nations, these same nations may, on the other hand, take some lessons from the Chinese to their own advantage. CHESTER HOLCOMBE.

MY YESTERDAYS.

I saw my yesterdays go past,
A sinuous stream of souls of days,
Some wreathed with myrtle, some with bays,
And those that answered to my gaze
Showed me my memories as they passed.
—*N. Y. Sun.*

AMERICAN STUDENTS ABROAD.

A recent statement from Berlin shows to what an increasing extent, in these days, young Americans, especially graduates of our colleges, after finishing their home education, go abroad to study.

At Berlin University alone, it is stated, there are two hundred and eight American students, pursuing the regular University courses. Beside these, there are many other young Americans in Berlin, engaged in special studies, for which Germany's high state of advancement in science and the arts affords particular facilities.

Some are busy investigating Dr. Koch's supposed cure for consumption; some are studying music under eminent German masters; some are learning the German language; some are being taught painting, drawing and sculpture.

Our larger colleges—such as Harvard, Yale, Princeton, Cornell and Johns Hopkins—are most numerously represented; and there are more medical students among the Americans than students of any other branch.

Next come those who are studying philosophy and political science, history and physics. The fame of German professors in each branch of learning has attracted many of our young men, who desire to become eventually professors and teachers, and so study abroad with a view to obtaining special efficiency in the various departments.

At Berlin, moreover, there are many American divinity students who listen to the lectures of celebrated professors like Hœrmack and Pffeiderer.

Most of the American musical students are young women who are finishing off their home musical education, and intend to become either teachers or public singers or performers. The number of young Americans who attend the famous Berlin Philharmonic concerts has been repeatedly remarked.

But of course Berlin is by no means the only European educational and art centre where young Americans congregate for instruction. There is a considerable colony of them at Heidelberg and also at Bonn, and a few are scattered at Göttingen and other German Universities, each one of which is famous in some special field.

Paris, too, claims a large number of American scholars, who go to the "siren of cities" for three purposes especially—to learn art, music, and medicine.

Scattered through the Paris schools and "pensions" are to be found very many American girls, who have gone thither to learn the "language of courts," and to receive the polish which is supposed to finish off a young girl's education, and to impart to her exceptional grace and good manners.

At Dresden and Munich, at Florence and Rome are gathered many young Americans, attracted by the musical advantages and art treasures of those historic cities. It would be interesting if a census could be taken of all the American young people who are now engaged in learning something in Europe. Probably it would be found that they number several thousand.

It is gratifying at least to learn, from the Berlin statement referred to, that "American students of every branch are greatly respected by the instructors for their earnestness and industry."

There are doubtless many advantages to young Americans in thus pursuing a larger education at the ancient centres of learning in Europe. But in the case of our young girls who go abroad to study, at least, every care should be taken by their friends that they are placed among good influences and surroundings while they sojourn in foreign cities.

GOLDENROD.

From no well-kept garden bed
Doth she lift her yellow head.
Gorgeous-hued is she, and wild—
Summer's wayward gipsy-child.
Her rich sprays
Softly blaze
By the homely weed-grown ways.
Selected. —*Eva Katherine Clapp.*

CITY GROWTH.

A tendency in modern life which can only be regarded as a deplorable one is revealed anew by the social statistics of cities prepared in connection with the Eleventh Census of the United States. These statistics show the surprising growth of the cities and large towns of the country—a growth which seems to be out of all proper proportion to the increase of the general population.

While the rural and village population in the older States, and also in parts of some of the newer States, shows a tendency to decrease, the city population is everywhere on the increase.

And with this increase the ill-health, evil and unhappiness which almost invariably attend the massing of great numbers of people upon a small area show a marked development.

In the United States in 1890, there were three hundred and forty-five cities which had ten thousand inhabitants and upward. In 1880 there were but two hundred and nineteen such cities.

The increase of the population living in cities containing ten thousand or more inhabitants, in the ten years from 1880 to 1890, was more than six and a half millions, or a little more than sixty per cent.

During the same time the population of the whole country had increased a little less than twenty-five per cent.

More than half of the increase of the whole population of the country was made within these three hundred and forty-five cities. Leaving them out of the account, the population of the country would have increased less than six millions between 1880 and 1890.

The importance of these cities has increased to such an extent that they now include more than seventeen millions of our population, or a little less than twenty-eight per cent. of all the people in the country.

The town-dwelling population has gained very rapidly upon the country-dwelling population in the ten years between the last two censuses. In 1880, only a little more than twenty-one per cent. of the population lived in cities of ten thousand and more inhabitants; in 1890 nearly twenty-eight per cent. of the people lived in such cities.

It does not appear that the people have been driven from the country to the cities by the unfruitfulness of the land or the unduly hard conditions of life there. Some of the most fertile, most prosperous, and in every way most highly favored commonwealths in the Union have suffered such a loss in many of their best agricultural counties.

The social statistics of cities gathered by the census bureau tell their own story of the conditions of life for which the people who flock to the cities are exchanging the comparative physical and moral health of the country.

These statistics bear out the correctness, as a general statement, of the rule that the death-rate increases with the density of the population; that is to say, the more thickly people are congregated, the greater proportion die each year.

To illustrate, in certain wards of the city of Boston people are packed together at the rate of one hundred and sixty-six persons to the acre; and here the deaths are thirty per thousand each year. In certain other wards of the same city there are only four people to the acre, and here there are but nineteen deaths per thousand.

Moral ill-health also increases in proportion to the density of population. It would seem reasonable that where a great many people are gathered together in a little space, a fewer number of policemen, in proportion to the number of people, must be needed to keep them in order.

The exact opposite is the case. As a general rule, the greater the population of a city, the greater is the per cent. of police force needed to each head of the population.

The city of New York has not only more policemen than any other city in the country, but it also has a greater proportion of them to the number of people. It requires twenty-three policemen to every ten thousand of its people; whereas the city of Rockford, Illinois,—the smallest of the cities from which figures relating to the police force are given by the census bureau,—requires but twelve policemen for its population of more than twenty-three thousand.

The existence of the tendency of people to flock from the farms to cities, and from better to worse conditions of life, is one of the most serious social problems of the time.

RIDING A WHITE HORSE.

An officer and his aide, at one of the decisive battles of the Civil War, were holding a hurried consultation in the shade of a tree. The ground all around them was peppered with bullets, while groups of soldiers much nearer the enemy seemed entirely unmolested.

"What does this mean?" the officer asked; "we seem to be the general target."

"It is your white horse!" was the reply. "That is the bull's-eye."

The soldier who rides a white horse in battle is instantly marked by the sharp-shooters. He stands out as plainly from the mass of men and horses as does a white birch-tree in a forest of pines. He appears to say to the enemy, "I dare you! Shoot me if you can."

Some persons choose to ride through the world on white horses. They desire to be conspicuous, even at the expense of safety or repute. They call themselves brave when they are merely foolhardy; and pride themselves on an unconventionality which is really eccentric vanity.

These persons are targets for their enemies, and thorns in the flesh of their friends. You cannot go near them without being wounded by one weapon or the other. Like Dickens's Buffer, they damage a cause by espousing it.

Such persons are apt to use startling expressions that savor of slang or boldness. They wear scarlet dresses when others appear in black, and affect stripes when the world says plaids. They push into society which lies outside their paths. They rock the boat when others row; lean far out of car-windows; and walk on the very edge of the precipice. They invite remark, and they get it.

The brave officer had that day had two horses shot from under him. The white horse had been offered by a private near at hand. Did he refuse it because it would draw down upon him the fire of the enemy? Did he change it when he found he was singled out by scores of Confederate sharp-shooters?

You may believe that he did not. While not defying danger he did not shirk it. Prudence, as Emerson says, does not consist in evasion or in flight, but in courage.

We are not recklessly to seek out comment or danger or "entrance to a quarrel," but being in we must "so bear it that the opposer may beware of us." We must take "both reputation and life in our hand, and dare the gibbet and the mob by the absolute truth of our speech and the rectitude of our behavior."

A WORD TO MOTHERS.

Doctor Neary, a well-known Methodist preacher in the southern Alleghany Mountains, used to tell many pathetic anecdotes of the eagerness with which the adult negroes crowded into the schools established for the children of the Freedmen after the Civil War.

On one occasion, going into the cabin where the school was held, he found the foremost bench occupied by a row of white-haired old people, each mumbling over an alphabet card. The teacher, a young girl, looked on in dismay. He touched an old man on the shoulder.

"You are at a good work, Uncle Ben. But at your age—is it worth while?"

Uncle Ben cast a contemptuous glance at the benches full of children.

"Ef yoh was a gyardener like me, doctah, you'd know dat de ole peach-trees was de best foh bearin', an' yoh wouldn't waste all yoh manure on de young shoots!"

The old negro's boast had in it sound reason.

In one of our large seaboard cities, the plan of university extension lectures and classes, so long in use in England, was tried last winter.

Experts in different branches of knowledge delivered courses of short lectures on historical, scientific, archæological and literary subjects. Their most eager hearers were educated women past middle age, whose lives had long been devoted to their children.

One of the women said: "At sixty, the world opens before me fuller and more beautiful every day! There is so much for me to do for myself and for my kind."

Surely this is a better frame of mind in old age than that which forces us to fold our hands and look mournfully back upon our youth, while we wait in idleness for death to come!

The old trees can yet bear good fruit, but not without air and water and sun.

GIRLS' FRIENDSHIPS.

There is a great difference between friends in the matter of companionability. Friendships that should have been helpful, cheering, and as enduring as life itself, are often seriously interrupted or finally destroyed by the lack of a little adaptability on both sides.

The thing that most charms and attracts us may be some point of extreme unlikeness to ourselves; but even in that case a friend must not make her peculiarity prominent lest she make it offensive.

Of two friends one will perhaps be talkative and the other silent. Usually one talks while the other listens, putting in an occasional question, comment or suggestion; and both are satisfied.

But sometimes the quieter one does not want to listen, while the talker still would like to talk. Then comes the need of tact and consideration. Let the talker moderate her pace, speak quietly and occasionally, not chatter in a steady stream; and let the taciturn friend take the trouble to answer patiently and understandingly, though as briefly as she chooses, and there is small danger of either feeling annoyed or slighted.

Friends do not need speech in the sense that

Digitized by Google

mere acquaintances do. True friends never need to make talk for the sake of conventional politeness; and that is in itself a great thing.

They are not rude if they are silent. They may work or read in each other's presence, taking pleasure in affection which there is no need to express. They may ride or row or walk, each enjoying everything through her friend's eyes as well as her own, and speaking or not as the scene and her feeling suggests.

"Oh!" said one of two girl friends after they had walked two or three miles together in the country without a word, "how delightful it is sometimes not to be on speaking terms with one another!"

Her friend briefly agreed in this opinion, and they proceeded another silent mile.

On her next birthday the first speaker received a gift from her companion inscribed with the line from Shakespeare, "'Twixt such friends as we, few words suffice."

BENEVOLENT PUBLISHER.

There recently died in Paris a famous publisher, Monsieur Calmann Levy, who had sent into the world a vast number of printed volumes, good and bad, and in doing so had acquired a great fortune. Many anecdotes have been told of him since his death, illustrating his sagacity and his positive character. None of these anecdotes is more amusing, perhaps, than the following, about a struggling young "author."

One day a very young man came to Calmann Levy, with an introduction and a frank, manly air, and offered him a novel in manuscript. It was entitled "Father Cæsar."

"A capital title," said the publisher. "Contrary to my usual custom, I will read the manuscript myself. Come back in a fortnight."

At the time set, the young man returned.

"It's pretty good," said the publisher, returning the story, "but very immature. Sorry I can't accept it."

The youth looked so heartbroken that the publisher slipped a fifty-franc note into his hand. The young man went away and two months after came back with another story, entitled "Aunt Giroflée."

"Good title," said Calmann Levy, again. "Come again in two months. I'll tell you what I think about it; and I like your perseverance."

In two months he came back, and was told that the story had strong points, but was on the whole unavailable. Then the publisher gave the young author another fifty-franc note.

Three months went by, and the author again returned, this time with a novel entitled "Uncle Epaminondas."

"Good for you," said the publisher. "I think I can read your story in about a week, this time."

In a week the young man returned, looking haggard and worn.

"I am sorry that I cannot accept your story," said Calmann Levy. "But what's the matter with you?"

The young man told him that he was very ill, and that the doctor had told him that if he did not have two months' rest in the country he would die. The publisher gave him a bank-note and sent him away.

Two months afterward the young man came back, much refreshed, and with him he brought another novel, entitled "Cousin Cerisette."

"I have been so careful with my style this time," he said.

"Very well," said the publisher, looking a little wearied, "this will be read —"

"No, it won't!" exclaimed the author, bitterly; "you won't read this any more than you did the others!"

"See here, young man," said Calmann Levy, "you have made a great mistake. I did read the others, and here is the proof: All you have done with your remarkable stories is to change the title each time and replace the first page. But though you have not yet used up the family, I'm afraid it is much too large to interest me any further. But never mind the money I have given you. I saw you were poor, and I wanted to try you. I have tried you all I wish to now!"

HIS TEST.

A dealer in pictures who makes it his business to find as many new painters as possible, both in this country and abroad, was asked recently in regard to his methods of selecting pictures to buy. He was very frank in his talk, and one thing which he said is shrewd enough to be worth quoting.

"Of course," he said, "with my experience I am able to judge whether there is promise in a painter's work, but I never buy with any idea of putting the painter on my list until I have seen the man and talked with him myself. I always watch him closely, and I never buy his pictures unless his eye lights up when I talk to him about his work and about his profession."

The artist whose heart was really in his work could not discuss it without kindling, and the man who did not paint from the heart was not the one whose pictures the dealer wanted.

The remark was not only one which showed insight and shrewdness on the part of the dealer, but it is one of a good deal of significance in regard to all work. The man who does anything worth doing is the man who cannot talk about what he has accomplished or what he hopes to accomplish without enthusiasm, no matter how far short of his ideals what he has actually done may seem to him to fall.

MAN OF LETTERS.

Prince Arthur, the Duke of Connaught, recently laid the corner-stone of "the Church House" in London, in the presence of more than a score of bishops and of many other distinguished men.

A bottle was placed in the corner-stone containing a document which recited the fact that the corner-stone was laid by the Prince, who was therein described as "His Royal Highness Arthur Duke of Connaught and Strathearn, K.G., K.T., K.P., G.C.S.I., G.C.M.G., G.C.I.E., K.C.B., P.C."

Notwithstanding the appropriation of so many letters of the alphabet by one man, it will be observed that there are still a few left for the rest of us.

PHOTOGRAPHING A BUBBLE.

After running horses, jumping athletes, flying cannon-balls, flashes of lightning, and the shifting spectral lines of revolving double-stars have been successfully photographed, the airy soap-bubble has furnished a stumbling-block that the scientific photographer has had great difficulty in surmounting. Lord Rayleigh, in a recent lecture before the Royal Institution in London, said that for some time it had been his ambition to photograph a soap-bubble in the act of breaking.

He anticipated great difficulty because he knew the time occupied in the disappearance of a breaking bubble must be but a small fraction of a second. Whoever has watched a brilliant soap-bubble burst knows how instantaneously it vanishes. Lord Rayleigh thought it might take one-twentieth of a second, but by repeated experiments he found that the time occupied in the disappearance of the iridescent film was not more than one three-hundredth of a second!

To catch and picture a vanishing film between the instant of its breaking and that of its complete extinction proved a most difficult undertaking, but it was accomplished.

Some persons may think that it would be equally difficult to photograph a lightning-flash, but it must be recollected that lightning makes an intensely vivid impression, while the soft reflection of a soap-bubble is evanescent, even in the bright glare of an electric spark.

From printing the image of the flying edge of a broken bubble in the three-hundredth of a second to disclosing the existence of great nebulæ in the heavens by the cumulative effect of several hours of continuous exposure, the modern photographic plate is performing many wonders in behalf of science, and proving itself one of the most powerful means at man's disposal to unlock the secrets of nature.

UNKNOWN TONGUE.

Those who have learned a foreign language with an approach to thoroughness often find in the dialects so many new languages to master. Almost any one who speaks English might be put down successively in half a dozen places where English is supposed to be the mother tongue, and hear as many dialects spoken, not one of which he would understand until it was interpreted.

An old Broughton worthy and an English lady, says an English paper, were one day occupants of a railway carriage. The train had been waiting long at a certain station and there was no appearance of its starting, when the worthy remarked:

"They're a gly tanglesome lot here."

"I beg your pardon, sir," said the lady.

"Am sayin' they're a gly daidlin' lot here."

"I really beg your pardon, sir."

"Am observin' they are a vera dreich lot here the nicht."

"I do not quite understand you."

"I'm wonderin' if they're ettlin to saunter here a nicht."

"Really I must again beg your pardon. I don't comprehend you."

"I was just tryin' to say that the train was late."

"Indeed, sir, it is very late," agreed the lady, and then collapsed.

INEVITABLE.

The force of logic is sure to be irresistible in the end. Weaker motives may temporarily prevail, but the sledge-hammer of reasoning is that which inevitably strikes home. John Gladstone, the father of the great English statesman, trained his children to give a reason for every opinion they offered.

It was in this way that William E. Gladstone was early trained to debate.

On one occasion William and his sister Mary disputed as to where a certain picture ought to be hung. An old Scotch servant came in with a ladder and stood irresolute while the argument progressed, but as Miss Mary would not yield William gallantly ceased from speech, though unconvinced.

The servant then hung up the picture where the young lady ordered, but when he had done this he crossed the room and hammered a nail into the opposite wall. He was asked why he did this.

"Aweel, miss, that will do to hang the picture on when ye'll have to come round to Master Willie's opeenlon."—*San Francisco Argonaut.*

"LUTHERAN."

Men in exalted station have always been the victims of envious detraction. Here, for example, is a slanderous story about a member of the Pennsylvania Legislature, told by an exchange on the authority of "a Harrisburg correspondent."

We have a few rural legislators here who can scarcely look after themselves, to say nothing of attending to the interests of their constituents. Only yesterday a gentleman from one of our neighboring counties, who had just received his order for stamps, went to the city post-office to get them.

"What denomination?" asked the clerk.

"Lutheran," said the member, modestly.

THE SIGN OF EQUALITY.

The mathematical readers of *The Companion* will be interested in the following quotation from Robert Recorde, who introduced the sign of equality into algebra.

Recorde was the first English author who wrote on the subject of algebra. In his treatise called "Whetstone of Witte," published about 1557, he says:

"To avoide the tediouse repetition of these words, is equalle to, I will sette as I doe often in worke use, a paire of parallel lines of one lengthe, thus: =, because no 2 thynges can be more equalle."

HIS GRIEVANCE.

It is true now, as it was of old, that man is born to trouble.

"I don't know what Smith does with his money."

"No?"

"No, I don't. Yesterday he was short, and he's short again to-day."

"Did he want to borrow from you?"

"No, hang it, I wanted to borrow from him."—*New York Press.*

Premature Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of *Burnett's Cocoaine.* It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay, and to promote a healthy and vigorous growth. It is at the same time unrivalled as a dressing for the hair. [*Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

RIVERVIEW ACADEMY, Poughkeepsie, N.Y. **36th Year.** Prepares thoroughly for College, the Government Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

METROPOLITAN College of Music,
19 & 21 East 14th St., New York City.
Has no equal for the thoroughness of instruction and the absolute safety of its methods. Fall term begins Sept. 14th. Residence department for lady pupils from a distance. Dudley Buck, President; Albert Ross Parsons, Vice-President; H. W. Greene, Secretary and Treasurer. For particulars send for College Annual.

Raise the Schoolhouse Flag

Last Spring we made an offer to help the Public Schools raise money for Flags. Our offer was accepted by several thousand schools. In most cases they were able to raise the money within a few days after the receipt of our Flag Certificates.

This Certificate entitles the holder to a SHARE in the patriotic influences of the SCHOOL FLAG.

Do You Wish to Raise a Flag?

First talk the matter over with your parents, your teacher and school-mates. Then write to us and tell us of your decision, and ask us to send you 100 School Flag Certificates. Ask your teacher to sign the order for the Certificates.

On receipt of your order we will send you FREE 100 Certificates. Each pupil can easily dispose of one or more of these Certificates to interested friends and neighbors at 10 cts. each.

Follow this plan, and any school can raise $10.00 for a beautiful Flag sixteen feet long, at short notice.

For a smaller schoolhouse, a 6x9 Flag, costing $5.00, is sufficiently large. Get your Flag, and thus be ready for the National Columbus Public School Celebration, to be held Oct. 12, 1892.

P. S. Any public school that has raised or does raise a Flag will be entitled to receive from us free, the beautiful Souvenir, printed in two tints, entitled "Raising the Schoolhouse Flag."

THE YOUTH'S COMPANION, Boston, Mass.

Fall Dress Goods.

We have placed on sale 100 pieces double width suitings:

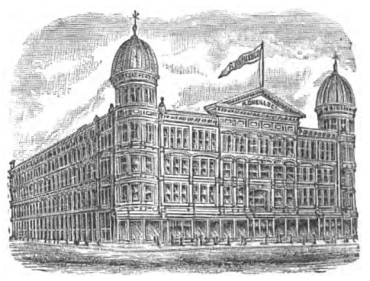
Fancy Checks at 35 cents per yard.

Tartan Stripes at 40 cents per yard.

Also three lines of Rough Cheviots, plain, mottled and stripes, 52 inches wide, at $1.00 per yard, of unusual value, manufactured exclusively for us.

James McCreery & Co.,
Broadway and 11th Street,
NEW YORK.

HE.—"I didn't know that you got letters now from any one but me."



SHE.—"This is only a circular letter, dear, with a sample of 'Stilboma.'"

HE.—"And what is 'Stilboma'?"

SHE.—"It is a prepared chamois skin that will polish gold, silver, brass, steel, nickel and all such things without scratching them or soiling your hands. All the swell ladies from Cleveland in the hotel have it here and use it at home."

A large sample of "Stilboma" will be sent to any one who will mention where this advertisement was seen and enclose six cents in stamps to THE CHANDLER & RUDD CO., Cleveland, O.

MAKING A HOME.

FIRST PAPER.

Great progress has been made in this country in the matter of house decoration during the last fifteen or twenty years; and, as seems to be an unbroken rule concerning all human progress, the movement has been accompanied by many mistakes. The mistakes are mainly due to ignorance of certain laws which apply to every house, be it palace or cabin. When these laws are violated the decoration in either place is a failure.

But all the blame is not to be ascribed to ignorance. In many cases the person who would

ornament a house is compelled to build on foundations which others have laid, and laid badly. This makes the task difficult indeed. But so much may be done, even under these conditions, that no one need despair of making things better.

For the sake of convenience, I shall suppose that Robin and Jenny Wren are a newly married couple, with all the world before them for their nest-building, the only limitations being inexperience, Robin's small income and Jenny's determination to spend but six hundred dollars on her furnishings.

The first question to be settled is, "Where is the house to be?" For it is worse than foolish to worry and dream over details of decoration and fittings until you know what is possible.

With your modest income, I hope the house is to be in the country, or, if it must be in a city, in the suburbs thereof, where Jenny can live more economically and independently, and will require much less dress and what is called "style" than in the heart of a great town. Besides this, Robin will live longer and more happily, if each night he can leave the close, murky air of the business quarters and enjoy a change, be it ever so slight, after his confining day.

Before buying or renting, there is much to be seen to; and it is a good idea to visit, if possible, a former tenant of the house you propose to take, in order to find out if range and furnace do their duty well, or if there is any real drawback to the property.

The cellar should be thoroughly examined to see if it is dry and well ventilated, and either cemented or boarded, and if the house itself is built over gravel; for a clay soil under your floors may mean the doctor's gig before your door many times each winter.

The all-important subject of drainage must be looked into; and it would be wise to take to the house a plumber, who lives far enough away to be disinterested, and pay him his fee for an examination of all pipes, traps and drains.

If you are going to buy, an equally disinterested builder should be consulted as to the construction of the house, its foundations, cellars, walls and wood-work being the chief points of question.

Of course you will remember that a house is more desirable if some of its windows face south or west; for into eastern windows the sun shines for a short time only, and into northern ones he never peeps the winter through.

At first, Jenny will not need a large house; or, having it, need furnish only a few rooms—halls, parlor, dining-room, sitting-room, two bedrooms and the kitchen. More than this is only a temptation to invite friends to see the "Earthly Paradise," and much company, though delightful to the master and mistress, is not only an expensive pleasure, but is sure to cause trouble with the one serving-maid that Robin's income can afford.

Jenny will find her six hundred dollars sufficient to furnish the necessaries for these rooms; but for bric-à-brac and many fancy touches she must be dependent upon her wedding presents and what she can beg or borrow from her old home.

It is, however, just in the choice of these necessaries that so much taste can be used that they become part of your decoration.

The most important element in any attempt of this kind is color; and this will include the color not only in wall-paper and hangings, but in carpets, wood-work, chairs, and in fact, all the objects in your house. All these things must accord in each room, and each room must harmonize with all others that open into it.

It is here that one of the laws I have referred to comes into operation: All color arrangements should be made up on what used to be called the law of complementary colors; which is that each of the primary colors—red, yellow, blue—combines best with a color formed from a mixture of the other two.

These colors need not be in their crude states, but may be in some union of tints which follows the general law. Thus red and green need not mean staring shades of these colors, but may resolve themselves into terra-cotta and faint olive-green. Blue and orange may mean salmon, with turquoise blue, while yellow and purple may change to heliotrope and gold, all that is essential being the presence of the three colors.

Following this line of study, artists declare that no color scheme is complete without the three colors, be it only a touch; and if you choose two colors for your room, the third ought always to be somewhere in sight, even if only in a sofa cushion or the tie-backs to your curtains.

The plans for your color scheme should all be settled for every room before you go into a shop to buy anything whatsoever; and then, knowing just what you want and what you can afford to spend for each room, you should cling firmly to your idea, and not allow your decision to be swayed by every suave clerk who has "just the newest thing" for sale. Otherwise, your shopping will be a failure of the worst kind.

One more bit of advice: Make up your minds never to go into debt for this your life's beginning. It is far better to go without some of the things which seem essential than to saddle yourself with the worry of unpaid bills.

A great puzzle will be the carpeting of your house. This is always expensive and seldom pretty work. I invariably say one thing: Do without carpets altogether, and substitute rugs on a stained floor.

Of course the rug or carpet, whichever you choose, must be selected with special reference to the color of the wall-paper and hangings to be used with it; and in taking up the rooms separately I shall not forget to speak of this.

But, first of all, I must give some general directions, for the staining and care of the floors. This will apply to all the rooms which are to be so treated.

The floor should be carefully examined and all the knot-holes and wide cracks stopped with putty.

Otherwise it will be entirely impossible to keep them clean.

The boards should then be given a coat of staining mixture. This may be bought ready for use of dealers in house-furnishing materials, and sent by express, in sealed cans. But you can also make a very good walnut stain at home, by adding to boiled linseed oil enough burnt umber to produce the rich brown you desire. The tint must be tried upon a piece of new wood, until the right shade is obtained.

This mixture is applied with a brush; and, after being well rubbed in, is allowed to stand a day. Then the floor is ready for waxing.

To wax a floor requires time and patience, but the reward is rich enough to repay the expenditure. The waxing preparation is made by shaving yellow beeswax into very thin slices, and mixing it with turpentine, in the proportions of a pound of wax to a gallon of turpentine. It should be allowed to stand until the wax is entirely melted, and a smooth paste-like substance formed. It should not be taken near the fire, as it is very inflammable.

This waxy substance is to be rubbed into the floor with a clean woollen cloth; and the more you rub it the brighter the polish will be. The waxing should be done every week for a few times, then every two weeks, and finally once a month; which is all the care the floor will ever need, beyond the usual sweeping with a soft floor brush, and an occasional wiping up with a cloth, dampened with milky water.

This treatment will insure a surface like glass, and one to which no dust or dirt will stick. However, the waxing is very back-breaking work.

There are several advantages in using rugs. They can be thoroughly cleansed from dust; can be turned end for end if worn places begin to show; and as they will, as a rule, fit any room, it is not necessary to make over old carpets and buy new ones every time one is compelled to move.

Besides, rugs are prettier than carpets; and even should you decide to have the floor carpeted, it should be done in imitation of a rug—that is, a mat with square corners should be made and bordered, leaving the door-ways and recesses to be carpeted with a plain material, thus avoiding the ugly fashion of following the line of the wall with the border.

On the first floor there is usually a hall; and I hope yours is a light, square one, and not one of those long, dark passages so impossible to decorate, and where decoration could not be seen.

It does not cost a great deal to throw light into such a place by cutting a window; and this your landlord will probably do for you—if not at first a little later, when he knows you better. Landlords are willing to do much to keep good and careful tenants.

The best paper for the hall is a rich terra-cotta, not too dark to go with wood-work painted a dark green. The floor should be stained walnut, almost black, with a red ingrain rug, and the stairs carpeted in an ingrain or Brussels carpet of two shades of red.

For the stairs, coco matting, with a red border, is cheap and very durable, though not at all pretty. This carpet requires no rods, but may be laid smoothly and tacked securely.

The hall, of all places, should be papered with a dado, for it is particularly exposed to the bumping of trunks by careless expressmen and the rubbing of tiny hands when the boys and girls begin to climb the stairs.

A good but expensive dado is made with leather paper. Many cheaper substitutes are almost as pretty. Perhaps the very best dado is made of matting, running lengthwise along the wall, and secured in place by a heavy band of wood over its upper edge.

I cannot say enough in praise of matting or chintz dados, but they, too, are expensive and quite beyond the means of any frugal Robin and Jenny.

The hall admits of but little furniture. A glass hung on the wall, with a table beneath it, two straight-backed chairs, an inconspicuous hat-rack, and an umbrella-stand are all that is absolutely needed. The umbrella-stand, by the way, will cost you next to nothing if you stand a piece of terra-cotta piping upright in the saucer of a large flower pot, and paint the whole a pale blue with a dark blue design running over it.

Jenny can, of course, use her nimble fingers in making various little conveniences — a pincushion and whisk-holder for instance—to hang beside the glass.

The pincushion may be round and flat, like those made to carry in the pocket, but very much larger—about the size of a breakfast plate, and finished with a bow and loop of ribbon by which it is hung. The whisk-holder is pretty if made from a Japanese straw cuff—which costs five cents—and lined with silk, which is arranged to stand up in a full ruffle around the upper edge. A second ruffle, some eight inches deep, is sewed to the lower edge; and half-way down is gathered in close and tied with ribbon. Thus is formed a bag, which serves as a bottom to the holder and keeps the whisk from slipping through. A ribbon to hang it by, and one bowed around the middle of the cuff, completes this very pretty convenience.

In more pretentious halls a hall-seat is a great convenience, especially if there is no closet to serve as a home for the overshoes of the family; for the seat may be made with a lid which lifts up, disclosing a box beneath. The illustration shows a model which can be made by any carpenter; and when stained walnut and ornamented with red or blue cushions, it makes a really pretty piece of furniture.

The cushions are inexpensive if made from Turkey red or from blue denims; though plush cushions or those covered with what is called Tycoon cloth or double velours are much richer.

ANNIE R. RAMSEY.

For the Companion.

DENNIS, U. S. N.

When he was a little fellow, not more than half as big as a boot, Naval Cadet Guiney bought him of a brown-faced old woman in Messina for the price of a gay handkerchief.

He was not the next of kin to old Alicia, a fact which renders the sale of a less shocking nature; but if he had been, probably she would not have hesitated long if the price she demanded had been offered.

He was a waif that Alicia picked up in the country, as one snaps off a daisy or a clover blossom in walking through the summer fields, with a fine disregard for the blossom's inclinations or its probable fate after it has been separated from its native stock.

At that time he was living in the state of intimacy with nature which is called "running wild."

Just why Alicia had preferred him to his brothers would be hard to tell. He was not more comely or intelligent; he was even the smallest and outwardly the least promising; but she chose him from out the little family, and took him home in triumph to Messina.

His life was not a joyous one after this. He seemed to pine for the sunny fields and deep forests of his country home. He grieved for his brothers, and none the less did he grieve because he uttered no word of repining.

He had been deprived of his freedom, and had received in exchange the petty tyranny of an ill-tempered mistress, whose squalid quarters seemed to him a prison. If by any chance he got out into the freer air of the street, he became the butt of Italian gamins, who invented ingenious tortures for the poor waif.

As may be imagined, Alicia gave no heed to his education. His manners were likewise neglected; such breeding as he displayed was innate.

He was often obtrusive. He was no respecter of persons; he could not discriminate between a poor laborer and the few dignitaries whom he met. This lack of the social instinct met its due reward; he was cuffed and kicked and beaten most impartially and thoroughly by nearly every one who passed through the court in which Alicia lived. He bore his blows as patiently as possible.

There was, however, one white spot on the general blackness of his fate—Alicia fed him liberally. This is a point to be dwelt upon, since in the biographies of most heroes, starvation plays an important part in their early years.

Alicia had her own reasons for gratifying his healthy youthful appetite; but she did not do this ungrudgingly. She grumbled ceaselessly, saying that he was "all stomach."

It did not occur to her that she herself might be to blame for this excessive development of the physical, since she had never fostered his intellectual or moral growth. Under similar conditions I doubt if a born genius would have reached fruition.

One day, after dinner, he was stretched in front of Alicia's door in what, if I were a poet, I should doubtless call a state of *dolce far niente*. He was prone upon the ground, his eyes half closed, the breath coming from between his parted lips in languid puffs, when Cadet Guiney of the United States ship *Moosilauke*, passing that way, almost stepped upon him, and then paused abruptly, as if arrested by a sudden thought.

"Whose is he?" Guiney demanded of Alicia, who was drowsing in the sun.

"Mine, the good-for-nothing," she replied, opening her eyes. "Does the officer fancy him? I will sell him."

"How much?" said Guiney, quite indifferent to the moral aspect of the bargaining away of a life.

Alicia deliberated, and then named her price which Guiney thought too much and said so.

After some haggling they agreed as to the waif's value, and Alicia pocketed the purchase money coolly. Guiney thrust his foot under his property by way of establishing his claim to it, and turned away as if to go.

Then he paused and said, as if it were an afterthought, "What's his name?"

"He has no name."

"No name?"

"He wasn't worth a name," said Alicia, drowsily. This time she did not open her eyes.

"Nor a number? He couldn't have less individuality; he'll do admirably for the Service," Guiney muttered with a grin.

Guiney's return to the *Moosilauke* was a signal for a frolic, in which the bewildered young Italian played an unwilling part. Cadets have a way of putting a new-comer to the test that is vigorous and perhaps wholesome, since it rarely fails to bring his ability and the true color of his character to the surface.

In this case they tossed Guiney's property into the water to see if he could swim. He struck out so valiantly, although manifestly unused to the water, that the merry boys soon allowed him to return to the ship with a cheering welcome.

"Plucky little scamp!" said one. "You'll be Admiral before you're a hundred."

"What's his name?" some one asked.

"He hasn't any," Guiney replied. "His guardian said he wasn't worth the price of christening, or words to that effect."

"We'll give him a name!" shouted the boys.

"How would Dennis do?" they demanded, a moment later.

Guiney hesitated.

"Guiney wants to call him Leonardo da Vinci!" cried a mocking voice.

That settled it. Guiney instantly avowed his preference for Dennis above all other names, and Dennis the waif was to the end of his seafaring life.

Before Dennis became accustomed to life on a man-of-war, the ship left Messina and went to Syracuse, where he was taken ashore and was captured by a native bandit who demanded a ransom upon returning him to the *Moosilauke*. Though it was preposterously large, the boys paid it without grumbling, for Dennis was even then the pet of the ship's crew.

From Syracuse to Zante and Crete, and then leisurely to Constantinople, a month of sailing and duty at various ports enabled Dennis to get on his sea-legs, and to show himself quite as steady a sailor as many who had graduated at Annapolis.

This direct proof of not being a land-lubber added immensely to Dennis's popularity. Guiney was proud to have introduced such a fellow into the Navy, and even the Captain and the executive officer had pleasant words for Dennis.

It is true that he showed but slight promise of mastering the intricacies of naval science. As time went on, the possibility of his rising to the rank of Admiral grew less. On the other hand, he showed a disposition to yield unquestioningly to discipline, which is, as every one knows, the first requisite of a good middy.

The Cadets gave him some excellent training. He was taught the beauty of personal cleanliness, not without difficulty, for, perhaps, his early associations had cultivated in him a prejudice against the outside application of water. But at last he took his "tubbing" as resignedly as if he had been of English birth.

Guiney, who had the sailor's proficiency with the needle, fitted Dennis out with a wardrobe that was varied enough for a "swell."

Not only was he provided with the regulation suit of duck and of fine, dark blue cloth, but Guiney made copies of all the national costumes he had seen in the different countries he had visited, buying materials whenever in port and making them up in his leisure hours. All these uniforms and costumes Dennis seemed very proud to wear.

Dennis in his fine clothes was a diverting sight, and in Constantinople, where the officers entertained a good many pretty Americans who were wintering there, his little head was often in danger of being turned by feminine flattery.

"Isn't he *too* sweet!" or "*too* cute!" or "*too* lovely!" were phrases to which he soon became accustomed.

Guiney took much pains to teach his charge to dance, and in the pleasant twilight hours, to the strains of mandolin or guitar, Dennis would foot it as featly as any young faun of primeval time. He also developed into an acrobat of genuine Italian suppleness and skill, and became a

Digitized by Google

"feature" of the ship's entertainments. It cannot be claimed that Dennis was useful, but he could hardly be useful when he was excused from every duty, and petted as if he had been a little girl.

While he was still too short to reach the water in the scuttle-butt, the Captain himself would fill Dennis's cup, insisting only that Dennis should return it to its place. The cook of Dennis's mess never spoiled his appetite in reckless disregard of rules, and the paymaster winked at this transgression.

Dennis's appetite remained good. It would have struck terror to Alicia's nervousness all soul to have seen him eat! Her vicarious absence from his mess, and government rations, for once, were not too liberal.

There is no evidence that Dennis ever had his rations converted into hard cash. Indeed, it was evident that he cared nothing at all for money.

This is easily explained by the fact that he had no relatives to demand it; and Guiney amply supplied his wants.

He was certainly a favorite. Even the dogs—of which the *Mosellaide* boasted a great variety—were fond of him. One of the number—a tiny, feathery poodle—slept at Dennis's feet, and would not be discouraged by word of mouth or boot.

Once only, and that during their stay in Constantinople, was Dennis treated with contumely. A native high-dignitary, visiting the ship, attracted Dennis by the flow of his spotless white robe and the majesty with which he wore his equally spotless turbine; and Dennis trotted around at a respectful distance, taking his fill of admiration.

Suddenly the great man swept Dennis with his rolling black eye. Then with a cry, he gathered his robe about him and scrambled over the side, hurling back imprecations upon the ship, her crew, and the frightened Dennis, in which the word "unclean" held a notable place.

Dennis did not understand it at all, and the Cadets did not explain to him the singular Mussulman prejudices of the Turk, not wishing to wound their favorite's feelings.

One day an adventure befell our hero which threatened to place him on the deserters' list. It was on the occasion of a return to Crete, and Guiney, who had a call to make upon a Grecian lady, took Dennis and his "kit," stuffed with costumes, intending to display his protegé's accomplishments for the lady's amusement.

He left Dennis and his kit at the portal of Aglae's dwelling, with the command to stay there until he was called for. This command Dennis would have obeyed to the bitter end, for he was devotedly attached to Guiney; but no sooner was that young gentleman fairly in Aglae's presence than a Greek youth—I hope it wasn't Aglae's young brother, though his actions savored of the mischievousness of the American type of the younger brother—came upon the kit and Dennis and bore him, struggling and crying to Guiney's dear ears, far away to the other end of the town. There his kit was freely distributed among admiring natives, and Dennis was left, with the careless advice: "You'd better find your way back, if you can."

Now this was just what poor Dennis could not do. He wandered and wandered. When night fell, there was no "pipe down" to greet his ears, but one by one the lights came into the deep sky quite of their own accord, and Dennis slept alone under a friendly tree.

When Guiney came out there was no Dennis to be found; and Guiney returned to the ship without him.

There was scouring on the *Mosellaide*. No one believed Dennis to be a deserter from Uncle Sam's service; and the following day a grand search was instituted which resulted in his discovery in the rear of a circus company.

Guiney, as we already know, was a fair man, but he had the nut stood in. He was half-starved, and as humble as if he had been to blame for his disappearance.

Well, they breezed him with "the brig" just by way of discipline, but he never got it. He received the prodigal's welcome from the cook of his mess, the Captain and the officers generally spoke kindly to him, and the men fairly spoiled him in their delight at his discovery.

Guiney even went so far as to promise him another wardrobe that should "throw into the shade the gorgeous dude living, and immediately began to make preparations for the task."

But this blessed privilege was never to be Dennis's. At Leghorn the American Consul visited the ship in company with a small terrier of outrageous manners, who bit and snarled and fairly insulted the tiny feathery poodle.

This was too much for warm-hearted Dennis. He had the temerity to interfere with a Consul's dog, and the misfortune to be caught in the act by the Consul. Raising his heavy cane, the Consul brought it down on Dennis's back with a thud that rang in the air. He may have intended to strike lightly, but Dennis was fellet to the deck.

There is not much more to tell. The poor little fellow's back was broken by the Consul's cruel blow, and the surgeon, who was hastenly called in, was of no avail.

In a few hours Dennis died, with his head pressed lovingly against Guiney's knee.

They buried him the next day, with genuine grief and singularly inappropriate ceremonies, in which praises of Dennis were spiced with reflections upon the Consul.

Poor Dennis! In a quiet corner in Leghorn he sleeps well. His friends erected a shaft of marble to his memory, and it bears this inscription:

HIS NAME WAS DENNIS.

Underneath this is the date, 1890.

Few tourists who chance upon this marble ever dream that the Dennis thus honored was not a Celt at all, but a small black and white Italian pig, which Guiney bought in Messina for the price of a gay handkerchief.

LUCILE LOVELL.

For the Companion.

MADAGASCAR JACK.

"Look out for a big sperm whale with the stump of a harpoon in his nose, and about fifty fathom of line sowing astern!"

"Ay! Look out for Madagascar Jack. He's a rogue. Ye may know him by the hose-shoe mark on his head. Give him a wide berth; he's a maneater!"

We had here to, to deliver letters and have a chat with the crew of the old whaler, *Cicero*, of New Bedford, then commanded by Captain Taber.

The *Cicero* had been three years on the Indian Ocean grounds, and was homeward bound when we fell in with her. She had eighteen hundred barrels of oil under hatches, and more than fourteen thousand pounds of bone,—so the crew told us. Sure was then a "clean ship." She was named the *Dreyper*, and was outbound for the same waters.

I was then a young man of twenty years and was a boat-steerer on board the *Dreyper*, Captain Lawton, of New Bedford.

Captain Lawton had sent a boat aboard the *Cicero* with the letters, and we laid by her for an hour or two, giving the Captain and crew home news and getting information from the whaling grounds. It was pleasant weather, and the vessels were brought within easy hail of each other.

I remember they told us of a "new island," or at least of one not down on the chart, in east longitude

Madagascar Jack destroys the second boat.

It was from the *Cicero* that we first heard of "Madagascar Jack"; and afterward the *Dreyden*, which we fell in with near Mauritius, gave us further tidings of a certain cross whale with an iron in his back and a white scar on his head.

But the *Dreyper* did not meet him, nor with much else in the way of whales, indeed, during the first year out, and sailed for home two years afterward with a light face.

My next cruise was in the *Jessie*, of Sag Harbor. She was a ship which returned no ounce of the blessed oil the Captain and mate was thirsting for, and it was not till three years after, when I was on the Grand Captain Wyford, that I first saw "Madagascar Jack."

We went through Sunda Straits and cruised on the Indian Ocean grounds for eight months. There we took twenty-one hundred barrels of whale-oil, but thus far not a cask of sperm. Wyford was an elderly man who did not now enter a whale-boat himself. Some, indeed, hold that the master ought never to enter one. But we had a second mate who made up in pluck and daring for anything the Captain lacked.

I have cruised in a good many ships, but never saw Cliff Andrews's match as a whaleman.

One morning during the tenth month of our cruise a whale was sighted in a mile soon after daylight. In fact, we heard him spouting before we saw him. But the Captain would not order the boats down till the men had their breakfast, and the delay chafed Andrews.

We ate our breakfast in a few minutes, and two boats were lowered. Meantime the whale, after blowing a few times, had gone down to feed.

The Captain said that we would not see him again for an hour; but we pulled off to the spot where he had last been heard blowing, and there lay by on our oars.

There were now five of us with Mr. Cummings, and his boat was crowded. How to rescue Andrews from his perilous situation was now our only thought. We dreaded to attract the whale's attention, and dared not approach. Andrews could swim like a dog, as we knew, and at length Cummings hailed him.

"Better take a header under him and then swim for us!" he advised.

"Put in! Put in, man, and fasten to him!" Andrews answered back. "You're not going to show the white feather, be ye?"

"It's not my duty," replied Cummings, "with a boat lashed down to the gunwale! It's for him to get back to the ship with us, make haste!" he again hailed.

Andrews let go the whale, which was still thrashing the fragments of the boat to pieces, and swam off to us. But he was very angry.

Cummings headed for the ship. Most of the men were badly scared.

Meantime the Captain had ordered out another boat. We met it coming off. Andrews, wet as he was, limped in and took command.

"I'll kill that whale, or that whale kills me!" he shouted. "But if there's any man here who can't swim, or is afraid, he had better go into Mr. Cummings's boat."

Four of the crew lost no time in tumbling out; but two of us, who had been with Andrews before, took their places. Andrews seized an oar and we started to pull back to the whale.

The first mate, by the Captain's advice, put his wet men aboard and then followed slowly after us, to pick us up, as he said.

"Boys," cried Andrews, as we neared the whale again, "I'm going to put another iron in him. If he makes for us, jump overboard, swim a few strokes and then tread water." We were round the whale and got within half a ship's length of him, when he settled a little, rose with a half breach, and came straight toward us again.

We as rapidly backed water and tried to steer off; but in a moment the furious leviathan was close astern of us, and threw out his terrible jaw.

"Jump!" shouted the mate; and we all went overboard.

For some reason the whale missed his blow at the boat and rushed by, going in the direction of the ship. As we swam we could hear the shouting on board.

Cummings got his boat to lee of the ship. The whale coursed back and forth, exhibiting unmistakable evidences of angry defiance. They feared that he would run them aboard.

On our part, we saw that our boat remained uninjured, and returned to it, the last man of us we climbing in, when the mate again shouted, "Jump! He's coming!"

I took a long inside cut, on the side next the ship, and as I rose, I heard a crash behind me. The whale had returned and made an end of the boat this time.

We all swam in the direction of the ship, and Mr. Cummings's boat stole cautiously round the bows and picked us up.

Meantime, "Madagascar Jack" was thrashing the fragments of our second boat to pieces; there could be no doubt as to his fighting quality. We had already lost one man and two boats; and the Captain deemed any further effort to kill him useless and extra hazardous. So thought most of the men.

But the second mate held out and exclaimed:

"Is there a man who will go with me for a set at that old man-killer, or will ye see me go alone?"

The Captain did not exactly forbid it; and three of us, Coles, the blacksmith, a boat-steerer named Preston, and I, volunteered to accompany Andrews to make a third attack on the whale.

We pulled round the bows in Mr. Cummings's boat and hoved the whale at a little distance, near where he had stove the last boat.

A few drops of rain were falling, and the mist had settled again instead of clearing.

"Ship your oars and take the paddles," said Andrew. "Dip easy."

He picked up the boat's lance instead of the harpoon. "If we can creep up where I can get a good set at him just behind the hump, it's all I ask," he continued, under his breath.

Insensitively we angled the black back of the monster through the mist, not half a cable's length away. He seemed to be lying there as if on the watch for us. Then, after a moment or two, he threshed the floating spinners of the boat again.

With hearts thumping hard, for we felt it to be a matter of life and death, the boat was propelled forward on the left side of the whale, and gibbed past his flukes. Andrew thrust his foot on the rail, and seized the lance pole to both hands.

The whale moved slightly forward; but the boat continued overreaching him for several seconds, till we were nearly abreast his shoulder.

Then the mate lunged at him with a will, burying the lance to his sole.

He had struck the "life;" for the lance entered so deeply that Andrew's hand half overlapped with it.

The whale spirtted spermaceti copiously, then started forward, stirring in the immediate of the boat before we could object. We jumped out and used as deep as possible, to escape a second blow.

I swam under water for two strokes or thirty yards, and when I rose, I got the brine out of my eyes, I saw the whale making off. Andrews and both the others had risen near me; and a moment after we all saw blood fly from the animal's spiracles.

"Madagascar Jack" was done for at last. He lingered instant for ten or fifteen minutes, however.

They could not see us from the ship; but they had lowered another boat, and on Andrew's triumphant hail, came and picked us up.

This whale made eighty-five barrels of sperm oil; and we had, moreover, the satisfaction of having rid this ocean of a dangerous "rogue."

CAPTAIN S. WATKINS.

TIME-KEEPERS.

How did the ancients mark the hours?

How did King Alfred do this?

When and where were the first watches made? Were clocks made earlier or later?

What regulates the movements of a watch, and how? How is it with clocks?

How are clocks regulated by electricity?

What is a chronometer, and for what is it used?

THE PORTRAIT OF A GENTLEMAN:

Thackeray's "Esmond."

With that mind-vision that transcends
A hundred-fold our natural sight,
I see him clearer than the friends
Of this to-day, and yet I write
Of one who fought in Marlb'ro's wars,
Whose periwig is "temp Queen Anne;"
Here is the Hall, push wide the doors—
The "Portrait of a Gentleman!"

It hangs against the wainscot brown;
The sunshine from the lozenged pane
Shows the dark face, the sombre frown,
The long, sad features, gaunt and plain.
You know him? Well, he was not much
To look at—and a ray the while
Has reached his eyes;—I think the touch
Of Beatrix could make him smile!

I need not tell you of his race,
Whose pictures smile along the wall—
Smiling is often easier grace
Than frowning—but you know them all,
"My Lord," that hath a royal air,
"Young Frank," grown foreign overseas,
And "Trix," red-stockinged on the stair—
My "Gentleman" is none of these!

The heartache of a lonely youth,
The bitterness of love refused,
That deeper wronging when the truth
Broke on him of fair trust abused,
Have left him, colder, sterner still,
And that last failure touched his pride;
Henceforth, plain "Colonel," if you will,
The Marquisate a thing denied!

The walls grow thin as air, and see!
The smiling pictures fade away,
This thick green volume on my knee
Holds all of Castlewood to-day!
But stronger than a castle wall,
And longer than our lives' frail span,
Esmond will stand among us all,
"The Portrait of a Gentleman!"

G. B. STUART.

For the Companion.

SHE "DID IT NOT."

Harry Fawcett came out of the dining-room and lingered irresolutely in the hall. It was Sunday morning. He had breakfasted late, as usual, on that morning. On other days he was at his office before nine.

"A young lawyer," he said, "must look as if he had business, if he means to have any," and Harry, though a rich man, was ambitious to do good work in his profession.

He took out his note-book and glanced over his engagements for the day and week: dinners, breakfasts, balls, theatre parties. Harry was a favorite in society.

Somehow, to-day, these things bored him. It suddenly flashed on him that his life was poor, and filled with trifles.

"There is some stuff in me fit for better work than this!" he thought, as he stood in the hall, hesitating.

There was a picture by Corot in the drawing-room. He looked at it.

"If I could paint something that would last, or write a book! Something that would give thousands of people comfort and happiness when I am gone!" he thought.

On the other wall was a copy of Vibert's picture of the returned missionary priest, showing to his superior his scars given by the savages. Harry's blood warmed. "I, too, could sacrifice myself for a great cause," he said. "But what cause do I care for? There is not a single great purpose or meaning in my life."

He looked out at the sunny street, down which the people were hastening to church. He grew grave and thoughtful. He remembered how, when he was a little fellow, his mother took him to church. Her religion had been her life. She had died when he was still a boy.

"Is her faith what I need?" his soul asked, groping in the darkness for something live and real.

His sister was a professedly religious girl. She was very active in church work. But he had never spoken to her of her religion. She was coming now, on her way to church.

She came down the stairs buttoning her glove. Something in her brother's face startled her. Could Harry be unhappy? If they were more intimate she would ask him what troubled him. She hesitated, and he came quickly up to her.

"Going to church, Alice?"

"Yes, of course."

"It—counts for a good deal to you, eh? Church, I mean. It is a help—a—kind of life, I suppose?"

"There is not much help in Doctor Ray's sermons," she said. "He has no ability. And the soprano has a wretched voice."

He walked with her out of the door. There was a hunger in his soul that must be stayed. Even her jesting tone did not drive him back.

"She has the secret. My mother had it. I might learn it. There, perhaps,—in the hymns or prayers—somewhere."

But Alice joked about the hats and gowns of the women they passed. "If you will come to church you will see such guys!" she exclaimed. "It is a perfect study on costume."

"Thank you. I will not go."

He left her at the corner and sauntered down to the club. That night when they met at dinner he was his usual gay self.

"Are you quite well, Harry?" she asked. "I thought you looked pale and troubled this morning."

"I fell into an anxious mood, and was inclined to take life seriously," he said, somewhat bitterly. "But nobody else does it, and why should I?"

"Your trouble is gone, then?"

"Oh, quite gone!" he said.

She was silent, for in spite of his light tone she felt that he blamed her. What had she done?

She puzzled about it during dinner, but soon afterwards forgot it. Harry and she journeyed side by side through life for years. But between them there was a great gulf, and she never tried to cross it. She had lost her opportunity.

POSSIBLE INCREASE OF COLD.

No one who has poked about the rocky ribs of New England can have failed to see some of those grooves and scratches on the bare ledges of the hills and on the sides of huge boulders, which geologists assure us have been caused by the grinding of the rocks under the great sheet of ice, thousands of feet thick, which once covered North America as far south as the latitude of New York. The ice, being piled higher toward the north, kept pressing slowly southward, and the fragments of rock that it broke off from peaks and ridges, being carried along beneath it, did the grinding.

These things occurred many thousands of years ago,—just how many thousand no one is able to say with certainty,—and the time when the great ice-sheet existed is called the glacial epoch, or the ice age.

Even to-day a glacial epoch, on a comparatively small scale, reigns in Greenland; for that strange continent is completely buried under an enormous blanket of ice, which is continually pushing its way down into the sea all around the borders of the land, where the vast fragments that are broken off float away in the form of icebergs.

Now there is reason to believe that the earth has experienced more than one glacial epoch, and that others may yet be in store for it, owing to certain periodical changes in the earth's orbit, or path around the sun.

For instance, winter now occurs in the Northern Hemisphere when the earth is nearest to the sun; but in about ten thousand years it will occur when the earth is farthest from the sun. The winters in this hemisphere will then be longer and colder than they are now, and the result may be the accumulation of great quantities of ice and snow.

Observations recently collected in Paris show that the temperature of Europe has been below the average ever since 1885, and it has been suggested that this fact may indicate that a period of cold, possibly a real glacial epoch, has begun to set in.

Such a conclusion would be somewhat startling if the falling off in temperature were very great; but in fact it has been only a fraction of a degree, and it has not yet been shown that a similar change has taken place in America and Asia. Possibly this may yet be shown.

But as to a new glacial epoch, even if we should admit that one is approaching, thousands of years would probably elapse before the invasion of the ice became a very serious matter.

DIOGENES IN PARIS.

Diogenes, looking in the street with a lantern for an honest man, had a sort of imitator in a wealthy citizen of Paris who died recently. Having a fortune of a hundred thousand dollars, and no heirs, this man resolved to bequeath his money to some person who had proved to be perfectly honest without any motive of policy. He had retired from business, and spent his time in riding up and down Paris in omnibuses. He always stationed himself near the front part of the interior of the omnibus, where he would have an opportunity to pass up to the driver the fares of passengers, and hand back the change.

Frequently, when the change was of a character to admit it, he quietly slipped into it, after the driver had put it into his hand, a fifty-centime piece—the equivalent of about a dime, and awaited the result.

A Parisian newspaper asserts that the old man rode up and down the streets for eight years, during all of which time not a single passenger upon whom he had bestowed the coin saw fit to restore it to the driver, from whom it was to be supposed it had come.

But at last, one day when the elderly cynic had slipped his usual small silver piece into the change for a five-franc piece, and passed it to a young working-girl who had entered the omnibus, he was delighted to hear her say in a clear voice to the driver: "But, driver, you've given me fifty centimes too much!"

The old man said nothing, but made inquiries about the young lady; and having ascertained her name, family and circumstances, he made a will, entirely unknown to her, bequeathing her all his property.

Lately he died, and the young woman came into possession of her benefactor's fortune of a hundred thousand dollars—a large return, surely, for a restitution of ten cents.

The story is told as a true one, but if it is really true, honesty is a virtue much more rare in Paris than it is in this country.

CLOCK-WINDING SNAKES.

The people of Persia are very unwilling to have house-snakes destroyed. The creatures do no harm, and what is far more important, they are believed to be tenanted by the spirit of the late master of the house. English travellers and residents in the country naturally entertain a very different opinion, and sometimes find the superstitions of the natives a trial hard to bear. Doctor Wills, in his "Land of the Lion and the Sun," recounts one of his own experiences.

In my first house in Shiraz, an old and handsome one, I was continually annoyed by a buzzing, as of the winding of clock-work. This, I was told, proceeded from the snakes, but I never saw one, though the buzzing was to be heard in all parts of the house.

One morning I was attracted by an unusual twittering of birds, and on looking out saw some thirty sparrows on the top of a wall, all jumping about in an excited manner, screaming, chattering, and opening their beaks as if enraged.

At first I was at a loss to understand the cause of such a commotion, but presently I saw a pale-yellow snake advancing deliberately upon the birds from the wooden window-frame, out of which he hung. They appeared to be all of them quite fascinated, and none attempted to fly away. The snake did not take the nearest, but deliberately chose one more to his liking, and swallowed it.

Glad to be rid of my buzzing annoyances, I got my gun, and notwithstanding the entreaties of the servants, some of whom wept, assuring me that the reptile was inhabited by the late master of the house, I gave him a dose of duck-shot.

He was a big snake, about four feet long. I cut him open and extracted the sparrow. After some ten minutes' exposure to the sun the bird got up, and in half an hour more flew away, apparently unhurt.

Shortly afterward a servant of my landlord came and took away the snake's body, and all my own servants sulked and looked black for a week. When I spoke to my landlord, however, an educated man, he laughed, and simply congratulated me, saying that the clock-winding snake had annoyed him for years. I never heard the noise again.

For the Companion.

AUTUMN SONG.

Fair Autumn stands by the maple-tree,
(Ah! but the Winter follows!)
And drops the bright leaves down to me,
Or blows them away on the north-wind free,
Across the meadow, across the lea,
Over the hills and hollows.

The squirrel runs to the chestnut tall,
(Ho! but the frost's cold fingers!)
And rattling down the ripe nuts fall,
But never a squirrel shall have them all,
While the lads and lassies merrily call
Through fields where the aster lingers.

The witch-hazel waves her fringe of gold,
(Hark! to the winds a-sighing!)
The hunter's moon shines over the wold,
The days grow short and the nights grow cold,
And the weary year is getting old,
While the withered leaves are flying.

DOROTHY GRAY.

HE BOUGHT THE QUAIL.

In Mr. Barry's "Russia in 1870," the author remarks upon the unlimited and irresponsible power which the proprietors of large estates had over their dependants in the days of serfdom. One proprietor caused a man who had offended him to be locked into an iron cage, and confined him in it for a length of time. Happily, however, the proprietor himself was a man under authority, and his day of reckoning finally arrived.

While the oppressor was absent on a journey, the case of his wretched prisoner came to the knowledge of the governor of his province. The governor caused the man, cage and all, to be brought to the government town, and at the same time sent a messenger to intercept the tyrannical proprietor on the road, with an invitation to dinner.

The proprietor was flattered by the courtesy, and presented himself at the government house at the time appointed.

There was then a curious fashion in Russia of keeping live quails, whose notes were greatly admired by connoisseurs. The governor was famous for his collection of these singing birds. The dinner was good, the company merry.

After the cloth was removed, the governor addressed his guest:

"Now, Ivan Simonovitch, I know you are very fond of quails, and I have a beauty which I don't mind selling you."

"Very well, your excellency; if the bird is not too dear, I will buy it of you."

"Bring in the quail," said his excellency to the attendants.

A very ordinary sort of bird, in a wooden cage, was introduced.

"I want to sell you that bird for ten thousand roubles," said the governor.

The proprietor could not understand the joke, but declined the bargain, as he thought the bird a little too dear.

"Well," said the governor, "I will show you a better bird than that, and I think you'll buy him. Have the other quail brought in."

Folding doors flew open, and the iron cage with its miserable captive was set down before the astonished guest.

"Now," said the governor, "what do you think of that for a quail? But this is a very expensive bird; I want twenty thousand roubles for him!"

"All right," said the alarmed proprietor; "I will buy this one. Send him down to my works without the cage, and your messenger shall bring back the amount."

History does not add that the poor peasant profited by any part of the twenty thousand roubles.

TREED BY PECCARIES.

The peccary is found in large herds in Mexico, Arizona and Southern Texas. If one of the herd is wounded by a shot so that it squeals, the whole herd will charge the hunter on sight. He can escape being devoured only by flight or by climbing a tree. In "The Big Game of North America," Mr. A. G. Requa says that he and three other sportsmen were camped in the mountains, forty miles from Hermosillo. It was arranged that they should try to get close to a herd of peccaries, and near several trees.

One man was to shoot and cripple a peccary, so that he would squeal. The hunters were then to show themselves, and on being charged by the herd, to climb the trees, from which they might kill every peccary.

The next morning, therefore, the hunters started up the mountain, each with a hundred shells. Mr. Requa, seeing a flock of wild turkeys, separated from his companions, and walked a long distance to get a shot. The others went on. He shot one turkey and sat down on a rock to rest, taking off his coat, for it was very warm.

Five minutes after, a dozen peccaries came in sight, and as there were plenty of small pines to serve as a refuge, the hunter thought he would kill the whole herd, provided they showed fight. He fired at one and crippled it. The pig squealed, and the peccaries came in such numbers that Mr. Requa started for a tree, forgetting in his excitement his coat and turkey. He had scarcely time to get up when two hundred maddened peccaries were squealing around the tree.

He killed five, that being the number of shells in his rifle, a Marlin repeater, when he remembered that his ammunition was in the coat he had left on the rock. So he threw down his rifle that it might not burden him, retaining two revolvers and a belt full of pistol cartridges.

The peccaries were gnawing the base of the tree, and climbing over each other trying to get at their enemy. Each shot from his revolver knocked over one, but made the others more furious. They rushed at the tree, gnawed at the bark and wood, while flakes of froth fell from their mouths.

Remembering that his cartridges would soon run out, the hunter stopped shooting and counted the dead hogs. He had killed twenty-three, but there were over two hundred left.

His position was uncomfortable, but the peccaries showed no signs of leaving. It was noon and very warm, and he was getting tired of being treed. He thought of his companions, and remembered that he had not fired the three shots from a revolver in quick succession—the signal agreed upon. He fired them and killed three peccaries, and then waited.

Three o'clock came, but no signs of his comrades. Fatigue made it hard for him to sit on the limb, and he took off his belt and buckled himself fast to the tree, so that he could not fall.

At seven o'clock the sun went behind the mountain, darkness came on, and with it hunger and thirst. At twelve o'clock the moon disclosed his guard scattered around. At two o'clock something, a grizzly or a puma, alarmed the hogs, and they went scampering down the mountain.

Unloosening his belt, Mr. Requa descended the tree, but was so stiff and cramped that he could hardly walk. The turkey had been eaten and his coat thoroughly chewed. He reached the camp at daybreak. Two of the boys were out on horseback hunting for him.

NOT FOR HERSELF.

It gives some women a deep and almost oppressive sense of responsibility to be entrusted with the selection of a pair of gloves or a yard of ribbon for another woman. "It isn't for myself," said an anxious-looking customer at the ribbon counter of a large dry goods store, one afternoon, when the clerks were busiest. "If it was for myself I should know exactly what I wanted and wouldn't waste any time over it. But—"

"Did you say dark or light green ribbon?" asked the clerk.

"She said dark, and yet not too dark, so I don't exactly know what to get. If I were going to use it myself—"

"How would this do?"

"Well, I hardly know. It seems a trifle light to me, and yet maybe it wouldn't be. I don't know just what it's to be used for, which makes the matter all the more perplexing."

"How wide did you want it?"

"She said from two and a half to three inches, which is, of course, rather indefinite. It's for a friend of mine living in M——, and she simply wrote for a yard of dark green ribbon, from two and a half to three inches wide, at from thirty to forty cents a yard, and I am puzzled to know just what to get. If it were for myself—"

"You didn't want satin ribbon?"

"She didn't say, and I don't know whether to get satin, or grosgrain, or watered ribbon, or ribbon with a plain, corded or picot edge, or what. Everything is so indefinite about it. If I knew what she wanted it for, or had some little hint to go by, or if it were for myself,—but as it is, I'm entirely in the dark.

"I think, on the whole, I'd better write and get more definite information before selecting anything. Yes, that's what I'll do, and then I'll not make any mistake."

QUITE PERMISSIBLE.

Mrs. Wiley was one of the people who enjoy, more than everything else, managing other people's affairs. She was such a power in her family and among her friends that she had at last come to believe that very few things were done without her advice and consent, either in her own home or elsewhere.

As she grew older her way of mentioning the control she exercised over everybody within her reach became more and more decided, and was now often the occasion of no little amusement.

Her husband, a very old gentleman, some ten years her senior, and quite feeble, had frequent attacks of sneezing, which did not seem to presage any cold, or to give him the least discomfort. Often he sneezed sixteen times in succession as he sat in his big arm-chair, reading the paper laboriously.

"Your husband's quite a hand to sneeze, Mis' Wiley, aint he?" said a little seamstress who was sewing for the family one day, when the old gentleman had had several of his longer attacks.

"Yes, he is," admitted Mrs. Wiley, "and for a long time I used to reason with him about it, and had him pretty well broke of the notion. But now he's consid'rable old, and he aint got much to occupy him, and sneezin' kind of takes up his time; and so, if he enjoys it, I just let it go, for when all's said and done, it's a harmless kind of habit!"

"NO PUBLIC SPEAKER."

Richard Coleman of Virginia, while yet a very young man, was made judge of one of the eastern circuit courts. Before his appointment he had led a quiet, studious life, and had obtained no extended reputation except among lawyers.

Shortly after he went upon the bench a cruel murder was committed in his district by a notoriously bad man. The murderer was taken, tried and convicted of murder in the first degree.

In pronouncing the sentence of the law upon the prisoner, Judge Coleman spoke with so much feeling and eloquence that many of the listeners were moved to tears. The murderer, on the other hand, seemed to be quite indifferent, looking at the ceiling and apparently paying no attention whatever to what was being said.

After he was remanded to jail one of the young lawyers went into the cell, curious to know how the criminal had felt when the judge was passing sentence upon him.

"What do you mean?" asked the murderer.

"I mean when the judge was telling you that you were to be hanged."

"You mean when he was talking to me?"

"Yes."

"Oh! I never paid no 'tention to Dick Coleman; *he* aint no public speaker, nohow."

GOOD SLEEPERS.

The author of "Bulgaria Before the War" says that the Turks devote to sleep any spare half-hour that may happen to be at their disposal. At night, he says, all his companions would be in the land of dreams within ten minutes, while he lay wide awake and envious.

It has often struck me with astonishment to see the little respect any one in Turkey pays to sleep. When I have been staying in the villages I have often heard a member of the family get up, and after searching about among his sleeping companions, arouse them all to ask where his tobacco was, or upon some equally slight excuse.

A lad of eighteen would thus wake up his father, a man of sixty, perhaps, two or three times in the night, and yet there would never be an angry word of remonstrance; and when I have snapped savagely at some one for walking into my room and over my body in the middle of the night, my snappishness has caused the greatest astonishment.

Many times I have turned in with natives in the same room with me, and though I was generally tired and my companions not, yet I think I may say I was invariably the last to close my eyes.

For the Companion.

A HYMN FOR A CHILD.

For all the pleasant things I see,
I must give thanks, dear Lord, to Thee!
The bending sky, so blue, so bright,
The daisy-meadows, green and white,
The silver moon and golden sun,
'Tis Thou hast made them, every one.

The robin in the blossoming tree
Sings "Praise!" and "Praise!" and "Praise to Thee!"
The sea-gull on the waves afloat
Still utters "Praise!" with harsher note.
In every voice of beast or bird
Their love and thanks may still be heard.

And I, who am Thy child indeed,
Shall I not give most careful heed
To praise Thee with a thankful heart,
To do Thy will in every part,
To keep myself all pure and sweet,
As for a child of God is meet!

LAURA E. RICHARDS.

For the Companion.

HOW JET STARTED WEST.

As told by Tommy.

Jet is my Aunt Bee's black pony. He's as pretty and gentle as you ever saw, and quite fast, too. Aunt Bee always talks to him as if he knew every word she said, and I just believe he does.

When she goes to hitch up she slips on the harness, and smooths his mane and foretop, and pats his nose, and then says, "Now come around this way, little pony." And he goes without leading, and steps between the thills, and she hitches him to the buggy. And then she climbs in, and takes the lines and says, "Now go right along, Jet, dear!" And off he goes, proud as you please.

She don't have to put on any old check-rein to make him hold up his head. No sir! Aunt Bee'd never do such a thing. She says it makes a horse's neck ache, same as mine did, when I looked up too long, trying to count the little round do-funnies on a Chinese kite.

Last month we concluded we'd go and live in California, and Aunt Bee said she would go with us. So she sold her place, and packed up her things, and came to stay at our house till we were ready. But she left Jet in his old pasture, and asked a near neighbor to look after him.

In a few days this neighbor came over and said, "Mrs. Beaman, I believe your horse is quite sick."

"Oh no," Aunt Bee said, "not really sick, I guess, but maybe he feels bad because I left him."

"Well," the neighbor said, "he doesn't run and play as he used to, and he won't eat a bite, but just stands at the bars with his head down, and doesn't notice any one. I think he's a pretty sick horse."

But Aunt Bee said she guessed not. She'd been so rushed she hadn't really explained to him why she came away, and probably he felt hurt about it.

So she went right over to see him, and she talked to him quite a while.

She said, "Did you think I'd gone and left my little pony? Not a bit of it! You see, I'm going to California, Jet, dear, but I'll take you along. You shall go on the big train in a nice car, and you shall have a good home when we get there. And I'll never leave you, Jet, dear, and don't you ever think it!"

So she patted him and stroked him and laid her head on his neck, and when she picked some grass he nibbled it, and seemed to feel a great deal better.

And then Aunt Bee said, "Come now, little pony, let's have a run." And she laid one hand on his mane and said, "Now come right along, dear!" And he trotted along beside her till she let go and clapped her hands, and then away he went, running and jumping and playing just as he used to.

Well, he was all right after that till she sent the man that was going to take care of him on the way, to put him into the car. The man came 'round in the evening and said she might as well sell the horse, for he wouldn't budge one step to go in.

"He's not for sale," said Aunt Bee, "but I do suppose I shall have to put him in myself."

So she went down next morning and got Jetty, and led him towards the car. The men were there, and they just stood back and laughed to hear how Aunt Bee talked to her horse.

I saw 'em, but Aunt Bee didn't look 'round nor take the least notice. She just patted the poor little pony, that seemed 'most scared to death, and said, "Come now, Jetty, this is the nice car that you're going to ride in to California. And Joe will go with you all the way and give you a drink whenever you want it. And I'll meet you when you get there, and you shall have the nicest little barn ever you saw. Now you must go right in with me. Nothing will hurt you. Come right along now, that's a dear!"

And she didn't try to lead him by the halter, but put her arms 'round his neck, and he walked in with her like a lamb.

I guess those men were some astonished when they saw that. But Aunt Bee said he would have gone in for anybody, if they had been half-way polite about it.

Well, that's the way Jet started to California, and he got there all right, too. But I do wish he could talk, for I want so much to ask him what he thought of the trip, and whether Joe was half-way polite to him.

EUDORA S. BUMSTEAD.

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

My *first* does a lady flirt and twirl;
My *second's* the name of a man;
Now do my *third*, find a pretty girl,
And dance my *whole*, if you can.

2.

10. That may be carried.

Zigzags.

Commencing at the first letter of the first word—The name of the inventor of a useful article, who died on Sept. 16, 1736.

Commencing at the last letter of the first word—The name of a State admitted into the Union on Sept. 9, 1850.

C. D.

3.

NUMERICAL ENIGMA.

The answer, composed of 83 letters, is a quotation from a noted American statesman, who died on Sept. 19, 1881. His name is added to the same.

The 1, 2, 33, 6, 17, 34, 30, 4, 9, 22, 25 is molded into an orb.

The 32, 55, 10, 3, 48, 5, 47, 65 is pressing necessity.

The 7, 23, 29, 39, 8, 35, 24, 16 is the worship of animals.

The 40, 63, 11, 31, 54, 20 is shown.

The 14, 38, 12, 15, 21, 45, 42, 44, 51, 13 are collections of living animals.

The 46, 18, 41, 68, 69, 53, 36 is foolish.

The 76, 78, 19, 64, 26, 79, 80, 81, 72 is one who pleases.

The 43, 67, 52, 58, 82 (or 59), 71, 27 are very small portions.

The 61, 77, 39, 60, 28, 75 is to exile.

The 66, 49, 50, 70, 56, 57, 37 is peevish.

The 73, 83, 62, 74 are the 15th day of March, May, July and October and the 13th of the other months.

4.

CALENDAR PI.

Mr. T. T. Stahphy, thy bread I see;
Mr. V. N. Joan, I plunder a bee.

A. M. P.

5.

LOGOGRIPH.

I scratch, I scratch,
As I utter this sound;
Beheaded it's longed for
All the world round.

3. Easel, Dutch, Idler, Style, Ought, Nerve.—Edison.

4. Many years ago, the bold headland, Tarifa, stretching out from the coast of Spain, was the headquarters of a gang of Mohammedan pirates who exacted tribute or toll from every ship passing through the straits of Gibraltar to or from the Mediterranean. This process was called Tarifing, and gave rise to the word tariff, so influential in political life.

5. Great rats, small rats, lean rats, brawny rats,
Brown rats, black rats, grey rats, tawny rats,
Grave old plodders, gay young friskers,
Fathers, mothers, uncles, cousins.

Somewhat back from the village street
Stands the old-fashioned country-seat.

For the Companion.

BRIGHT LITTLE MICE.

A great, white cake, without sugar or spice,
First round, then nibbled, then only a slice;
Where did it go? Does any one know?
Just ask the sly little twinkling mice.

LITTLE NELLIE was in great glee over a promised visit across the country to grandma's. She heartily agreed to the stipulation that she should get up bright and early. When awakened at four o'clock in the morning she protested against being disturbed. "Why, you *said* you'd get up bright and early," reminded mamma. "Yes, I know," admitted Nellie. "But this isn't bright and early. It's *dark* and early."

A POOR "PERVIDER."

Abijah Stokes, for a long time owner of the one small shop in Cyrusville, was an elderly bachelor who, to use the expression commonly applied to him by his friends, was "some cranky, but a turrible good hand to jedge o' things in gen'ral." He had taken his meals for many years at the "tavern," and always expressed himself well satisfied with the food; but, unfortunately, the tavern changed hands at last, and the new man was by no means as liberal or careful in supplying the table as his predecessor had been.

Abijah was not one of the grumbling sort, but it was observed that he accepted invitations to take dinner or tea with his hospitable neighbors with much greater alacrity than in times past, and that occasionally he even courted such invitations.

He did not wish to hurt the new proprietor's trade, however, and for a long time was guarded in his replies to the questions with which he was plied. One day he was asked to take Sunday dinner with a family, the mistress of which was renowned for her good cooking. He accepted with great thankfulness, having been kept on particularly short and poor rations for some days previous to the invitation.

When he saw the first slice cut from the great roast of beef his eyes glistened, and when his plate had been well supplied and the meal was fairly under way, the host said, casually, "How is the table over 't the tavern, nowadays, Bije? I aint heard you make any special mention of it, 's I know on."

"Wa-al," said Abijah, slowly, evidently drawn on to speak by the richness spread before him, "you know 's well es I do, Samu'l, they's some es is extry good perviders, an' others es aint; then agin, they's some 't are more pertick'ler abaout the meat 'n others. Naow, in course," he concluded, after devouring a large mouthful of the beef, "when the yoke hes callused on the neck o' the ox fer from ten ter twelve years, the meat you git, aint, so to speak, over'n above juicy, an' it don't appear ter *relish* much!"

A GOOD FEE.

Ministers in New England villages are not usually the recipients of liberal salaries, and the number of marriages in a year is seldom large enough to make the fees much of an addition to the slender sum. The fees themselves are apt to be slight, and sometimes are omitted altogether, although the clergyman is usually presented with some little "remembrance" of the happy occasion.

One clergyman has a good many amusing stories to tell of his "wedding experiences," but he once received a wedding fee which has never been duplicated, and which he says lasted ten times as long as any other which was ever given him.

He performed the ceremony which united the daughter of the Widow Robbins, the thriftiest housewife of his parish, to a poor but estimable young man, whom the widow had selected for her son-in-law, and with whom her daughter had dutifully fallen in love.

The wedding was a merry one, and as the "officiating clergyman" was putting on his coat in the hall, ready to start for home, the Widow Robbins bustled out to him and said, "I sent Harry over with your fee about half an hour ago, Mr. Lathrop. I told him people wouldn't miss the groom for a few minutes; and sure enough they didn't. He said he gave it to your wife, and I hope you'll like it; you always *have*!"

Mr. Lathrop murmured his thanks and hurried home, to be greeted by his wife, whom a severe cold had kept in the house, in a voice shaking with suppressed laughter.

"Where is my fee?" demanded the clergyman. "I hear it has been put in your keeping."

"It's on the dining-room table," faltered his wife.

He strode out to the dining-room, and there on the table were ranged four rows of glass jars, three in each row; they were well filled, and labeled respectively, "currant jelly," "chili sauce," "sweet pickles," and, last but not least, "raspberry jam."

"We had a good laugh, of course," says Mr. Lathrop, "but we also had some of that 'fee' the very next day, and we never enjoyed one better."

EARTHQUAKES.

Several shocks of earthquake which have recently been felt in various quarters of the globe at about the time of the new moon recall the interesting theory that the earth is more frequently shaken near the periods of new and full moon than at other times. Lists of earthquakes covering many years have been prepared, which seem to favor this theory.

The reason assigned is similar to that by which we are able to account for the greater height of the tides at new and full moon.

When the moon and the sun are on the same side of the earth, as is the case at new moon, they unite the force of their attractions in heaping up the waters of the sea. The same thing happens when they are on opposite sides of the earth, as at full moon, for then each, by attracting in an opposite direction, assists the other in pulling out the ocean, so to speak, as one might pull out the sides of a rubber ball.

According to the theory in question, the same forces of the sun and moon which raise the tides put a strain upon the crust of the earth which, by causing the strata of the rocks to slip and slide a little, produces earthquakes.

When the moon is at its quarters its pull is at right angles to that of the sun and then, as is well known, the tides are lowest. Then, too, it is argued, the strain upon the crust of the earth is least.

If this theory is true, how wonderfully sensitive the apparently solid globe must be to the impulses conveyed to it by the attraction of bodies hundreds of thousands and millions of miles distant!

SINGULAR.

A fourteen-year-old boy at school wrote this sentence in an exercise: "Ten men and four voman." His teacher pointed out to him the sentence with the remark:

"Is it possible that you do not know, after all these years at school, that the plural of *woman* is *women*?"

The boy scratched his head in a somewhat disconcerted way.

"Anyway," he said, "I've often heard my father say that woman is a singular creature!"

Itching Piles.
Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

MINING CAMP NAMES.

In travelling through the mining districts of the Rocky Mountains, one is often surprised and amused at the queer, fanciful or poetic names given by miners to their mines or claims, or even to the little log-cabins in which they live. The writer has in an old note-book a list of such names, gathered in and around Leadville.

The list begins with "Sweet Marjorie," a name given to an undeveloped claim far above timberline. Near by was the "Girl I Left Behind Me," owned by a manly, honest-looking young fellow of twenty-two or twenty-three, who no doubt had many happy, helpful thoughts of the girl he had left behind him while working eagerly and hopefully on the claim that might make them both rich.

Down in the gulch a brawny, full-bearded man was wielding the pick vigorously in the tunnel of the "Baby Belle" mine, while a post driven in the ground not far distant indicated the location of "The Little Sass-box" claim.

In another gulch were claims called "My Sweetheart," "Dandy Jim," "Just My Luck," "Daddy's Delight," and "Gun of the Range." The "Pretty Polly Pemberton" had become a paying mine, while near by two boyish-appearing young fellows had staked out "The Last Cent" claim.

"It means," one of them said, "that we've spent our last copper for tools and grub to keep us alive till we see if there's anything in this piece of ground."

"And if there is not?" I said.

"Well, then we'll get somebody to grub-stake us on a claim until we strike something. People don't starve to death in this country anyhow."

Nevertheless, there was a claim not far distant called the "Starvation."

"The Fairy Queen" and "Morning Star" were favorite names among the miners, and the "Last Chance" and "Last Hope" were not uncommon. One deserted shaft had a bit of paper tacked to a post to indicate that its name was "The Fair Dream." The long-deserted shaft and the sunken roof of the cabin near it told their own sad story of a "fair dream" that had come to naught.

Over a cabin door was a pine board on which was painted in black letters, "The Missouri Lead." In the cabin there lived a boy of nineteen who was prospecting "on his own hook," as he himself said when he came to the door with his hands covered with dough from the "batch of biscuits" he was making for his supper.

A humorous vein in the owners of some claims was indicated by such names as the "Thompson's Mule," "Hello," "Sassy Jane," "Busted," "Hanner Marier" and "Here We Air" claims.

The owners of claims with such names as these were likely to be quite as happy without as with the fortunes they sought for in the granite walls of the mountain slopes. In many cases they were better off seeking wealth than they would have been in the sudden possession of it.

UNTRUSTWORTHY.

Fame has its own peculiar bitterness. "Isn't it pleasant to go back with laurels to your old home?" asked some one of a celebrated artist, who replied, quizzically: "It would be, except that many of my townsmen think me a house-painter. That is a worthy trade, but still it is not *my* trade." Yet such a sting is not the sharpest to be imagined.

A century ago there lived a famous almanac-maker, named Partridge. One day, while travelling in the country, he stopped for dinner at an inn, and afterwards called for his horse, in order to continue his journey.

"If you will take my advice, sir," said the hostler, "you will stay where you are, unless you want to be overtaken by a heavy rain."

"Nonsense," was the reply. "It doesn't look in the least like rain."

He proceeded on his way, and was thoroughly drenched by the shower in which he had refused to believe. Turning back, he was met by the hostler, with a broad grin.

"Well, sir," said the man, "you see I was right, after all."

"Yes, you were right, and now you must tell me how you came to know about the rain."

"Well, sir," replied the man, "you see we have a book at our house called 'Partridge's Almanac,' and whenever that fellow promises us a fair day, we know it will rain. Now this day is put down in the almanac as 'settled fine weather.' I looked at the prediction before I brought your horse out, and that was how I could put you on your guard."

TRULY RESIGNED.

There was once a certain old lady whose son, late in life, married against her wishes. The wife was everything that could be desired, and yet the old lady had not intended her middle-aged "boy" to marry at all, and loud were her complaints thereat. Finally the minister called, to essay consolation, and remind her that it was hardly best to make the neighbors the confidants of her woes.

"I am sure Huldah will prove a dutiful daughter to you," said he.

"She'll do as well as she can," grumbled the old lady, "but her best 'll be bad enough."

"Well, you know the deed is done, now, and nothing you can say will prevent it."

"I know it. If he had only heard to me in the first place, it never would have happened."

"But, my dear madam, this is not making the best of things."

"There aint any best to some things!" snapped she.

"If you could only be resigned —"

"Resigned? I'm always resigned when things go as I want them to!"

Evidently there was no more to be said.

BEGAN WITH "A."

In London one evening, writes a correspondent, I was looking for the Alhambra. Not knowing exactly in which direction it was, I stopped to inquire of a passer-by, when suddenly the name of the theatre escaped me entirely.

The situation was awkward, but I said:

"Do you know where that large theatre is near here—the name begins with 'A'?"

The man replied at once:

"Oh, you mean the 'Aymarket, sir."

IN some places a yeast cake is known as a "two-cent razor."

Children are often irritated and made sick by worms. A simple and effective remedy is found in "*Brown's Vermifuge Comfits.*" They contain nothing injurious. [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

APHASIA—A CASE.

The vocal organs are one thing, the power to use them is another thing. The power to use resides somewhere in the brain. But the brain is made up of many distinct parts, each part having its own particular function, and being connected with some mental, muscular, or sensational act.

Thirty years ago Broca found the speech-centre to be in the third frontal convolution. An injury at this point produces a disturbance of speech known as aphasia.

Three forms of aphasia are now recognized. In the first form there is inability to articulate, though the meaning of the word is fully understood, and there is no difficulty with the vocal organs. In the second form of the disease, while the mind in general is unaffected, the patient is unable to recollect words. In the third form the patient, though intelligent and able to articulate, is unable to read printed language.

In the first form, the centre of the disease is where Broca placed it. In the second form it is about an inch below and behind that point. In the third form it is further back in the temporal and occipital lobes.

The form of the aphasia now enables the surgeon to locate the cerebral lesion. The lesion may be due to a clot, a tumor, an abscess, or a hemorrhage. In the case of left-handed persons the speech-centre is generally in the right half of the brain.

A very interesting case was lately detailed before the New York Surgical Society. The patient was thrown from a buggy and was picked up conscious, but became unconscious toward evening, and remained so three days. On the return of consciousness, he was found to be aphasic, and was paralyzed in his right leg and part of his right arm.

After three months the case came into the hands of the surgeons, and from a study of the symptoms they located a blood-clot in the speech-centre. On opening the skull in that region, they found the clot, removed it carefully, and duly dressed the wound. On the evening of that day the patient uttered the first word he had spoken since the return of consciousness. At the end of a week he was able to walk with the aid of a cane, and the aphasic symptoms steadily diminished until, three months later, he was able to converse and to resume his business.

STARS IN LATE SEPTEMBER.

An observer will find a favorable opportunity for studying some of the September stars on the evening of the Twenty-third at eight o'clock.

The moon is then out of the way, and if the sky be cloudless and the atmosphere serene, some of the largest stars in the Northern Hemisphere may be easily recognized. The observer should find a position where the whole expanse of the heavens is spread out above him.

The first object that will attract his attention is a brilliant star in the southeast, nearly half-way between the horizon and the zenith. It is Jupiter, the prince of planets, shining at his brightest, for he is at nearly his least distance from the earth.

Near the point overhead, the radiant star Vega comes into view, brighter than any of its neighbors and shining with a bluish light that ranks it with stars of the first class, those whose light has not yet grown dim, stars still in their golden youth.

Arcturus is the superb red star low down in the west, its color showing that it is not in its prime, though it is one of the most interesting stars in the heavens, from its enormous magnitude and the fact that it is drifting towards us at the rate of nearly sixty miles a second!

Capella is the yellowish star in the northeast, a wonderful brilliant.

These three first-magnitude stars, Vega, Arcturus and Capella, are called the northern brilliants, and it is difficult to decide upon their relative lustre. Some observers think that Vega bears the palm, others decide in favor of Arcturus, and others place Capella first on the list.

Only one other first-magnitude star, Altair, northwest of Jupiter, is visible at the time of observation.

When these four first-magnitude stars have been traced, the picture may be filled in. The semicircle of stars east of Arcturus is the Northern Crown. The Swan, with its starry cross resting on the Milky Way, lies east of Vega, in the zenith. The square of Pegasus adorns the eastern sky, and is northeast of Jupiter.

The Pleiades are low down in the northeast, and above them lies Perseus with its famous variable, Algol, on one of the richest portions of the Milky Way, that aggregation of eighteen million suns, of which our sun is a member, though by no means a distinguished one.

Intelligent observers may readily find the stars and clusters here mentioned, and the same stars will return to the same places at the same time on every succeeding September. Once learned, they have been learned for a lifetime.

Stars seem to rise and set, like the sun, on account of the earth's revolution on her axis. They seem to rise four minutes earlier every night, on account of the earth's revolution in her orbit. The starry picture of the Twenty-third will be seen four minutes earlier on the Twenty-fourth, eight minutes earlier on the Twenty-fifth, and so on.

THROUGH THE TUNNEL.

A railway mail clerk, who had a car to himself, left it for a moment to run forward and speak to the engineer as the train stopped for water at a station in the Alleghany Mountains, just west of the great tunnel. When the boiler was filled and the train started, he sprang for his car. What followed is described by the Washington *Star*:

The entrance to the car was on the side, and a solitary handle offered itself to the grasp of the passenger. As the clerk seized this hurriedly and pulled himself up, he discovered to his horror that the door had jarred shut, and could not be opened from the outside.

At that moment the train shot into the tunnel. The man shrieked for help, but the noise of the train drowned his cries, and with both hands grasping the handle, his feet on the iron step, and his body glued to the side of the car lest he should be dashed against the jagged wall, he was carried into the darkness.

As the tunnel is a mile long, and the atmosphere almost stifling, the hapless man's predicament can be better imagined than described. When the train came out into daylight again the engineer looked back, as usual, to see if the train was following, and discovered the mail clerk in his perilous position.

The train was stopped as quickly as possible, and the engineer and conductor hastened to the man's rescue. He was all but demented, and on being assisted to the ground, fell unconscious.

For six months afterwards he was under a physician's care, and when he had recovered from the shock, he said:

"The tunnel seemed at least ten miles long, and my head, I thought, was hollow, with the smoke rushing in at my mouth and nostrils and pouring out again through my ears. Whenever I think of it my brain reels and I feel myself crouching, just as I crouched against the outside of that car, while being dragged through that horrible darkness."

IT COULD SWIM.

At a sea-side resort some boys caught a ribbon-snake about eighteen inches long, and after playing with it for a while took it into their heads to see if it could swim. They carried it to the pier and threw it into the harbor. The snake set out swimming at once, but instead of coming toward the land, it made for a small yacht lying at anchor.

It could not get up the sides of the boat, but in swimming about it, it came to the cable, up which, to the amazement of the boys, it was seen to make its way by twisting around it.

The shouts of the boys called the attention of the only man on the yacht to the presence of the snake, and after chasing the poor creature with a broom about the deck, he succeeded in throwing it into the water again. The snake, still plucky, swam to another yacht near by, but was driven away with an oar.

It then started for the other side of the harbor, nearly a quarter of a mile distant, and the men in the second yacht had the curiosity to get into a small boat and follow it to see if it reached the shore. It swam steadily, going somewhat more slowly as it went on, but still keeping up its graceful, undulating motion until the shore was gained.

By this time it was somewhat exhausted, but it had strength enough to crawl away among the rocks, and the men who were watching it felt that it had earned the right to live, even had there been any reason—which there wasn't—for killing it in the first place.

CHANGED THE SUBJECT.

One of the most difficult things to do gracefully is to change the current of an unpleasant conversation. But the small boy can do it if circumstances make it necessary.

"Thomas, will you please tell me why you pulled up the onions from my Danvers onion-bed? How many times have I told you to keep away from the garden?"

Thomas grew red in the face, and his grandfather went on to depict the evil fate that was sure to befall boys who went around destroying what their elders had planted.

Meantime, Thomas had pulled himself together, and, as the harangue was concluded, he said, with a smile, referring to an event of the previous week:

"Pity our old rooster died, wasn't it, grandpa?"

TOO TRUE.

There is more than one kind of truth-speaking which is not to the truth-speaker's credit. An example is furnished by *Forest and Stream*:

A disappointed fish-peddler was belaboring his slow but patient horse in a street in Georgetown, D. C., the other day, and crying his wares at intervals,—"Herrin', herrin', fresh herrin'!"

A tender-hearted lady, seeing his acts of cruelty, put her head out of a second-story window, and said, "Have you no mercy?"

"No, mum," was the reply, "nothin' but herrin'."

CONCERNING the recent marriage of an American poetess to an American Indian, the Detroit *Free Press* remarks that time alone will determine whether she did wisely in listening to his Stoux.

"Brown's Camphorated Saponaceous Dentifrice" is effective for cleansing teeth. It has no equal and is used and recommended by many dentists. [*Adv.*

WELLS, RICHARDSON & Co., Burlington, Vt.

The Nail
and
The Picture.
A description of the picture, "The Fairy and The Thorn" is on the last cover page of the Fourth of July Number.
What has the Nail to do with the Picture?
THE NAIL, apparently a thing of small importance, is really an object of much concern to every owner of Horses and every Blacksmith who cares for his reputation. Split and Broken Nails in a Horse's Foot are sure to cause lameness, which often results in lockjaw. The only Nail that will never split, sliver or break is the
Putnam Hot-Forged and Hammer-Pointed
Horseshoe Nail. It is the only Nail in the world in which, in its manufacture, the old hand process is precisely imitated and followed.
THE PICTURE was painted by one of the best artists in America, and is now owned by the Putnam Nail Company. The expression of pain on this beautiful face on account of the Thorn in her foot may lead those with humane feelings to appreciate the suffering of the Horse that has a slivered or broken Nail in the tender part of his foot.
This picture has been reproduced in the same original beautiful colors. Size 21 x 13 inches. A charming subject for the walls of any Parlor, Library or Chamber. It will be sent
FREE
without any advertising, to any one who will find out from the Blacksmiths in their neighborhood what kind of Horseshoe Nails they use, and send us this information, with the names of the Blacksmiths, and 10 cents in stamps to pay for postage and packing. It will be sold for $2, or Sent Free as above described. Address,
PUTNAM NAIL CO., Neponset, Boston, Mass.

The True Bermuda Easter Lily
Bears in winter enormous trumpet-shaped flowers of snowy whiteness, great beauty, and unsurpassed fragrance. It is the Queen of Winter Flowers, the most lovely and popular, and sure to grow and bloom freely in any window, surprising all with its superb loveliness. **For only 50 cts. we will send by mail postpaid all of the following:**
1 Bulb of the **True Bermuda Easter Lily,** good size.
1 Bulb **Freesia,** most magnificent and fragrant.
1 Bulb **Roman Hyacinth,** lovely spikes, very sweet.
1 Bulb **Tulip, Double Due Van Thol,** magnificent.
1 Bulb **Giante Jonquil,** yellow, and fragrant.
1 Bulb **Allium Neapolitanum,** beautiful white flowers.
1 Bulb **Belgian Hyacinth,** lovely spikes of blue flowers.
1 Bulb **Glory of the Snow,** superb blue and white.
1 Bulb **Star of Bethlehem,** (Orinthogalum) grand.
1 Bulb **Winter Aconite,** large golden yellow and our **SUPERB FALL CATALOGUE of Bulbs and Plants for Fall Planting and Winter Blooming,** together with a sample copy of the **Mayflower,** and large colored plate of premium flowers. If you have already received Catalogue and Mayflower, say so and we will send something else instead. The above 10 fine bulbs (which is our "Gem Collection" worth $1) may all be planted in pots for winter blooming, or in the garden. Every one will bloom splendidly and for winter flowers there is nothing finer. We send them for only 50 cents to introduce our superior Bulbs. Get your neighbors to order with you. We will mail 4 of these Gem Collections for $1. **Order at once, as this offer may not appear again.** Also by mail, postpaid, 12 Fine Mixed Tulips for 35c., 6 Fine Mixed Hyacinths for 50c.; 12 Mixed Narcissus, 50c.; 25 Fine Mixed Crocus for 20 cts.
OUR FALL CATALOGUE for 1891. A superb work of Art, large and illustrated, will be sent to any one on receipt of 5 cts. We offer the finest stock of Hyacinths, Tulips, Crocus, Narcissus, Lilies, Freesias, etc., and scores of rare new Bulbs and Plants for fall planting and winter blooming. also choice Shrubs, Trees and Fruits. It is the most beautiful and complete Catalogue of the kind ever issued. We want agents in every town to take subscribers for our beautiful Monthly Horticultural Paper (16 pages), THE MAYFLOWER, 50c. per year Liberal premiums. Sample copy free. Address
JOHN LEWIS CHILDS, Floral Park, N. Y.

LOVE OF LIFE.
Dyspeptics who earnestly desire to live, can keep a mortal disease at bay much longer than those who are indifferent to their fate. A resolution to never say die, is the salvation of many a dyspeptic. Another means of restoring to health thousands of dyspeptics is to carefully read my "Advice to Dyspeptics." In Eight Chapters.—Chapter VIII.

Dorothy "Comes Into Her Own."

While Dorothy was rocking back and forth in her room in an agony of spirit, and praying that she might die, her step-father was pacing to and fro upon the piazza, only a little less miserable than she.

"I tell you, Agnes," he was saying to his wife, pausing before her and speaking in a low whisper, "I cannot comprehend it at all. Both you and Miss Lorimer gave me such a different idea of the child. I thought—but this cannot go on. Something must be done.

"If the girl's nature is as you and her teacher think, I cannot allow it to be ruined by lack of discipline. She must learn to feel that she cannot give herself full swing. She must know that she is subject to restraint.

"This last piece of folly has been so insulting to us, so plainly a case of insubordination, that I feel that it ought to be dealt with immediately and with rigid severity.

"All her former escapades I excused; but this! She knew she was putting a direct slight upon my authority, and she did it, I am convinced, to try to humiliate me and to—I hate to say it, to think it—stab Helen!"

With a deep-drawn sigh he left his wife, who was crying softly, and continued his restless tramp up and down the piazza.

He could not bear to see her weep. Every tear added to his misery, but he felt compelled to speak. He had tried patience and kindness, and now he must begin a system of "rigid discipline."

Helen and Fred, who had been taking a melancholy stroll in the garden, and trying to talk about everything but Dorothy and her escapade, returned to the piazza, and endeavored to be talkative and gay. But their effort was a dismal failure, and after a long season of silence all went to their rooms.

The next morning Colonel Everest appeared at the breakfast table looking careworn and fatigued. He had passed a sleepless night, and was relieved, upon the whole, to find that Dorothy would not leave her room, and that he should not see her until the afternoon.

He had business in the city that would detain him there until late in the day, and he felt it would be wise to postpone his talk with his step-daughter until his return.

Dorothy, sitting dejectedly by her window, saw him drive away, and heard her mother's voice and Helen's call good-by to him.

She was discouraged and disappointed. Not only had she been awake most of the night, but she had spent her time in striving and battling with herself—trying to conquer the rebellious spirit within her.

But now she thought bitterly:

"What am I to them? They all belong to one another; I am crowded out. I am the interloper, I guess they think!"

She recalled how her step-father had rejected her the day before; how he had made her mother believe she had gone aboard the boat to play and dance simply to spite Helen and to humiliate him—for of course she felt sure he had been the first to suggest that.

She thought of herself as being cast aside and disowned in the very moment of her best endeavor to be good, and her heart felt as if it would burst with the stress of her sorrow.

Yesterday she had determined to begin a new life. She had resolved to go to Helen and beg her to forgive her for all her cruel slights and harsh treatment, and to tell her that she loved her—for indeed she did love her. She loved her so dearly that the very thought of her dying made her dizzy with terror.

But what was the use of all that now? They would not even listen to her. Her mother had said she was a disgrace to them, or that she had disgraced them—it was the same thing—and had left her in the saddest hour of her need.

Well, if they were willing to believe ill of her without waiting to hear her side of the story, she resolved that she would never tell them the truth.

By and by she went to her dressing-stand, and looked at herself in the glass. What a hollow-eyed, sorrowful face gazed back at her! It almost made her cry, she pitied the reflection so.

Then she began idly to turn over her toilet articles for want of something better to do. In a moment her eyes fell on a little book that lay upon the table top. She took it up, and opening it, began to read.

It was her Bible, which she had sadly neglected of late. She scanned the pages, first with a sort of careless unrest; but after a time she was reading half-aloud to herself, while her tears fell silently upon the leaves, and her heart was melted with tenderness and regret.

At last she rose, and going to her bed, fell on her knees beside it.

"I am going to do it all as I promised," she said, in a very low, tremulous whisper. "When he comes home I'll tell him all—just as it was—and ask him to forgive me; and tell him I love him—and Helen!"

Flinging herself upon her bed, she fell asleep and slept heavily for several hours.

As Colonel Everest was boarding the train late that afternoon on his return, he felt a touch upon his shoulder, and turning half-around, saw Mr. Beech behind him, smiling cordially. They sat together talking of business and of politics, and finally of the prospect for the success of the Tournament. All at once Mr. Beech interrupted himself with:

"Really, Everest, I quite forgot to tell you."

Colonel Everest turned to him attentively, and Mr. Beech went on.

"After I left you last evening I couldn't help thinking of that affair on the boat—your little step-daughter, you know. Of course I said nothing to any one, not even my wife, because you had desired it, and I thought, too, it was best to hush it up.

"But a little while after I got home, my wife was called away to see some one, and while she was gone I couldn't help wondering if, after all, it was quite the fair thing to give the poor little girl the cut direct.

"Well, I was getting pretty uneasy over it all, when my wife came back; and, Everest, you should have seen her! I couldn't think what ailed her, for she isn't one to show much emotion unless she's deeply touched. I asked her what it was all about, and then came a long story that put quite another face on the boat affair."

He told, briefly, the story of Mrs. Beech's visit to Mrs. Everest and her daughters; of her request that the girls should earn money by "a sacrifice," and of Dorothy's eager desire to do so.

"Elaine says," Mr. Beech went on, "that she remembers that she heard Dorothy say she could not do anything but play the banjo, and she suggested her going about dancing for pennies, thinking nothing more about it after it was said, and not having the faintest shadow of an idea that the whole thing would be more than a sort of spur to the girls in getting the money together.

"But when she was told some one wanted to see her last night; when she found that 'some one' was Dorothy; and when, moreover, she saw the child was ready to faint with weariness, she was somewhat taken aback, and was quite unnerved when Dorothy poured a pocketful of money into her lap, explaining that it was her contribution to the hospital and that, as my wife had recommended, she had earned it.

"Elaine naturally asked how she had earned it, but Dorothy would not answer. All she said was:

"'I earned it honestly, Mrs. Beech. You needn't be afraid to take it. I couldn't embroider—I should have spoiled it, but I—it was a sacrifice!' Then the poor little soul hid her face in her hands, and left my wife standing by the door-way too much taken aback to even call her and have her taken home in the carriage to save her tired feet the extra tramp.

"Of course Elaine was all at sea regarding the means Dorothy had used to procure the money; but when I heard her story I thought you wouldn't object if I enlightened her. For, of course, that was what she collected the pennies for. I wish now I'd given her a five-dollar bill instead of a one—poor little girl!"

Mr. Beech broke off suddenly to cough and gaze fixedly away from his companion and out of the window.

"Elaine says," he continued after a moment, "she never saw in all her life anything more pathetic than that little figure. The child had a beaten, harassed look that almost broke her heart to see. She says her eyes —"

"Stop, Beech!" exclaimed Colonel Everest, huskily. "I can't bear any more."

He said no more, and Mr. Beech did not try to press him into conversation. They were quite silent all the rest of the way, and more than once Colonel Everest could not get a very distinct view of the country around—it seemed so strangely hazy and blurred.

When the train drew up at their station, and the two men were preparing to descend the car steps, the same mist rose before his eyes and made him a little uncertain of his footing.

Mr. Beech had jumped lightly upon the platform before him, and then turned and said:

"Be careful how you go here; there's a slippery place in the wood and —"

His warning came too late.

Colonel Everest, still with that dimness of vision, made a misstep and fell heavily forward upon the platform, his leg slipped beneath him upon the rotten edge, and became wedged firmly between the car-wheel and the wooden framework.

In a moment he was surrounded by men, eager to render assistance, and it was not long before he was lying, white and still, upon a bench in the waiting-room, and wondering why they did not hasten with a carriage to take him home.

At last he was carried to a victoria, and driven slowly up the hill and into his own grounds.

Dorothy had been sitting by her window ever since she heard the whistle of the train, watching for her father to appear. She had gained much good from her long nap; and now, dressed in her white frock, looked quite natural and like herself. Only she was trembling with excitement, and anxious dread of what she was about to do.

She was about to turn away from the window and begin some trivial task in order to divert her mind, when she heard the grating sound of wheels upon the drive, and in another moment saw a strange open carriage come in sight around the curve of the path. In it she saw her step-father lying, ashen white and motionless, his head upon Mr. Beech's shoulder.

For a second it seemed as if her heart had stopped beating. Was this the end, then? Had her father died, leaving her unforgiven? Then she saw him move his hand, and in a flash was out of her door and flying downstairs, pale as death, but with presence of mind enough to caution the servants against "exciting mamma and Miss Helen."

"An' sure," answered Katie, "it's only your mamma is home, miss. Miss Helen and Mr. Fred is ridin'."

Dorothy breathed freer as she thought that Helen "won't have to bear the first and worst of it."

When the physician came and examined the broken limb, Dorothy watched his face as closely as if she thought she could read his innermost thoughts by its expression. But she gained small satisfaction. All she knew was that her father was very badly hurt, and that her heart was full of compassion for him.

By and by Helen returned, and came running in to sink down by the side of the bed and kiss the patient again and again, her tears raining down upon his face. Then the surgeon made preparations to set the broken leg, and Helen ran quickly out of the room.

Dorothy remained in the room and rendered such ready and actual assistance that after it was all over and the surgeon preparing to depart, he turned to Mrs. Everest and said:

"You have a brave girl there, madam—a little heroine. I could hardly have managed without her."

But Dorothy had suddenly disappeared from the room, and did not hear.

"Where is Dorothy?" asked Helen, who had crept back to her father's side now the ordeal was over, and he was lying, worn out and still, upon

"Little Daughter!"

Digitized by Google

the pillow, with his injured leg strapped in a "fracture-box."

Receiving no answer she went in search of her sister, for she felt a longing for her sympathy in this hour of need. But she was neither upstairs nor downstairs, and at last Helen was about to give up in despair when, happening to pause a moment for breath at the foot of the garret stairs, she thought she heard the sound of a sob descending from above.

In a trice she was standing in the dusky, warm, trunk-filled place, and there, behind a huge packing-box, was the object of her search, crouching away in the shadow in a disconsolate little heap and sobbing as if her heart would break.

"O Dorothy, don't!" pleaded Helen. "Don't cry so. What is it, dear? Do tell me."

The strain had been too great. Now the immediate necessity of being brave for her father had passed, she was so broken down that her hysterical weeping was beyond her power to control.

She clung wildly about Helen's neck, beseeching her not to die, and telling her again and again how much she loved her.

"O Helen, Helen, forgive me—*please* forgive me and love me—if you can. I thought it wasn't fair to—wear the dress—when I had—been so cruel to—you. Don't think it was—because I didn't love you, Helen; I do—I do!"

Then Helen, crying too, and with her arms tight about her sister's waist, said:

"Why, Dorothy, darling, I'm not going to die. I *couldn't* die now, when I know you love me."

They clung together and cried and laughed, and were very foolish and happy.

By and by it was evening, and no one seemed to take dinner into consideration at all. Then it was night, and Dorothy had crept into the sick-room where the patient had fallen into a doze; and seeing how tired her mother was, had sent her peremptorily into the next room to rest, sinking down herself in a large arm-chair behind a screen.

Presently she heard a slight stir at the bed, and was just peering out from her place of concealment to see if her father had waked and was in want of something, when she saw amid the gloom Helen's white-robed figure steal softly to his side, and kneeling next him, commence stroking his forehead tenderly.

Then she heard her say: "I wasn't brave to-day, dearest. I couldn't stay to help you bear it. It was Dorothy who did that. Dorothy is better than —"

But her father interrupted her, laying his weak hand upon her lips.

"Dorothy doesn't care, darling. She could see me suffer, because she does not love me."

Poor Dorothy! She had thought the worst was over—that she had lived through the saddest moment of her life. But this was harder than all.

She hid her face in her hands and bowed her head upon her breast, with the great ache back in her heart again with fourfold force.

But Helen was talking again, and Dorothy could not help hearing what she said.

She was telling how she found Dorothy in the garret, and of what she had said. Dorothy waited to hear no more, but slipping out from behind the screen, ran to Helen's side, crying softly:

"Don't stand up for me, Helen. I don't deserve it. Let me bear it all alone. It will serve me right, but I want to tell my father that I love him, and I want to tell him that I'm sorry, and that if he knew how I have wanted him to take me in his arms just once and call me—"

"Little daughter!" he said. Helen stepped aside, and he held Dorothy close to his breast and kissed her.

Then something very strange happened. Colonel Everest begged Dorothy's pardon; and when she looked at him in wonderment, he told her about Mr. Beech, and how he had learned to understand why she had gone upon the boat and played the banjo for money.

When Mrs. Everest returned and found her patient running excellent chances of developing a fine fever, she had, in the midst of her joy at the turn affairs had taken, to send the two girls out of the room; watching them as they went, and thanking God in her heart.

So it came about that toward the end of September, when Colonel Everest had recovered sufficiently from his accident to be able to get about on crutches, a party of three descended from a coach that rolled up to the seminary door.

The pupils who had already arrived were able to hear Dorothy present her girl-companion to Miss Lorimer as, "My sister, Helen Everest," and to see her, when the moment of parting came, cling about the Colonel's neck, crying because she must be separated from him.

When he was driven away, Dorothy and Helen stood at the door with their arms about each other's waists, waving him a last good-by.

As they turned back, Helen shyly brushing away a tear and Dorothy looking very wistful and sad, Fanny Bergen remarked disdainfully:

"Well, I like that! After the way she carried on at first—calling them 'interlopers' and all that!"

Dorothy turned and answered, stoutly:

"Yes, I did 'carry on' at first, Fanny; and I did call them interlopers. But now I love them with all my strength, and I am proud to be able to say it. If any one was cruel and mean, it wasn't the interlopers; and if any one need to be sorry for it, it isn't the interlopers.

"So there! And I've learned something this

summer that I shall never forget. It has made me able even to forgive you for sneering at me, and to ask you to make up and be friends!"

JULIE M. LIPPMANN.

The End.

OPPORTUNITY.

You have me now—at least you may,
This very hour, this very day;
But no one knows how long I stay.
—*Lady Lenox.*

For the Companion.

THE GOURD BANK.

"Nick," said Mr. Jim Conway, interrupting the tune he was whistling, to address the man who rode beside him, "I haint felt so much like a boy in years!"

"Nor me either!" returned Mr. Nicholas Nickerson, also breaking off in the midst of a whistled tune. "I feel like I'd jest broke out of a cage."

They were rough-bearded, carelessly-dressed men, with sun-browned faces and toil-hardened hands, but they were as happy as kings in purple and fine linen. They were going home.

For almost one-half their lives they had called wherever they happened to be in the West "home," but now they were on their way back to the place where they were born.

"Queer," said Conway, slowly, "that the longer a man stays away from the old home neighborhood, the better he likes it. When I left it, I was so tired of them simple old scenes that I thought I hated 'em. But, now —"

He paused, half-ashamed to tell his comrade more.

"Yep," agreed Nickerson. "After a while every old tree an' rock an' slope an' medder that he ort to have forgotten long ago, kinder—kinder seems like a brother."

"A man gits kinder hungry to see 'em again," said Conway.

"Yep, kinder hungry."

Presently Conway said, slowly, "I seen a woman once who 'd been driven crazy by that hunger. Youngish woman—moved out to the Panhandle country from Ohio; used to the hills an' woods an' rivers all her life. I don't know all of the story, but anyhow, she couldn't take kindly to the prairie. Finally, the baby died. After that she'd stand in the open door most of the time, an' look off across the prairie toward the east—toward home.

"Her husband—wal, he was kept busy tryin' to dig out a livin', an' thought it all foolishness, anyhow, I reckon. She didn't complain much, but jest kept lookin' off across the prairie toward the east, an' growin' thinner an' paler.

"Wal, when it was too late, I saw 'em at the depot; he was takin' her to the asylum. She stood in the depot door an' looked out, an' said, 'So far! So far!' in the most hopeless voice I ever heerd. Prob'ly she didn't live an' suffer very long after that, for she was so weak an' worn that she could scarcely stan' without holdin' onto the door-posts.

"Her husband growled a little to somebody he knew, that the trip was costin' him a heap of money, an' takin' him away from his crops jest when they needed him most."

"I reckon you didn't git a chance to kick him?"

"No. It 'd only made it worse for the poor woman. But —"

They said no more for some time after that, but did not resume their whistling. Each realized in his heart something of what the poor, home-hungry woman had suffered.

"Wonder if anybody'll know us till we tell 'em who we are?" said Nickerson, after a while.

"Doubtful; mebby not then. Most of the old-timers are gone, an' the younger ones won't know us. But the old hills an' streams an' crooks in the road won't be strangers."

"No. Kinder queer, but I've thought more about them than about the people—none of mine are left now, you know."

"Nor mine," said Conway. "Father, mother and brother dead, and two sisters married an' gone."

"Remember old Gran'pap Watrous, who used to go dodderin' up an' down the street, sellin' early garden truck from a basket with a blue stripe around it?" asked Nickerson, musingly.

"Yes. Remember how you could git him started to tellin' a story, an' make him forgit in five minutes what he come for?"

"I should say so! Like to see old gran'pap again. Wonder if he —"

"That was twenty-five years ago," interrupted the other, gravely.

"That's so!"

The sun was dropping behind a bank of heavy clouds, slowly rising from above the western edge of the prairie, when they reached a homestead claim, and rode along its fence of barbed wire toward a weather-beaten little house near the further corner—a house out of sight, unless the day was very clear, of other human habitations.

The fence was overgrown in places with last summer's weeds, and here and there a post lopped over, rotted off at the bottom, but partially upheld by the tension of the wire.

The field within showed that it had received but scanty cultivation during the previous season, and had probably borne but a meagre crop.

Yet in that weather-beaten little house dwelt a capitalist—the sole proprietor of a bank and the treasure therein.

The bank, which sat beside a crazy old clock on a shelf made of the side of a soap-box, was a small, pudgy yellow gourd that stood up on its larger end, and had a slit beside its stem for the introduction of deposits.

In it was a capital of eleven cents.

The capitalist was Jackson Bascom, over whose towey head almost four years had passed. Ten cents of the money had been tossed before him by a passing horseman, who had seen the old-mannish-looking baby perched on the low top-bar that helped to fill a gap in the wire fence, and "wanted to see the little fellow smile a dime's worth," as he expressed it.

Jackson had tumbled from the bar with a shout, picked up the two nickels and put them into the gourd bank with the penny which had been the bank's sole capital for many a day before that.

Often, thereafter, he might have been seen, in fine weather, perched on the same bar, hopefully waiting for the dropping of more money.

It was a little more than a week after the time of the bank's great increase in capital when Conway and Nickerson drew rein before the weather-beaten little house.

Jackson had been perched upon the bar until within a quarter of an hour of their arrival. He had been startled from his perch by a cry of alarm from Lyddy in the house. Poor, weak, worn, hopeless Mrs. Bascom had fallen in something very like a faint.

When, a little later, Conway and Nickerson rode up to the bar-way, the cloud wall that had risen from the west was half-way across the sky, and dusk was falling.

"Rain in ten minutes," said Conway, laconically.

They tied their horses to the posts, swung themselves over the low bars, and advanced to the house.

The door was open, and the men saw the children gathered about the fainting woman. There was Lyddy—an old-faced, anxious-looking girl of twelve or thirteen; Jimmy and Johnny, grave little fellows of about ten and eight; and Jackson, the capitalist.

Lyddy had bathed her mother's wan face with cool water, and Jimmy and Johnny were fanning her with their tattered straw hats. Jackson stood back and looked solemnly on; and his distress was none the less great because he was not crying.

"Can we do anything?" asked Conway, as the two looked in at the door.

"I am better now," said Mrs. Bascom, weakly but gratefully, raising her head from the shabby old lounge where the children had placed her. "It will soon pass away; it always does."

"If we can do anything —" began Nickerson, slowly.

"Won't you come in?" invited Mrs. Bascom, with a feeble attempt to be hospitable. "Lyddy, set chairs for the gentlemen."

The dusk was fast deepening. The cloud wall had spread across the sky, and a few great drops of the coming storm were plashing down.

"Much obliged to you, mom," returned Conway, "but if we can't be of any help, we'll ride on. Is there any place near here where we can git accommodations for the night?"

"The nearest house is two miles away," said Mrs. Bascom. "You can't ride on in the storm. You are welcome to put your horses in the barn and stop here."

The men made a show of remonstrance.

"We needn't eat much," Nickerson whispered to his comrade, "an' we can pay for what we git."

The horses were hardly under shelter before the rain increased to a downpour.

"Where —" began Conway, "that is, is your husband comin' home soon?"

"He is dead," answered Mrs. Bascom.

By this time she was able to sit up on the rude lounge.

"Lyddy," she said, "set out a bite for the gentlemen to eat. We haven't got much, but you're welcome to what there is."

"Thank ye, mom," returned Conway, awkwardly.

"We'll pay for it, Jim," whispered Nickerson to him.

The children were shy at first, but when the frugal meal was over, and the men were sitting back from the table while Lydia cleared it off, little Jackson advanced gravely and climbed on Conway's knee.

"W'ere you doin', mister?" he asked.

"Hush, Jackson!" said his mother.

"Oh, jest as lives tell as not, mom!" said Conway. "Me an' Nickerson are on our way back to the old Indiana home we left twenty-five years ago."

"What part of Indiana?" asked the widow, with pitiful eagerness.

"Green County—Spencerville."

The woman's eager look faded away.

"We are from Burtis," she said.

"An' we're doin' back dere pretty soon!" spoke up Jackson, cheerfully.

"That so, mom?" asked Conway, heartily. "That's good!"

"I—I—we —" began the widow, weakly.

She glanced at the children, and there was an undercurrent of hopelessness in her low voice that told the men that, though she did not wish to destroy the hope of the children, she felt little for herself.

"Yes, mom," interrupted Conway, understanding. "It costs a heap of money. I—right heavy rain fallin', haint it?"

"I dot money!" Jackson uttered, triumphantly. "In my bank! We doin' pretty soon."

He scrambled down from Conway's knee.

"Dit my bank, Lyddy!" he commanded. When it was handed down to him he brought it triumphantly to Conway.

"Money!" he chuckled. "Doin' back to Ind'ana pretty soon!"

Nickerson saw that there were tears in the widow's eyes.

"Want to look at my knife, Jackson?" he asked, producing a huge, many-bladed affair, with a cork-screw in the back.

Jackson grasped it, marvelled, and was silent. Presently he fell asleep in Conway's lap, with the huge knife in his clutch.

The men, with awkward kindness, tried to talk of other things; but Mrs. Bascom kept returning to the one subject ever in her thoughts—the old home.

"I have been hoping for years to go," she said, "but —"

"Same way with us, mom!" returned Conway. "Me an' Nickerson got together four years ago—we came from the same old town at about the same time, but never happened to meet again till four years ago—an' ever since, we've been figgerin' on takin' a ja'nt back there, but never got to it till now. We've finally managed to save up enough to make the trip."

Presently the widow told them a part of her story. She glossed over the failings of her dead husband, but a word or phrase let fall here and there told Conway and Nickerson what kind of man he had been.

Jackson Bascom, the elder, had been neither depraved nor vicious—he had been simply a combination of over-hopefulness and laziness; a contented waiter for "something to turn up."

It had been this sanguine trust in luck which had caused him to take up a homestead claim away out on the prairie, almost out of sight of human habitation, not with the earnest intention of making of it a valuable farm by hard work, but as a speculation. A railroad would be sure to be run through that region on its way to the Southwest, he thought; a town would spring up, and he would be rich.

In the meantime, he farmed the homestead in a half-hearted fashion, which brought scarcely enough to live miserably upon.

The years passed on, but the railroad never came. When the claim became his own, Bascom mortgaged it and dribbled away the proceeds.

By and by he died, leaving a broken-down, heartsick woman, and half-helpless children.

The future held but little promise for them. Before long the mortgage on the homestead would fall due, and they knew from the first that they would not be able to satisfy it. The home would have to go.

Mrs. Bascom had longed to return to the old home State, at first hopefully, then doubtfully, and at last in dreary hopelessness. The longing at last became almost a monomania with the poor woman.

When one's heart is full of a beloved subject, one must talk of it, and the mother told the children of it till they longed to go almost as ardently as she did.

Though she had hoped long, her courage and strength gave way slowly as her health declined.

"I have wanted to go for so long," she said, concluding the story. "But now —" she ended with a sigh.

The two strangers understood how much of real heroism there was in that simple recital, and were silent when it was done.

The rain had subsided to a gentle drizzle. The men sat silent. The older children looked miserable and dejected.

Then little Jackson woke up, and began to examine again the wonderful knife with great interest. To divert the thoughts of the others as much as possible, Nickerson displayed and explained the mechanism of the knife, exposing the corkscrew, opening out the hook for removing stones from horses' hoofs, revealing the tweezers, the saw-blade, the file and the screwdriver.

Jackson alternately whooped with delight and stared in mute amazement. Then he suddenly held out the gourd bank to Nickerson, and reached for the knife.

"Me'll trade wid you!" he said.

Trade his bank and its treasure—almost sufficient in his eyes to take them to Indiana—for the wonderful knife which he wanted so badly! Poor little fellow!

"I—wait till mornin', Jackson," said Nickerson. "We'll see about it then."

When Jackson was packed away in his little trundle-bed the knife went with him.

After the men had retired to the pallet that Lyddy spread on the floor, they talked in tones so low that the occupants of the other room did not hear them.

"She won't live long unless she goes," said Conway.

"Nobody thar'll know us or keer anything about us," said Nickerson.

They said but few words more. They lay very still for a long time, and the other occupants of the little house did not hear them when they arose, just before the east was turning gray. They donned their garments and then, in the dimness of the room, Nickerson handed Conway something which he had taken out of his pocket, and passed out of the house as noiselessly as possible.

Conway took something from his own pocket, and tiptoeing and feeling his way to the table, wrote in the darkness a few words with a stub of pencil on a scrap of paper. Then he made his way to the clock-shelf, and fumbled for a moment with the gourd bank.

Then he stepped softly to the door and passed out into the drizzle and through the bar-way, beyond which Nickerson was holding their horses. They mounted and rode away in the dreary rain—back to the westward, in the direction from which they had come.

"Nobody'd know us thar, anyhow!" said Conway, after a while, in a gruff way.

"Nor keer about us!" returned Nickerson.

When morning dawned, the light shining in through the little window of the weather-beaten house fell upon little Jackson sleeping in the

Digitized by Google

trundle-bed, with Nickerson's wonderful knife still clutched in his hand, and in the other room the light revealed a corner of green paper sticking out through the slit in the gourd bank.

The Bascoms discovered it before long, and looked into the bank.

The little gourd was carelessly stuffed with greenbacks and national bank notes—the money which Jim Conway and Nick Nickerson had hoarded to take them back to Indiana.

As the money was pulled out, a scrap of dirty white paper appeared. On it was written, in Conway's rude hand:

"*To take you back home. God bless you!*"

TOM P. MORGAN.

A TRUE FRIEND.

The friend who holds a mirror to my face,
And hiding none, is not afraid to trace
My faults, my smallest blemishes, within;
Who friendly warns, reproves me if I sin—
Although it seems not so—he is my friend.

For the Companion.

A PERILOUS LEAP.

By a small stream, in a pleasant valley in Southern Missouri, stand the smelting works of the Denby Mining and Smelting Company. An unusual thing about these works is that one sees neither smoke nor smokestacks above the flaming furnaces. But upon the hill an eighth of a mile away, a huge iron chimney rises seventy-five feet above the ground; and to this chimney, through an underground passage, is conducted the smoke from the lead furnaces.

There is a good reason for this method of conducting the smoke away. If the smoke from a lead furnace is carried directly upward through the air, it settles rapidly to the ground, leaving a grayish sediment where it touches. More than three-quarters of this sediment is pure lead; and the lead ordinarily goes to waste.

After much experiment to save the waste, the Denby Company hit upon the plan of conducting the smoke from the furnaces through an underground passage. In this way the lead which had escaped in the smoke by evaporation was given time to cool, and to be condensed before passing through the chimney.

The plan succeeded, and the lead which accumulated in the tunnel, and was taken out once a month, was found to be sufficient to pay for the smelting of the ores.

The tunnel was near the surface of the ground, and was lined on the inside with a thick wall of brick. Near the furnaces an iron door opened into the tunnel, through which the lead was removed.

A few years ago, the Denby Company had among its employees a boy named Harry Baker—a stout young fellow, sixteen years old. He did odd jobs about the works, and assisted wherever he was needed.

One day, at the end of the month, Harry was sent to help the men who were removing the lead from the tunnel. Of course the smelting works had to be shut down during the time set apart for this work; and for this reason, and in order that the furnaces might be started up as quickly as possible, the work was done hastily.

It was late in the afternoon when the job was finished. There was nothing more for him to do that day, and Harry was sent home.

Just as he came into the village, he met Peters, the foreman of the gang of men who had taken the lead out of the tunnel.

"Hello, Harry," said Peters, "you are just the fellow I want to see. There was a shovel left in the tunnel where we were at work this afternoon. I wish you would go down and bring it out. I just happened to think of it, and if you will do the errand for me it will save me quite a walk. You can leave the shovel in the tool-room at the furnace."

"All right," said Harry. He walked briskly back to the smelting works, and found the place deserted by all save the bookkeeper, who was preparing to go home.

"Please give me the key to the tunnel door," said Harry. "We left a shovel where we were at work this afternoon, and Mr. Peters has sent me to fetch it out."

"The superintendent has the key," said the bookkeeper, "and he's gone away."

"I think there is a key hanging up in the office," said Harry. "Anyway, Mr. Peters left one there this evening."

"So there is," said the bookkeeper, after looking. "You can keep it till morning, or give it to Peters."

Harry procured a lamp from the tool-room, lighted it, unlocked the padlock on the outside of the iron door, put the key in his pocket, and entered the dark tunnel. Before he had entered the bookkeeper had gone away.

He found that the shovel had been left at the farther end of the passage, and it was a quarter of an hour before he could get it and return to the entrance.

When he returned to the door, he found, to his horror, that it had been closed and locked.

He shouted and beat upon the door, but no answer came. Then he stood in silence, hardly knowing what to do.

Who had shut the door? As he pondered upon it he came to the conclusion that the superintendent had not left the works when the bookkeeper supposed; that he had been in some other part of the buildings, and returning to the neighborhood of the tunnel door, had found it open. Then, supposing that the workmen had forgotten to close it, the superintendent had shut and locked it, without suspecting that any one was within.

Harry pounded upon the door again, hoping that the superintendent was not far away. But no response came. No one was within hearing. His key was useless, for the padlock was beyond his reach.

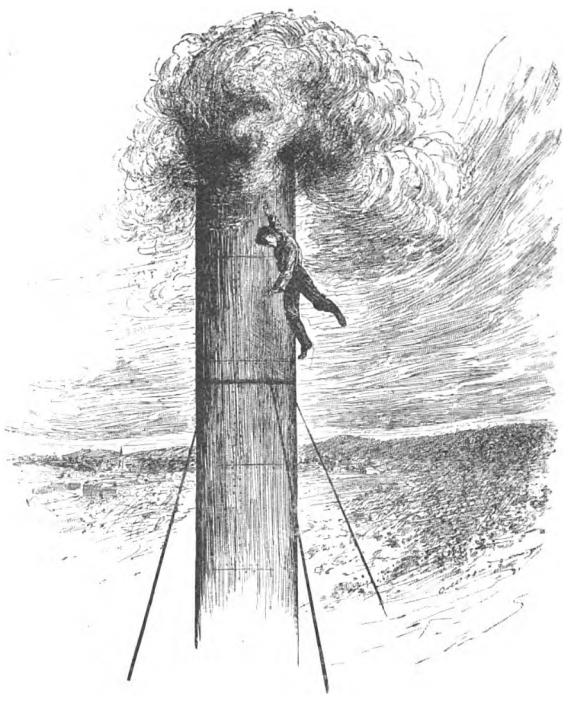
He sat down and pondered again. What would happen? He knew that within a short time after the clearing of the tunnel, the furnaces were "fired up" again; and as soon as the fires were started, he would be suffocated by the smoke and gases, and would die a dreadful death.

The thought filled him with alarm. Again and again he beat upon the door with the shovel; but no one came to his assistance.

Could he climb down through one of the furnaces, and escape that way before the fires were lighted?

No; he knew well enough that the way toward the furnaces was barred by a huge iron grate that extended across the tunnel. Nevertheless, he rushed to the gratings, as if hoping that by some accident there might be a passageway.

The gratings were impassable, of course. He knelt upon them, his lighted lamp in his hand, peering down into the darkness below, and wondering if he could make the firemen hear through the flues by shouting.



He called again and again. It was quite useless; the distance was too great, and the flues did not readily convey the sound.

As he knelt there, he fancied that he smelled smoke. Could it come from his lamp?

Certainly not. It was the smell of burning wood, which now came up distinctly to his nostrils. The fires were already being lighted.

Harry turned and walked up the tunnel. It was useless to hurry. He was in a trap, and must be suffocated in a few minutes.

As he walked along, he suddenly remembered that within the chimney there was an iron ladder, running clear to the top, which had been placed there by the builders to afford a footing for the men who cleaned out the chimney. Why could he not climb this ladder, and reach the outside in that way?

A Leap for Life.

It was a long distance to climb, but it was his only way out.

He ran now, as fast as he could. The smell of the smoke grew stronger and stronger in his nostrils.

He knew that, if the smoke did not come too fast, he could climb to the top of the ladder; but how was he to get down? Never mind about that now, he thought; he would rather be dashed to pieces on the ground below the chimney, than suffocate in this horrible tunnel. Perhaps he could call help, if he once reached the top of the chimney.

Soon he reached the foot of the ladder, and placing the lamp in his hat, began the ascent. Already the white smoke was beginning to fill the chimney. He must climb for his life.

The clouds of smoke grew thicker and thicker about him as he made his way desperately up the slender ladder. With every step his breathing became more difficult. Could he hold out till he reached the top?

Half-stifled, with a sickening, dizzy feeling stealing over him, he at last reached the top of the chimney, and drew himself up upon its rim.

Leaning quickly over the side, he managed to get a breath of fresh air.

This revived him. He glanced hastily about.

Darkness was fast settling over the hill, but there was still light enough to show him that no one was in sight.

Far below in the valley he saw the red lights gleaming from the open doors of the smelting works, and now and then caught the dark forms of the workmen; but he knew they were beyond the sound of his voice. It was almost useless to expect help.

Looking downward, he saw what might be a means of escape. Several feet below him were the large stay-wires that held the great pipe in place. If he could get down to these wires, he might slip to the ground.

But how could he be certain that, if he dropped, he could catch one of the wires? If he missed it he would go to the ground, seventy-five feet below, and be dashed to pieces.

It would be better to remain perched upon the edge of the chimney, and to try to keep his head out of the volume of smoke until help should come. But the smoke, growing denser every moment, swirled about the top of the chimney, now and then completely enveloping him.

He knew that now the smoke was only that which came from burning wood; but the charges of ore would soon be placed in the furnaces, and then the poisonous gas which would rise must render his situation ten times more perilous.

He looked down once more, in the hope of seeing some one whom he might summon to his assistance. He saw only the bare waste of the desolate hill.

But glancing down into the little valley toward the town, he presently discerned the forms of two men walking in the direction of the furnaces. If they should look up, they must have him in view.

He shouted to them, with all the strength he could command, again and again. But the men continued their course down the valley.

Harry was a brave boy, but his heart sank as he realized that his last chance for escape was passing.

Suddenly he remembered the lamp which he had placed in his hat. Quickly taking it in his hand, he began to wave it in a circle about his head. Several times he repeated this, shouting at the top of his voice as he did so.

Presently he saw one of the men stop. He seemed to be looking in the direction of the chimney. Then his companion followed his example, and a moment later Harry saw them both hurrying up the hill.

He took new courage from their coming, though he saw no way in which they could help him.

It was all he could do now to keep his face out of the huge clouds of smoke that were pouring out of the chimney and curling about him; but leaning downward as far as possible, he called to the men to hurry to his assistance. In a few moments they were within speaking distance.

"Quick!" shouted Harry. "Run for ladders and ropes! I can't hold on here much longer!"

"How did you get up there?" one of them called.

"Never mind—I tell you I'll be dead soon if you don't help me!" Harry shouted.

The men turned about and ran in the direction of the town. It was now almost dark. They were soon lost to sight in the shadows of the valley.

It seemed an age to Harry, though it could not have been more than ten minutes, before he caught sight of a half dozen lanterns moving swiftly across the valley, followed by scores of dark forms. Two minutes later an excited crowd of men came running up the slope, and were soon gathered about the base of the chimney, gazing helplessly upward.

"Take courage and hold fast!" shouted one of the men. "The hook and ladder company will be here in a few moments to help you down."

"I can't hold on much longer," answered Harry, leaning far over the chimney, while the smoke whirled about him. "I can breathe here but a few minutes more. It's suffocating me!"

The people below hurried helplessly back and forth. Some of them attached a stone to a rope and tried vainly to throw it to the top of the chimney.

Meantime, a hot, sickening blast of gas came up, which Harry recoiled from desperately. Men had gone to the works to drag the fire from the furnaces, but the tunnel and flues were now charged with gas. It was an affair of minutes before Harry must be asphyxiated and lose his grasp.

The firemen, with hooks and ladders, rushed up to the base of the chimney, and ran their ladders aloft. But the highest point they could reach was thirty feet below the top.

A groan of disappointment went up from the crowd.

Harry realized that now but one thing remained to be done, and that must be done instantly. He could not be reached; he must drop to the stay-wires.

The excited crowd below, looking upward, saw him first fling his hat and lantern clear of the crowd, and then swing himself down the edge of the chimney. Then cries of horror went up as he was seen to leap downward into space.

Not one in the crowd but thought he would be dashed to pieces on the ground. But descending swiftly, he struck the stay-wire. The next moment he had caught it in his hands, and for an instant hung suspended, swinging like a pendulum beneath.

Then he threw his legs over the wire, slid slowly to the ground, and fell fainting in the arms of one of the men who had rushed forward to assist him.

WILL LISENBEE.

CHANCES.

Do not cry and weep for chances,
Chances that have passed away,
Opportunities neglected—
Grasp the chance you have to-day.

Do not mourn for faded roses,
Roses that have bloomed and died.
Satisfy yourself with others—
Pluck the one there at your side.

ADVENTURES IN WILD AUSTRALIA.

FIRST PAPER.

Although at the time I started for Australia I was twenty-nine years old, and was, therefore, scarcely entitled to be termed a youth, I caught at the opportunity of going to this strangest of all strange lands with all the eagerness of a youthful mind.

Strange countries and strange peoples, curious customs and thrilling adventures—these are what take the fancy of youth.

If you consult your world's history you will find that, although the Portuguese had probably touched upon the western coast of Australia as early as 1601, and Luis de Torres had in 1606 discovered the straits which bear his name, it is to the patient efforts of the Dutch navigators that the discovery of the fifth continent is due, more than a century after Christopher Columbus landed at San Salvador.

You will also find that the first English settlement—a penal colony of one thousand convicts—was established in New South Wales as late as 1788, one year before George Washington was inaugurated as first President of the United States of America.

These dates show how far behind America Australia was in her start toward civilization. As regards attainments, Americans may probably claim a yet greater lead over their younger rival on the opposite side of the world.

It must be admitted that Australia has yet to establish her independence. She is still a colony, but one of the most magnificent on the face of the globe. She covers an area nearly as great as that of the United States, exclusive of Alaska, and the southern portion of the continent is highly civilized.

Here we find large cities, immense wealth, vast resources, and a thriving and ambitious population, whose annual exports to the mother country, Great Britain, amount to two hundred million dollars.

The first house in Melbourne was built in 1835, but when I was there, in 1880, I found a city of three hundred thousand inhabitants, with many handsome public edifices, and a magnificent parliament house in course of erection; for the façade of which, I was told, it had been contemplated to import marble from Carrara, Italy.

Sydney, the capital of New South Wales, is nearly as large as Melbourne, and a city of immense wealth. Victoria and Adelaide—near which gold mines were discovered in 1851—are also centres of well-rewarded activity.

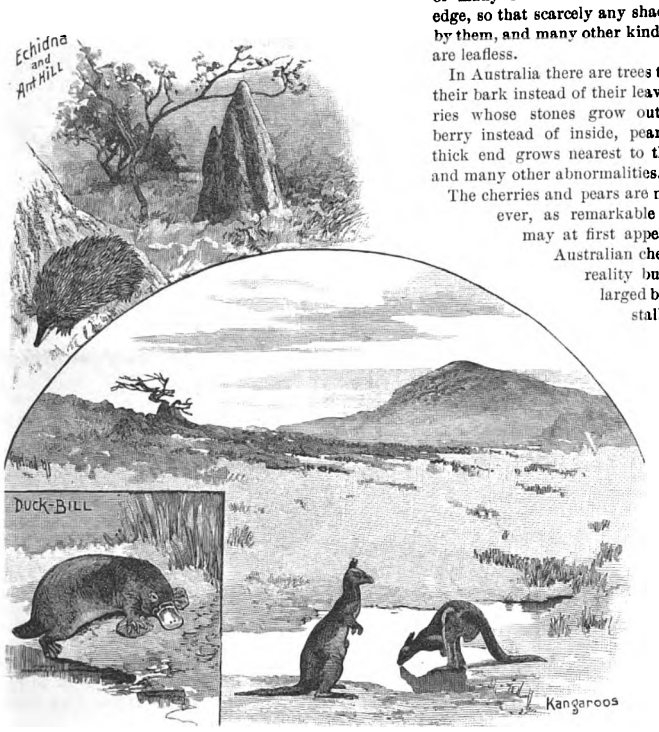
In 1839 England yielded to the vigorous protest of the free settlers and ceased deporting its criminals to Australia. Up to that date sixty thousand convicts had been sent out.

In the civilized parts of the country existence is made easy and pleasant. Anything one wishes may be obtained for money. Ladies frequently send to Paris or London for their dresses. In fact, all that civilization affords in the way of luxury can easily be procured.

But it was not for the purpose of studying civilization that I went to Australia. When, on May 23, 1880, I stepped aboard a sailing-vessel whose Norwegian name was nearly as long as its mast,—*Einar Tambars Kjælver*,—I was commissioned by the University of Christiania to study the fauna and the aborigines of the Australian Continent.

Truly, the naturalist finds there a wide field for his labors. Nature offers the commercial man next to nothing in this wilderness. There are scarcely any fruits or edible roots, no good game, no domestic animals, hardly any drinkable water; and the fish taste of mud. Everything had to be introduced from Europe, from potatoes to grapes, from horses to rabbits; but once introduced, they thrive wonderfully—especially the rabbits, for the extermination of which there is a standing offer of one hundred and twenty-five thousand dollars. The famous French savant, Pasteur, has tried to solve the problem presented by the rabbit plague, but has failed.

Yet, poor as it is in original resources, this is verily the wonderland of the naturalist. It is evident that Australia is the region which has undergone the least change in later geologic times. It is in the main now what it was during the early part of the tertiary period.



This "Land of the Dawning" reveals to us a primitive and peculiar form of animal life. The majority of its mammals belong to the curious order of Marsupials, or animals which have a pouch in which they carry their young. They are the most ancient of all known mammals. The fossil remains of animals of this order are found in the secondary and tertiary deposits of Europe and America.

These singular relics of a past age have now no other living representatives, with the exception of one family—the *Didelphyidæ*—found in

Digitized by Google

America. But in Australia they flourish in the most varied forms, and assume in nature the place filled in other portions of the world by the most different groups.

Some are carnivorous, others herbivorous. Some live on the earth, others in trees. Some

approach in form the wolf, others marmots, weasels, squirrels, dormice, etc. Yet they all possess common structural and other peculiarities, which show them to be members of one stock, presenting only an outward resemblance to the old-world types, with which they have no real affinity.

The natives often described to me a large carnivorous marsupial called by them "yarri," which approaches in form the larger members of the feline tribe, and therefore may properly be called a marsupial tiger.

Unfortunately, notwithstanding repeated attempts, involving many dangers and privations, I was unable to secure the specimen I was so anxious to possess of this interesting antipodean animal.

The largest and best known of the marsupials, the kangaroo, sometimes attains a height of seven or eight feet. Yet the new-born offspring of this huge beast is no larger than a human baby's little finger, and not unlike it in shape. This helpless, naked, blind little being the mother picks up with her mouth by a seeming miracle of dexterity, and places in her pouch, where it is nourished for several weeks, and gradually assumes the form of its parents.

Pouch and little one grow simultaneously, and the young kangaroo is soon able to take excursions from its place of refuge. These become more frequent and more extensive, the strength of the infant kangaroo increasing until finally it no longer needs maternal care.

Here also are to be found the most peculiar mammals on earth — the *Monotremata*. This singular order is divided by naturalists into two genera: The duck-bill platypus *(Ornithorynchus anatinus)* and the echidna or spiny ant-eater.

The duck-bill somewhat resembles a water-mole, but is provided with a duck's bill and webbed feet; and the spiny ant-eater is not unlike our porcupine. It has quills, and when alarmed, rolls itself up in a ball. It is a good swimmer, although its feet are not webbed, and it shows its strength by rapidly disappearing in the sand or loose earth when pursued.

Both of these interesting mammals possess marsupial bones, but no pouch. They lay eggs like birds and hatch them, and then suckle their young!

Among birds, Australia possesses some remarkable species, such as the megapodius, or jungle-hen, and the talegalla, or brush-turkey. These do not themselves hatch their eggs but, like reptiles, bury them in large mounds of earth and decayed vegetable matter. The fermentation of this produces heat, by means of which the eggs are hatched.

These mounds, which are built by several females associated for the purpose, are so large that at first they were mistaken for the burial-places of the natives.

Enough has been said to show that, to the eager naturalist, Australia offers the most tempting inducements for study and exploration. It is a land in which nature seems to indulge in the most unexpected freaks. There is a saying that in Australia the women have no beauty and the flowers no fragrance; while the birds do not sing, and the dogs do not bark. Without venturing a scientific opinion upon the first point, I can testify to the truth of the rest.

Europe has white swans—Australia possesses black ones. It has black cockatoos, wagtails that wag their tails sidewise instead of up and down, and bees that do not sting. In Europe, trees are the pride of the land-owners, and give grateful shade to man and beast; but the leaves of many Australian trees are set on edge, so that scarcely any shade is cast by them, and many other kinds of trees are leafless.

In Australia there are trees that shed their bark instead of their leaves, cherries whose stones grow outside the berry instead of inside, pears whose thick end grows nearest to the stalk, and many other abnormalities.

The cherries and pears are not, however, as remarkable as they may at first appear. The Australian cherry is in reality but an enlarged berry-like stalk, while the fruit proper is an unsavory, hard nut, growing at the extreme end of the stalk; and the Australian pear is really not a pear, but an entirely different, uneatable fruit, as hard as wood.

CARL LUMHOLTZ.

SUNRISE.

All of a sudden the sea damp drifted up,
And the great bowl of the sun came out of the sea.
Daylight had filled and lifted its drinking cup,
And sweet was the promise of joy it pledged to me.
Selected. —*Ernest Arthur Edkins.*

SWITZERLAND.

On August First and the following day the Swiss Republic celebrated the six hundredth anniversary of its existence.

The character of the Swiss Government, and the position in Europe of the little Alpine republic, surrounded as it is by formidable and jealous powers, are matters of peculiar interest to Americans. We do not forget that, until France threw off monarchical institutions twenty years ago, Switzerland alone of European States presented the example of a republic alike in form and spirit.

Even now it is fair to assert that Switzerland has a more completely republican form than has France.

Recent minor changes in the Swiss Constitution call special attention to the structure of that organic law; and it is useful to compare the little European republic with the great republic of the Western Hemisphere, and see wherein they resemble and wherein they differ from each other.

A general resemblance appears between them in the fact that in both the people, through their executive and legislative representatives, rule the State. This general resemblance is carried further in the structure of the two national legislatures.

Both are federal governments, with two legislative houses, one of which represents the people of the republic directly, and the other the States of which the republic is composed. They are alike, too, in the fact that the Upper House in each case is composed of an equal number of members—namely, two—from each State or canton.

Still another resemblance lies in the constitution of the two supreme judicial tribunals of the two republics. The Federal Tribunal of Switzerland corresponds to the United States Supreme Court, as being the court of final appeal of the whole nation.

But here the differences between the two States begin; for, while the United States Supreme Court has the power to declare a law made by Congress to be unconstitutional, the Federal Council of Switzerland has no such power. Every law made by the Swiss Congress is constitutional, and cannot be challenged by any authority in the State.

As we examine the details of the two governments, the differences between them more distinctly appear. The Swiss Lower House is elected for three, instead of, as with us, for two years. The Upper House, too, though it is chosen by the several cantons, as our Senate is chosen by the legislatures of the States, is not elected for a definite period, our Senators being chosen for six years; but the length of the Swiss term of service is decided by each canton for itself. The Swiss Ständerath, or States' Council, corresponding to our Senate, comprises forty-four members, two from each of the twenty-two cantons.

The method of choosing the Swiss executive also differs essentially from our method of electing the President. It more closely resembles that of the French Republic. The executive power in Switzerland is confided to the Federal Council, which is composed of seven members. These are elected by the two Houses of the Swiss Congress, their term of office being three years.

The Federal Council being duly chosen and inducted into office, the two Houses proceed to elect from their number a President and Vice-President. The Swiss President is thus only the presiding officer of the Federal Council, in which body the whole executive power is lodged.

The position of Switzerland, a small and in a military sense weak State, in the very midst of great and rival powers, would seem to be a perilous one. Its safety was guaranteed by the great powers in the Treaty of Vienna in 1815; yet it is easy to see that in a general war events might happen which would put the existence of the little republic in peril.

But it is to be hoped that, even in case of such a war, public opinion in Europe would be strong enough to stay the hand of any power which sought to violate the agreement under which Switzerland has thus far lived securely and prospered.

THE SAFE LEADER.

First, find out Truth, and then,
Although she strays
From beaten paths of men
To untold ways,
Her leading follow straight,
And bide thy fate!

CONVICT LABOR.

Several bodies of workingmen, and several political gatherings which are in sympathy with the demands of organized labor, have lately newly expressed a very earnest opposition to the employment of convict labor in competition with the labor of free and honest workers. So frequent have these protests against convict labor become, that it is of interest to examine the general subject.

The State, it is now almost everywhere admitted, must provide the convict with some kind of work. To keep him in idleness means to degrade him, and when his imprisonment is over, to subject society to a worse danger from his depredations.

Unproductive labor, like that of the tread-mill, has also been generally rejected as degrading in its effect upon the convict, and mischievous to the State. Nor has it been proposed seriously, in this country, to exile convicts to a distant region.

We have, in this country, practically four systems of employing convicts.

The first is the contract labor system, under which a contractor employs convicts at a certain price per day, the men working for him in the prison.

The second plan, the piece-price system, is a modification of the first; but the State supervises the work of the convicts, and the contractor receives from the prison, at a set price, the material which has been manufactured for him by convicts.

The third is known as the public account system. Under it, the State simply carries on the business of manufacturing on its own behalf, making the prison a sort of State factory.

The fourth is the leasing-out system, which has prevailed in several States, but is being gradually abolished. It now prevails only in two or three. The convicts, under it, work outside the prison in chain-gangs, like bands of slaves.

How do these various systems affect free labor? The workingmen's organizations complain that the contract systems take a large amount of work out of the hands of honest laborers; and this is not generally denied. Convict labor is slave labor, and often distinctly affects the price of free labor.

In Alabama, for instance, certain mine-owners reported that they could not work their mines at a profit without the lowering effect upon wages of convict labor competition. They did not in all cases employ convict labor, but they were able to obtain free labor cheaper on account of it.

The number of convicts whose work is employed under some sort of contract is vast. Laborers in many industries have felt its effect, and have protested earnestly against it. These protests have led in certain States to the abolition of the contract system, and the substitution of the "public account" system.

But this, it is said, has not brought about relief. The industries which are engaged in by the State, under this system, find themselves injuriously affected, and a new injustice results.

For instance, we are told by the shoe-workers of one State that the maintenance of a certain prison cost two hundred thousand dollars a year. This cost was paid, or nearly paid, by the manufacture of boots and shoes in the prison. As the boots and shoes thus made would otherwise have been made by free workers in this industry, the entire cost of maintaining the prison rested upon those who were engaged in the making of boots and shoes.

The public account system, these free workingmen say, is competition no less than the contract system, because the State pays no rent and no taxes, and is not under the necessity of selling its goods at a profit. Productive convict labor, it is urged, under any system, is necessarily a form of competition with free labor.

But no practicable means has been devised of getting rid of it. To abolish it would increase the cost of the care of criminals, put a heavy burden of support upon the productive classes of the community, and increase the amount of crime.

It is urged, however, that the evil can be lessened by abandoning any attempt to make a profit upon the labor of convicts, to diversify their industries as much as possible, so that no undue amount of competition shall come upon any one industry, and to devote as much attention as possible to instructing convicts and accustoming them to willing industry, so that they may become capable and law-abiding citizens when they have served out their terms.

INTRODUCTIONS.

"She is the dearest creature in the world," a young girl was explaining to her aunt; "so good, loving, and generous; but I always have cold chills when she visits me, because in company she is just a dead-weight. I cannot introduce her and leave her; I must stand by and hold her up. In her own home she is the support of the whole family, but society acts like acid upon her backbone and leaves her limp. Do befriend her, Aunt Agnes, and help her out of herself."

"Maud is actually speaking in sentences instead of monosyllables," the girl whispered to her aunt a few evenings later. "How have you bewitched her?"

"It was simple enough. I introduced Charley Dunlap to her, telling her beforehand that he was very shy and ill at ease; but that there was one subject, amateur photography, over which he forgot his bashfulness; that if she could get him to explain to her the best way of mixing developer, he would be intensely happy, and I should be relieved from all charge of him. Thinking to help me, finding a person shyer than herself, and having a subject to begin upon, seems to have worked the charm."

A little later Aunt Agnes beckoned Maud to her side and presented her to a white-haired gentleman. "Professor More is a relic-hunter, and I have been telling him about that treasure of a tomahawk which you found. He thinks he has one to match it, but I will leave you to settle the question between yourselves."

"Maud," came again Aunt Agnes's sweet voice, just as Indian relics had exhausted themselves, "Mrs. Lewis wishes to see my palms. You must not reveal my ignorance, however, by letting her know that they would all have died if you had not come to their rescue."

As Aunt Agnes turned away she smiled to hear the elder lady say to the younger, "How fortunate I am. Now you will tell me how to treat *my* poor palms."

"It has been a delightful party," the young guest exclaimed, as the two girls kissed Aunt Agnes good-night. "I did not once find myself, as Howells says, 'cast away in a corner, and clinging to a water-color on the wall with a show of interest that would melt a heart of stone.' You were lovely to supply me so with topics.

"Hereafter I shall be courageous enough to try to find some for myself, or I will search for a Charley Dunlap and ask him the name of his hobby. It flashed over me to-night, Grace, that I had been selfish heretofore, in not being more social with your friends, but I did not know how to begin."

It is true that no one in society has to practise unselfishness more than the timid and retiring person. It is also true that the easy talker owes support and stimulation to her less sophisticated friends; and in no way can she confer it more gracefully than in bringing forward subjects in which she knows they are interested. It is as much her duty to do so, as for the hostess to provide viands which will tempt the appetites of her guests.

EXAGGERATION.

One of the effects of a little education, without much thinking with it, is to make people expert in exaggerating. There are many young people, educated in our schools, who make use of their acquaintance with words to pile them up uselessly in description.

We say their *acquaintance* with words, not their knowledge of them; for when one really knows words, he does not often misuse them. He does not, for instance, call a large apple a "monstrous" one, because he knows that an apple may be large without being either misshapen or unnatural; nor would he call a mutton-chop "elegant" because he found it tender.

Let us take an instance of the misuse of a little education in this way. Bertha Brown is a high-school girl, who is reckoned bright at school, and who has had many social advantages. The other day, meeting one of her companions on the street, she grasped her by both hands and burst into this speech:

"O Edith Jones! You can't possibly imagine what a perfectly immense, gorgeous time we had last night at that enchanting Mrs. Snodgrass's! She has a perfectly mammoth, palatial house, you know—three stories high, and such a gigantic dining-room, and the most fascinating love of a piazza!

"Well, we had an enormous dinner—beautiful mushrooms, and some monstrous peaches and the most seraphic ice-cream and that sort of thing—and then some music on the piazza that was just too huge and heavenly for anything! Sophie Ives was there with that perfectly magnificent banjo of hers, and played a dazzling fandango on it.

"And then Billy Graves played ineffably on his jewsharp—did you ever hear anything so utterly

Digitized by Google

preposterous as playing on a jewsharp?—but it was sublime, anyway, the way he played on it.

"Ethel Smith had just played an immense little caprice on the piano, when who should come in but that awfully odious Mr. Tompkins; and he began talking everlastingly about social problems, and that sort of thing, in the most agonizing way.

"It was absolutely insufferable, and we were all simply paralyzed. Mrs. Snodgrass was mortified to death, and —"

Fortunately for Edith Jones, her father came along at that moment and relieved her from the necessity of listening to any more of Bertha's superlatives.

Bertha had not been conscious that she was using bad English or telling any untruths in the speech she had been making. She had been well trained in grammar, and did not wilfully tell a falsehood. She thought she was simply relating, in a lively way, actual occurrences of the day before.

But her story was really very far from a truthful account of the evening's happenings; and nothing could do much worse violence to the laws and the spirit of the English language than such discourse.

People who talk in this exaggerated and inexact way do not realize that the most forcible language is always the simplest, and that no word is effective if it is used out of its proper sense.

AT THE LUCKY MOMENT.

When Hubert Howe Bancroft was collecting the material for his "History of the Pacific States," he was greatly aided in his quest by Enrique Cerruti, an Italian who seemed to have a way of willing valuable manuscripts from jealously guarded chests.

General Vallejo, a Hispano-Californian of the old school, was said to have, at his residence in Sonoma, a great quantity of priceless documents relating to the early history of California. These Mr. Bancroft desired, but though he addressed many a deferential petition to the General, no response could he obtain.

Cerruti now entered upon the campaign, and after enlarging upon his own love of California, speedily obtained an invitation from Vallejo to examine the precious papers. At length, by dint of introducing the historian's name and objects, Cerruti succeeded in obtaining from his host the loan of a trunkful of papers, to be copied and returned in perfect condition.

"But, General," exclaimed Cerruti, overwhelmed, "I cannot copy them here. Since you have been so kind as to repose this confidence in me, permit me to take the papers to the library, and employ men to copy them. Otherwise, I might work over them for years."

"Be it so," said the General, "and while you are about it, there are two other chests of documents here which have never been disturbed since the fire. Take them, copy them as quickly as you can, and return them to me."

Now it was a fundamental maxim with Cerruti never to be satisfied. As long as there was anything left, so long did he importune.

"Why not multiply this munificence fourfold," said he, "by giving Mr. Bancroft these documents out and out, and so save him the heavy expense of copying them?"

"No, sir!" exclaimed the General, emphatically. "Do you think I regard these papers so lightly as to be wheedled out of them in a little more than two short months, and by one almost a stranger?"

So the matter rested for some months, until General Vallejo, accompanied by Cerruti, visited the library in San Francisco. The documents were spread out upon the long tables, about which sat eight Mexicans, busily copying them. It was an impressive sight to the visitor.

Passing the copyists, he was conducted to the historian's room. Several gentlemen were present, and two hours passed in discussion of the forthcoming work. General Vallejo was impressed and delighted. It became evident that a most important and worthy work was being done.

Cerruti had found his opportunity. He saw Vallejo drinking in the idea like an inspiration; he read it in the visitor's enkindled eye, flushed face and firmer tread. Placing himself by the General's side, he whispered:

"Now is your time, General! If you are ever going to give those papers—and what better can you do with them?—this is the proper moment. There are the copyists seated to at least a twelve months' labor. A word from you will save Mr. Bancroft this large and unnecessary expenditure, secure his gratitude and the admiration of every citizen."

"He deserves them," was the reply. "Tell him they are his."

And so, to the boundless gratitude of the historian, were fifty volumes, each approaching the dimensions of a quarto dictionary, added to his library of historical material.

MAKING GOOD ROADS.

The movement which has been well begun in many parts of the country to reform the wagon-roads, which have to a great extent fallen into a sad state of neglect, is likely to be forwarded by the action taken by several agricultural colleges, and particularly by Cornell University, in giving courses of instruction in road-making.

Very often bad roads exist because no one in their vicinity knows how to construct a road. The people often do the best they can; but road-making is a science in itself, belonging properly to the civil engineer's profession.

In Cornell University the Professor of Civil Engineering, the Professor of Agriculture and the Professor of Horticulture have been directed to prepare a plan for putting the roads of the University property into the best possible condition; and when the road has been completed, an inscription is to be put up upon it, stating how much it cost, what materials were used, and what methods were employed in its construction.

In several agricultural colleges, courses of lectures are given by practical men upon road-making. Farmers' Institutes are taking the matter up, and the people everywhere are learning that much better methods of road-making exist than the old one of heaping up dirt in the middle of the driveway, to be worked into ruts and washed into the ditches again in the course of a year.

EXHUMED HISTORY.

Every young reader who has been charmed by the wonderful story of Joseph in Egypt must be interested to know how much modern science and enterprise are doing to restore the scenes and objects he looked upon, and the outlines of the very life of his generation. Pithom, one of the "treasure cities" in which doubtless that Hebrew hero and pattern man stored up the surplus of the harvests of the "seven years of plenty," has been discovered by Doctor Naville, and excavated from the sand. It is the city which the Greeks called Heroöpolis.

Geological surveys have shown that the Red Sea, now crowded far away by the accumulating land deposit of thirty centuries, once extended to this great city and washed its walls, and Pliny and Strabo, and others, were right in describing the place as an important port of commerce.

Doctor Naville's explorations have enabled him also to identify the early camps of the Israelites, Succoth,—a district, not a city,—Pi-Hahiroth, Baal-Zephon and other places, and so trace their journey to where they crossed the Red Sea.

It seems almost as if the localities of Bible history were cast by design outside of the path of destroying time. Climate, the embalmer's art, and the all-covering sand, have kept the daily world of the Pharaohs, like an old but indelible "negative," to be brought out in full photograph by nations thousands of years younger than they.

Men like Mariette Bey, Mr. Petrie, and Doctor Naville have unearthed and are still unearthing for us the very halls and streets where old Egyptians bowed the knee to Joseph or trembled at the miracles of Moses and Aaron, and restoring to the light of day the inscriptions and some of the very papyri which they actually saw and read.

It is a silent language these risen relics speak, for the vowels are all gone out of them; but it requires but little imagination to breathe life and sound into the startling consonants—the skeletons of a past so real and so grand.

RUSSIAN DIPLOMACY.

The late Sultan of Turkey, Abdul Aziz, was, if not absolutely mad, sufficiently eccentric to cause constant trouble, not only among his own ministers, but also where the foreign ambassadors were concerned. One of the ambassadors, however, General Ignatieff, of Russia, was sufficiently clever to outwit him, and introduce the business of nations under the guise of personal pleasure. A fine example of his ingenuity is given in an article in *Murray's Magazine:*

At one time the Sultan absolutely refused to grant an audience to any member of the diplomatic body, and spent the greater part of his time in cock-fighting, an amusement which he greatly relished.

Ignatieff learned that His Imperial Majesty was in need of fresh birds to supply the place of those killed in fight.

Thereupon, Ignatieff procured a fine-looking white fowl, of the barnyard species, had it trimmed and spurred to resemble a game-cock, and sent it, in a richly-decorated cage, to the Sultan.

The ruse was successful, but the Sultan, at first delighted with the gift, soon sent for the ambassador to present himself at the palace, and explain, if he could, why the bird had no inclination to fight. Ignatieff went, examined the bird in the presence of the Sultan and, with great astonishment and regret, acknowledged that it was quite unable to cope with the royal game-cocks, which were of an undoubtedly superior race.

A conference followed on the subject of game-cocks in general, and this one in particular, and when the diplomatist had succeeded in drawing the Sultan into a conversational mood, he adroitly introduced the political matter he had so long awaited an opportunity to discuss. After a long conversation he returned to his embassy triumphant over his other colleagues.

ROOF-LIZARDS.

The names that have been invented for some of the animals that inhabited the earth in long-past ages are almost as extraordinary as the extinct creatures that they designate. Yet these names cannot be said to lack fitness. Take, for instance, the "stegosaurus," an animal of the Jurassic age which has been described by Professor O. C. Marsh, and of one species of which he has just completed an ideal restoration; the name exactly fits the extraordinary beast that bears it.

Stegosaurus is formed from two Greek words, *Stege*, roof, and *Sauros*, lizard, and means a roofed lizard. These, however, did not resemble the little lizards familiar to us in our day, but were huge creatures eighteen or twenty feet in length, and a dozen feet tall at the centre of their sloping backs!

They were covered with a dermal, or skin-like, armor of a tough, horny character, very strongly backed with massive bony plates and spines. Upon the tail were four double-pointed projecting spines of great strength, which Professor Marsh thinks were used for offensive purposes.

Similar indications of the powerful weapons and effective means of self-protection which nature furnished to the enormous beasts of the Reptilian age are found in the remains of other extinct animals of that time. They were clearly cut out for fighters.

BRITISH PRIDE TOUCHED.

When three regiments of the English army took possession of Castine, Maine, in the last year of the War of 1812, a large detachment was sent up the river to seize the neighboring towns. As the red-coats were leisurely marching through the country, they saw an old, bent, white-haired man, sitting at the door of a small, plain house.

The young officer at the head of the troops deigned to lay aside military dignity for a moment, and condescendingly hailed him:

"Old Daddy, did you ever see so many men before?"

"Yes," was the prompt answer.

"And where, then?"

"With Wolfe, under the walls of Quebec."

The officer stopped. Good-natured condescension to the old Yankee countryman was changed to respect for the colonial soldier. 1776 and 1812 were forgotten. He ordered the command to halt, and with the other officers shook hands with the humble old man, proud to do honor to one who, under the British flag, had followed a young, brave general to his last victory.

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

RIVERVIEW ACADEMY, Poughkeepsie, N. Y. **56th Year.** Prepares thoroughly for College, the Government Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

LOOK WELL, FIT WELL, WEAR WELL.

Ask Your Furnisher for Them.

SHAW STOCKING CO., Lowell, Mass.

What sort of a manufacturer is he that puts mean varnish on his things? The sort that makes mean things.

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY.
FRANKLIN MURPHY, President.

Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

Six Great Epochs

in America's History covering the Birth, Growth, and Development of our Country are represented by Six Souvenir Spoons, manufactured by the TOWLE MFG. COMPANY.

A. D. 1000.
Leif Ericson came to America 986-1000.

A. D. 1492.
Columbus discovered America.

A. D. 1773.
Faneuil Hall, "The Cradle of American Liberty."

A. D. 1776.
Independence Bell in Independence Hall.

A. D. 1783.
Evacuation of New York by the British.

A. D. 1849.
California, the El Dorado of the World.

in our large Illustrated Advertisement of these Souvenir Spoons in the Sept. 10th issue of this paper.

TOWLE MANUFACTURING CO., SILVERSMITHS,
Newburyport, Mass. Chicago, Ill.

1891-2.

Our assortments of **Dress Goods** and **Silks** for this season are larger and better than ever before, and the goods set aside especially for our Mail Order customers are more attractive than we have ever offered. Selling

Dry Goods by Mail

can be done with perfect satisfaction to the purchaser, as our very large Mail Order trade proves, and we solicit inquiries for any line of goods you may require.

Samples sent FREE upon request to any address. Write at once to

Jos. Horne & Co.,

607-621 Penn Avenue, PITTSBURG, PA.

Black Silk Warp

Henrietta Cloth.

It is now two years since our great sale of this favorite weave of Black Goods at unusually low prices.

Now we are again in position to announce a second sale of about 100 pieces from the looms of a world-renowned maker, regular in every respect as to weight, quality and finish, subject only to slight manufacturer's imperfection:

$1.25	per yd.;	regularly		$1.75
$1.35	"	"	"	$1.85
$1.50	"	"	"	$2.00
$1.75	"	"	"	$2.50

These goods may be readily ordered by mail or by express.

PIANOS

Mason & Hamlin recognize the high excellence achieved by other leading makers in the art of piano building, but still claim superiority. This they attribute chiefly to the remarkable improvement introduced by them in the year 1882, and now known as the "MASON & HAMLIN PIANO STRINGER," by the use of which is secured the greatest possible purity and refinement of tone, together with greatly increased capacity for standing in tune, and other important advantages.

A circular, containing testimonials from three hundred purchasers, musicians, and tuners, sent, together with descriptive catalogue, to any applicant.

Sold for cash and easy payments.

The Cabinet Organ was introduced in its present form by Mason & Hamlin in 1861. Other makers followed in the manufacture of these instruments, but the Mason & Hamlin Organs have always maintained their supremacy as the best in the world.

Mason & Hamlin offer, as a demonstration of the unequalled excellence of their organs, the fact that at all of the great World's Exhibitions, since and including that of Paris, 1867, in competition with best makers of all countries, they have invariably taken the highest honors. Illustrated catalogue free.

Sold for cash and easy payments.

HAVE WE TWO BRAINS?

By William A. Hammond, M. D.

The human brain consists of two hemispheres, very much alike in their general appearance, and closely united at certain points, but nevertheless so distinct one from the other that it appears strange that they should so long have been regarded as constituting a single organ. When we look into their physiology we find so many arguments for considering them as different in their functions that our astonishment is increased when we think that they are still spoken of as "the brain."

I shall endeavor to show that these two hemispheres are in reality two brains, as much so as our hands are two hands, and our eyes two eyes. As a matter of fact the eyes are just as much united one to the other as one hemisphere of the brain is united to the other hemisphere; and yet we can see with one eye without seeing with the other; we can even see differently with our two eyes.

So we can also think with one brain hemisphere without thinking with the other. We can think of one subject with one hemisphere, and of another subject with the other hemisphere. We can be sane with one, and insane with the other; the one may have hallucinations which the other corrects; the one may be stricken with terror while the other is moved with the keenest delight; the one may be disgracefully feeble in will-power while the other carries everything before it; the one, when the seat of injury or disease, causes one side of the body to be paralyzed, while at the same time the other, the seat of some different disease, throws that side of the body with which it is in relation into violent convulsions.

In the very beginning of the existence of the individual the body consists of two distinct halves, which, afterwards becoming fused together, retain, nevertheless, in a great degree their original characteristics.

Thus the two sides of the face are never exactly alike; the two lungs are not of the same size; the liver is placed on one side of the abdomen, the spleen is placed on the other, and the two brains, though looking much alike, are seen upon close examination to be different and to be possessed of different functions.

The organ of speech is located entirely, in the great majority of cases, in the left brain—occasionally in the right brain—but never, so far as our knowledge extends, in both brains in the same person. Thus if a man be injured in his left brain at a point a little above and in front of the ear, he is deprived of the faculty of speech, losing even all idea of language. If the injury admits of relief, the capacity for speech is at once restored. If, however, the injury takes place on the right side, there is no interference with the faculty of speech—unless, as occasionally happens, the speech organ is situated on that side.

Again, if a person is, for instance, shot or otherwise injured in his right brain, he is paralyzed on the left side of his body; while if correspondingly injured in the left brain he is paralyzed on the right side of his body. Thus the right brain presides over the left side of the body and the left brain over the right side of the body, the nerve fibres crossing to the opposite sides before reaching the cranium.

When a physician is called to a case of apoplexy, for instance, and finds his patient without the power of motion and of feeling in his right arm or right leg, he knows that he is suffering from some disease, probably the rupture of a blood-vessel, in his left brain; and with this paralysis there will frequently be a loss of the power of speech. If on the other hand the patient is paralyzed in his left arm and left leg, there is no loss of speech and the physician knows that the disease is seated in the right brain.

Such facts go to show that there are two brains presiding over opposite sides of the body.

By hallucinations we understand a false sensorial impression, which has no real physical basis of truth. Hallucinations may exist with all the senses.

Now it occasionally happens that these hallucinations are present with only one eye or one ear or one nostril, or one side of the tongue or the fingers of one hand. A patient of my own, while preparing for bed one night, saw before her the figure of her mother, who had died several months previously. The image did not for an instant impose upon her intellect; but thinking that something must be the matter with her eyes, she closed them alternately and rubbed them with her fingers as we often do when we wish to make our vision clearer. As she closed the left eye the image was no longer perceived; and then she became convinced that she saw it with the right eye only.

Another patient, who had greatly overtasked his mental powers, heard a voice whispering to him to go and kill himself; but only in the right ear.

In both these instances, and in several of similar character that have come under my observation, but one brain was affected, while the other remained free from perceptional disorder.

Some of the phenomena of hypnotism are interesting in this connection. In the case of a gentleman upon whom I frequently experimented it was easy, after I had hypnotised him, to act separately upon his two brains. Thus I would place on the middle of his forehead a book, in such a way that it was interposed as a screen between the two eyes so that both could not follow the same line of vision.

I would then tell him, for instance, to look with his right eye into a corner of the room, and that there he would see the dead body of a dear friend. Instantly the corresponding side of his face expressed the greatest horror, while the other remained a perfect blank.

I would then tell him to look into the opposite corner with his left eye, where there was a clown performing various ludicrous antics. Immediately that side of his face expressed intense pleasure and expanded into a broad smile.

Thus there existed in him at the same time two opposite emotions, the one of horror, the other of mirth.

Such experiments appear to me to show indubitably the existence of two separate and independent brains, capable of being influenced in diametrically opposite directions. Nothing, I think, in the whole range of physiological experimentation can give us more conclusive results, unless perhaps it may be the phenomena of double consciousness, to which in the next place I desire to call attention.

In this very remarkable condition, a person under the influence either of disease or of injury of one or the other brain lives two separate and distinct lives, as different from each other as though he were in reality two individuals. Several such instances have occurred in my own practice; but before citing them I will quote the wonderful instance of a French sergeant, who was wounded by a rifle-ball on the left side of his head, and who in consequence became paralyzed on the opposite side of his body. He was apparently cured of the wound and of the paralysis; but shortly afterward a new condition of the most striking character developed.

In his ordinary state the patient was quite an intelligent man; and having been retired from the army he was able to gain his own living by singing in one of the cafés of the Champs Elysées. He was docile and well disposed, and his conduct generally was such as to be beyond reproach. His health was in all respects excellent.

Suddenly, however, an entire change took place in his mental characteristics. He forgot absolutely every event of his past life, and yet he acted in all respects as if he was in the full exercise of his senses and of his intelligence, so that a person coming into association with him would never have suspected that he was otherwise than in his normal condition. But his character had undergone a complete change; and above all, he had developed a disposition to steal whatever he could lay his hands upon.

After this state had lasted a variable period, sometimes two or three months, he suddenly resumed his natural life, and became in every respect as he was before; but entirely oblivious of events that had occurred during his abnormal condition.

These two phases of his life continued to alternate, each condition being in close relation with each other condition of the same character. Thus if we designate his normal state by *A* and his abnormal by *B*, during every *A* state he recollected all the events of every previous *A* state, but had no knowledge of any circumstance occurring during any *B* state. While in every *B* state his memory of events which had occurred during every previous *B* state was full and complete, but he had no recollection whatever of the incidents of any *A* state.

He lived, therefore, two different existences, and undoubtedly the condition was due to the fact that during one period the left brain predominated over the right brain, while during the other the right brain was in the ascendency.

In a case which occurred within my own experience, the patient, who had been struck on the head several years previously by a stick of wood so that his skull was fractured, became affected with epileptic convulsions; but he also became a subject of double consciousness.

Upon one occasion the attack came upon him just as he was entering a railway train. He proceeded on his journey, and arrived in Washington city, where he took lodgings at a hotel.

A few days afterwards he bought out a small book shop and started into business as a bookseller and stationer. He conducted himself with perfect propriety and apparently was in full possession of his intellectual faculties. He passed, however, under a name different from his real one.

During all this period his friends had no knowledge of his whereabouts, until one day when several weeks had elapsed he suddenly resumed his natural condition, and to his intense astonishment recognized his changed circumstances. He at once telegraphed to his friends and returned home, having no knowledge of anything that occurred after getting into the railway train until the recovery of his natural mental condition.

He has had repeated attacks of a similar character since, and in all of them has a more or less distinct recollection of the events of all like previous seizures, and passes under the same name that he took at first.

Ordinarily the two brains act synchronously, that is to say, at the same time; but when they do not, and there is the difference in their action of the fraction of a second, we have the curious experience that what we are doing at the time amid the circumstances that surround us we have done at some previous time under identical conditions.

All of us have had such experiences. They afford additional evidence of the fact that we have in reality two brains, which in these cases do not act at precisely the same time.

The Prince Appears.

For the Companion.

PRINCE JOE.

The spot where Joe found himself was very pleasant. It was the edge of a wood crowning a hill that was little more than a gentle swelling of the earth's surface; but, slight as it was, it enabled him to look over the stretch of pasture and cultivated field and "wood lot" to the sparkling lake beyond.

It was warm, and there was no noise that Joe—too busy anyway to notice sounds and scenes except sub-consciously—could hear except that made by a lad chopping wood in the yard of a farm-house not far away.

Joe was whistling half under his breath, in a contented manner; and as he moved slowly along the edge of the wood was closely scrutinizing the trees. A sudden change in his manner showed that his sharp eyes had spied something interesting. He stopped whistling, stepped quickly back a step or two, and dodged from side to side, getting the object into clear view.

"Flicker!" he said, with emphatic satisfaction.

That it was not a flicker, or golden-winged woodpecker, at all, should be hastily added; for the flicker is not a bird which stops to be stared at.

Joe stood before a tall tree-trunk which was evidently quite dead, and near the top of which was a round hole about twice the size of a silver dollar. Joe regarded it doubtfully, the question in his mind being whether the nest were old or not.

The hole had not that perfectly round and neatly cut appearance which the entrance to a new nest should have; and he looked in vain for the little clumps of mouse-colored feathers, which, brushed off from the bird's breast in its goings and comings and caught by the rough bark, are a sure sign that a nest is in use.

Still, in such matters Joe had known all signs to fail.

A tree in full vigor of life and foliage which stood beside the dead trunk and partially concealed it had made Joe's dodging about necessary to see the hole which he had immediately set down as the work of a woodpecker. But if the tree had made the finding of the nest difficult, it made approach easy, as Joe's eye was prompt to discover.

The big dead tree-trunk, without a branch from one end to the other of its twenty feet, would have been too much for even Monkey Joe, as the boys called him, to climb. But this tree had branches near the ground, and Joe's gray flannel shirt and rough, worn trousers were shortly to be seen at intervals through its foliage, always nearer the top.

Panting a little, and with his face flushed with the exertion, Joe was soon astride a limb whence he could look directly down upon the dead bole just below him, which his hanging feet almost touched.

"Older'n Methuselah!" was his disgusted verdict on the nest.

The dead trunk revealed itself from Joe's new point of view as hollow. Joe ruefully surveyed the cavity. It extended down the trunk of the tree apparently about six feet, where he fancied he saw it come to an end in a solid floor.

It was a most attractive lurking-place for "Monkey Joe." The next moment saw him swing impulsively from the limb on which he was seated, hang a moment in the hollow tree, and then drop down into the alluring cavity.

He dropped twenty feet. The floor which had looked so solid was nothing but a litter of wind-blown twigs and dead leaves.

Joe did not drop like a shot. The hole, in its upper portion, was just large enough to admit his body, and he felt, as he scraped through the narrow passage, a rough tearing of clothes, the departure of buttons, the scratching of his knees and face, and a good deal of dust in his eyes and mouth.

Then suddenly the hollow widened out and he landed much shaken, very much confused, but quite unhurt on a soft, moist heap of particles of rotten wood.

He was caught in this hollow tree as completely as a beetle thrust by a boy into a bottle.

About this time—it was perhaps ten o'clock in the morning—a little girl came out from the neighboring farm-house. She was dressed in a very short-waisted white gown—or possibly it was a white apron over the gown—with big puffs at the shoulder. Her golden hair fell all about her face, and she wore a big hat, Gainsborough fashion. She carried a book under one arm and a doll under the other, and she was very pretty.

She came into the yard and watched the boy Reuben a while with a critical eye as he chopped the wood. She thought him wonderfully strong; strong as that man Her-cules—she pronounced it in two syllables—whom she had read about in one of her books. Then she passed up the slope toward the great dead tree, where there was a pleasant shade and a lovely view.

The book she had was a collection of stories about fairies. In the existence of these beings she quite believed, though she had never seen any. She wondered if there were not some in the woods, it seemed so fit a place for them. She would not be surprised, she thought, to meet one or a dozen there any day; and as she came up silently to the old tree and sat down on the dry grass, she looked about inquiringly.

Then, setting the doll against a stone, she drew its dress into the proper fold with two expert pats of her hand, opened her book and began to read.

She turned by chance to a story of a princess who was wandering in a wood and came upon a beautiful evergreen tree. The princess greatly desired some of the branches of the tree to wreathe above the arches of the great stone hall. She reached forth and plucked a branch; but it bled and a voice came out of the tree, lamenting. This graceful evergreen was no less than a prince of the north whom a wicked enchantress had changed into a tree because she hated him for his handsome face and his good heart.

Marian was breathlessly interested, and began quite unconsciously to read aloud. In doing so, she gave Joe the first hint he had received of a human presence near him. In his dark, close tree-trunk he gave a start of joy and shouted:

"Hallo, you, out there!"

He was going on to demand aid, but he heard the person, whoever it was, jump to a standing position with a startled cry; and he interrupted himself to exclaim and explain anxiously:

"Oh, don't run away. Hold on a minute, can't you? Don't be scairt—it's only me!"

This appeal had an extraordinary effect on the person outside. Joe was very much puzzled. He heard from without, the sound of dancing feet, the clapping of hands, and a treble voice crying, "Oh goody, goody!" as if its owner had found a Christmas-tree in the woods.

Marian, though startled at first, had swiftly argued that, inasmuch as a talking tree could mean only an enchanted prince, she was in the midst of an adventure like that of the princess in the book, and was greatly overjoyed.

But Joe was angry "clear through" at this foolish joy.

"It isn't 'goody' at all!" he said with heat, "and I guess you wouldn't think so, either, if you was me."

He was on the point of crying now.

As Marian paid no attention to this protest, he raised his voice to an angry shout:

"Quit your 'goodyin',' can't you? Go get an axe or a rope or something. Stop your monkeying, and hurry up, too!"

Marian paid no heed to the ungracious tone of the prince. She was too busy wondering what a fairy prince could possibly want with a rope or an axe.

No prince converted into bark and wood had ever in the whole course of her reading asked for a rope or an axe. No indeed! Somebody said something mysterious, and the tree straightway split apart as neatly and nicely as a glove-box opens, and the prince stepped forth smiling as if from a cedar chest where he had been put to be kept from the moths.

"An axe or a rope!" she repeated, dazed; "what do you want with a rope or an axe?"

"What do I want with 'em?" cried Joe, who was growing more and more impatient. "What do I want 'em for? why, to get out of this tree with, of course. D'ye think I wanted 'em to play with?"

"No, but I don't see"—began Marian.

"Well," groaned Joe, "of all the stupid—Say, you're a girl, aren't you?"

"Of course," said Marian, surprised.

"Well," said Joe, scornfully, "I thought so. No boy'd be such a fool. But you can do as you're told, can't you?"

Marian stared. She had been dimly conscious that the manners of the prince were odd; now she suddenly realized that they were very bad. Hurt and grieved, she sought vainly for an explanation.

At last a bright thought came to her. This was a naughty prince, confined in the tree in order that he might be cured of bad manners; and plainly he hadn't been shut up quite long enough.

It flashed through her mind that good fairies in the books frequently punished bad boys so—"just like your mother shutting you up in a dark closet." If such was the case with this particular prince, ought she to help him get out?

"I sha'n't let you out," said Marian, with decision, "until you get more politer. Come, Arabella!"

Picking up the doll, she turned and walked away.

Joe heard her go away with mixed astonishment, rage and despair. It became evident to him, as it had not before, that this girl, so fantastic and queer and unreasonable, was mistress of the situation; and he knew, as he did it, that he raged and kicked the tree to no purpose.

He subsided at last, and stuffing his fists into his pockets, sat down dejectedly in the rotten wood.

Digitized by Google

It was very still—oppressively so—and close. He could hear eerie little insect noises like that of the death-watch which, if the house is old, you hear sometimes in the night. He listened to them dully a long time.

Then a squirrel came scratching his way down the hollow; perceived Joe, filled the resonant passage a minute with angry chattering, and fled.

Another interval followed, and a woodpecker came to the tree, kept up a rat-a-tat for a while on its sides, and flew away. Joe wished it had stayed.

Then a new sound struck his ear—the sound of some animal cropping grass close by his prison. He knew not what impulse of desperate mirth made him give a sudden yell. There was a loud and terrified snort, the sound of four feet landing all together on the turf as if after a sudden jump, a pause of perfect stillness, another snort, and then the dull pounding of galloping hoofs. All this brought so swift and clear and ludicrous a vision of a terrified pony to Joe's mind that even in his despair he broke into a short, convulsed laugh.

This was the only gleam of merriment that visited him that long and memorable day. It was quickly extinguished by the discovery that the ants, of which the tree was full, were crawling about his clothing, on his hands, even on his face.

He jumped up and began slapping himself vigorously, and he drew a pair of very dirty hands over his face, to the destruction of several of the uncomfortable little pests. Not liking to sit down again, he remained on his feet, hot and miserable, there in the darkness.

Time passed. He thought of the boys playing ball on the common, of the swim in the lake they would have after the game, of the good dinners they would eat—of many pleasant things of which he could take his part, if he were only out in the sunshine.

And to think that he might now be there if he had only been polite to that foolish girl.

Marian went her way fully convinced that the prince ought to stay where he was a very long time, "perhaps hundreds and hundreds of years." She determined to think no more about him; but the resolution was hard to hold. Do what she would, her thoughts continually came back to the poor prince. She found herself wondering what he was doing or thinking.

Marian was not cruel. She could not have kept even an impertinent boy shut up so, if by any act of hers she could set him free; but an enchanted prince was an entirely different matter. Still, her sympathy went out to him, and she wondered all sorts of things about his queer life.

At dinner, for example, she asked herself what people turned into trees ate. She supposed they must live upon sap. "And if you were turned into a maple sugar tree," she concluded, "that would be rather nice."

But this living prince was turned into a dead tree, she recollected. And then she gave it up.

At first, as was said, she had made up her mind not to help him out for a very long time. Little by little, however, the time shortened. She would let him out in a month—next Saturday, to-morrow. Certainly she did want very much to see what a real prince would look like. Then a glance at Reuben, still at the wood-pile, filled her with a thought of horror. Supposing some one should chop up the prince into kindling-wood? She was decided; she would let him out to-day.

The fact is that Joe, wearied out with long hours of waiting and weariness, hunger and hopelessness, had at last fallen asleep. So he did not hear Marian's soft footsteps as she approached the tree.

When she had left him before, he was sorry he had not been more courteous, mainly, however, because his rudeness had left him in such a dreadful situation. But some hours of quiet thinking, such as he had ample opportunity for, had convinced him that he never in any circumstances would be impolite again.

This resolution suffered a rude defeat when he was suddenly awakened by some one knocking on the tree and a girlish voice inquiring, "Mr. Prince, Mr. Prince, are you in?"

"In?" exclaimed Joe, with all his old impatience. "In? of course I'm in. I can't get out, can I?"

But he bethought himself immediately, and continued gently enough:

"Please go get some one with an axe, and get me out of this. I'm awfully hungry."

"What?" said Marian. "Haven't you had anything to eat?"

To answer calmly so absurd a question cost Joe a mighty effort.

"No," he said, quietly, "not since breakfast. Please hurry and get the axe, won't you, please?"

There is no knowing what would have happened if Marian had thought to ask, as from her point of view she might have done with perfect reasonableness, why if he had had breakfast he hadn't had dinner too; but fortunately she was struck by something else in his speech and tones.

"You're more polite than you were," she said, contemplatively. "I think perhaps I might help you, now you're good."

"Oh do! do!" cried Joe, "run and get an axe!"

"I don't see yet what you want with an axe," said Marian, "but I'll go get Reuben. He's got one."

She started toward the house.

Joe soon heard voices; the girl's, and—oh, joy! a boy's voice too. There was, he reflected, some sense coming now.

It was, in fact, Reuben, whom Marian had found just starting for the cows. It was now near sunset. Reuben was quite willing to make a turn to the dead tree to see what the little girl's foolish talk about an enchanted prince really meant.

Reuben knew the tree was hollow; but he could not imagine how any one could have tumbled into it.

"Have you got an axe?" shouted Joe, excitedly, addressing himself to Reuben.

"Ye-es," said Reuben, cheerfully, "but how under the canopy 'd ycou git into that tree, anyhow?"

"Oh, please," cried Joe, who, since his lesson, said "please" a great deal, "never mind about that now! Just cut me out, won't you, please?"

"Sa-ay," asked Reuben, "haow much room hev ye got in there, when ye git close t' the other side?"

"Oh, plenty—most a foot," returned Joe. "You needn't be afraid of hitting me. I'm all right."

So Reuben raised his axe for a mighty blow, but paused at a horrified cry from Marian. This experienced little person believed that when human beings were converted into trees, it hurt them to be cut and slashed with axes quite as much as it would if they had not altered their shapes; and she was in real fright at the prospect.

"Oh don't! oh don't! you'll hurt him. I know you'll hurt him!" she cried, and fairly danced up and down in terror, wringing her hands. Reuben stared, axe suspended.

"Jest yeou tend right to your knittin', and don't yeou worry," he said finally. "I guess I know what I'm a-doin'."

The axe fell. Marian covered her eyes; but as there came no scream of agony from the tree, she ventured to peep between her fingers. Then, as no blood gushed from the wounded side, she stopped fearing and began wondering, as she watched the singularly dry chips fly under Reuben's blows. She concluded at length that this tree was different.

Joe listened to the blows of the axe with beating heart. Life and liberty were coming nearer to him with every stroke. Soon he would be free to stretch his cramped limbs in the sunshine, and to get a breath of the blessed fresh air.

Soon he saw light appear through a small hole, which grew steadily larger until he could put first a fist, then an arm, a leg, his whole body through.

"Oh thank you, thank you!" he shouted. "That's enough. I can get out of that! Oh, if you aint a brick!"

As Reuben stood aside, he stepped forth gladly.

Marian, too, watched the hole in the tree grow larger with bated breath. From this, she thought, in due time the prince would appear. He would be brilliant and beautiful, with a silken doublet and cloak, with white satin shoes on which would be silver buckles, with rosettes at his knee, and on his head a velvet cap with a plume nodding proudly above it, and with lace about his hands, one of which should rest on his sword hilt negligently as he drew his heels together, swept his hat to his knee, and bowed.

But what, alas! was the reality? Joe, happy in his freedom and unconscious of his torn clothes, covered with bits of rotten wood, his dirty face dotted here and there with a dead ant, stepped from the tree, and, blinded by the sudden light, stood blinking like an owl.

Right before him he saw a daintily dressed little girl, who looked scornfully at him; and beside her Reuben, leaning on his axe and roaring with laughter.

He was greatly disconcerted when Marian, with sobs of disappointment in her voice, turned away, and with a world of disgust in her tones, exclaimed:

"Why, it's nothing but just a boy!"

A few days later, Joe's mother took him to call on the mother of Marian. "I can't think," said she, "what has come over Joe lately—he's so polite."

Joe stole a glance at Marian, caught her eye, and though he was much older than she, looked very foolish.

"And I," said Marian's mother, "can't think why Marian doesn't care any more for her fairy books."

"It's because," said Marian with a sober little sigh, "I think there aren't any fairies any more."

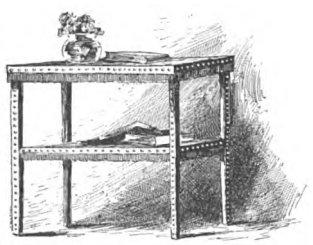
MAKING A HOME.



SECOND PAPER.

Parlors, Wall-papers and Principles.

Nowadays we no longer think that a parlor is to be kept shut and shrouded—a sort of "best room" only to be used on high days and holidays. People see that parlors resent such treatment, and if not used and made a home of by the family, reveal the secret to the most casual guest.

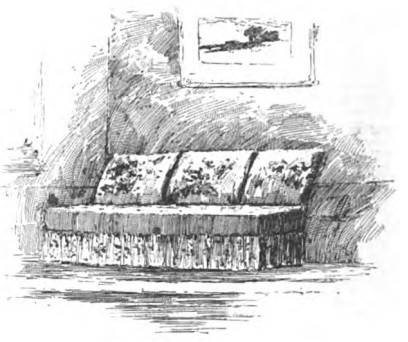
Gone, too, is the idea that parlors must be stiff and stately apartments, with grand furniture and upholstery quite different from the rest of the house.

We have learned that a room of either of these kinds is an artistic mistake, and that no place, however magnificent, can be beautiful if it is not

in keeping with its surroundings. So our young couple need not feel forced to do without a parlor because they cannot have the ponderous and expensive "sets" their grandmothers considered essential.

Instead of this, I urge you to avoid "sets," unless you can afford to buy the very best,—that is, from the best makers,—for they are never good in the cheap constructions offered in the furniture stores. They warp and shrink and come apart, besides being unsightly with coarse wood carvings and covers of gaudy plush, or what is even worse, horse-hair cloth.

Domestic ingenuity, joined with simple good taste, comes in again to give you a better thing than the ordinary furniture-dealer is likely to give you.



You can make a comfortable and pretty substitute for the cheap set by using a box-sofa and wicker chairs like the one I illustrate. The sofa is merely a box, six feet long, two high and two wide, covered with chintz. Upon it is a mattress made to fit exactly. There are also three pillows, all covered like the box.

A carpenter will make the frame for two dollars and a half, and the rest you can do yourself. In the chairs should be cushions of gay colors; the double one for the head should not be forgotten, nor the square one to go in behind the back.

Never be persuaded into buying a "fancy" chair or a "fancy" table. They are delusions as to usefulness, and are generally got up to sell, without the slightest idea that there are rules of art which, carefully followed, make certain forms good, or neglected, make other forms bad.

As it is extremely difficult to find a good parlor table, I illustrate one. The frame any carpenter will make for three dollars, and you can then cover it with plush, corduroy, or even cretonne. The edges should be concealed by braid, put on with nails which have large and ornamental brass heads.

A word of caution as to the placing of the furniture is necessary. Do not stand everything stiffly against the wall, nor yet have every article huddled in the centre as if drawn there by centripetal force. One does not wish to take "a walk among the furniture," when one moves around the room, such as the guests of the Veneerings took in Dickens's story, "Our Mutual Friend."

If your room is large enough, fill up your corners, making each one different from the rest and cozy in itself. Draw the piano across one, a table or desk across another; put a high stool with a vase and growing plant in a third, and a sofa or screen across the fourth. But be sure to leave the centre of the room free.

If you have inherited, or can beg from your old home any old piece of furniture, use it, if it is not hopelessly decrepit. These old friends re-upholstered and "done up" make excellent foundations for the building of a nest. Besides, nothing is so absolutely unhomelike as those perfect parlors "where everything, even the baby, is brand-new," to quote from Dickens again.

If Jenny is skilful with her needle, she may do much with it to beautify her parlors. But I hesitate to suggest this when I remember the rags and tags which I see in some parlors as "bits of color," or "bits of embroidered drapery."

We have run wild in this direction, as a reaction from our perfectly barren parlors of pre-Centennial days; and never asking whether certain things are fitting and in their place, we pile up bric-à-brac, hang drapery in every possible and impossible spot, and make "home" look like a "dollar store."

One sometimes feels, in entering a room "decorated" in this fashion, that he would like to lay about him with a club, and demolish as many of the "nice things" as possible.

I have even seen a wooden milking-stool in a parlor—of all places! And, to make it worse, the stool was tied up with ribbons. In another parlor I saw a wooden shovel, painted with apple blossoms on a blue background, and tied with enormous bows of ribbon, hanging under a marble mantel beside the register.

Could absurdity go further? What could be more useless as a shovel or more inappropriate as decoration, and what more ridiculous than any shovel by the register?

Do not decorate objects intended for homely use, is the decorator's first law; and the second is like it: Do not pervert any object from its original use, nor decorate it so as to conceal its purpose. Because the milking-stools, spinning-wheels and shovels are in the wrong places, devoted to unnatural ends, they become inartistic and incongruous.

Of course most of the charm of your parlor will be in its color, and if you have no reason for choosing another, you cannot do better than select blue or yellow for the prevailing tone, especially if the room opens from a terra-cotta hall.

This color will depend mainly upon wall-papers, curtains and carpets, and on the first of these alone I could write a chapter. Many people have abandoned wall-paper as dusty and unhealthy, substituting painted walls; but these are so expensive that we cannot all follow the example. Moreover, painted walls have disadvantages of their own. A perfectly plain tint shows every spot and stain, and if hardly used, the paint peels off in patches, exposing the white plaster beneath. These defects cannot be remedied except by expensive re-painting.

If the surface is not plain but "wrought," the raised portions catch dust and hold it quite as tenaciously as paper could; and then it peels just as the other paint does. I think, therefore, that most of us will prefer the pretty papers which are cheap enough to admit of renewal without danger of bankruptcy.

No one need pay more than twenty-five or thirty cents a roll nowadays for parlor papering, though of course the dearer papers are tougher and more showy.

So much can be done with paper to conceal the defects of a room that it is worth while to know that a ceiling which is too low can be made to look higher, if the walls of the room are papered with a design of vertical lines, and that if a ceiling is too high it can be "brought down" by the use of a very high dado of some color which contrasts strongly with the body of the wall, and by adding a deep frieze different from either.

Dark rooms are made cheery with bright terra-cotta paper, while rooms into which sunlight streams may be hung with very cold-blue or with pale sage-green.

A room that is hot in summer is made to look delightfully cool by combining lettuce-green and pink, or olive and white. Blue is a color which is known to recede apparently from the eye; therefore, rooms papered in pale blue appear larger than they are, while a deep, pure yellow makes a room look cozy.

The rule may be laid down that for the body of the wall large figures should be avoided in houses of moderate size, the best style for this purpose being a paper in which the design is of the same color as the background, only a shade or two darker or lighter, as the effect may require.

The design should always be indistinct, and never of a character to catch the eye. One soon grows tired of a pronounced pattern on the wall. Never be led into choosing a design with wavelike lines, for these fairly seem to live and to move up and down in a distracting way.

Avoid this especially for bedrooms, for here you may have to spend many an hour of sickness—quite bad enough without the torment of having your mind forced to count the spots or to follow wriggling masses on the paper.

The character of each room is so marked that the paper should be chosen with this diversity of uses in mind—that is, your paper for parlors and for bedrooms must be as distinctly different as are the purposes of these rooms.

There is a sort of instinct in the matter which will lead, if we would but listen. Even the most careless perceive that a bedroom, for instance, should not be a library plus the bed. We naturally expect the one to be light, airy, gay, the other to be sober and solid. Following this principle out, we do not put flowers on the parlor walls, but reserve them for bedrooms; and papers with large figures are best when confined to dado or frieze, both of these requiring something bold and conventional.

Gilt should be sparingly used. In the first place it requires cunning skill to treat it artistically; and then if it is not of the best and most expensive quality, it will tarnish and grow ugly.

Boston felting is good in almost every place. Its rough texture is pleasing to the eye, it wears excellently and comes in all shades and colors. For dadoes it is particularly fit, since, being just a yard wide, its width may be used for the height of the dado, thus avoiding the seams which are disagreeable in these short lengths.

Whenever a dado is possible, it should be used for economic reasons if for none other. This lower part of the wall is that most exposed to rubbings

and blows, and when these accidents do happen the dado can be renewed, and what may have been a very forlorn-looking room made fresh at small cost.

The upper edge of the dado should always be concealed by a light molding of wood, ebonized, or painted to match the wood-work of the room, and if the molding is not possible, a narrow line of black and gilt paper is necessary, the black giving the touch which will bring out best the delicacy of the color scheme.

For matting dadoes this molding needs to be so deep that it serves for a chair-rail, and in this case it need not be so dark, but may match the general tone of the wood-work.

This in turn should contrast with the general effect of the paper, or else be in the same color, several shades darker.

The white paint so loved by our grandmothers has many drawbacks. It is inartistic to have masses of such cold color in a room where the effort is being made to combine warmer tones; and the white paint, once used, must be continued, since no coat of any other color will "stick" over it, but will flake off till the wood-work is spotted all over with white.

Why this is, I cannot tell. It is one of the small things of daily life which chemistry does not explain, but experience proves true.

Finally, white paint is so easily soiled that it greatly increases the cares of the housekeeper. Nowadays architects are using our natural woods to such advantage that the question of paint is much less important than it once was; but for those of us who have neither long purses nor new houses, it still requires thought.

In a hall where the paper is terra-cotta, the paint may be dark green. In a parlor with blue walls, a pinkish cream is lovely for the wood-work, and for pale yellow walls a deeper yellow paint is needed.

In a yellow dining-room, where the furniture is walnut, the wood-work is best in walnut, or ebonized; and where the walls are sage-green a deep red may be used. A very fresh dining-room is made with salmon-colored walls and apple-green paint, the dado being of Japanese leather paper of very metallic tone.

SUGGESTIONS

SHADOWS.

Place a lamp four feet from a white wall. Between them, one foot from lamp, put a small card.

Measure and compare sizes of card and of shadow

Try other distances for card and for lamp, and finally say upon what the size of shadows depends.

Are all parts of the shadow equally dark? Why?

Does changing the size or shape of the flame change the shadow in any way? Explain.

For the Companion.

HARVEST-DAYS.

The shining, golden Harvest-Days!
Fair gospellers whose feet are shod
With peace and plenty, and whose hands
Are filled with gracious gifts of God!
O Days as bright with miracle
As dawned on sacred Palestine,
The clod and stone are changed to bread,
And living waters turn to wine!

O Days that tell us year by year
God's Hand is o'er us still, nor we
Need strain our faith to reach the Love
That walked in distant Galilee!
O Days of resurrection joy,
When furrowed graves are opened wide,
And dull unsightly germs appear
In living bodies glorified.

Lush grapes like swinging censers hang
From richly laden boughs, and fill
The fields with incense as the sun
Illumines fruitful vale and hill.
The orchard colours glow and greet
With sweets the sweetness of the hay,
And Harvest-Moon forbids the night
To be less beautiful than day!

O holy, happy Harvest-Days,
Sweet chroniclers of smile and tear,
Of light and shadow, pain and toil,
Earth's heart bears through the circling year
Like ye some rich and ripened sheaves,
Some fruit of deed I fain would show,
Perfected by life's smiles and tears,
And beautiful in joy and woe!

NOBLY DONE.

About ten years ago a gentleman living in New York took his family to the mountains of North Carolina to spend the summer. The Northern visitors at the hotel where he and his family stayed were in the habit of inspecting the mountaineers in their cabins with amused curiosity, as they might have looked at wild beasts in a menagerie.

The women of the mountains could not read, write, nor sew; they knew how to cook nothing but the coarsest food. Many of them had never been inside of a church. A prayer-meeting held once or twice a year in the hills was the only religious service which they had ever known.

The city visitors were interested in them for a day or two; talked of them with pity, or with contempt, and wondered how such ignorance could exist anywhere in the United States. Then they turned to the scenery, or their hunting and fishing, and thought nothing more of the people with whom they had so little in common.

But the daughter of the New York merchant, a girl of seventeen, went often to their cabins, and made friends with them. She found them anxious to be "like the women from town." She wished to help them, but felt incapable of doing so.

That winter, at home, she went into the kitchen of her father's house and learned to make bread and to cook meats. She learned also, from her dressmaker, how to cut out, fit and make a simple gown.

Her father the next spring built a cottage in the mountains, so that the family could remain all summer. She invited several of the mountain girls of her own age to form a sewing and cooking club. They met twice each week at the cottage, when she taught them what she herself had learned. The club increased; many middle-aged women joined it, eager to "learn town ways."

Not only were they taught to sew and cook, but unconsciously they learned from their young teacher many comely and healthful habits hitherto unknown to them. The men of their families highly approved the work which brought comfort into their cabins.

The next summer the city girl's classes were larger. She opened a school in the cabins among the hills, and taught the women to read and write, as well as to sew and work. Her family and even some of her pupils regarded her work as a girlish frolic, but came to a different conclusion as she persisted in it year after year, and its good results became apparent.

The ambition to be clean, to wear decent gowns, to bake good bread, and to be able to read spread from cabin to cabin. When she taught a class in the farther ranges, where even the itinerant preacher never came to hold a "pra-ar," she read from the Bible, or sang a hymn with her pupils, doing it as simply and naturally as she taught them to make bread.

Naturally the girl became a pet among these lonely mountaineers. They taught her, in turn, to fish, to shoot, and to ride their shaggy ponies. As time passed they built one or two school-houses at her suggestion, and then a church.

What was the result? Religion and civilization have now spread through two counties of that State. But the people, as a whole, were probably never conscious that they owed their first push forward to the hand of their young Northern visitor.

She died a year ago. Her name will never be enrolled among the missionaries of any church, yet she was one of God's messengers.

The Companion tells this true story, in the hope that at least some of its readers may ask themselves whether they, too, are not His messengers.

Neither age, nor ordination, nor ceremony of any kind is necessary to set us apart for this work. We can begin to-day on the simplest, homeliest way which offers itself to bring the brother who is more needy or ignorant than ourselves up to a higher plane of life.

LINCOLN AND SEWARD.

In December, 1861, President Lincoln and his Cabinet were anxiously considering the "Trent affair," the British Government having formally demanded the surrender of Mason and Slidell, over whose capture the North had been keenly exulting. The Secretary of State, Mr. Seward, was convinced that the demand was just. As he expressed it: "We are asked to do to the British nation just what we have always insisted that all nations ought to do to us."

The Cabinet meeting at which the question was considered, writes Mr. F. W. Seward, was an anxious and earnest one. Seward stated the case, and gave the substance of his views in regard to it.

Some of the other members, not having studied the subject, naturally shared the popular aversion to a compliance with the demand of Great Britain. "At least," said one, "we need not decide at once. Let us settle it that we won't surrender them to-day. We can meet again to-morrow." So the matter went over.

After the other gentlemen had retired, the President said:

"Governor Seward, you will go on, of course, preparing your answer, which, as I understand it, will state the reasons why the envoys ought to be given up. Now I have a mind to try my hand at stating the reasons why they ought *not* to be given up. We will compare the points on each side."

Seward heartily assented. The mutual confidence between the two men was so great that each felt that the other would ask approval of nothing not sound.

On the next day the Cabinet came together again. Seward read his reply. There were some expressions of regret, on the part of the other members, that such a compliance with the demands of England was necessary, but the paper was adopted without a dissenting voice.

The council broke up, relieved to feel that war with England was averted, but not without misgivings as to the temper in which the people would receive the decision. The President expressed his approval.

When the others were gone, Seward alluded to the conversation of the day before. "You thought you might frame an argument for the other side?"

Mr. Lincoln smiled and shook his head.

"I found I could not make an argument that would satisfy my own mind," he said; "and that proved to me that your ground was the right one."

This was characteristic of Lincoln. Presidents and Kings are not apt to see flaws in their own arguments; but, fortunately for the Union, it had a President at this time who combined a logical intellect with an unselfish heart.

STRANGE NOCTURNAL CLOUDS.

A curious discovery has been made in Germany, and is gradually attracting the attention of men of science throughout the world. It is the existence of bands of luminous clouds visible at night for a long time after sunset, and in the morning for a corresponding time before sunrise. The clouds are mere haze, lying in parallel stripes, not less than fifty miles high. They reflect the sunlight, and have a silvery tint, sometimes bluish.

Many photographs have been made of them. They are seen only from the end of May to the beginning of August in the Northern Hemisphere. In the Southern Hemisphere it has been found that they appear in December and January.

It is thus apparent that for some mysterious reason they follow the sun, and their arrangement in long ridges with cross bars suggests the play of electrical forces in their formation.

They were first seen in 1885 near Berlin, and they have been gradually becoming fainter year by year since that time.

No one pretends to know just what they are, but many theories are suggested to account for them. It will be remembered that after the great volcanic explosion that blew away half of an island in the Straits of Sunda in 1883, clouds of fine dust, hurled into the upper atmosphere by the explosion, quickly encircled the whole earth and produced, for several succeeding years, magnificent crimson sunsets and other beautiful atmospheric effects. It has been thought that the luminous clouds may owe their origin to the same cause.

It is also suggested that they may have entered the atmosphere from outer space, as the earth, owing to the general motion of the solar system toward the north, is continually advancing into new regions, and space is known to contain a great deal of scattered matter, varying in size from large meteoric chunks to clouds of fine dust.

Whatever they are, their existence opens our eyes to yet another proof of the marvellous variety of nature, which not only covers the earth's surface with endless forms of life, and enlivens it with the operation of ceaseless forces, but fills even the upper limits of the atmosphere with phenomena that, while they may awaken man's wonder, at the same time show him how the globe he lives on is linked with surrounding space.

HIS OLD "MAMMY."

The more pleasing aspect of slavery—for there is no harm in admitting that even so bad a thing as African slavery had its favorable side—is well illustrated by Mr. William S. White, of the Richmond Howitzer Battalion, in his "Diary of the War." The battalion had received marching orders, and was setting out for the scene of conflict.

When marching through Church Hill I felt very sad. I was passing my old home, and as I looked into the garden, now choked with weeds, I thought of the fragrant flowers I used to gather there, long ago, and of those dear ones who used to watch them as they first began to bloom. Memories of bygone times were crowding thick and fast upon me, when I saw one who had nursed me in the happy days of childhood.

She rushed into the street, clasped me in her arms, and while great tears trickled down her dusky cheeks, placed in my hands a huge loaf of bread, and begged me to accept it, humbly apologizing at the same time because she had nothing else to give.

Lives there a Virginian whose soul does not melt into tenderness when memory brings before him childhood's happy days, and the dear "mammy," whose name was perhaps the first word ever articulated by his childish lips; whose snow-white kerchief and kindly heart will ever be seen in the memories of the happy past; whose ample lap was so often childhood's couch, when tiny feet were wearied with roaming over the green fields, and joyously wading through the limpid streamlets of the old homestead?

At nightfall, too, when the candles were lighted, and the older members of the family were gathered round the fireplace, how tenderly that old black mammy lifted him in her fat, strong arms, carried him through the spacious hall, and up the wide, winding staircase! How carefully she placed him in his low trundle-bed, and taught his infant lips the hallowed words of the Lord's Prayer!

The blue-eyed boy is now a stern, strong man, but the green sod of his old mammy's grave is often bedewed with his tears.

For the Companion.

HARVEST SLUMBER SONG.

Sleep, little baby, sleep, sleep, sleep.
Red is the moon in the night's still deep,
White are the stars with their silver wings
Folded in dreamings of beautiful things,
And over their cradle the night-wind sings;
Sleep, little baby, sleep, sleep, sleep.

Soft in the lap of the mother night
The wee baby-stars, all glowing and bright,
Flutter their silver wings and crow
To the watchful winds that kiss as they blow
Round the air-cradle that swings so low,
Down in the lap of the mother night.

Sleep, little baby, sleep, sleep, sleep.
Red is the moon in the night's still deep,
And the wee baby-stars are all folded and kissed
In a luminous cradle of silver mist;
And if ever they waken, the winds cry whist!
Sleep, little baby, sleep, sleep, sleep.

WILLIAM WILFRED CAMPBELL.

CHILDREN FOR SALE.

"Never buy what you do not need, simply because it is cheap." The observance of this wise and familiar maxim on a certain occasion not long ago, would have saved a tin-peddler ten dollars' worth of tinware and at least twenty dollars' worth of mortification, if we are to believe a story related in a New York newspaper. He was on his travels through the villages of Connecticut, as the narrative runs, when he came to a house which was surrounded by a swarm of children.

The lady of the house bought one or two trifles, but could purchase nothing more, she declared, for want of money.

"But, ma'am," said the itinerant, "aint you got any rags?"

"None to sell," was the reply.

"Well, you seem to have plenty of children. Why can't I trade for one of *them*?"

"What will you give?"

"Ten dollars, ma'am."

"In good tinware?"

"Sartin, ma'am, the best."

"Why, then, it's a bargain, and you may take your pick of the lot."

The peddler, surprised at this matter-of-fact acceptance of his offer, but confident that no mother would carry out such a bargain, settled upon the brightest-looking of the boys, placed him in the cart, and told the woman to select the articles she wanted in exchange. This she proceeded to do, and before long a considerable part of his load was lying upon the grass.

The joke—an old one with all such travelling dealers—was beginning to seem not quite so funny as usual. The woman was carrying it a little too far, but no doubt she would speedily call a halt if he actually carried the boy away.

He mounted the wagon, therefore, twitched the reins gently, and started off at a slow pace. His little passenger crowed lustily, and when finally the tin-man looked back to see if the woman was already in pursuit, he saw her carrying her new pans and kettles into the house, to all appearance quite unconcerned about everything else.

The peddler kept on till he had turned a corner. Here he pulled up his horse and waited and listened. Nobody was crying after him to come back, but he turned round, nevertheless, and returned to the house. The woman was just decorating her shelves with the shining tins.

"I say, ma'am," called the peddler, "I don't think the boy will do, after all. You may take him back, and let me have the goods."

"Oh, no," answered the woman, as she shifted the position of the new colander, "a bargain's a bargain."

"Why, ma'am, you don't really mean to part with your boy, and to an entire stranger?"

"Bless your soul, mister," said the woman, "I haven't any children. These you see here are pauper children, and as you appear to be a good man, I will gladly sell you several more of them, if you wish, at the same price."

It was useless to argue the point. The boy, much against his will, was dropped at the gate, and the tin-man, with a light wagon and a heavy heart, whipped up his horse and made off as rapidly as possible.

DANGEROUS POSITION.

When Christian Fast, well known to Western readers, was a boy he lived in the northern part of Ashland County, Ohio. His father's farm was remote from other settlers, but there were friendly Indians in the neighborhood, of whom Christian learned many of the arts of rude warfare. His chosen friend was a young Indian lad about his own age, named Ke-wassa, with whom he often went hunting. One autumn the two boys were off on a bear hunt. They had started up a bear in the morning, but had not been able to get a shot at him, although they had caught an occasional glimpse of his shaggy black sides. In the middle of the afternoon they came upon a large elm-tree, dead at the top, and hollow, which bore evident marks of having been often ascended by a bear.

Ke-wassa asserted that he had seen a bear just disappearing from sight in the hole at the top, as they came up.

"I know him thar!" he declared, "but how we get him? How we get him?"

"We'll drive him out," said Christian.

But that was easier said than done. In vain they threw stones and clubs at the old trunk. The bear refused to show his head, and the elm was straight and branchless for at least forty feet. After much cogitation it was decided to fell a small maple-tree, which stood a few yards off, so that its top should rest against the elm.

With a hatchet, which Ke-wassa always carried, the lads set to work, and after many turns with the hatchet the maple rested lightly against the elm.

Christian, who was an expert climber, made the ascent, taking along a quantity of birch bark and rotten wood with which to smoke bruin out. Without much difficulty he wormed his way in and out among the maple branches until he was at the top. He stood for a moment clinging with his hands to the old elm, his feet resting on the maple limbs, while he peered into the hole where the bear was concealed.

At that instant a strong gust of wind came. The maple bent, quivered, slipped from its support, and fell to the ground.

Christian felt it going, and by tremendous exertions managed to scramble to the top of the elm, where he clung for dear life. He was in a ticklish position — forty feet from the ground, with no means of getting down, and in imminent danger of falling.

He began to feel as anxious for the bear to stay in his hole as before he had been anxious for him to come out.

Ke-wassa jumped to the conclusion that Christian would fall and be killed, and not wishing to witness such a tragedy, he set off toward home at a run.

Christian tried in vain to call the Indian back. He saw himself deserted; but he was not one to yield without a struggle. He looked about, but there was no help, and he was well aware that he could not long maintain his present position.

With an inward prayer for strength the boy let himself down over the edge of the elm trunk, clasped the rough bark with knees, arms and hands, and slid downward. It was his one chance for life.

Down, down he slipped, his hands lacerated and bleeding, his clothing hanging in strings, and his limbs bruised and sore. Down, down! Would he never reach the ground?

Suddenly the poor lad lost his hold, fell and struck on the back of his head. For a long time he lay, stunned by the fall. Finally he recovered consciousness and was rejoiced to find himself with no bones broken, and save for the mangling he had received from the rough bark, as sound as ever.

"CALL IT OYSTERS."

The physician in charge of an insane asylum in Ohio prescribed a large dose of castor-oil for one of the inmates, a man of great strength and wild, unmanageable temper. The attendant who had been commissioned to administer the nauseous dose foresaw that he was likely to find the task more or less difficult, and therefore took with him several assistants.

On reaching the lunatic's cell the attendant put on a matter-of-fact air and, cup in hand, stepped inside the door. The madman divined his purpose instantly, and rushed furiously upon him. The assistants were too quick for him, however, and after a severe struggle threw him down and attempted to pinion his arms.

The man fought like a tiger, but found himself overmatched. Suddenly he became perfectly quiet, and putting his hand to his mouth, said in a whisper to the chief attendant, "Call it oysters."

The attendant was a man of great natural shrewdness—as dealers with the insane need to be—and at once understood the lunatic's meaning. Directing the wondering assistants to release the patient, he took the cup from the shelf on which it had been set, approached the crazy man, made him a low bow, and said in a tone of ceremonious politeness: "Good morning, Mr. Smith; will you try this dish of very fine oysters?"

The lunatic smiled pleasantly, returned the bow with one still lower, and answered:

"Thank you very much; you are very kind."

So saying he took the cup, and drained it with every appearance of the deepest satisfaction.

"Ah," said he, as he finished the dose and smacked his lips, "those are indeed fine—the finest oysters I have ever tasted."

He had saved his self-respect, and had taught his keepers an excellent lesson in their own line.

"CHOOSING."

An anonymous contributor to the *Atlantic Monthly*, evidently a woman of sentiment, has been amusing herself by observing the amusements of poor children in city streets. One raw, gray March Sunday she saw half a dozen little girls—very small, but not babies, the oldest perhaps eight—sitting on the inhospitable steps of a gloomy closed business building down town..

It was a cross street; there were very few people going by. It must have been a dreary tenement house indeed from which, on such a day, this bare place offered a refuge. I suppose a few people, going to and from a ferry, were their entertainers; for, as you will see, it was to feast on the passers-by that they were there.

As I approached, they were gabbling, but softly, with their heads all together, and turned from me toward some retreating feminine figure; but when one looked my way she set up a mysterious little wild cackle, whereupon all attention was centred upon my modest person, and—my vanity expands delightfully now with the recollection—from the first observer I caught, in the loudest and most gleeful of undertones, the words, "That's me! That's me!"

Then lowering her voice, with a note of awe, she added, "Oh, see, see! Silk! silk!" and the small, blue, grimy hands smoothed automatically her own ragged frock, while in a trance of rapture she gazed at mine, where, after all, I remember with still poignant regret, only a very humble portion of silk was visible.

They were "choosing," you see, as I used to from fashion-plates, and were utterly oblivious of my existence other than as a lovely vision sent for their delight. And what a thing it is for me to know that I once presented such an aspect to fellow-beings!

LADY ANGLERS.

Old Louis Bouchard, our half-breed Nepigon guide, writes a Canadian correspondent, reverences white ladies, but prefers to let Eskimo Joe, another famous voyageur and cook, take charge of angling parties that include lady members. On seeing an American party of three gentlemen and two ladies, old Louis remarked:

"Doze chentlemans aint get much fish, den. No. Dey's nice, de ladies is—mebby? I don' know—but in camp? No-o-o. Dass so. One tahm I'll go up wiss five lady and seven chentlemans.

"De chentlemans was boss dat trip? Boss? No-o-o—nevare! All de tahm, all de tahm, doze lady boss dat camp. Keep me cookin', cookin', and nossin' is cook right. In de mawnin', first ting, I got to bring coffee in de tent before doze lady ees get up. 'Louis, you wash your hands?' doze lady ees ask.

"What dey tink? Mebby I boil my hands before I mek dat coffee! No-o-o—dass so, I ain' boil 'em any. All de tahm, all de tahm, doze chentlemans and doze lady aint care one bit—all de tahm doze lady want what aint dere.

"You tink de chentlemans get out for fish early, early? No, *baptsun*—doze lady not make ver' good fishin'. Den Louis, *he's* blame. Eskimo Joe laugh when I'll tol' him 'bout dat. He's want for go wiss lady party. Mebby he's like for wash hisself two—tree—four tahm in one day. *Sapree*—dass fool way for waste soap."

KITTYKIN WINK.

Kittykin Wink
Sat down to think
What she would like to eat.
But while she sat still,
The mice had their will
And ate all the cheese for a treat.

For the Companion.

AN AFTERNOON CALL.

I PAID a call the other day, and as it was more entertaining than calls usually are, I thought you might like to hear about it.

In the first place, the maid who came to the door was so pretty and had such bright eyes that I wanted to kiss him—I mean her—on the spot. She wore the most beautiful white cap and a lovely apron that came down to her feet.

The little red saucer she carried was too small for my big card, and it fell on the floor, but the maid said it was no matter, and he—I mean she—picked it up in the politest manner possible.

Then she showed me into the parlor, where she said I would find Mrs. Ching-Ling, the lady of the house.

When we entered the room, sure enough there was the lady sitting before a large kitchen stove with her feet—which you will be astonished to hear were bare—resting on the door of the oven in a very unusual position.

Somehow I felt so much at home with the pretty maid, that I ventured to ask her in a whisper if there was a fire in the stove.

She said, "Why, of course there is," and pulled Mrs. Ching-Ling's chair back with such force that the good lady rocked in her seat.

Then the maid, who seemed to be a kind of master—I mean mistress of ceremonies, called my attention to a gentleman who sat on the floor in a corner of the room.

This was *Mr.* Ching-Ling. He seemed for some reason to be very much out of spirits, and I was just about to ask him why he chose so lowly a seat when I noticed he wore a Japanese costume, and concluded that was his Eastern manner of receiving guests.

Then I turned to the lady, who sat facing me with a very stiff and ungracious air, gazing over the top of my head as if she was trying her best not to see anything.

Feeling obliged to say something, I began:

"Your husband looks sad; is he in bad health?"

"Nothing's the matter with him," spoke up the maid, before the lady could answer. "He always acts like that."

"Perhaps change of air —" I ventured to remark, but the maid interrupted me in a most sudden way.

"I'm going to make you a cup of tea," she announced, walking over to the stove.

"Oh, thank you," I said, "but maybe Mrs. Ching-Ling would not like it."

"Why not?" said the maid, beginning to pour out a great deal of water from the tea-pot and getting his apron very wet.

"Well, you see," I answered, "she has not spoken to me since I came in, and she looks so rigid and uncomfortable, I am afraid she would like to have me go away."

"Oh, no she wouldn't," declared the maid. "And she can't help being stiff. She's got something the matter with her knees."

"How sad!" I exclaimed, as I sipped my tea. "Rheumatism?"

I addressed my question to the lady, but the maid *would* answer.

"No," she said, in an unconcerned tone, "I don't know what it is. Do you like your tea?"

"Very much, thank you."

"Would you like to see the children?"

"Oh yes, indeed!" I cried, for really the silence of the gloomy gentleman and the stiff lady was growing very oppressive. The maid left the room, and for a few minutes I was left alone

with my new friends. Neither of them spoke, and the lady seemed to grow stiffer than ever.

Presently the maid came back with the children.

There were eleven of them, all ages and sizes. Indeed, the oldest girl was much larger and taller than her father.

I shook hands with them all, and was very glad to see them, though I think I never saw children whose clothes were in a worse plight.

I said as much to the maid, who remarked scornfully that their mother never sewed anything for them.

"Perhaps you might," I began, feebly, for I was rather afraid of the maid by this time.

"Why, it isn't my place," she burst out, quite roughly. "I'm the cook."

"Oh, indeed," I murmured.

Then I mustered up my courage, and said boldly, "I feel very sorry for this family. Everything is in such disorder. The kitchen stove is in the parlor, and the lady of the house has no shoes and sits with her feet in the fire all day. The children have nothing but rags for clothes, and seem to have dreadful things the matter with their arms and legs, and yet no one does anything for the poor creatures. Perhaps if you were a girl instead of a bo—oh, I beg your pardon, I mean if you knew how to play with dolls—dear me, what *am* I saying!" I cried, coming to a full stop and feeling very much confused.

The maid was gazing at me with a very reproachful look in his blue eyes.

"Is that the way you talk when you go calling?" he asked in a severe tone.

"Not always," I said, meekly.

"I think you had better go home now," said the maid.

"Perhaps I had," I answered, rising. Then I bowed to the sad Japanese gentleman and the stiff lady and the eleven miserable children and took my leave.

Just outside the door, some one sprang at me and gave me a big hug and a kiss. It was the maid dressed in a boy's sailor suit.

"*You* don't know how to play you mean," he cried, laughing. "I did my part all right, but you forgot, you know you did."

CHILDREN'S SAYINGS.

One night Jennie was aroused by the alarm of fire. She jumped out of bed, and ran to the window. The ground being covered with snow, the ruddy light of the fire was reflected with striking effect. She clapped her little hands gleefully, exclaiming, "Oh, come, Annie, see how beautiful all out doors is *blushing!*"

Edith's teacher had told her all the parts of a flower. "Now, what are these, Edith?" she asked next day. "The petals," Edith replied. "And this?" pointing to the pistil. "I can't think—oh, yes, the gun."

Four-year-old Earl was begging his papa to let him attend the Teachers' Institute. "If I'm ever going to be a teacher, papa," he said, very earnestly, "it's time I began!"

WHAT WAS INSIDE.

Georgie lives with his grandpa and grandma, and he sleeps in the room with them. One night he was very restless, tossing about and kicking anything that came within reach of his small feet. This disturbed grandpa and grandma very much, and finally grandma arose and prepared some medicine for the little boy, while grandpa awakened him.

"Here is some nice medicine," said grandma, "to make you sleep better. Open your mouth, Georgie, and take it."

"What is it?" queried Georgie.

"It is molasses," answered grandpa.

"And what you like so well in the turkey-stuffing," added grandma.

"But—what is it?" asked Georgie, drowsily.

"It's molasses," said grandpa.

"Molasses," added grandma, "and —"

"I know it's molasses," broke in Georgie, half-asleep by this time, "but what's—inside—the molasses?"

"Sage, my boy, sage!" cried grandpa.

And Georgie took the medicine without another word.

EDNA was looking at the sunset one evening. It was very beautiful; above the golden glow hung a heavy, purplish cloud. The little girl's brown eyes shone with wondering delight. "O auntie," she whispered, "hasn't God got pretty lambrequins!"

Enigmas, Charades, Puzzles, etc.

DOUBLE ANAGRAM.

Complete rhyme. Key in ninth and last lines.

'Tis true without any *it's* or * * *' *
That boys and girls are fond of * * * *.
And what is true to-day, I * * * * *,
—As back to ages past I * * * *,—
Was true as well, in days of * * * *,
Three centuries ago and * * * *.
For in a manuscript as * * *
As fifteen-sixty, I am * * * *,
'Tis writ that on * * * * * * * * * * * * * * * * *,
At Eton, a holiday should * * * *
That all the boys should gather * * * *
In a grove which on their grounds * * * * *,
Provided they each should give a * * * *
To the teachers who set the day * * * * *.
But ere the day was granted * * * *,
The teachers did each boy condemn
Verses to write on the deadly cold
Which comes with winter so hoary and * * *,
Or else on the bountiful fruitfulness
Which autumn brings, her children to * * * * *.
A holiday thus well earned, you would * * *,
On a date by the church called * * * * * * * * * * *.

LILIAN PAYSON.

2.

ADDITIONS.

1. Add a Roman Catholic ceremony to an epoch and make shampooing.
2. Add places of sepulchre to a termination and make an English town.
3. Add a game at cards to a fish and make something that the wind and boys are fond of doing.
4. Add an adult male to a domestic fowl and make a monkey.
5. Add a stroke to a coat of mail and make an apple-puff.
6. Add thills to a sailor and make a guide.

3.

DOUBLE LETTER ENIGMA.

In the camel, a queerly shaped beast;
In the huskings, so famous, down east;
In the tickets we bought for the show;
In the cherries that on the trees grow;
In the atlas we study at school;
In the meadow, so pleasant and cool;
In the album, where pictures are seen;
In the gambols we had on the green;
In the curtain that keeps off the sun;
In the chamois that fleetly will run;
And now, I'd have you all remember
A battle fought in one September.
A noted day then call to mind,
These are answers you must find.

CYRIL DEANE.

4.

NUMERICAL ENIGMA.

For very young puzzlers.

Once there was a boy named 1, 2, 3, 4, who lived in a village in Ohio called 5, 6, 7, 8, 9, 10, 11, and he told his cousin, 12, 11, that his grandfather remembered when the city of 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 was taken on September 26, 1777.

5.

PUZZLE.

Though I am invisible my presence cannot be concealed.
A dog will follow me all day, but a child generally wishes to exchange me for something else.
My value is very small, yet two of me make a possession of inestimable worth.
Give me as a reply to a request and I grant it.

Conundrums.

Why is the master of a small trading vessel like a cheese maggot? Because they are both skippers.

How can you spell barge with thirteen letters? Bee, aye, are, gee, e—barge.

What oratorio is seen upon nearly every dinner-table? "The Seasons."

To what State of the Union should maidens and bachelors go? To Maryland (Marry-Land).

Why is borrowed money like a man without friends? It is a loan (alone).

What bells are never rung? Diving-bells.

FORBIDDEN TO ASCEND.

In these days it is generally recognized that a man has no right to throw away his own life. The officers of the law are justified not only by the courts, but by public sentiment, in depriving of his personal liberty any one who recklessly and without some thoroughly sufficient reason engages in any undertaking which is likely to result in his death. A German newspaper chronicles a singular balloon ascension, one of the parties to which should properly have been restrained by force from making it.

Joseph Strochschneider, aëronaut and rope-walker, had announced that he and Carl Pramper, landlord of the village inn, "The White Rose," would make an ascension on the following afternoon.

Now, every one knew that Strochschneider rode only on a trapeze in his ascents, and that Pramper was no gymnast. Moreover he was thick-set and had a family. The recklessness of the undertaking was so apparent that the police were appealed to, and Pramper was officially forbidden to make the ascent.

The police, however, failed to take measures to enforce the order, and so, when the hour arrived, Pramper appeared with Strochschneider on the platform in the presence of a great crowd of curious spectators.

While the balloon was being inflated a cry was raised against Pramper's ascent, and the populace finally became so much excited that Strochschneider had to hasten his operations lest he should be mobbed.

Pramper alone remained cool. When the balloon was ready he retired to a little lean-to, reappeared a moment later in aëronaut's costume, and then with a white face and shaking limbs took his place with Strochschneider on the trapeze.

There were shouts of execration. Mrs. Pramper and her two daughters fainted, and every one else watched in horrified suspense the soaring balloon.

Away went the balloon, and after it ran the crowd, shouting madly to Strochschneider to descend, for Pramper was plainly seen to be losing courage, and his arms and legs dangled nervously over the ropes of his frightful perch.

To increase the horror of the situation, it soon became apparent that the two men were quarrelling. The gesticulations of the aëronaut became more and more violent, till eventually he struck Pramper a blow in the face and toppled him off the trapeze. The figure of the landlord came whirling down. The crowd gave one general groan of horror and then was still.

When the body struck the ground, all except the fainting women rushed toward the spot. The mutilated, bleeding, and almost unrecognizable remains of Pramper were not there—only a cleverly made effigy of him dressed in his every-day clothes.

The portly landlord was in the lean-to, safe and sound.

A POWERFUL GLASS.

At a popular lecture on the "Wonders of the Telescope," one simple auditor, hearing that the moon could now be "brought within eighty miles," became so excited that he asked the lecturer at the close why he didn't skip over and make the moon a visit, after getting it down so near. The humor of such an exaggeration would have been appreciated by the "gray-back" joker in this anecdote.

In one of the Confederate companies at Charleston there was a blue-eyed young Englishman full of merriment and waggishness.

One of his tricks was to mimic pompous officers, who sometimes stalked around the forts with their gold-mounted field-glasses, in a way that would bring down the house if done on the stage in comedy.

He usually wore slung over his shoulder three joints of cane in imitation of a field-glass, and one day, after a long study of the enemy through the pretended magnifier, he dropped the instrument, leaped from the observatory where he stood and alighted among a crowd of men watching him from below.

His face was the picture of alarm, and when asked what the matter was he answered, hysterically:

"The matter? Why, I brought those Yanks so close up with my glass that I became frightened and ran off."—*Southern Bivouac.*

CUPBOARD LOVE.

An Englishman who once travelled on foot through Norway says that he was much attracted by the tameness of the horses and cows which he saw feeding along the roadside. It indicated a kindly disposition on the part of the people, he thought; but he adds:

In my original notes I find a long paragraph overflowing with sentimental tenderness relative to these affectionate cows, that followed and overwhelmed me with their loving licks; but I do not transcribe it, as upon further reflection it is evident that the licking was mere cupboard love.

All cattle in inland, and especially in mountainous districts, have a strong craving for salt, and these cows were merely licking the deposits from the sea-spray that had fallen on my clothes during the recent voyage.

This discovery was mortifying to my feelings. Man wishes to be loved for himself alone, and the spontaneous manifestations of these pastoral, unsophisticated cows seemed to respond to the heart's fond yearnings. But, alas! even the cows of Surrendal were licking me for the salt I carried.

NOT ONE.

The contribution-box is often a grievous disappointment, but not often in exactly the same manner as in the case of a little boy of whom the New York *Tribune* reports an anecdote.

William was very fond of raisins, but in his childish vocabulary they were known as reasons. One Sunday, as he sat demurely in church, he was suddenly interested and delighted to hear the minister say in the course of his sermon: "I will give you my reasons later." From that moment the little fellow had something to look forward to.

At the close of the sermon the contribution-box was passed, and he felt sure that the promised treat was forthcoming, and it was a badly disappointed boy who said, after the service:

"Mr. S—— said he would give us some reasons, but when they passed the plate there wasn't a reason on it!"

Itching Piles.

MOUNTAIN AND VALLEY HOMES.

From the earliest times the differences of character between the inhabitants of mountainous countries and those dwelling on plains and lowlands have been noticed. Mountaineers have usually been credited with a stronger spirit of independence and a greater love of personal liberty than are displayed by their brethren of the valleys and sea-coasts. Sometimes a single nation embraces citizens possessing strikingly diverse characteristics, due apparently, in part at least, to differences in the elevation of their dwelling-places. We may recall a familiar instance in the highlandmen and lowlandmen of Scotland.

In the United States, covering an enormous territory and including a great variety of mountain and prairie lands, similar differences have not attracted much attention, perhaps because the country has not yet been filled up, and sufficient time has not elapsed since the first settlement to permit the development of characteristics growing out of the nature of the people's surroundings. Then the many differences between the various races of which our newer population is being formed are sufficient to conceal, for the present at least, those other variations that only time can develop.

The new census shows, however, that the people of the United States may be roughly divided into several classes, corresponding in a general way to the elevation above the sea-level at which they dwell. For instance, twenty-four million persons live between the level of the sea and an elevation of five hundred feet, and their chief occupations are commerce, manufactures, and the cultivation of cotton, rice, sugar and tobacco; thirty-three million dwell at an elevation between five hundred and fifteen hundred feet above the sea, and their principal occupations are the raising of grain, cattle and so on.

At higher elevations the population is comparatively small, and the three hundred and forty-seven thousand persons who live above the level of six thousand feet — nearly equal to the height of Mount Washington—are almost entirely engaged in mining.

An interesting fact is that ever since 1870 the census has shown a gradual rise of the average elevation above the sea at which the population lives. This average was six hundred and eighty-seven feet in 1870, and seven hundred and thirty-nine feet in 1880, while in 1890 it had increased to seven hundred and eighty-eight feet. In reading these figures one can almost imagine that he sees our broad land slowly filling up, and the flood creeping up the mountain sides, as the tide of immigration pours in. But there is plenty of room left, and almost no end to the variety of wealth that nature has stored up for us in the soil and in the rocks that spread from the Atlantic to the Pacific.

BADLY SCARED.

Thrilling adventures are sometimes to be met with in very unexpected places. The New York *Tribune* reports one which befell two young ladies in a Westchester County road not long ago. The husband of one of them had just bought her a new turnout, and she had taken a friend out for a drive, neither of them being accustomed to managing a horse. They chose a retired road, hoping to find some early violets along the way.

"Do you know, Bertha," said Mrs. Jack, suddenly, "I have never driven alone before; don't you think this is a very lonely place, and do you see those two men standing beside the road? They look very queer."

The next moment a third man came into sight. Evidently they belonged together, and they stood looking at the two ladies in a way that was certainly enough to excite suspicion.

"Turn round," said the second lady, "please do."

"But I can't," said Mrs. Jack, in a condition of nervous terror. "The carriage will be sure to tip over. I never turned round in my life."

"Well," said Bertha, who was the cooler of the two, "drive right on. Have the whip ready, and when we get opposite them let the horse have it. Better be run away with and killed than fall into the hands of such villains."

Every moment they were coming nearer to the desperadoes, and now one of the men planted himself squarely in the middle of the road with the unmistakable intention of stopping the carriage. Weak with terror, Mrs. Jack pulled up the horse, forgetting the whip and everything else in her excitement.

"Ladies," said the man, "don't come any further, 'cause we're goin' t' blast. Don't you want to get out and let me hold your hoss?"

WOULDN'T CALL HER "LADY."

A "handle" to one's name is often a cheap acquisition. "The clouds may drop down titles and estates," but to the mind of a sensible American such things are hardly worth seeking or using.

The late Leonard Jerome's three pretty daughters, somewhat to his grief, chose Englishmen for husbands, but though he lived abroad during the latter years of his life, he remained independent and a good American to the end. In fact, he never acknowledged Lady Randolph Churchill's title, and the first visit he paid her after her marriage he astonished the flunkey at the door by asking for "Mrs. Churchill."

The cockney footman at first seemed inclined to throw the tall, amused-looking American down the steps, and, holding the door half-way open, announced, indignantly, "'Er leddyship is at 'ome, but not to the likes of you."

Whereupon Jerome smiled gently, reached in the door-way, and, by a twist of his long, strong hand on the back of the footman's coat-collar, twirled him round like a top.

"Now," said he, "go tell Mrs. Churchill that her daddy is down here in the parlor and wants to see her, and I'll stand in the door-way and see how fast your calves can carry you up those steps."

TIME WAS PRECIOUS.

German scholars are famous for their economy of odd minutes.

Herr Schmidt is an absent-minded teacher of music. One of his pupils asked him:

"At what o'clock do you want me to come to your house to-morrow to take my lesson?"

"Oh, vell, choost come vén you ' s ready; put be sure you vas on time, for I don', unt to be kept vaiting."—*Texas Siftings.*

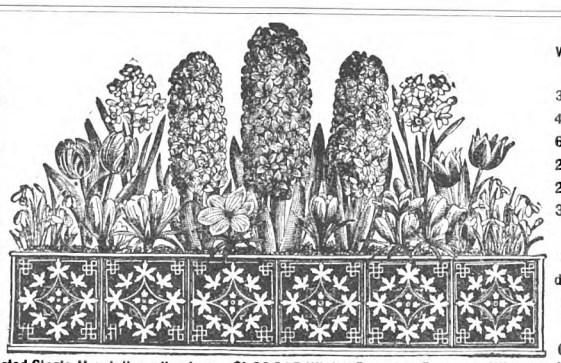
ALLCOCK'S POROUS PLASTERS

ALLCOCK'S POROUS PLASTERS were introduced to the medical profession and public over thirty years ago, and the marked success and unprecedented popularity which they met with not only continues, but steadily increases. No other plasters have been produced which gain so many testimonials of high value as those continuously accorded to ALLCOCK'S POROUS PLASTERS, and the only motive for these exceptional tributes lies in the fact of their being a medicinal and pharmaceutical preparation of superior value.

Additional proof of the true value of ALLCOCK'S POROUS PLASTERS lies in the fact that they are being largely imitated by unscrupulous persons, who seek to deceive the public by offering plasters which they claim to be the "same," "equal," "as good," "better," "best porous plaster," etc., while it is in general appearance only that they resemble ALLCOCK'S. All of the so-called porous plasters are imitations of ALLCOCK'S POROUS PLASTERS.

Avoid dealers who attempt to palm off inferior and worthless plasters that are purchased by them at low rates for the purpose of substitution.

EVERY SKIN AND SCALP DISEASE, whether torturing, disfiguring, humiliating, itching, burning, bleeding, scaly, crusted, pimply, or blotchy, with loss of hair, from pimples to the most distressing eczemas, and every humor of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. This is strong language, but true. Thousands of grateful testimonials from infancy to age attest their wonderful, unfailing and incomparable efficacy.



Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Skin and Blood Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Rheumatism, Kidney Pains, and Muscular Weakness relieved in one minute by the CUTICURA ANTI-PAIN PLASTER. 25 cents.

Success With Flowers

The DINGEE & CONARD COMPANY'S NEW FLORAL MONTHLY is the best and brightest. Every member of the family reads it.

The Most Successful Growers and best Floral Writers contribute their methods and experience, and Flower Growers in all parts of the U. S. in letters to the Editor for publication, tell how they do with *their Flowers;* everything fresh and originally written for **Success With Flowers.**

A CRITICAL TIME.

NOW is a critical and difficult time for *Flower Growers;* **NOW** Flowers for house culture must be selected, properly started and cared for; **NOW** hardy Bulbs, Perennials and Shrubs must be planted in the open ground, etc.

Some of the articles to be published during the Autumn months are "From a Gardener's Note Book," sparkling full of bright ideas; "How to Plant Hardy Bulbs," with illustrated diagram; "A Pot of Bulbs for Winter Bloom;" "California Bulbs;" "Window Gardening;" "Success With Cuttings;" "Among the Lilies;" "Protection and Care of Plants During Winter," etc.

For only **25 Cents**—we will send **Success With Flowers,** postpaid each month, beginning with September, for **15 months.** We make this remarkable offer feeling sure that every new subscriber will always remain a subscriber. Address **THE DINGEE & CONARD COMPANY, WEST GROVE, PA.**

Digitized by Google

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

LONGEVITY.

The body may be looked on as a living machine, delicate and complicated in structure, made to run a hundred years or so, but liable, by bad management, to be disarranged and brought to untimely destruction. That drunkards, debauchees, gluttons, and the devotees of sensual pleasures generally, do not live out half their days, is plain to every one.

But all continuous physical transgression, however innocent it may seem, is followed by a like retribution. Such is the punishment which overtakes multitudes who overwork their brains and underwork their muscles; of not a few who waste vital energy with anxiety, fret and unstinted care; of many who overlook the great law of their physical being that makes daily recuperation depend on the interchange of work and rest. Even ministers of the Gospel not unfrequently allow well-meant faithfulness to end in a fatal mental strain.

One of the signal facts connected with many forms of physical transgression is its tendency to weaken the vital stamina of the transgressor's offspring. The least a child can ask of its progenitor is a fair chance of life. To squander the vital inheritance of one's offspring is vastly worse than to squander its large ancestral estate.

We can have no more valuable possession than a good heredity—an inheritance of longevity; and if this has not descended to us, it is generally because ancestors, more or less remote, have squandered it.

Such an inheritance gives constitutional vigor, keeps its possessor safe amid almost every form of microbic disease, secures the needed recuperative energy in case of attack, makes life worth living up to the normal end, renders old age green and sunny, and keeps up intellectual activity to the last. Mr. Gladstone, in his ninth decade, is more than a match for most men of fifty at their best. No one would guess from the latest products of Doctor Holmes's pen, or from his genial spirit, that he had been for two years an octogenarian.

After all, care is necessary to the prolongation of life; not anxious care, but care to avoid harmful transgression. Mr. Gladstone still keeps up vigorous physical exercise, and Doctor Holmes uses his great knowledge of the laws of health and life to keep himself not merely alive, but in good working condition. The *British Medical Journal*, referring to his recent essays, says:

"He is still one of the most vivacious of men; age cannot wither the freshness of his interest in life, or deaden the cheerful sparkle of his style. Even of 'crabbed age' he writes with an easy wit quite untinged by cynicism, and so brightens the dismal subject as to make it amusing even to his fellow-sufferers."

For the Companion.

SWALLOWS AND CROWS.

Among the courageous small birds may be counted the family of swallows. The writer has often seen barn swallows fly downward and peck at the cat and dog, and more than once a sharp twitter, a whir of wings and a peck on the hat has reminded her, when standing in the barn door, that she was intruding on swallows' precincts.

About a half-mile from the house is a high bank which is the home of a colony of bank swallows. The earth for some distance is thickly perforated with the roundish holes leading into their nests.

Not far from this bank a quantity of corn was one day scattered by accident upon the ground. The crows were quick to discover what had happened, and swooped down and began to devour the windfall.

Some of the swallows spied them at once and gave the alarm. I chanced to be sitting beneath a tree in full view of the scene. In less than a minute after the crows had settled to feeding, more than a hundred of the bank swallows had darted from their holes, and with angry twitters, fell upon the intruders.

The attack was a complete surprise to the big black fellows, and as if realizing the futility of trying to cope with their small assailants, they rose from the ground in a body and took flight.

The swallows pursued them, darting, diving, striking at them, above, below and from both sides. The crows were routed completely, and took refuge in a dense piece of woods a quarter of a mile away. Then the triumphant swallows turned about and sailed homeward, uttering many chirps and twitters of satisfaction as they flew.

For the hour or more that I remained in the field not a crow was to be seen near the corn. The swallows were masters of the field. C. F. H.

OUT BERRYING.

Bears have at times ways that are grotesquely human. They are as fond of sweets as any child, and are ponderously delighted over many a clumsy game among themselves. Tales are told of their swinging, enjoying a seesaw in the woods, and actually playing leap-frog—or rather "leap-bear." Kate Upson Clarke gives, in the *Independent*, the following account of an absurd tableau seen by her in the White Mountains, some years ago, when she was taking a tramp across the range toward Mount Washington:

"What's that?" cried the guide. His face assumed an expression of intense excitement. As lightly and swiftly as a cat, he sprang in advance of the others, and moved slightly toward the left. Some six or seven rods away, he paused and beckoned to the rest of us to follow him. Then we observed, not twenty rods distant, and looking much nearer, in the clear atmosphere, a full-grown bear.

"A cinnamon bear!" cried one.

"A *huckleberry* bear," corrected the guide.

With one paw, the creature was pulling toward her a large blueberry bush, which grew somewhat above her level. Then she opened wide her enormous jaws, gave the bushes a hard shake, and having thus filled her mouth full of blueberries, approached another one. She smacked her lips like a well-fed child.

The wind, which had been blowing from her to us, at this instant seemed to circle backward, and carry some intimation of our presence to the brute's quick sense. She cast a fearful look about her, uttered a peculiar sound, half-grunt, half-howl, turned, and trotted away. Then we saw what we had not suspected before, that there were two cubs, close by their mother. The whole family dashed like mad into the woods, making a crackling and a crashing which echoed far and wide in the stillness.

DUSKY GEOGRAPHY.

There are, perhaps, no religious meetings which are conducted with more fervor and enthusiasm than those of our colored brethren. Sometimes, however, their theology, though no doubt sound at the core, becomes a little confused in its expression.

At a recent "praise meeting" one good old darkey displayed a knowledge of geography which was, at least, not derived from the ordinary text-book. He said:

"No matter whar yo' home is, or whar yo' lib, bredren an' sisters, you'll fin' members ob de same fambly what we all belongs to! An' yo' nebber need t' feel lonesome, on dis account.

"Yo' go to de Norf Pole, an' twine yo'se'f roun' de Norf Pole, an' yo' ax dem Christians whar dey was borned, an' dey'll say, 'I was borned in Zion.' Yo' go to de Souf Pole, an' twine yo'se'f roun' dat, an' ax 'em dar whar dey was borned, an' dey'll say, 'I was borned in Zion.'

"Den yo' go to d' Eas' Pole an' twine yo'se'f roun' d' Eas' Pole, an' yo' ax 'em whar dey was borned, an' dey'll say, 'I was borned in Zion;' an' las'ly yo' go afar off to de Wes' Pole, an' twine yo'se'f roun' dat, an' ax 'em whar dey was borned, an' dey'll say, 'I was borned in Zion!'"

MEAN.

To the large number of stories of "the meanest man" which are frequently related, one should be added of a certain Frenchman, famous for his habit of grumbling at everything and on every occasion.

He was attacked by inflammatory rheumatism, and was carefully nursed by his wife, who was very devoted to him in spite of his fault-finding disposition. His suffering caused her to burst into tears sometimes, as she sat at his bedside.

One day a friend of the invalid's came in and asked him how he was getting on.

"Badly, badly!" he exclaimed; "and it's all my wife's fault."

"Is it possible?" asked the friend, in surprise.

"Yes. The doctor told me that humidity was bad for me; and there that woman sits and cries, just to make it moist in the room!"

BRIC-A-BRAC.

The person who is inclined to boast of his valuable possessions is likely to have the laugh turned upon him, on occasion. A wealthy man was once exhibiting proudly to some acquaintances a table which he had bought, and which, he said, was five hundred years old.

"That is nothing," said one of the company. "I have in my possession a table which is more than three thousand years old."

"Three thousand years old!" said his host. "That is impossible. Where was it made?"

"Probably in India."

"In India? What kind of a table is it?"

"The multiplication table!"

SOMETHING OFF.

A Maine man, notorious for his "nearness," according to the *Kennebec Journal*, lately went into a meat-shop, and inquired the price of a certain soup-bone.

The proprietor of the shop is a generous fellow, and in answer to the old man's question he said:

"Oh, I'll give you that."

The customer put his hand to his ear. He is hard of hearing, and had missed the reply.

"Can't you take something off of that?" he asked.

The dealer took pity on him.

"Yes," he said, "call it ten cents." And the old man went home with a comfortable sense of having driven a good trade.

"SURE," said Bridget, "I can get work from me ould mistress; I've losht her addhress intirely, but I've only to write to her to find it out!"

"Turned Upside Down"

Is your home in this sad plight—many are and house-cleaning does it. Cold meals and no comfort, sour tempers and aching backs, hard work and too much of it, tired women and "mad" men—all from house-cleaning. And it's all needless. Don't make such a fuss over it. Take a little *Pearline*, and have it done easily, quickly and quietly.

You'll have it done better, too—*you won't have to rub the paint off to get the dirt off.* You can save half your labor and half your time, if you'll clean house with *Pearline*—and everybody in the house will be thankful for it. Millions use nothing but *Pearline* for washing and cleaning

JACOB LADD'S CHANGE OF HEART.

The cats, the dogs, the cattle and the chickens instinctively shunned Farmer Jacob Ladd. He was harsh with his hard-working wife, had been unkind to his only son, and a bitter, unreasoning hatred rankled in his heart against many men.

His wife, a gentle and timid woman, was beloved by people who feared and hated her husband.

In the little shed-room, back of the room where her husband sat in the doorway, she was busily at work mending a quilt. Another woman was in the room—a neighbor who, for the sake of seeing Mrs. Ladd, had braved the chance of encountering Jacob.

Mrs. Ladd paused in her work, and said with a sigh:

"Did yer see ther pore critters, Mis' Lindsey? They passed right along by our gate. I tried to keep from lookin' at 'im, 'ca'se I couldn't bear to see his sufferin'. The idea o' Poke Baker, if he is a sheriff, drivin' a pore boy 'long the big road, jest as if he was a yearlin' calf, 'fore he's been proved guilty o' the murder! It's a shame!"

"Yes," the other admitted, "they ought to treat 'im human; but I reckon the's no doubt under the sun 'at he killed Squire Broadenax. He laid all night close by the Broadenaxes', an' when they cotch 'im in Spring Place he had two hundred dollars in 'is pocket. I reckon he did the killin'; fer how could a pore tramp like 'im, 'thout a whole rag to 'is back, have so much money?"

Mrs. Ladd sighed again, and her motherly face grew more serious. She let the quilt glide to the floor.

"It looks mighty bad," she said. "They'll likely find 'im guilty an' hang 'im for it, pore boy! He passed as nigh to me as that bed-post, an' it made me think o' my Tobe. Who knows whar on earth my boy is to-day? I haint hardly been able to close my eyes for the last month, for thinkin' about 'im. I'm afeared he's dead; Texas is mighty onhealthy.

"I haint had a letter from him in more than two months," she went on presently. "It's been two year sence he let his father's hoss drownd, and Jacob driv' 'im off."

She told again the sad story, familiar to her guest; how Tobe had driven the horse into the river, ignorant that the water had risen; how the animal had become entangled in the harness, and had drowned in spite of the boy's efforts to save him; and how his father had driven him away, and forbidden him to return until he could bring back the money that the horse had cost.

"I believe he's dead," Mrs. Ladd sighed.

She wiped her eyes on her needle-punctured fingers, and went slowly over to a wooden box in a corner. Raising the lid she lifted out a black coat and waistcoat, a pair of trowsers of light color, and a pair of calfskin boots with high heels and red tops.

"His Sunday clothes," she explained, huskily. "Tobe was mighty proud of 'em, but he wouldn't take 'em with 'im. He said he wanted to rough it—that he didn't want to put on style; he said I could save 'em till he got back. But he 'lowed if he never did git back, for me to give 'em to some feller that needed 'em."

Jacob Ladd still sat in the doorway. The dusk was falling over the hushed earth, when a man under a slouched hat rode up.

"Hello, Jake!" he called out, pausing at the gate.

Ladd rose quickly and went to him.

"I've seed 'em all," said the man, in a whisper. "We'll meet at the store to-night at 'leven. Morgan is in for it, heart an' soul. He 'lows hangin' is too good for such a cold-blooded rascal."

"All right," said Ladd, "I'll be thar. We'll save the county the expense of a long trial. It'll be that much in the pockets o' the tax-payers."

It was late in the night at the cross-road's store. Peter Morgan, the storekeeper, had closed and locked the door, and stood leaning against it. Some twenty rough men were sitting and standing about in whispering groups. The last two to arrive were Jacob Ladd and a burly black man.

"You fetched Ike, I see," remarked Morgan, as he cautiously admitted them.

"Of course!" grunted Ladd. "Who else kin climb a tree like him? You know he's afeared to give us away, an' he is fond o' sech amusements."

The negro smiled grimly.

"Well, we are all here, I believe," said Morgan, "and as fur as I'm able to see, ye're all of one mind. But to make shore, I'll put it to a vote. All in favor hold up the right hand."

Every hand in the room was raised.

The storekeeper handed out a coil of new rope.

"That's the stuff," said Ladd, taking it in his hand, and handing it to the negro. "Make yore knot, Ike, or I'll have t'other eend for yore neck."

Ike smiled good-humoredly, tied the knot quickly and passed the rope to the group of men nearest him. They nodded as if satisfied, and handed it back, some of them refusing to touch it.

Ladd took a lantern and led the silent band from the store and down the little shaded forest road to the village, where the jail stood.

Ladd rapped upon the jail door with the head of his walking-stick, and his fellows moved up close behind.

"Hello! Who's thar?" sounded in gruff tones from the room occupied by the jailer and his wife.

"Git up an' see, Nelse Murray!" answered Ladd.

The men pressed nearer together. Some of them drew their revolvers and pulled their hats down over their eyes. Ladd's face was entirely hidden.

A chain rattled on the door and a pale, bearded face appeared in a slight opening.

"What's it you want?" asked the jailer in an unsteady voice.

"Jest yore prisoner, Murray, that's all," replied Ladd, in a guttural, unrecognizable voice. The others crowded about him. "Turn over yore keys an' go back ter bed; we'll do the rest."

"Boys," exclaimed the jailer, "this aint right. The prisoner haint been proved guilty. Go off, an' let me do my duty."

Murray was trembling so violently that the rattling of the chain on the door could be heard. Ladd coolly cocked his revolver. A dozen other weapons clicked.

"Hold on! Give 'im a minute!" exclaimed Ladd. The jailer's hand suddenly came out into the moonlight. A bunch of keys rattled in his fingers and fell jingling upon a stone step.

"I wash my hands uv ye," the jailer faltered.

Ladd unlocked the door, and the men entered. They gathered around a large cage of iron in the middle of the room, in which they saw, by the light of the lantern, a handsome man about twenty-two years old.

"I see what you want," said the young prisoner, "but I'll swar I'm not guilty! I didn't kill that man—I don't know anything about it. Give me a chance to prove it!"

"Tell that to some other gang o' 'white caps,'" said Ladd, coolly unlocking the cage and leading the man out. "You needn't bother to spend yore wind—you'll need it atter awhile. Tie 'is hands, Ike, an' put the rope 'roun' 'is neck."

Most of the band were awed by the prisoner's cool deportment. A sudden look of angry fearlessness seemed to sweep over his young face. As the negro approached him, he voluntarily crossed his hands behind his back for them to be tied.

"All right," he said, in a tone of resignation, mixed with contempt. "I'll show yer how an honest man kin die when he's overpowered by a mob o' cowards. Lead the way!"

Ladd preceded the prisoner and Ike down the stairs; the others brought up the rear. Silently they crossed the shaded court-yard, passed out into the open moonlight in the street, and entered the woods.

"What time is it?" asked Jacob Ladd, of a man by his side.

"I dunno," was the reply, and the speaker shuddered at the sound of his own voice.

"It's about quarter atter two," said the prisoner, very calmly. "I heerd the clock strike twice jest 'fore you fellers knocked on the door."

"Hanging's too good for him!"

Every man that heard the voice seemed to feel a cold hand upon his heart. Presently Ike stopped the prisoner beneath a huge oak, and looked around with a question in his gleaming eyes.

"This one'll do," said Ladd, in an uneven voice. Then, at his command, Ike hung the rope over the lowest limb of the tree.

"If yer hev any prayer ter pray, say it 'fore I give the order," said Ladd.

"My prayers are said, thank yer," said the young man; "but I've got a straight request to leave behind me, if ther's one among yer that 'ud like to see justice done."

"Out with it, then," said Ladd. As he spoke he let the rope fall slack.

"I've done said I'm innocent, so I won't go over that. But I've tramped it all the way from Texas to do somethin' for a dyin' man, an' this hangin' will prevent it. That money, two hundred dollars, 'at the sheriff tuk from me, an' which he intends to hand over to the dead man's wife, don't b'long ter her, and never was in the possession of the man that was killed.

"Ye all 'low I'm guilty, 'ca'se I had that money, an' couldn't tell the man's name I was fetchin' it to. Now I was away out on the prairie in North Texas, twenty mile from a white man's house, when I run acrost a young man by 'isse'f in a cabin, jest about to die with a fever. Thar wasn't nobody in reach, so I couldn't get he'p. Jest 'fore he died he give me that money, an' made me promise to take it to his father.

"He said he owed it to 'im fer a hoss he drownded, an' hed promised to pay fer. He hed jest told me that his father lived in this county, an' started to tell his name, when he tuk a fit o' coughin', an' died 'thout makin' it known.

"I buried 'im thar, an' tramped all the way here, 'ca'se I had no money o' my own. But so many young fellers has gone West 'at I couldn't find the father o' this one.

"All I want to ax is thet some o' you will try to see thet justice is done, in case anything turns up ter prove me innocent atter I'm gone. Now I'm ready."

Every eye in the group was directed toward Jacob Ladd. He was leaning against a young tree, as pale as death.

"What was the boy's name?" he gasped, staring the prisoner in the face.

"I tol' yer I didn't know," replied the other.

"Did he have red hair an' blue eyes?"

"Yes, an' a blood-red birthmark on his cheek."

Ladd was quivering in every limb and feature. The men had dropped the rope as if it had stung their hands. The whole forest seemed hushed in suspense.

The prisoner began to look around him in astonishment, but he could meet nobody's eyes.

"O my boy!" burst from Ladd's lips, and he staggered toward the bound man; "is he dead?"

"Who?"

"The boy that give you the money."

"Yes, an' under the ground. I buried 'im the best I could. Do you know anything about 'im?"

"He was my son!"

Almost without a word the young man was released. The mob gradually dispersed, and Ladd was left alone with him.

"Come along with me," said Ladd. "I'll see you clear with the sheriff. I want you to tell the boy's mother about it."

By and by they reached Ladd's cottage. The light from a kitchen fire shone through the window.

"She's up a'ready," said Ladd. "You wait here till I go and sorter break it to her."

He leaned wearily against the fence, and Ladd staggered across the potato patch and entered the door. The stranger listened, expecting to hear some sound of grief from the house, but it did not come. In a few moments Ladd emerged from the house and came slowly toward him.

"She takes it mighty quiet," he said, "an'

Digitized by Google

Edward D Duffield Jan92

haint a word to say 'bout our treatment o' you. But that'll come atter she's over t' other shock. She said to bring you in; come on."

Mrs. Ladd was standing in front of the fire when they entered. She went across the creaking floor to get a chair, which she placed near the hearth for the visitor. A sunbonnet hid her face, and she did not look up.

The visitor sat down. His bare toes showed through his shoes. A nude knee parted a wide rent in his trousers, and his elbows were exposed.

Ladd muttered something to his mute wife about going out to feed his horses, and slunk from the room.

"You mus' be hongry," Mrs. Ladd said; and she raised a most pallid, woebegone visage. "I'll have breakfast ready in a few minutes."

She gave him food, and then showed him the way into the little bedroom, where Tobe had slept. Before he retired, he told her the story of the boy's death and burial. No tears came to the woman's eyes as she heard the recital, but she staggered as she went about her work.

He had slept soundly fifteen minutes before she cautiously put her gray head in at the door. She shrank back as if she had been smitten in the face when she saw the outlines of his form under the covers of the bed her son had used. Then she stole into the room, and softly lifted the sleeper's tattered clothing and shoes from a chair near the bed, and bore them back to her room.

She looked at them aghast; they were beyond repair. For twenty minutes she sat helplessly looking at the heap of rags, unable to think. A tear of pity for the young man asleep in the adjoining room came into her eye, although she had not yet wept over the death of her only child.

All at once her breast heaved. She arose, and going to the box in the corner, took out the suit of clothes she had shown her neighbor the day before.

"It 'ud be a shame to 'low 'im to go away in them rags," she muttered softly; and all at once she buried her rigid face in the clothing, and held it there for a silent moment. "Besides Tobe 'lowed if he never come back, to give 'em to some feller 'at needed 'em; an' yit I wisht I might a-kep' 'em, to look at once in awhile."

She measured the two suits together; she put the soleless shoes against the bottoms of the high-heeled boots, and was satisfied with the measurement. Then she folded the ragged clothes up in a bundle, and put them behind some rubbish in a corner.

Taking the other suit and the boots, she placed them noiselessly upon the chair near the stranger's bed, and softly withdrew.

About three hours later the guest put his head cautiously out of his room and caught her eye.

"I cayn't find my clothes," he said.

"I left 'tothers for yer," she said, huskily; and she coughed a little behind her hand. "Yore'n was 'bout played out. Yore welcome to 'em—I reckon they'll fit yer."

When he came out wearing the suit, and she looked up suddenly and saw him standing near the water-shelf, she fell to shaking so violently that the pan she held fell to the floor. She stooped to pick it up, and without giving him another glance, quickly left the room.

While the young man stood in the door, Ladd and the sheriff rode up to the gate and called him to them. They had come to restore the money that had been taken from him, and to tell him that a man had been arrested in the next county with Broadenax's money in his possession, and that the man had confessed the crime.

The young man took the money.

"Thar's the money yore boy sent yer," he said to Ladd. "An' now I think I'll go. I've been away from my folks fer three year, an' I aint thought much about home, but somehow I've got the strongest hankerin' to see my mammy I ever had in all my life. Good-by. Tell your wife I'm much obleeged fer 'er kindness. I know how she feels, an' I won't bother 'bout tellin' 'er farewell."

Ladd tried to speak, but could not. He walked on down the road by the young man's side to a tree where his favorite mare was tied. There were tears in his eyes, and his features were softer than they had been since his childhood.

"Hold on," he said. He put his hand upon the neck of the mare, and looked appealingly into his companion's face. "Fer heaven's sake don't refuse what I'm agwine to ax yer," he began. "I b'lieve on my soul I'll die if yer do! You've got forty mile ter go—I want to give you my mare, fer yo' ter keep fer good. I've packed some victuals in the saddle-bags. Don't refuse me!"

"I cayn't take yore hoss, man," said the other. "You needn't feel like I'm agwine to harbor any ill-will agin yer. I aint that sort."

"Yer must take 'er!" groaned the farmer. "I cayn't take no refusal."

The young man looked into the streaming old eyes for a moment; then he said:

"All right, sence yer insist on it. I think I see what's botherin' yer, an' if I kin he'p yer, I'm willin'."

Ladd watched the horseman ride away.

When he was almost out of sight down the long road Ladd turned, and found his wife at his side. Her face was as hard in expression as a statue's. But she showed surprise when she noticed the tears in her husband's eyes, and his transfigured visage.

She looked away in the sunshine after the departing horse and rider. Then her face lighted up with sudden eagerness.

"Did you give 'im Betty, Jacob?" she asked.

He nodded.

She wavered an instant; then threw her arms around him, and with her white head on his breast, burst into tears. WILL N. HARBEN.

HUGH LAWTON'S BICYCLE.

The amount that it would cost was on the table before him—seventy-five dollars!

There was a smile on Hugh's face. His blue eyes sparkled with pleased anticipation, as he

carefully smoothed out the paper money, and made a neat little pile of the pieces of silver coin.

"Seventy-five dollars!" he said, as he leaned back in his chair, with his hands clasped at the back of his head, while his eyes rested on the money.

"I never have had so much money before; and I shouldn't have had this if I hadn't earned nearly every dollar of it."

He ran over in his mind the jobs, small and great, that had given him his treasure, supplemented, it is true, by some timely presents.

He had wanted a bicycle for three years. In fact, he never saw a boy or a man spinning along on one of those airy vehicles without longing to experience the same enjoyment. Sometimes it cost him a struggle to keep down a spirit of envy; but he felt that the possession that gave most pleasure to its owner was the thing that had been honestly earned.

His father could not afford the expense of such a luxury, but had gladly given Hugh permission to purchase a bicycle, if he could earn the price of it outside of his school and study hours.

"And now I've got the money," said Hugh, with a long-drawn breath of satisfaction, "it's lucky for me that Harry May is going away, and wants to sell his wheel. He has had it only one season. It cost him one hundred dollars, and if it hasn't been very carefully cleaned, it is otherwise in as good condition as when he bought it. I'll scour and rub it up so well that—that—"

Just here he noticed a voice in the next room, and heard the words, "Yes, it does seem that some folks have a lot harder time to git along in this world than others have. Sometimes it makes me feel that there's such a thing as bein' born lucky, I declare if it don't."

Hugh knew to whom the querulous voice belonged. It was that of an old lady known to everybody in town as Aunt Phœbe Blake. She was a poor, feeble, fretful old woman, without husband or children, who had known nothing but poverty and hardship all her days. Her sorrows had been so frequent and so keen that it could hardly be expected that she should take a cheerful or a hopeful view of life.

She had buried six children, one by one, just as they were coming into young manhood and womanhood. For twenty years the poor widow had lived a lonely, sorrowful life.

Had it not been for the benevolence of the Lawtons, who had known her for many years, she must have suffered for the actual necessaries of life. She had long been feeble, and now there was a prospect that her health would fail wholly. There seemed to be nothing before her but the Reedville poorhouse.

"I can't bear the thought of it," Hugh heard her say, tearfully; and then there came the sound of a half-smothered sob before she added: "None of my folks ever went to such a place, poor as they've been. Not one of 'em has ever come on the town, and I can't bear to be the first to do it. I'd rather die! Yes, it's terrible to think of, and I'd rather die."

"Poor old Aunt Phœbe!" Hugh said, sympathetically, as he folded up the bills and put them snugly away in a corner of a drawer of a little desk in his room. He put the silver back into the little tin box in which it had been saved, piece by piece.

"I'm very sorry, Aunt Phœbe," he heard his mother say; "I wish I might give you a home, but you know my mother is coming next month to make her home with me, and we are already crowded."

"Oh, I know, I know," Aunt Phœbe answered quickly, "I wasn't hinting for you to take me in. You've already done more for me than I can ever pay you for. I don't want to be a burden on them that aint no kin to me. I think I'd almost as soon go to the poorhouse. But I've got my own kin folks who'd make me welcome, if I could only git to 'em.

"I've got an own sister and two married nieces living back in Vermont in the town where I was born, and they've written more than once that I'd be welcome to a home with them if I could only manage to git there. They aint able to send the money themselves, and I aint got but a dollar and fifty cents in the world; and that I've saved five cents at a time, when I'd git a little for my knitting or for piecing a quilt for somebody."

She stopped for a moment, and then went on, tearfully:

"I've hoped to save enough to take me back to my friends, and to end my days among 'em, on the spot where I was born. They'd be good to me, I am sure, and I wouldn't feel as if I was a pauper, with my own kin folks. But I s'pose I shall have to give it up and die here in the poorhouse."

Her voice wavered and broke, ending in a little sob, and Hugh heard his mother say:

"There, there, Aunt Phœbe, I wouldn't cry. Maybe some way will open for you to go. How much would it cost?"

"Just sixty dollars for a through ticket. I've been and asked about it two or three times, hoping that the price would come down."

"And you ought to have a sleeping-car, and that would cost more."

"Oh, no, I wouldn't have a sleepin'-car. I'd just carry some bread and butter with me, and I'd make myself comfortable in any car."

"Why, Aunt Phœbe, you are too old and not strong enough to travel in that way. You are over seventy years old, and it's more than fifteen hundred miles from here to Vermont."

Hugh sat thinking for a long time after Aunt Phœbe had gone. His mind wandered back to the years of his early childhood, when Aunt Phœbe and Uncle Peter, her husband, lived in a small house at the edge of the town, and he and his little sister Nellie, now dead, played on the hillside behind the house on Saturday afternoons.

He remembered how Aunt Phœbe used to come out and bring them hot ginger cookies, and how tenderly she soothed all their childish hurts and grievances. Once, at great personal risk, she had saved little Nell from a runaway team.

She had knitted Hugh his first pair of red mittens, and he could recollect, too, how pleased he was with them. He had said then that he was going to take care of Aunt Phœbe when he was "a big man." When he had the scarlet fever and his mother was ill at the same time, Aunt Phœbe had nursed him for four weary weeks.

To be sure, his parents had always befriended Aunt Phœbe. For years most of her support had come from them; but somehow, Hugh suddenly felt a sense of personal obligation he had never before experienced.

He sighed deeply three or four times as he sat with folded hands and bowed head. Then he took the money out of the desk and slowly counted it again; and then his head dropped upon the lid of the desk, and rested on his folded arms for a long time.

When he lifted it there were several damp spots on his coat-sleeves, and several on the desk lid. He wanted that bicycle very much indeed.

He took the five dollars in silver, and put them back into the desk. The bills he folded up slowly, and thrust them deep down into the trousers-pocket that had no hole in it.

A moment later Mrs. Lawton heard Hugh coming down the stairs. She called out:

"I suppose you are going to get that precious bicycle now, are you, Hugh? Well, I think you've earned it, and I wish you much pleasure with it."

"Thank you, mother," Hugh said, quietly, as he walked out of the house and down the village street.

When he came home he found a note on his desk telling him that his mother had been suddenly called by a telegram to a neighboring town because of the sudden and dangerous illness of her sister, and that she should be away while her sister needed her. His father was absent from home, and was not expected back before the end of the week.

Hugh went out again after supper, and then went to bed.

He was eating the breakfast he had himself prepared, the next morning, when there came a hurried rap at the door, and before he could rise to open it, Aunt Phœbe Blake came hurrying in, her dim eyes shining as they had not shone for years, a radiant smile on her wrinkled face, and her voice tremulous with excitement. Her very hands were trembling.

"What? Your ma aint to home?" she said. "Dear, dear! I m so sorry! I wouldn't have missed seeing her for anything, for I don't s'pose I'll ever see her any more. I'm going back home, Hugh! Only think of it, I'm going back to Vermont! I'm going day after to-morrer!"

She clasped her hands together as she spoke, and dropped into a chair, nodding her head again and again in eager affirmation of what she had said:

"But I'm so sorry not to see your ma agin. I'd wait a day or two if I was sure she'd come home, but your aunt is sick, and she may not be back for a week or more. You must tell her all about it when she comes home, and tell her that I've a feeling that it all comes through her in some way, and that I can never thank her enough. Do you s'pose it was her sent me the money, Hugh?"

"No, I'm sure she did not send it," replied Hugh, quietly.

"No? Well, I don't know who on earth it could have been, then. It beats all!"

"How was it, Aunt Phœbe?" asked Hugh, with a faint smile on his face.

"Well, I'll tell you; I was just going to bed last night when there come a knock at my door, and 'fore I'd got it fairly open this big envelope was flung in; and whoever brought it then run away in the dark. There was seventy dollars in the envelope, and this letter that I've had read agin and agin, and that I can't hear read too often. You just read it agin for me, won't you?"

There was a look of confusion on Hugh's face as he took the letter and read, in what was evidently a disguised hand:

"Dear Aunt Phœbe: Please accept this money from one who gives it in gratitude for your kindness to him in the past, and in the hope that it will make you happier than it would make him if he kept it."

There was no signature, and none was needed for Hugh to know the name of the writer.

He hesitated and stammered a little as he said, "I'm glad for you, Aunt Phœbe."

"But who do you reckon could have sent it?"

"I—I—well, some one who wants you to have it, I'm sure," was all Hugh could say.

"Well, now I'm going back to old Vermont, and to sister Cynthy, and them I was brought up with, that I aint seen for over thirty years. I'll have my few poor little things all packed to-day. I do wish I could have said good-by to your ma. But I'm glad to see you, Hugh. I want you to be a good boy as you always have been. If you ever find out who it was sent me the money I wish you'd tell 'em all I say, and how happy they've made the last days of an old woman. Wasn't it kind and thoughtful in whoever sent it to put in enough for a sleeping-car, too? I reckon I would have got mighty tired without."

"Yes, I thought you, that is, I—I—when do

Digitized by Google

you start?" Hugh asked, in a way that Aunt Phœbe must have noticed but for her own excitement.

Hugh was one of the two or three friends who met at the little railroad station to bid good-by to the tearful but wonderfully happy old lady. She put her arms around him when she bade him good-by, and said:

"Good-by, my dear boy, I've carried you in my arms when you was a little bit of a baby, and I'll keep you in my heart always. I've a kind of a feeling that the money for my ticket come through your folks in some way, and I'd like your mother to write and tell me if she knows who sent it. Good-by; I hope you'll have lots of nice times with that bicycle you're goin' to get!"

The kind old eyes were filled with tears.

"Good-by, Aunt Phœbe."

A moment later her handkerchief fluttered from a car window as the train moved out of sight.

For the Companion.

A BRAVE STRUGGLE FOR LIFE.

A Story of The Oregon Trail.

About the year 1849, when I was barely in my twenties, I had been knocking about the Oregon country for a year or two, trading here and there with whites and reds, and looking for a place that suited me for permanent residence. Many emigrant "trains" were arriving from the East over the old Oregon Trail. All these had to make a long detour down the Snake River to reach a ford; and I perceived that a ferry, at the point where the trail struck the river, would be the source of a considerable income to its proprietor.

Many of the immigrants, and especially those from New England, had good sums in coin with them; and few, I reasoned, would care to go out of their way sixty or seventy miles, when for a dollar a wagon they could be ferried across the Snake promptly and safely.

I made up my mind to establish such a ferry. With ponies, men and materials, I made the trip to the river, and began work on the first flat-boat ever seen on the upper waters of the Snake.

The work did not make the rapid progress I had anticipated. I grew tired of the food, which consisted mainly of dry-salted pork and corn-dodgers. The salmon were running, but the water was so deep that we could not kill them.

There was a cascade on the river about sixty miles away, where the Indians came yearly to catch and cure fish. I was not then as well known among the Indians as I became afterward, and did not dare venture among them alone.

At a distance of a few miles, on the opposite side of the river, there was an old post of the Hudson Bay Company, consisting of a pallisaded store-house and several dwellings, where an agent and several men were always to be found. I had no doubt that I could get a man there who knew the Indians well, to help me obtain fish; and with this plan in view, I left my men one day and set off for fresh salmon.

I found but three men at the post—a Scotchman, a half-breed and a Kanaka, or Sandwich Islander.

The Kanaka had lived among the Snake Indians, and could converse with them in their own language. I made an arrangement whereby the Kanaka was to pack a pony with blankets and other salable goods, and make a trip with me to the salmon fishery, in behalf of the post.

We started in the afternoon, camped that night on the river bank, and reached the cascade at about noon next day.

The Kanaka left the pony in a thicket, at some distance from the Indians, saying that we must not show our goods until we saw in what mood they were. We were both dressed in the Hudson Bay Company's costume, which consisted of a blue flannel shirt, a broad-brimmed hat, green trousers and a drab coat, or jacket, of doeskin. Each of us carried a revolver; I had also a carbine. As I was at that time somewhat stout and florid, I felt that I might pass anywhere for a young Englishman. That circumstance, indeed, was very fortunate for me, as the event showed.

As we approached the Indian camp, we saw the entire company of red-skins gathered about a hole in the ground, from which a cloud of steam rose high in the air. Out of the hole they soon lifted an enormous salmon, which weighed at least fifty pounds.

I never saw food that tempted me more; and I expected an invitation to eat. I was very hungry. I had gone there for salmon, and there it lay, in most tempting form, before me; and yet I could obtain nothing more than the tantalizing odor of it.

The Indians, we saw, were not very friendly. They ate their salmon without speaking to us, and their glances were lowering and suspicious.

After a time two of them approached the Kanaka and asked him if I were not an American. The Kanaka did not hesitate to assure them that I was an Englishman, from the Hudson Bay Company's post, and that we had come up to buy salmon.

They paid no attention to the offer to buy their fish, and still debated among themselves, appearing to suspect me.

Presently one of them came to me and asked to take my carbine; and I, not caring to show any fear, gave it to him. Then they began to shoot at a mark, with the purpose, as I soon suspected, of using up my ammunition. Presently I stepped in, and taking the gun, walked slowly away in answer to a signal from the Kanaka.

Presently he sauntered up to me and said, "Two of their men were killed recently in an affray with a party of Americans, and they are after blood. One of them thinks he has seen you before. You must slip out of sight as soon as possible, and get as far from them as you can before night. I will stay and keep them talking a while, and then make my own escape. When you get to the high bluff below where we left the pony, wait until sundown and watch for me. If you see me coming alone, remain quiet till I reach you; but if I am followed, ride for your life."

I sauntered about with an air of unconcern for a time, as if waiting for them to get ready to sell their salmon. Then I edged my way out of camp and was soon in the saddle, riding as fast as my little cayuse could run.

I reached the bluff, and was able to command a view of the country for miles around. Seeing that I was not pursued, I lay there, keeping a sharp lookout in the direction of the Indian tepees.

The Kanaka had manifestly succeeded in disarming their suspicions, for the time.

By and by a wagon-train appeared in sight, far off on the plain to the eastward. For an hour or two I watched it, as it crept slowly toward the river. I ought to have gone at once to meet the emigrants. A timely warning of the danger they were in from the Snake Indians that night might have saved their lives. But I was new to frontier life, and did not realize their danger.

Dusk fell while yet they were several miles away on the plain; and shortly afterward the Kanaka joined me. We set off immediately, and reached the post a little before daybreak. Thence I returned to my boat building empty-handed, greatly to the disappointment of my men, who had their mouths made up for salmon.

Ten days after my visit to the Indian camp, I was sitting in my shanty near the Snake, looking lazily out over the sage-brush plains that stretched away until they seemed to become the rim of the world. It was intensely hot.

Alfred reaches the Shanty

Presently my eye caught an object on the plain. It was so far away that I could not make out clearly what it was. It appeared to be a man, but its movements were not those of a man in a normal state. Sometimes it was erect, and apparently coming towards me; but it staggered like a drunken person. Then it fell and would disappear for a time; but it seemed to be possessed of a desire to move on.

Evidently it was a drunken man. But how could a solitary man, upon the bank of the Snake River, on foot, many miles from any place where liquor was obtainable, become intoxicated?

At any rate, as I had no use for a drunkard, I made no effort to reach the person, and erelong went inside my hut to take a nap.

An hour or more later a boy about fifteen years of age reached my door, and flung himself in a heap upon a bench. He was so faint that he could hardly tell me that he was starving; but it needed not a word to inform me that the lad was in sore straits.

I brought him into my shanty, and gave him some water and a little food, knowing that to satisfy his hunger at once might prove fatal.

His face, hands and hair were covered with sand and blood, which had dried on; and his clothing, consisting only of shirt and trousers, was tattered and stiff with dirt. His face showed that he had been suffering intensely, and his tongue was parched with thirst; for though he had been near the river for miles, he was so weak that he feared to go down the bank, lest he should be unable to climb back.

I got water, soap, a towel and some of my own clothing, and bade the boy try to bathe and change his garments; and meantime I began to make a cup of tea for him.

But still he sat, apparently unable to move, and at last I approached and set about helping him to remove his old clothes.

Taking hold of the shirt by the collar, I attempted to draw it over his head. The poor fellow screamed with pain.

"What is it, lad?" I asked.

"O mister, I've got an arrow in me!" he groaned.

I thought at first that his sufferings from lack of food had rendered him light-headed, and so said, soothingly, that we would take it out as the shirt came off, and then he would be all right.

"But it catches, it aches! You can't get it off," he exclaimed.

I examined his body, and found protruding through his back, and about three inches to the left of the spine, a broken arrow-shaft. Looking in front I found a half-healed hole where the stone head of the arrow had struck him. The missile had gone completely through his body!

The flint had fallen from the end that protruded on his back, but I found the ligament of deer sinew that had bound it to the shaft.

That the boy could have survived such a wound for more than a week, and have travelled sixty miles, in such a country, without food, seemed to me the strangest instance of human endurance I had ever known, or heard of. I hardly believed it possible that he could recover, but was ready to do all I could for him.

I was no surgeon, but I knew that the terrible arrow must come out. The slightest movement of it gave him severe pain, for the flesh was greatly inflamed. Bracing my nerves, I encouraged him, but told him plainly that the arrow must come out if he wished to recover.

"Take it out, mister," he said, faintly.

It was astonishing how tenaciously the arrow-shank held its place. I worked an hour before I could get it out; and the poor lad, who had borne the agony bravely, now fainted dead away.

I dressed the wound as well as I could, and put him to bed. I had small hopes of his recovery, but he improved rapidly. In the course of two days he sat up in the bunk, and ate food eagerly.

Alfred—as I shall here call him—then told me that the emigrant train to which he belonged had camped at dusk on the bank of the river, the very night of my escape from the Snakes. Plainly it was the train which I had seen.

The emigrants had seen no Indians for several days. They prepared their supper and arranged the wagons for the night, and then turned in and fell asleep. Even the watch, no doubt, had got drowsy, lulled by the silence and suspecting no enemy.

The Indians had probably seen the train during the afternoon, and thirsting for vengeance for the killing of two of their tribe, were watching for a chance to attack.

Some time in the night the emigrants were awakened by frightful whoops and the discharge of guns. The savages were upon them.

Several of the men jumped out of their wagons, with their rifles, and attempted to drive off the Indians. The fight raged sharply. Alfred's father had been one of the first out. His mother, older sister and brother had also jumped from the wagon, calling to him to follow them and hide in the brush; but he delayed a few moments, searching for an axe with which to arm himself.

While he was thus occupied, an Indian drew the rough canvas curtain at the front of the wagon, saw Alfred, and began to climb in. The boy jumped from the rear of the wagon, and started to run into the brush.

He had almost succeeded, as he thought, in getting out of sight, when something struck him, and he felt a terrible pain, as if he were cut in two. He remembered falling forward, and then became unconscious. He did not know how long he lay; but when he came to his senses the moon had set; it was dark, and all around was silent.

The ripple of the river came to his ears, and he dragged himself down to it. A draught of water revived him somewhat, and he walked along the bank, thinking—for his recollection of what had happened was still confused—that the wagon-train had gone in that direction.

"Did you find the trail?" I inquired.

"No, sir. I suppose I kept to the river so long that I lost it, and then I just wandered on, hoping to find some one."

"And you found nothing to eat?" I questioned.

"I found rose-buds, and sometimes pigeon-berries, and ate them. That is all I have eaten since that night. Some days I can't remember about at all. I lay down amongst the sage a good many times. I think I lay in one spot three days. Part of the time I was crazy, and saw strange things. Sometimes I would come to my senses, and find myself walking. At last I saw your shanty, but it seems to me that I was two or three days getting to it."

"Was the arrow broken when you discovered it?"

"Yes. I suppose I must have fallen down on it, and so broke it off, for I rolled over and over when I first fell."

"Did you try to pull it out?"

"Yes, but you don't know, mister, how hard a thing that was to do. The soreness and pain was terrible; and I just made up my mind to get somewhere, if I could, and leave it sticking there, till I found somebody who could help me."

"Well, my brave boy!" I exclaimed. "You've earned the right to live; and you are welcome to stay with me, or go on with the next wagon-train that comes. But you must stay here until you are stronger."

"All right, mister. You've been very good to me, and I won't forget it; but I must find my folks, if they are alive."

I greatly feared that he would never see his parents again; and partly for his sake, and partly from a sense of my own responsibility in the matter, I took four of my men and rode to the scene of the attack. We camped one night on the way and, for greater security, visited the spot during the night.

Not more than half a mile from the bluff from which I had watched the emigrant train, we came upon the place where it had camped and been attacked. A number of wagons had been plundered and burned. The iron-work of them lay scattered around.

More ominous still was the odor from the bodies of the unfortunate victims—men, women and children—who still lay unburied, where they had fallen. Out of pity, and for common humanity's sake, we hastily excavated a shallow grave in the sandy soil, and gave them such rude sepulture as we could give.

From Alfred's statements and from intelligence received afterward, I concluded that the wagons of these murdered emigrants were a part of an overland train which had fallen in the rear of the main body of teams.

The lad was the sole survivor of his family; but he still hoped that some of them might have escaped, and went on to Portland and Salem with the next train that passed.

Alfred is now an elderly and prosperous farmer in the Willamette Valley, and has a family of sturdy boys, the eldest of whom bears my name in recognition of the desperate surgical operation I performed at the first ferry on the Snake River.

ADVENTURES IN WILD AUSTRALIA.

SECOND PAPER.

How I Lived "in the Bush."

I travelled four years in Australia, from 1880 to 1884, without a white companion. Of this period I spent one year among some cannibal tribes of Northern Queensland, near the Herbert River, sharing their life. I lived in a hut like theirs, hunted with them, partook of their meals and shared their dangers; and I endeavored to learn their language and to become as familiar as possible with their ideas and customs.

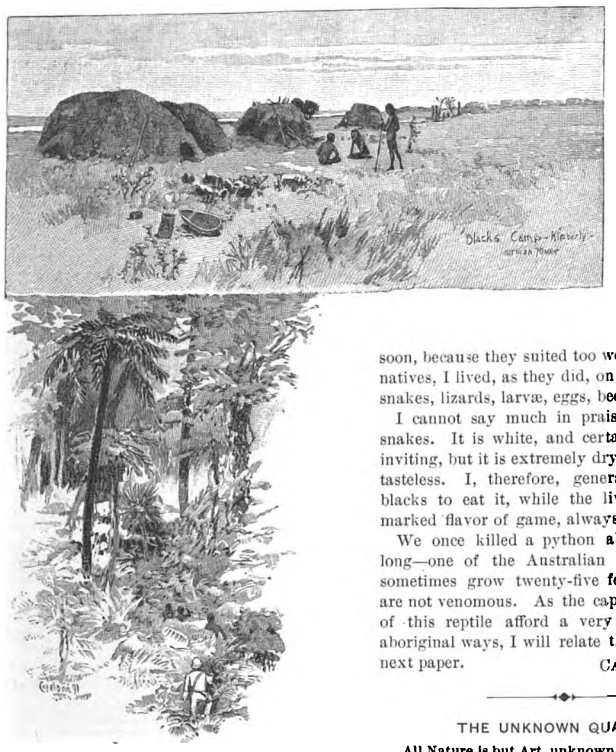
In the vast and dense bushwoods or scrubs, that so luxuriantly cover the coast mountains of Northern Queensland, these natives live in their primitive state. The white settler remains in the lowlands, and never ventures into thickets of the mountain districts to disturb the black aborigines, for he can find there neither gold nor diamonds, nor anything that could tempt his cupidity, and lead him to encounter the hardships of a journey to their haunts.

But I had long wished to study these savages—the lowest of the human race—in their actual conditions of life. To the student of ethnology, no phase of human existence is so interesting as the most primitive. And as this seemed to be the only mode of getting an exact knowledge of them, I made up my mind to live with these wild children of nature.

A further inducement to risk the dangers connected with such an enterprise was my belief that, by their help, I would be able to secure many specimens of the Australian fauna which could be procured in no other way.

Of course it was impossible for me to go and live with them at once. I had to work my way in among them by degrees.

I took for my starting point a deserted cattle station, called Herbert Vale, about forty miles from the mouth of Herbert River, under the eighteenth degree of south latitude. An old white man, attended by a Kanaka, or native of the South Sea Islands, had been left in charge of the property; and although he and I were the only white men in the country, I will say that I found him, in all my relations with him, the most disagreeable human being I had ever met.



Here I learned, from the surrounding half-civilized tribes, some of the elements of their language, and became to a certain extent familiar with their habits. Through these semi-savages I associated with the neighboring natives; and from them I ventured, step by step, among the more remote tribes, until at last I came to live alone in their huts, with absolutely wild Australians, who had never before come into contact with a white man, or even seen one.

I was, of course, taking a serious risk when thus alone, without a single white follower, I took up my abode in the very heart of the cannibal district. But I preferred it so; another

Digitized by Google

white man might easily have compromised the success of the whole expedition, and brought death upon both of us, simply by want of tact in his treatment of the savages.

The greatest difficulty I encountered was in getting the blacks to take part in my expeditions; for they are born idlers and have a radical objection to doing any kind of work. Fortunately for me, six or seven months before I left that region I happened to find a really good native servant. He stuck to me wherever I went, and from the time of his advent my position improved materially.

He was by no means an ordinary black, but was possessed of a peculiar vein of humor that frequently led him to blurt out ideas and information of the highest value to me.

In spite of his good qualities, however, he was not quite free from the salient characteristic of all these savages—treachery. I never dared to trust him unreservedly, for all Australian blacks are like children, the sport of caprice and of the inspiration of the moment, and are especially prone to deceit. Nevertheless, he was more worthy to be trusted than the others, and saved my life many times.

We were, as a rule, fortunate enough to find four or five "black fellows," as the native Australians are called, willing to go with us. Sometimes a whole tribe, with their women and children, would accompany us.

Whenever it was possible I rode alone, my blacks marching on before me, one of them leading my pack-horse. At the foot of the mountain a camp was pitched, and here the horses were left behind, while saddles and bridles were hung on a tree in order to protect them from the wild dogs. Then we walked up the mountain; for the dense underwood that covered it was impenetrable to horses.

My equipment on these exploring expeditions generally consisted of about ten or twelve pieces of salt beef, some thirty pounds of wheat flour to be baked into bread in hot ashes, and a small quantity of sugar. Instead of tea I used sugar and water—a mixture which was very cooling and refreshing, especially when water could be found as good as it is in Northern Queensland.

My outfit included a large, white woollen blanket, which became an object of constant wonder and envy on the part of the natives. As soon as I unpacked it, they made with their tongues a clucking noise expressive of delight, and roared out: "*Tamin! Tamin!*" (Fat, fat!) Anything that is very good they call fat.

One of the most important things I brought with me was tobacco—a source of greater joy to the natives than the very best food. At Herbert River, before the arrival of the Europeans, the blacks knew of no stimulants, but they very soon learned the use of the pipe.

Tobacco served me instead of money. For it the natives will do anything, down to selling their wives. They do not chew it, but I have often seen a mother hand her pipe to the child she was carrying on her back, and the baby would take a puff or two with apparent delight.

In bartering with other tribes they frequently send them small bits of tobacco wrapped up in grass. In that way tobacco has become known to remote tribes living in the interior of the country, who have never come into contact with Europeans.

Next to tobacco, my revolver, a fine American one, was of the greatest importance to me. Very luckily, the natives, who themselves do not possess even bows and arrows, stand in the greatest awe of firearms. It is, however, necessary for one to keep up his reputation as a marksman, or he will soon lose their respect.

Their astonishment is equally great when a kangaroo is hit at rest, and when a bird is brought down on the wing.

I made it my business to keep this wholesome fear constantly awake. Every night, before creeping into my hut, I discharged my "baby gun," as they called it, merely in order to refresh their minds as to the existence of this much-feared weapon. When my stock of provisions had given out, which as a rule happened very soon, because they suited too well the taste of the natives, I lived, as they did, on such delicacies as snakes, lizards, larvæ, eggs, beetles and the like.

I cannot say much in praise of the flesh of snakes. It is white, and certainly looks rather inviting, but it is extremely dry and is absolutely tasteless. I, therefore, generally allowed the blacks to eat it, while the liver, which has a marked flavor of game, always was my share.

We once killed a python about sixteen feet long—one of the Australian constrictors that sometimes grow twenty-five feet in length, but are not venomous. As the capture and cooking of this reptile afford a very good picture of aboriginal ways, I will relate the incident in my next paper.

LITERARY DIPLOMATISTS.

The death of James Russell Lowell recalls vividly the fact that our government has often been represented at foreign courts by literary men.

Mr. Lowell himself was United States minister to Spain, from which post he was promoted to that of the legation at London.

Our diplomatic service is not, like the diplomatic services of the European nations, arranged on a system of permanency and promotion. In Europe, diplomacy is a profession, for which men are regularly trained, in which they spend the busy years of their lives, and in which they rise from the lower to the higher places almost as regularly as do army officers.

It is seldom, on the other hand, that an American minister or consul is promoted from one legation to another, or that he spends more than four, or at most eight, years in the service.

As a result of this our government has more freedom of choice of our representatives abroad; and takes men from every walk of life, whether they have had any special training for or experience in diplomacy or not.

It seems always to have been recognized by our Presidents that men of letters are well suited to the diplomatic office. At all courts, they have frequently been called upon to discharge its duties.

One of the earliest literary diplomatists was our first great prose writer, Washington Irving, who was sent as minister to Spain, and who there saw the Empress Eugénie in her girlhood.

The appointment of Irving was no doubt intended both as a recognition of the enrichment of American literature by the author, and as a compliment to Spain, whose history Irving had studied deeply in preparing to write his "Alhambra" and the "Life of Columbus."

The historian Bancroft was for a while our minister at London, and later at Berlin. Another historian, Motley, was minister, first to Austria, and then at London. One of our most eminent scholars in language, George P. Marsh, was for some time minister to Italy.

Nathaniel Hawthorne was appointed by his intimate friend, President Pierce, consul at Liverpool, one of the most lucrative posts in the gift of the government; and to this fact we owe Hawthorne's charming series of English notes. Andrew D. White, afterwards President of Cornell University, was American minister to Berlin.

Of later writers, Bret Harte, the brilliant California author, was for some time consul at Glasgow; John Hay was secretary of legation at Paris; John G. Nicolay was consul-general at Paris; and William D. Howells was consul at Venice, whence he gathered the materials for "Venetian Days," the work which first made him known in the world of letters. Journalists have often, especially in recent times, been selected to fill diplomatic and consular posts. John Bigelow was minister at Paris, and John Russell Young in China; the United States is now represented at Paris by Whitelaw Reid, and at St. Petersburg by James Emory Smith.

In these days, owing to the Atlantic cable, the position of a minister at a foreign court is less arduous and responsible than it was before. The decision of complex questions is made in the state or foreign departments, and the ministers are for the most part merely the instruments of communication between one government and another.

There is, therefore, less need of thoroughly trained diplomatists; while eminent men of letters certainly present to foreign peoples the best and most cultivated type of American citizenship.

For the Companion.

SUMMONED BY THE KING:

James Russell Lowell, obiit, August 12, 1891.

He was at home in Courts, and knew the great—
Himself was of them. Oft-times kings have sent
To call him to their presence; and he went,
A welcome guest, to share their royal state,
Of Earth's high potentates the fitting mate.
He was by all men honored—crowned of Song,
And crowned of Love—and high above the wrong
Of envy, or the littleness of hate.

And now the mightiest King—to summon him
To that far place whereto all souls must come—
Has sent swift Azrael, Heaven's Chamberlain:—
Beyond the ultimate sea's remotest rim,
Where all the voices of this earth are dumb,
The Courtier journeys—called to Court again.

August 17, 1891. LOUISE CHANDLER MOULTON.

"HAYSEED."

There can be little doubt that a distaste for the farmer's life is cultivated among country boys by the caricatures of the farmer which are published in comic papers and "humorous" books, and by the fear of being classed among the people whom these caricaturists are pleased to call "hayseeds."

Boys are accustomed to see these "funny pictures," in which a sort of farmer who is extremely unusual, and may be said not to exist at all, is set forth as the type or example of farmers in general. And as boys are sometimes unreasoning, they are apt to say to themselves, "I will not be ridiculed in that way when I grow up; I will get out of the 'hayseed business.'"

In this way not only is an injustice done by these caricatures, but a positive injury.

The American people have a broad sense of humor, and no doubt delight in caricature; but they do not delight in injustice or mischief-making, when they are able to recognize it as such.

For this reason, it may be hoped that the caricaturing of the farmer, which has certainly been greatly overdone, may soon cease from the distaste for it which is pretty sure to arise.

The farmer himself can afford to take the "hayseed" ridicule good-naturedly. At a recent farmers' demonstration in the West, men rode in a procession dressed in cowhide boots, patched trousers, and ragged straw hats, carrying pitch-forks on their shoulders. They had adopted the guise which the caricature gives them as a way of showing that they are independent of that sort of ridicule.

But in the case of the young this spirit of independence is not often so strong. With a little thought, they must see that an unjust caricature does not really affect the credit and honor of their occupation; but they are often ambitious of what is called consideration or respectability, and are likely to be unconsciously affected by misrepresenting pictures and stories.

It is the duty of the young to bear it in mind that nothing is more respectable or dignified than the life of the independent farmer, and the duty of those who have it in their power to "raise a laugh" in the public prints to remember that they, no less than serious writers, have a responsibility to truth and justice.

HOW CROPS ARE PAID FOR.

It might be supposed, by those not familiar with the subject, that the means used to pay the Western farmers for the grain they raise and sell were easy and simple. A moment's consideration will show, on the contrary, that it is one of the most complex of financial operations.

The farmer sells his grain to large shippers in the nearest town. The shipper usually sells it to grain dealers in Chicago or New York.

If these dealers have orders for "home consumption," in which most of the crops are used, they sell it to the millers or manufacturers, who in turn, after making it into flour or corn-meal, or other finished forms of food, sell it to the bakers or to the people who bake it for themselves. If the orders come from foreign countries, the dealers send it across the ocean.

The people who make the final payment for the farmer's grain, therefore, are scattered all over the world, but chiefly in the thickly-populated cities of our Eastern States.

Up to the time when the harvest is gathered, there is less need for actual money in the West, because large payments are made in bank checks, which in turn are deposited in other banks. But now the farmer must be paid, and living as he does in a country district, he wants the actual money. Bank checks will not do.

The people of the East either owe the money already for their grain, or else they soon will owe it. And so the bank employees of the Eastern cities, where most of the actual money circulates, are busy week after week, tying up bank-notes in packages, and sending them by express to the Western banks.

Two or three million dollars of currency will sometimes leave New York and Boston in a single week for this purpose. There is for several months actually far less money than usual in the Atlantic States.

How does the East get its money back? To answer this question, one must consider what the farmer does with his new money. First he puts it in his country bank; and then he pays it out for wages or living expenses, for clothing, food which he does not raise, railroad fares, farm tools, and a hundred other things.

But it is the great manufacturing cities of the East which receive payment for such things. And so, when the autumn and winter come, the Western banks pack up the paper money again, and send it back to the East.

If foreign countries have had to buy vast quantities of our grain, the country may get still more money. So long as we sell Europe exactly as much in value as what we buy, the two accounts are only checked off against each other. But if, for instance, the export of grain is so large that we sell in one year seven hundred million dollars' worth of goods, while we buy only six hundred and fifty million dollars' worth, then Europe must send over to us on its steamers fifty million dollars in good money.

That is to say, this would be the case if the merchandise trade with foreign countries were the only thing to be considered. But as a matter of fact there are many other things to complicate the accounts.

For instance, we have to pay large sums for freight, which is carried chiefly in foreign vessels; and England has large investments in this country, the interest on which must be paid, thus diminishing the amount of money which would naturally come hither.

But whatever the balance may be, after all the accounts are settled, it is paid in gold.

EYES WHICH SEE NOT.

It is considered now to be an almost essential part of the education of the daughter of a well-to-do American, that she should spend a season in foreign travel.

The results of the large outlay of money and trouble in these tours are often painfully insignificant.

One young girl remembers nothing of her journeyings, but her chance glimpses of princes and princesses. Another comes back with a definite knowledge of but one place—the shops in Paris. To this girl, the whole continent of Europe with its history, its vast treasures of art, architecture, and records of antiquity means only—pretty gowns; to that one—bargains.

"Each eye," says a Spanish proverb, "makes its own harvest."

The same difference in eyes is found among those who never travel. A book which won fame for its writer throughout the English-speaking world was Richard Jefferies's "Walks About an Old Farm," in which he described the beauty and mystery in the weeds and insects, the common sights and sounds enclosed within a few acres.

One boy goes out in the city streets, and comes back full of interest and delight in the histories hinted in a thousand faces which he has met, the glimpses of comedy and tragedy which he has found at every crossing or in every street-car.

Another sees nothing but the muddy streets.

The first feels his whole nature warmed and elevated; the other is conscious only of the condition of his shoes.

The important part of education, then, is not so much the things to be seen as the eye to see them.

How many intelligent readers would be ashamed to own that they had not read the last popular novel, while they have never spelled out a page of the great books of nature and of human life?

BASHFULNESS.

Happy hearts beat under Sunday jackets as four boys sprang down the academy steps and dashed across the road.

"Ho, all ye fellows who have nice rich, red, ripe strawberry shortcake," chanted the foremost; the second made a variation upon spring chicken, and the chorus behind came in bravely "when your spring chicken is gone."

On they went through the lovely morning—racing, loitering, whistling, ruminating, until nine miles had been passed, and they flung themselves down on the river-bank to rest.

After a swim and a careful toilette made in the glass of one another's eye, they repaired to the town hall, where a great dinner was in process. You may imagine that they were hungry.

Their plates were soon heaped with good things, but alas! at the place of the youngest there happened to be no knife or fork or spoon. He gazed upon the chicken-pie, the mashed potatoes, the cranberry sauce, the strawberry shortcake.

He could not eat with his fingers, nor could he endure the thought of the apologies and remark and laughter which would follow the disclosure of his situation. No one noticed his distress, so he finally left his loaded plate, and with a heavy heart and an empty stomach walked back with his jolly companions the nine miles to their home.

Missed that dinner just because he was so bashful!

"Goose!" he said to himself afterward. "Coward! Set your teeth and square your back, and get over this childishness."

To-day there is scarcely a more self-possessed speaker, or more finished gentleman in the country than that foolish boy.

It is said that Dorothea Dix, the woman who

Digitized by Google

inaugurated reform in the prison and the insane system of the United States and many foreign countries; who treated personally with kings and queens, popes, presidents, plenipotentiaries and men of affairs, was so shy in her youth that she colored extremely when addressed; that her voice often failed her in trying to speak.

"This is my weakness," she declared; "along this line must I labor with myself."

The immoderately bashful person is no less an affliction to his associates than to himself. It is his duty to overcome it. By going among people, even though at first it is agony; by fortifying himself with good clothes; by learning to control his muscles; by reading the newspapers for topics of the day; by practising the telling of anecdotes aloud to himself; by working to overcome shyness as he would work over a Greek root or an algebraic problem: he will come out more than victorious.

ENFORCED BENEVOLENCE.

The story of Beau Nash is so inwoven in the life of Bath, one of England's most celebrated watering-places, that one can scarcely see its name without thought of him. There, for a triumphant period, was he autocrat of fashion, and tyrant over aristocracy itself.

When a certain hospital was about to be built there, Nash stood at the door of the Assembly Rooms, one day, to receive subscriptions. Presently there entered a certain duchess, whose custom it was to spend much on her pleasures and little on charities. She gave Nash a familiar tap with her fan, and said, graciously:

"You must put down a trifle for me, Nash, for I have no money in my pocket."

"With pleasure, madam," was the reply, "if your Grace will tell me when to stop."

He drew from his pocket a handful of guineas, and began counting them out.

"One, two, three, four, five —"

"Enough, enough!" cried the duchess, in alarm, "what are you about?"

"Consider your rank and fortune, madam," said Nash, still counting; "six, seven, eight, nine, ten —"

Here the lady's alarm gave place to anger, but Nash continued unmoved. With maddening assurance, he begged her not to interrupt the work of charity, while he went on counting, "Eleven, twelve, thirteen, fourteen, fifteen —"

At this point, the exasperated duchess cried aloud. Catching his hand, she strove to stop his reckless numbering.

"Peace, madam," said Nash, "you shall have your name on the front of the building, written in letters of gold. Sixteen, seventeen, eighteen, nineteen, twenty —"

"I won't pay a farthing more!" cried she, now at white heat.

"Charity covers a multitude of sins," replied her tormentor, coolly, and still went on counting.

"Nash," cried the duchess, now thoroughly enraged, "you frighten me out of my wits! I shall die!"

"Madam, you will never die of doing good," and he was about to count on, but seeing that he had reached the end of feminine endurance, he agreed to stop if she would give him thirty guineas. Thus was the matter settled, but Nash had lost a friend.

BUBBLES.

It appears from reports made to the Insurance Commissioner of Massachusetts by the several "endowment orders" doing business in the State, that during the first six months of the present year they received in all more than five million dollars.

They paid out about one half this sum to certificate-holders and for sick benefits, and something more than a million dollars for expenses of management; and have about a million and a half dollars left from their receipts. Meanwhile their liabilities have increased more than thirty million dollars.

According to the principle on which these orders work those who became members later pay the claims of those who came in earlier; and any one who knows the four simple rules of arithmetic can easily discover by the study of their accounts that after a short time a person who becomes a member must inevitably lose all he "invests."

Let every one who is asked to join one of these orders remember two things: First, that on the average, almost exactly one fourth of the receipts go for "expenses," mainly salaries to officers; and secondly, that this leaves at best but three fourths of the receipts to be put at interest.

If any one can tell how, at this rate, an association can continue to pay one hundred dollars for an investment of fifty dollars, such a one would confer a great favor upon suffering humanity, which hitherto has been unable to acquire wealth without working for it.

NOT SO EASY.

Although it is always easy enough to say, "If I were you, I should do so and so," that is not by any means a sign that we should do any better than the person whom we advise or reprove, if placed in exactly his position.

A writer of many popular stories says that he has never succeeded in ending any of his tales in such a way that all of his readers and correspondents were satisfied; some one was sure to be disappointed at the way things turned out in the story.

At last, with a desperate resolve to please every one if possible, at least once, he wrote a novelette, and left the fate of the heroine quite undecided, not giving the faintest intimation of a preference for any special ending, on his part.

"Now," he said, "if I get any complaining letters I shall know how to answer them."

Within a short time after the publication of the little romance he had a letter from an elderly spinster, living in a small town in western New York, who was much addicted to novel-reading. She wrote anxiously to know if he would please tell her "whether he intended to have Anna, the heroine, marry Harold, the hero, after all, or whether she refused him, and sent him off to the far West?"

Whereupon the much-tried author seated himself at his desk and promptly wrote the following answer:

"MY DEAR MADAM.—If you would have married him, then she did; if you wouldn't—then she didn't!"

And although the elderly spinster has read both the story and the note a good many times since then, she has never been willing to take the responsibility of saying in which way the little romance should have closed.

OLD VIOLINS.

The great violin-makers, says an exchange, all lived within the compass of a hundred and fifty years. They chose their wood from a few great timbers felled in the South Tyrol, and floated down in rafts, pine and maple, sycamore, pear and ash. They examined these to find streaks and veins and freckles, valuable superficially when brought out by varnishing. They learned to tell the density of the pieces of wood by touching them; they weighed them, they struck them, and listened to judge how fast, or how slow, or how resonantly they would vibrate in answer to strings.

Some portions of the wood must be porous and soft, some of close fibre. Just the right beam was hard to find; when it was found, it can be traced all through the violins of some great master, and after his death in those of his pupils.

The piece of wood was taken home and seasoned, dried in the hot Brescia and Cremona sun. The house of Stradivarius, the great master of all, is described as having been as hot as an oven. One was there soaked through and through with sunshine. In this great heat the oils thinned and simmered slowly, and penetrated far into the wood, until the varnishes became a part of the wood itself.

The old violin-makers used to save every bit of the wood when they had found what they liked, to mend and patch and inlay with it. So vibrant and so resonant is the wood of good old violins, that they murmur and echo and sing in answer to any sound where a number of them hang together on the wall, as if rehearsing the old music that once they knew.

It was doubtless owing to this fact that when the people could not account for Paganini's wonderful playing, they declared that he had a human soul imprisoned in his violin; for his violin sang and whispered even when all the strings were off.

There have been experiments made with all sorts of woods by the various makers. An Earl of Pembroke had one made of the wood of the cedars of Lebanon, but the wood was so dense that vibration was deadened and the violin was a poor one.

CUTTING THE KNOT.

The ironclad *Merrimac* which harassed the Union fleet, and was herself finally disabled by the *Monitor*, made during her first unquestionable triumphs a victim of the frigate *Congress*. After the fight had continued for some time, the *Merrimac* was so fortunate as to take such a position relative to her enemy that the destruction of the *Congress* became only a question of moments.

Her commander was slain, she had been repeatedly set on fire, and her decks were covered with dead and wounded. She was accordingly run ashore, and there hoisted the white flag.

The *Merrimac* now sent alongside two tugs, to take possession, and remove the prisoners, but these were driven back by a sharp firing from the shore.

General Mansfield had directed the Twentieth Indiana to deploy along the beach, behind a sand ridge, and two guns were wheeled into position to prevent the enemy's making way with its prize.

Captain Reed, who was as good a lawyer as soldier, raised a question of military law.

"Since the ship has surrendered," said he, "has not the enemy the right to take possession of her?"

Then General Mansfield uttered one of the shortest and most conclusive opinions on record.

"I know the old *ship* has surrendered," said he, "but *we haven't*."

That settled it. Unable to take possession of its prize, the *Merrimac* opened upon her with incendiary fire, and then withdrew. The remnant of the Union crew were brought on shore, and that night, when the fire reached her magazine, the *Congress* blew up. That lightning decision had at least saved her crew.

"A MAJORITY."

According to a recent decision of the French Council of State, a unanimous vote may be cast in favor of a candidate at an election, and the candidate may yet fail of receiving a "majority" and of being elected.

Recently, in the town of Montlerçon, France, in an election for a small local office, only one voter presented himself to cast his ballot. He voted for Monsieur Bagneux for the office; and Monsieur Bagneux, having received all the votes cast, was declared elected.

But the matter was carried before the Council of State, which promptly annulled the election, declaring that a "majority of votes cast" was necessary to elect, and that, as "a majority" means "the greater number," there could only be a majority where there were more than one.

It is presumable, from this decision, that if two votes had been cast for Monsieur Bagneux, these two votes would have been held to constitute a majority; just as two sheep have been said to constitute a "flock of sheep," and two calves a "herd of cattle."

HE KNEW HIM.

Most people wear colored spectacles of some kind, and whatever they see takes the hue of the glasses. A story comes from England that a certain famous operatic conductor lately visited Stratford-on-Avon.

He was one of a select coaching party, and his companions soon perceived that he felt no very lively interest in the Shakespeare monument and other objects over which all visitors to the place are expected to wax enthusiastic.

"Shakespeare! Oh, yes, Shakespeare," he murmured wearily, and one of the party volunteered a hint.

"You recollect, maestro, 'Amletto' and 'Romeo e Giulietta,'"

The popular conductor at once brightened.

"Ah, yes," he replied, "I quite understand. Ze librettisti"

"Do you really believe all this?" asked some one, of a woman who had been telling ghost stories. "Indeed I do," she replied, "and I'm not an *imaginary* woman, either!"

"Brown's Camphorated Saponaceous Dentifrice" preserves the teeth and hardens the gums. Made only by JOHN I. BROWN & SONS, Boston. [*Adv.*

SELWYN HALL, READING, PA.
A first-class school for Boys. Thorough instruction and careful oversight. New gymnasium. Military drill.
Rev. WM. J. WILKIE, A. M., Headmaster.

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

RIVERVIEW ACADEMY, Poughkeepsie, N.Y.
56th Year. Prepares thoroughly for College, the Government Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

METROPOLITAN
College of Music,
19 & 21 East 14th St., New York City.
Has no equal for the thoroughness of instruction and the absolute safety of its methods. Fall term begins Sept. 14th. Residence department for lady pupils from a distance. Dudley Buck, President; Albert Ross Parsons, Vice-President; H. W. Greene, Secretary and Treasurer. For particulars send for College Annual.

Dainty Foods
Demand it.

IN EVERY Receipt that calls for baking powder, use the "Royal." Better results will be obtained because it is the purest. It will make the food lighter, sweeter, of finer flavor, more digestible and wholesome. It is always reliable and uniform in its work.

I have found the Royal Baking Powder superior to all others.

A YACHT CRUISE IN NORWAY.

By Lady Constance Campbell.

Steaming along in what seemed to me the smartest yacht afloat, under a blazing sun, on the afternoon of Sunday, the Thirtieth of June, we sighted Norway at five o'clock. It required a vivid imagination to realize how much beauty and grandeur lies behind the low and somewhat monotonous stretch of rocky coast that first met our eye.

At ten o'clock we were abreast of the Hellisö Light-house, and signalled for a pilot. Forthwith an amusing race took place among the rival pilots. The winner—a thorough specimen of his race, with fair hair, light blue eyes and high cheek-bones—sprang up the gangway, breathless after his hard row; and we, who knew what a captain can look like when his vessel is going through intricate channels, felt that "The boys about the monkey's cage had better keep away," more especially as communication between captain and pilot had to be carried on by gesticulation. Besides, we thought it wise to turn in and leave our introduction to Bergen for the morrow.

Bergen is hardly worth mentioning after you have been in Norway a week; but if you see it before you are thoroughly spoilt, it is quaint and pleasing enough. The town lies prettily on either side of the two arms of the harbor, under hills unmarked by any striking features, but well wooded, and forming a picturesque background to the bright-colored wooden houses, roofed with red tiles, that come down to the water's edge.

On shore what we saw chiefly were roughly-paved streets, down which clatter innumerable ponies drawing carrioles or market carts; women dressed, if not in the complete national costume, at least with its quaint three-cornered white cap,—and here I may remark that feminine beauty is not conspicuous at Bergen. The women, indeed, as a rule are positively ugly, while the children—like little fairy elves, with flaxen hair, light blue eyes, and looking the picture of health—form a pleasing contrast to their elders.

We soon hired ponies and carrioles and drove to the church of Fantoft, well known to every visitor to Bergen, which owes its present situation to the energy of an American who transplanted it bodily from its original site in the heart of the country. Here it stands, a quaint monument of eleventh century art, suggesting more a Japanese pagoda than a Christian church.

The road lay through ground typical of the more fertile districts of the country, through meadows of the richest grass, scented with masses of meadow-sweet and bluebell, birch, aspen and alder giving welcome shade from the burning sun.

The climate in this part is much like that of the west coast of Scotland. In winter it is mild and damp, the thermometer seldom falling below fifteen or twenty degrees Fahrenheit; and the average rainfall is seventy-two inches per annum.

But Bergen, besides forming one of the eighteen counties and six dioceses into which the country is divided, is of interest as one of the chief centres of the fishing trade, without which Norway would be a still poorer country than she is. A picturesque sight rewards early rising, when the toilers of the deep, with their heavily laden and bright-colored craft, come into the harbor; for the Norwegians love bright colors, and paint the hulls of their boats bright green or blue, while the sails are generally of a warm yellow or rich red-brown.

In 1881 the fishing trade of Norway employed nearly one hundred and twenty thousand men, and the aggregate profits were then estimated at more than five million dollars. Cod-fishing leads in importance, the herring-fishery coming next.

Intending to return to Bergen later, we spent only one day there, and by ten o'clock on the First of July were under steam for the Hardanger Fiord, a distance of one hundred and twenty miles.

How shall I attempt to describe that day, when every moment brought into sight some fresh point of beauty, some effect of color quite beyond pen or brush, and which made it seem audacity to touch my sketch-book and color-box, which waited patiently at my side?

As we passed the entrance of Kors Fiord, the distant range of the Hardanger came into sight with its field of perpetual snow towering above lines of pale blue hills and jagged fir-crowned promontories, all softened by the heat haze of the midday sun.

The water, dotted here and there by bright-colored sailing-boats, sparkled in the sunlight, or reflected clearly the fir-wooded banks of Lok Sound, which rose within a stone's throw of the vessel as she slowly wound in and out of the intricate passage.

Now we passed under cliffs two thousand and six thousand feet high, down which course waterfalls, fresh from the glaciers above, driven by the breeze in clouds of spray against the bold, rugged ledges of rock. Then we steamed past little patches of cultivation, where the industrious proprietor has made the most of any tiny bit of ground capable of giving foothold for his hut and soil for his small crop, which generally consists of a strip of barley and another of potatoes. Here were cherry-trees, laden with fruit, at the water's edge, and banks of birch and alder.

On we passed, through such scenery as this, till we reached Oddë, and hardly had the anchor been down five minutes before the vessel was surrounded with boats manned by juvenile natives, all offering for sale baskets of fruit, strawberries, raspberries and cherries. Who could resist them? One little pair, aged eight or nine, drove a roaring trade. They were dressed in every color of the rainbow, and looked like a pair of brilliant paroquets. We learned that the way to please a little Norwegian lass is to murmur words apparently uncomplimentary, but fraught with pleasant meaning. "Smoky piggy," being interpreted, means "Pretty girl!"

We spent some days here, anchored close to the shore, under cliffs topped by a fine glacier, over which a fresh, not to say cold breeze, always compensated in the evening for any moments of discomfort we might have experienced during the heat of the day.

The Hardanger peasantry are capital specimens of their class—industrious, contented people, with frank, pleasant manners. Indeed, the natural courtesy of the Norwegians is one of their most striking characteristics.

One may go far to find a better-looking, stronger race of men. Need they have for industry and strength, or the little patches of ground dignified by the name of farms would do little to keep body and soul together during the long, severe winter months.

Their houses, or rather wooden huts, are kept clean and tidy. The farm, with its herds, descends from father to son, and the son, on succeeding to his father's property, is bound by law to provide for each member of the family.

Well for him if he happens to number among his possessions one of the flat, small islands called *rärе*, with which the coast is studded, and which, if well stocked with sea-fowl, form a most important part of a Norwegian peasant's property.

These islands, which are stocked with puffin, valuable for their feathers, are the scenes of sport which, from the accounts given of the methods employed, convey a strong impression that they must be the lunatic asylums of the feathered tribe. The fowler either sends down a dog trained for the purpose into the narrow clefts of the rocks, or lets down an iron hook which the first puffin at leisure is obliging enough to seize hold of. The next one in his turn bites and holds on to the first one's tail; and thus the birds cling in succession, until a whole affectionate and curiously self-sacrificing family is dragged to light in one continuous chain.

Every village has its school, and where the population is thinly scattered, the schoolmasters wander from farm to farm. In this way primary education is brought within the reach of the most isolated families.

That neglect of the means of education is reckoned a serious offence is shown by the fact that no Norwegian can be confirmed who does not know how to read. He may not marry till he has been confirmed, and if he completes his twentieth year without having been confirmed, he is in danger of the House of Correction. What the House is, and what are its forms of correction, I have not been able to ascertain.

We had no opportunity to witness a Norwegian wedding. A somewhat gloomy custom makes it one of the betrothed bride's first duties to weave with her own hand her future husband's winding-sheet. Having so occupied the days of her engagement, she appears arrayed in gorgeous apparel for the ceremony, which is followed by a course of feasting and dancing, beside which the trials attending our matrimonial arrangements at home sink into insignificance.

Leaving Oddë we steamed up the Eidë Fiord, one of the many branches of the Hardanger, and anchored for a night off the small village of Eidë, within a short walk of which lies Graven's Lak, one of the prettiest inland lakes we saw. The lower slopes of the hills on either side were wooded with spruce, birch, alder and mountain ash.

The Sognë Fiord is certainly the grandest as well as the longest fiord in Norway. It is a hundred miles in length, shut in by sheer precipitous walls, and sends out various branches, of which the Essë Fiord is one.

Anchoring off the small village of Balholmen, we were under cliffs and crags, to look to the top of which for any great length of time involved serious risk of permanently twisting one's neck.

Boating late one evening, we rowed slowly to the head of this fiord, and saw an effect of color which I, for one, shall never forget. Towering above us rose one peak after another, clear cut in rich purple against the saffron sky, and perfectly reflected in the water beneath. No sound was to be heard save the roar of the distant waterfalls as they dashed down the cliffs from the glacier above.

Then, as we lay on our oars, and watched the mists rising from the deep glen beyond, shrouding the lower ledge of a grand crag five thousand feet high, the weird notes of the peasant's cowhorn broke upon the stillness, and were repeated in softened tones by the echoing rocks.

Here, if anywhere, I expected to see some fine old eagle; but watch as I might and did, I was obliged to conclude that the eagles of Norway were "not at home" when we called. Not a single specimen did I see; and a boy told me he had seen only one in all his life.

Perhaps this was more his fault than the eagles', for they are said to be common enough; and the sea-eagle makes known his existence by methods which lambs and other small animals can hardly be expected to appreciate.

Stories are told of his even attacking cattle, and Von Buch relates, on the testimony of many witnesses, how he was compelled to accept the commonly reported account of the eagle's method of attack.

He is said to dart down into the waves, then after rolling about with his wet plumage on the beach till his wings are quite covered with sand, he once more rises into the air, hovers over his intended victim, and swooping down quite close to him, claps his wings and flings the sand into the brute's eyes, completely scaring it by repeated blows of his pinions.

A Fiord in Norway.

The blinded ox rushes away to avoid the attack until he either falls over a cliff or becomes completely exhausted; in either case falling a prey to his enemy. This for him whose faith is large.

The glacier above the Sognë Fiord is part of the perpetual snow-field of the "Jostedals Brae," between the Sognë and Nord Fiords, which covers an area of five hundred and eighty square miles, reaching a height of five thousand feet and descending to four thousand or forty-five hundred feet. Our most northerly point was Moldö, where we spent three delightful days before sadly turning homeward.

There is one spot in Moldö which has painful associations for me. That spot is the fur shop. I entered this place full of good resolutions, and with rather a well-stocked purse. I came out, having parted with those resolutions, with parcels stuffed under each arm, hanging from every finger, and with my purse in a deplorable condition.

Three weeks—or three days—can seem long enough when, from any anxiety or sorrow, each hour seems to drag heavily along, but as I looked from my port early one morning, and saw that we were rounding Ardnamurchan Point, I thought that never before had I known so short a three weeks.

For the Companion.

THREE LITTLE KINGS.

King Alphonso of Spain.

A happy life is that of King Alphonso XIII. of Spain, who will be six years old on the Seventeenth of May next. He is a remarkable and intelligent child, with a handsome, frank face and silky, golden curls. He has already a very correct knowledge of his power and high station, and knows how to behave in a kingly fashion, and yet obeys in all things his mother, Queen Christina.

The white-haired Madame Tacon, who was the governess of his father, King Alphonso XII., some thirty years ago, has supreme control of the royal nursery; but Raimunda, the gorgeously attired peasant nurse, is still his most cherished attendant. The little King refused to allow her to be paid off and dismissed at the time when he could have done without her services, and insisted upon her being retained as a member of his household.

Punctually at seven o'clock every morning young Alphonso is awakened by Raimunda, who bathes and dresses him. He then drinks a cup of chocolate, and partakes of fruit and toast.

At eight he steps out upon the low, spacious balcony of his nursery, which looks out upon the great square, and listens to the music of a regimental band.

A crowd of children is always assembled under the windows to see him appear. Rich babies, covered with costly furs, and ragged little street urchins all uncover their little heads in a low obeisance to their young sovereign, who bows gracefully all around to return their salutation.

When he happens to recognize any of his young subjects among the rows of upturned rosy faces, he leans over the balcony, and, calling them by name, chats joyfully with them until his mother summons him. Then with another bow and a wave of his hand, he leaves the balcony, followed by the enthusiastic hurrahs of his fervent little admirers.

Shortly after nine the King drives out in a beautifully appointed carriage, accompanied by Madame Tacon and preceded by two outriders in brilliant liveries. After a drive of two hours, during which his childish prattle never ceases, he returns to the palace for luncheon.

On his arrival, the palace guard turns out and the bugle sounds, to the great joy of the young sovereign, who dearly loves military display. As he ascends the steps leading to the great hall, the Royal halberdiers range themselves in line on each side of the stairs.

When he reaches the top of the stairway he turns to Colonel Loigorri, the chief of the halberdiers, and, in obedience to the instructions which he has received from his mother, doffs his cap and says with great gravity, "Let them retire."

At five o'clock he goes out for another drive, which is attended with the same ceremonies; and after his dinner, which he takes with his mother, he plays with his regiments of tin soldiers, or romps with his big dog Cæsar in a large gallery filled with all kinds of toys, ranging from the rubber menagerie of babyhood to the miniature railway trains, steamboats, and beautifully painted picture-books appropriate to his age.

At eight o'clock his mother takes him to his bed-chamber, which communicates with her own, and hears him recite his evening prayers. The Queen invariably remains seated by his cot of sculptured ivory, shrouded in curtains of white gauze and silver brocade, holding his hand in hers until he falls asleep.

Alphonso has a little basket-carriage of his own, drawn by two snow-white Spanish donkeys, which he drives with great skill. Wrapped in a sable coat with a sable-lined hood, his little majesty takes his place on the high velvet cushion of his miniature equipage, and with a masterly crack of his whip, starts off the donkeys, who jingle their bells and toss their long ears as if in defiance of the admonitions of the English groom who is in attendance.

While at the sea-side resort of San Sebastian, King Alphonso enjoys more liberty of action than he does at Madrid.

Every morning he appears on the sands near the sea escorted by Madame Tacon and the faithful Raimunda, and plays with his sisters and other little children as freely as if he were not his most Catholic Majesty King Alphonso XIII. of Spain.

But in the wildest moments of his enjoyment, the boy remembers that he is the King, to whom all people give homage, crowding to kiss his tiny hand; and he is full of pride and resolution.

At times he is even a little overbearing. One morning in August, when he was four years old, he was running on the long lawn under the gray walls of the old château. The roses and orange-trees filled the air with their perfume; and, seated on a low wicker chair, Queen Christina watched the little boy as he chased some bright butterflies which hovered over the flowers.

The Queen had often forbidden him to hurt any living creature. For once, however, he disobeyed, and as a large butterfly settled on a crimson rose close by, Alphonso put out his little hand and caught it by its velvety wings.

At that moment the Queen, who had risen and approached unheard, put her hand on his arm, and, unclosing his fingers, set the prisoner at liberty.

"You have disobeyed me, mein Bubi." This is the pet name by which she always calls him. "You have been cruel," she said, sadly, while the little boy was looking ruefully at the brilliant dust left by the butterfly's wings on his pink finger-tips.

KING ALPHONSO OF SPAIN.

His pretty face was flushed with suppressed anger, and he attempted to draw his arm away from his mother's grasp.

"I am the King," said he, imperiously, "and I can do as I like!"

"You are the King, my child," answered Queen Christina, softly, "and that is why you must always be good and merciful to all creatures living. You have pained me very much, and I shall not kiss you to-night."

The boy burst into tears, and then kissing the

Digitized by Google

Queen's hand he said, sobbing, "I am very sorry, mamma. I beg your pardon—I will do it no more!"

Since then the little fellow has always been very careful to obey his mother, for he knows that, although she loves him tenderly, she never overlooks his faults, and he cannot bear to see her angry.

For a time he was very ill, and during forty-eight hours it was believed that he could not recover. Prayers were offered up for him in all the churches of the kingdom, and his mother, the Queen, and the old prime minister Sagasta, on whose knees the boy, when well, loved to sit and listen to stories, never left his bedside until the crisis was over.

King Alexander of Servia.

Very different is the existence of the young King Alexander of Servia, whose fifteen years of life have been sadly desolate. It is impossible not to sympathize with this poor boy. Well may he envy the lot of King Alphonso, who enjoys a tender mother's love, and who is surrounded by friends and loving subjects.

Since his father, King Milan, abdicated in his favor in March, 1889, the life of young Sacha, as he is called by the Servians, has been in constant danger, and several attempts have been made to kill him.

A week after his ascension to the throne five dynamite bombs were thrown through the windows of the military riding school near his palace, which he had left but ten minutes before the termination of his daily riding lesson.

The force of the explosion was such that all the windows in the neighborhood were shattered; and had Alexander been still in the building, as his would-be assassins supposed, he would have been blown to pieces.

The unfortunate lad, parted from his father and mother, whom domestic and political troubles have separated and driven out of the country, is extremely miserable, and says that his present existence is unendurable. He has not a single intimate friend to whom he can turn for comfort, and he is not allowed to communicate freely with either his father or his mother.

He is forced by etiquette to take his meals alone, and never hears a word of genuine affection.

He is a very brave and courageous boy, and remains patient and courteous to all in this melancholy life. He strives to perfect himself in all bodily exercises and manly habits, and seems to think himself quite old. Truly, the burden of woe which he carries on his youthful shoulders is heavy enough to make him forget the pleasures and light-hearted joys of childhood.

He is a good shot, and is as skilful in the management of a boat as he is on horseback. He can drive three horses harnessed abreast, in Russian fashion, with great skill; he has been well trained in all athletic exercises, and can climb and run and walk long distances without fatigue.

His slender limbs are as strong as steel, and his health is excellent. One of his few pleasures during the fair season is to climb the higher ranges of the Servian hills, his gun strung across his shoulder, or carried in his hand ready to shoot the antelopes or chamois which abound there.

He has a little tent which is set up for his use on the hills. He knows all the paths through the large, dark forests and pine woods, and feels free and happy only when he reaches the rocky regions, strewn with boulders of granite and barred here and there by huge limestone crags.

When at home in his immense, melancholy palace, the young monarch is unhappy. No one ever hears him complain or sees the tears fill his eyes; but the sense of his loneliness and bereavement never leaves him. Sometimes he lets his grief have its full sway when no one is near—when the night has closed in and he is left to himself.

He studies hard with his tutor, Professor Doritch; he learns German, French, English, Russian, Italian, Latin and Greek. Study is a pleasure to him, for he is very ambitious, and strives to become a learned and good man.

King Bun-Lan of Annam.

Far away across the seas lies the great Asiatic kingdom of Annam. A large portion of its area consists of jungles and fever-breeding marshes. There are, too, immense fields of maize and rice, with here and there a pleasant thicket of cotton-bushes or mango-trees.

Over this land reigns little King Bun-Lan, a twelve-year-old sovereign. A queer little child is this yellow-skinned monarch. Unlike their majesties of Spain and Servia, he disdains games, sports and childish amusements. Solemn and prematurely serious, he spends his days in solitude in his great white palace, poring over books and manuscripts.

He is a quaint little figure, slight and supple, with melancholy black eyes and a mournful countenance. He is lithe as a leopard in movement, and quick of mental perception. He studies hard to learn the language of the French, who are the masters of his country; and is extremely careful to see that those who teach him shall be perfectly conscientious and well informed.

Evidently he already realizes the heavy burden of responsibility which rests on the shoulders of a sovereign, and, instead of trying to shirk his duties, this young "barbarian," who would have many excuses for laziness and self-indulgence, is constantly striving to improve his mind and his education.

A short time ago the young King received from the French Government a large number of magnificent toys, nearly all of which were of a nature to make him acquainted with the marvellous progress of the civilization and industry of Europe. He has deigned to be interested in and even pleased with them.

Beautiful indeed were these costly playthings, the possession of which would render any boy almost beside himself with joy. Among their number is a miniature steamboat, the tiny engine of which, when set in motion by the heat of a spirit lamp, propels the little vessel with ease and rapidity.

A complete railway train, with numerous carriages and baggage-cars, drawn by a genuine miniature locomotive, which steams and puffs and runs on real iron rails, is another of the toys.

Among them there are also mechanical singing birds in silver cages, a little printing-press, a clown who, when wound up, walks, dances and rolls his eyes and executes the most remarkable feats of gymnastics, and last but not least, there is a complete regiment of French artillery.

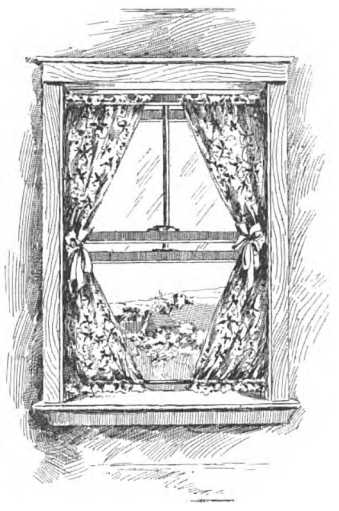
MAKING A HOME.

THIRD PAPER.

Curtains and Carpets.



The color of wall-paper and paint is hardly more important than that of curtains, carpets and draperies.

Every window should have at least two sets of curtains. Often there should be three sets. First, then, is the white curtain, close against the pane, which should be at every window in the house.

The use of pane curtains only is certainly an improvement on the old-fashioned shades and "Venetian blinds," but it is not really pretty, for it leaves the upper sash bare. To overcome this, and yet to enjoy the privacy and convenience of the lower curtains, you will need two sets of drapery, one arranged as usual, and the other consisting of white curtains long enough to reach from the top of the frame to the sill. These, being open in the middle, are caught back at each side with bows of ribbon.

Over these, again, suspended from a rod at the top of the window frame, hang the heavy stuff curtains on which you depend for color, and which should touch the floor in parlors, but may be cut at the sill in bedrooms.

The material suitable for curtains is of infinite variety. Of course those against the glass should

be as nearly white and as like lace as possible. I reject Madras, which, though pretty in itself and not dear, does not wash well. Some of the muslins, coarsely worked with chain stitch, are durable, but rather heavy.

I find that among the cheap materials, the soft cotton crêpes called "crazy cloths" are best for all purposes. When put up full enough they give the soft, graceful folds we so much desire.

They come in pure white, in écru, and also with a design in colors in either of these grounds.

Suspend the pane curtains by means of small brass rings which slip easily over a metal rod, permitting the curtain to be pulled aside at will, without creasing it.

The longer lace set is also on a metal rod; but this may be run through the upper hem if need be, since these curtains are rarely drawn back from the top.

The heavy curtains may be of plush, with costly embroideries—if your house is a palace and all its appointments on a magnificent scale. Otherwise I advise much less pretentious stuffs, for nothing is more depressing than to go into a little box of a house and find rich effects which are only beautiful when far enough away to be seen in proper relations to the whole decoration.

Few people know the decorative possibilities of cretonne. A parlor can be beautiful furnished entirely with it, provided it is wisely chosen. It is by far the best stuff for bedrooms. The Morris cretonnes are well known to all artists; they are expensive everywhere, but especially so in America. The designs have in some instances, however, been copied by our manufacturers, and these imitations are generally sold from thirty-five to seventy-five cents a yard.

A curtain stuff of very rich appearance is double velours, or tycoon cloth. It suggests chenille, but is better than that material—heavier and more velvety. Both sides being alike it needs no lining.

Next in beauty are the old-fashioned "reps," which come in plain tints, and make beautiful curtains where masses of color and noble folds are needed.

Reps must be lined, as must all material not alike on both sides, and this is no easy task. To do it well, the outside material should be spread on the floor and the lining stretched smoothly over it, the bottom edges being securely sewed to each other.

About ten inches above this seam a line of basting is run across, and the lining turned back until stopped by this basting. Just along this line the lining and curtain are sewed together by a blind stitch in silk of the exact color of the outside; though the stitch must not show through either of the materials.

The lining is then smoothly laid in place again, and a second line of basting, fifteen inches above the last, is made ready and the stitching repeated. This is done again and again at intervals of twelve or fifteen inches until the top is reached.

The hanging of heavy curtains is a simple matter, though there are right and wrong ways here, too. They should *always* hang from rings, either brass or wooden, slipped over a heavy pole of like material.

There is a convenient contrivance which makes this easy. On the outer edge of the ring is a small metal ring, just large enough to hold the brass hook which comes with it. The lower end of the hook is twisted so as to form a safety-pin, and when this is pinned to the upper hem of the curtain and the hook put into the small ring, the curtain is in place.

Curtains should always be quite full; but when the stuff is heavy less width is needed, though even here all appearance of scantiness is to be avoided, especially if curtains are to be drawn across the windows or doors at the top instead of hanging straight down at the sides.

When soft, light material is used, like silk or cretonnes, so many folds will be needed that the curtain should be sewed into shape before it is put up. A deep single fold is laid for the front edge. Then the width is equally divided so as to admit of three or four double but shallow folds. A stitch is taken through each set of folds at the top, and the pin-hook fastened in about the same place.

Just where the curtain should be caught back depends somewhat upon the height of the window; but in general the nail for the tie-back should be nearly in the middle of the distance between the floor and the top of the window-frame. Where there is unusual height, however, this does not hold good, as no tie-back should be more than five feet above the washboard.

Curtains should never be pulled out and allowed to hang in a festoon-like puff over the tie, but should be parted, drawn to each side and held closely in a band which hangs from a nail and has a "slope" of about forty-five degrees therefrom.

The ties should never be of stiff materials. Ribbons, bands of silk or cords of worsted or silk are quite enough to keep a curtain in place. How absurd, then, the fashion of chaining up these yielding materials with brass chains.

Next to curtains in importance come the carpets. I have entered a special plea for rugs and stained floors, and it only remains to tell of certain kinds of carpets that are best for the purpose.

If you can possibly find the money for them, Eastern rugs are an investment that pays during a lifetime. These thick rugs last a generation or two, if properly cared for.

After the Bokhara rugs, which are quite expensive, come the Turkish, the Persian, the Daghestan, the Smyrna and a host of others, each beautiful in its own way, but a little more striking and mixed in color than the Bokharas.

In imitation of these we have the American velvets, always alike on both sides and with a thick pile which wears well. But they are not to be compared with the Eastern rugs in any way; and as they are somewhat costly, too, you may prefer something really prettier if a Brussels mat made with a border.

Next in durability are the art squares. Of these the English are the best, but the American wear fairly well. They come in all shapes and sizes, and are sold almost everywhere in our Eastern cities for one dollar the square yard.

These mats are merely three-ply or ingrain carpet, finished by having a border woven around the centre; but they come in rather better designs than the ordinary ingrains.

What you need always to remember is to avoid a spotty appearance in the design and the mixture of colors that do not blend.

Light carpets wear better than dark ones as they show wear less. Well-covered carpets of thoroughly mixed colors show spots and stains less than those in which the design is thin and scattered, or where large patches of any one color are prominent. It is hardly necessary to remind you that the scrolls, the gigantic roses and the mammoth tulips so prized by our grandmothers are hopelessly inartistic.

A very cheap carpet can be made at home by cutting into fine strips all the old ingrain carpet you can find, and mingling with it strips cut from a few yards of new of different bright colors. These strips are sent to the man who weaves "rag" carpets, and, being treated exactly as he treats his balls of rags, they unite to form not only a neat and durable carpet, but a very pretty one, too, in which lines of color are artistically blended. The weaving may cost as much as fifty cents a yard, but the mat will wear long enough to pay for this.

I must not forget to say that the strips should all be cut in a line with the selvage—never across it.

For the smaller draperies of the room—the mantel-scarfs, chair-backs and table-covers now considered indispensable—no material is better than the China silks which are brought to us in such beautiful colors. For the mantel-shelf it is quite sufficient to line a piece of this silk large enough to face two feet below each end and six inches below the front edge of the mantel, and then finish the ends and edges with a fringe made of small tassels of various harmonizing colors.

To tables of ornamental wood, a small square of plush edged with gold lace gives an air of elegance which no more showy cover could do; and when it is necessary to conceal the whole table, a cloth of Bolton sheeting, heavily outlined with rope silk or Bargarren floss, is easily made and appropriate.

In upholstery, in chair cushions and in all the minor draperies of the room, the color is more important than the material, and nothing is more offensive than single pieces which are so gorgeous in either of these as to be out of keeping with their surroundings.

ANNIE R. RAMSEY.

SALLY'S MUSEUM.

The little girls had longed for years to have a place entirely their own to keep their treasures in and play those fantastic, imaginative rainy-day games, which are spoiled by the least suspicion that a grown person can overhear them or behold their innocent mysteries.

For how is it possible for a grown person to understand that a circle of chairs and an oak bough represent a magic forest, or that Sally, when she puts on a string of blue beads and hangs an old red shawl from one shoulder, is a wandering princess?

When mother chances upon their play in the midst of some such thrilling episode, she stands in the doorway and smiles and lingers, and doesn't realize that everything is at a standstill until she is gone; and as likely as not she will warn Sally not to come downstairs in that rig or she will trip, and remind her to be sure and clear up when she is done playing.

Nothing is so sure to break the spell of a good time as the thought that clearing up must follow; but somehow even the most considerate mothers never understand this.

But this summer Sally has had a little bit of a room to herself, entirely to play in. What good times she has had there with her mate in bad weather, and what delightful trophies they have brought back from their out-door rambles.

They call the place their "cubby-hole" when they play in it, but their "museum" when they show it to visitors.

Their collection of curiosities is miscellaneous but undoubtedly extensive. Over the door hangs a stuffed sea-gull, rather the worse for wear and inclined to shed down powders from his interior on the furniture, to the terror of the family, who declare it must be arsenic. There is a hornet's nest as big as Sally's head in one corner. The other children let her down from the barn window with a rope to reach it, and she got stung and was plastered with mud and vinegar for the rest of the day.

The fluffy cotton balls over a picture, and the specimens of lava, and the seed-work from the Sandwich Islands were given her by sympathizing friends, but the collection of birds' eggs, half of them not labelled and a large proportion cracked, are the result of her own searching, scrambling and tumbling.

The horseshoe crab and the seaweed she brought from the beach; but unfortunately she did not understand how to prepare properly the shells which she got at the same time, so after she had had them only a week her mother made her throw them away. She feels badly about it still, for there were as many as eleven kinds, and they did not smell so *very* strong, and she kept the windows open, and she is sure that in another week, if people would only have waited, they would have dried up inside and been all right.

They did let her keep the starfish, though. They made her dry him out of doors, where it is a wonder he was not stolen; but he did dry at last, and he is a big one and a perfect beauty, and looks finely, placed on a square of old black velvet on the top of the bureau.

She is very proud of him—almost as proud as she is of the giant clam-shell in which mamma made a sketch of herself and Susy Jones as they looked in bathing, with their hair all stringy and great sun-hats on. Everybody laughs at that sketch, and she thinks that if mamma had not married she would certainly have been an artist.

Sally used to envy her elder sister her pretty room with lace curtains, and dainty valentines, and German favors, and painted Christmas cards, and little trifles from bazaars and fancy fairs stuck in the looking-glass and pinned up on the walls.

She used to wish she were old enough to have such a room. But that was before she had her cubby-hole, which is a great deal nicer and more interesting; it is even, she tells herself, as she gazes triumphantly upon her curiosities, "more instructive."

She would not change that little seven-by-ten paradise for anything less delightful than a palace in the Arabian Nights.

AN AUTUMN SONG.

Come! For awhile put work away,
The very winds keep holiday.
Come! Let us breathe the eager air,
Above the world of cark and care,
Upon the mountain-top.

The rustling leaves the roadway spread
With puce and russet; gold o'erhead,
Orange and green glow in the sun,
Whose rays through clouds their way have won,
To touch the mountain-top.

The merry rushing stream doth flow,
Across the path as up we go.
In the wood plays at hide and seek,
Laughs to itself at each new freak,
Sings of the mountain-top.

And sudden through the twisted trees,
A blue and purple land one sees,
Misty and faint, as in a dream,
Through which there winds a silver stream,
We near the mountain-top.

And now at last we throw us down
Upon the rocky root-fast crown,
Which towers aloft 'mid shine and shade,
While at our feet the world seems laid,
Far 'neath the mountain-top.

A new world this of calm and peace,
Where hearts grow light and troubles cease,
And larger ways than ours we see:
A little nearer heaven are we,
High on the mountain-top!

W. HENRY WINSLOW.

For the Companion.

GIVE HEED.

A story is told of one of the "fighting Carters" of Virginia, who, in 1771, was a member of the House of Burgesses, when a fearful storm broke over the building.

The sudden darkness and terrible thunder appalled the delegates, who rushed to the door, many crying out that "the day of judgment had come."

"Put the question, Mr. Speaker," shouted the stern voice of John Carter. "Call the ayes and noes. If the last day has come, let the Judge find us attending to our business."

The grim old burgess understood, what so many of us never learn, that our every-day work is a religious duty.

We are apt to think that our church-going, Bible-reading and prayers are our only service to God, and that our daily work—whether it be drawing out briefs, shoeing horses, or washing dishes—necessarily belongs to the world and the world's life.

Some of the old Jews had a clearer idea of the truth. The "artificers in brass" and the "carvers of cedar" felt that they were doing a task set them by God, as truly as were the prophets when they spoke by inspiration.

A young girl who had lately become a member of the church exclaimed: "There is one command in the Bible which I cannot obey. 'Pray without ceasing.' I cannot spend my days idly in prayer; I have my work to do."

Her work was that of a shop-girl in a large establishment. If she had gone to it in the spirit of a child who has a task to do for a loving Father, Whose eye is upon her, she would have known that every word and act of the day, even its weariness and pain, were silent appeals for that Father's help and approval. In the highest sense it is true, *Laborare est orare*.

When the Saviour of mankind was revealed to the world, it is significant that He came not first to kings, or prophets, or even to holy men, praying for his appearing, but to shepherds watching their flocks, doing their work by night as by day.

There is one thing to be remembered, however: The daily work must be good, legitimate work, or it is certainly not that which God has given us to do.

Another truth to remember is that the shepherds, when they heard the story of the angels, left their flocks and "came with haste" to find the Saviour.

There will come times to each of us, in the midst of our daily drudgery, when some messenger sent by God will call us to draw closer to Him. It may be a strain of music, which "leads us to the edge of the Infinite and bids us look down upon that," or some wretched human brother who needs our love and help, or some moment of physical weakness, when life's burdens seem almost too great to bear, and we are tired and lonely and cry for rest that only God can give.

It is a messenger, calling us away from the work of money-getting, or from domestic duties, to our Master's side.

It is as certainly a divine summons as that which came to the shepherds, or to John and James when Jesus spoke to them as they were mending their nets.

"See, then, that ye disobey not the Heavenly call."

BONAPARTE'S PERSONAL ASCENDANCY.

Taine, in his "Modern Regime," ascribes the peculiarities of the French of to-day largely to the First Napoleon. He laughed at and stimulated their passion for equality. He took advantage of their little regard for liberty as understood by English-speaking peoples, and lessened it. He encouraged them in all their natural favor for centralization in government. Their craving for military glory, the theatrical airs of the nation and its public and literary men, the readiness with which the popular imagination responds to fantastic proposals for establishing French power in the Orient, all are Napoleonic.

The personal ascendancy of Bonaparte over the generation with which he came into contact and from which France inherits its present way of thinking, is shown by numerous anecdotes.

When Napoleon, at twenty-six years of age, was appointed as commander-in-chief of the army in Italy, Admiral Decrès, who had known him well in Paris, learned that he was to pass through Toulon. Decrès wrote long afterward:

"I at once proposed to my comrades to introduce them, venturing to do so on the ground of my previous acquaintance with him. Full of eagerness and joy we started off. The door opened and I was about to step forward, when the attitude, the look, and the tone of voice sufficed to arrest me. And yet there was nothing offensive about him. Still this was enough. I never tried after that to overstep the line thus imposed on me."

A few days later, at Albergo, certain Generals of Division, and among them Augereau, a vulgar, heroic old soldier, vain of his tall figure and his courage, arrived at headquarters not well disposed toward the little *parvenu* sent to them from Paris.

Recalling the description which had been given to them, Augereau was abusive and insubordinate beforehand, saying:

"One of Barras's favorites. The Vendémiaire guard! A street general! Never in action! Hasn't a friend! Looks like a bear because he always thinks for himself! He is said to be a mathematician and a dreamer. An insignificant figure!"

They enter, and Napoleon keeps them waiting. At last he appears with his sword and belt on, explains the disposition of the forces, gives them their orders and dismisses them. Augereau is thunderstruck. Only when he gets out of doors does he recover himself and fall back on his accustomed oaths. He agrees with Massena:

"That little fiend of a general frightened him!"

He cannot comprehend the ascendancy which overawes him at the first glance!

The fact that stern and proud men freely confessed that they could not understand the terrible personal magnetism of Bonaparte is not the least remarkable testimony to his force. They seem to have accepted him as so immeasurably superior to other mortals that there could be no shame in their mental prostration before him.

HISTORIC BELL.

One would hardly expect to find anywhere in this country, least of all in a New England mill, and still in daily use, a thing of human manufacture that is older than the oldest title of the English peerage; a thing that was made before the first English parliament was formed. But such a thing actually exists, and is in daily use in a factory in Saylesville, Rhode Island. It is a bell, and has an interesting history. Around the bell, about four inches from the crown, is this superscription: "Peter Secest, Amsterdam, Anno 1263, me fecit."

The date, together with other well-authenticated facts, lead to the belief that the bell was long used in a convent belfry in England, and was taken therefrom for public use during the Reformation. But the connecting link between its life in the Old World and its advent to America is the famous naval battle between the *Guerrière* and the *Constitution*.

The *Guerrière*, a helpless wreck, was rolling in the trough of the sea, while her brave but defeated commander, Captain Dacres of the Royal Navy, on the deck of the American frigate, the *Constitution*, was offering his sword to the gallant Captain Hull.

The two heroes had been friends in time of peace, having often exchanged hospitalities at the Mediterranean ports, and now Hull's magnanimity shone out.

"No, no, Dacres," he said, "I'll not take your sword. Keep it."

In the meanwhile the boats of the *Constitution* were busily engaged in transporting the crew of the defeated ship to the deck of the victor. A midshipman reported to the first lieutenant that the ship's bell had been carried away by a grape-shot from the *Guerrière*, and that there was no way of announcing the time to the ship's company.

At that moment the *Guerrière* gave a succession of heavy plunges, and the clear tones of a fine bell rang out over the water.

"There you have it," Lieutenant Wadsworth said to the midshipman. "Go get the Englishman's bell; there will be no further use for it on board that craft."

The *Guerrière* surrendered at seven o'clock in the evening of the Nineteenth of August, 1812, and at eight o'clock that same evening Peter Secest's bell, in sonorous tones, rang out the hour on board "Old Ironsides."

It was immediately pronounced a success, and a decided improvement over its predecessor, and at once became a great favorite with the ship's company.

With the lapse of time, the bell, amid the confusion and debris common to a great navy-yard, became misplaced, lost its identity, and was thrust carelessly to one side. It found its way to the scrap heap; was afterwards sold by the United States authorities, and finally came to rest in its present quarters.

STEALING LION CUBS.

The lioness does not leave her cubs, even for a moment, until they are three months old and have finished teething. Gérard, the famous French lion-killer, says in his "Adventures," that teething is an important crisis in the life of the lion cubs, and that a large number of the young die during that period.

When the cubs have finished teething, the lioness leaves them a few hours each day, and on her return brings mutton, carefully skinned and torn in small pieces.

The Arabs, on discovering a litter of cubs, watch for the departure of the lioness, and then rob her of the whelps. They post themselves on a high cliff, or in a tree overlooking the lair.

As soon as they see the lioness go down to the plain, and are sure that the lion is not near, they creep to the lair, wrap the cubs in the fold of their burnoose in order to smother their cries, and carry them to the edge of the woods, where men are waiting with horses.

One day sixty Arabs surrounded the woods where there was a lair, and by shouts tried to rouse the lioness. She, however, remained in her hiding-place. Several Arabs then crept into the thicket and brought out the whelps.

The Arabs, pleased at their success, were retiring to their tents, thinking they had nothing more to fear. Suddenly the sheik, who was on horseback, and a little behind his men, saw the lioness rushing out of the woods directly at him.

He called, and his nephew, Mecaoud, and his friend, Ali, ran to his aid. The lioness sprung at the young nephew, who, facing her with his gun at his shoulder, pulled the trigger when she came within six or seven feet. The cap only exploded. The youth threw the gun away, and presented his left arm wrapped in his burnoose.

The lion seized the arm, and began crushing the bones. The young man, without a cry, drew his pistol and fired in her breast. She dropped the arm and bounded on Ali, who fired a ball down her throat as she sprang at him. He was seized by the shoulder and thrown down, but the lioness, before she could injure him greatly, expired on his prostrate body. The nephew died the next day.

For the Companion.

DUTY.

How gladly for a good, great cause
We struggle, shoulder set to shoulder!
How restlessly, when One withdraws
Our weapons, leaves us no beholder,
We bear the inactive pause!

"Lord of the Fight," we cry, "we miss
The cheery comrades, tried and trusted;
We share the coward straggler's hiss;—
We may not, swordless, armor rusted,
Partake the battle's bliss!

"Post us," we pray, "where we may lead,—
Not wait in sullen silence bidden;
Give us to serve some pressing need;
Until, the enemy o'erridden,
Thou shalt be King indeed!"

Yet no man's place is fixed by chance
On open field, in lonely thicket:
The issue of deliverance
May rest with that unnoticed picket
Who sees the foe advance!

WALTER L. SAWYER.

HE WOULD DO.

Merchants, of all men, appreciate qualities which bring success,—tact, energy, courage, industry, quickness, and a readiness in suiting means to ends. An exchange prints a story, which may be new or old, truth or fiction, but which is not incredible in itself, while it illustrates in a striking way the spirit and method of a born man of business. A country boy went to New York, with no friends and little money, determined to make his way in the world. In the course of his looking about he wandered into "lower Wall Street," and walked into the store of W—— & Co. Mr. W—— was busy and the boy waited. At last the frank, bright face of the stranger attracted the merchant's attention.

"Well, my boy," said he. "What can I do for you?"

"I want a place, sir."

"What can you do?"

The boy answered, eagerly:

"'Most anything, sir."

Partly in joke, perhaps, and partly to rid himself of an almost too confident applicant, Mr. W—— said:

"Ah, ah! Well, just go out and borrow me a couple of thousand dollars."

The lad put on his hat, walked out of the store, and passed slowly down Front Street till he came to another large store in the same line of business. This firm was probably well acquainted with W—— & Co., the boy said to himself, and with a bold but honest look he walked in and accosted the man who seemed to be the head of the concern.

"Mr. W——, of W—— & Co., sent me down to borrow two thousand dollars," said he.

"He did, my son? How is business up at your place?"

The boy, who had seen an appearance of large shipments, answered promptly:

"Very good, sir."

"Two thousand, did you say? Will that be enough?"

"Well, two thousand is all he told me, but if you have plenty I think he would like it if you sent him three thousand."

"Give this boy a check for three thousand dollars in favor of W—— & Co.," said the man to his cashier.

A few minutes later the boy walked into Mr. W——'s office and handed him the check.

"Here it is, sir," said he, with an air of having done an errand in the ordinary course of business.

Mr. W—— looked at the check and then at the boy.

"Young man," said he, "come in here; you are just the man I have been looking for;" and he gave him a desk and set him to work.

WARM ENOUGH.

Generally speaking, practical jokes are to be avoided, as they are commonly more productive of harm than of amusement. But occasionally there is one so spontaneous and appropriate as to be quite pardonable. Two young men were roommates at Harvard. They were not only roommates, but fast friends, and shared their joys and sorrows as well as their apartments; but neither was averse to a wholesome laugh, either at his own or at the other's expense. They had two rooms—a commodious study, and a small bedroom, large enough, however, for each to have his own separate bed.

It happened one particularly cold night last winter that both the young men had passed the evening out. About eleven o'clock the first one reached his room; he had ridden out from Boston in a slow car, and was very cold. The fire in the grate was low; and the bedroom, which had been left with door closed and window open, was exceedingly cold; but the student was resolved to make the best of the situation.

First spreading his ulster over his bed, he went to the closet and helped himself to all the coats he found there; and putting these over the ulster, he crawled under the pile, and was soon as snug and comfortable as a cat under a stove.

He had just got well asleep when in came his chum, half-frozen.

"Well," he said, "Jack's got his whole wardrobe over him. It's a good idea; I'll do it myself." But on going to the closet he found that all his clothes had already been appropriated. He stopped a moment to think the situation over, and then exclaimed, "Well, Jack, old man, if you're as cold as that, I'll see what I can do to make the night comfortable for you."

This he proceeded to do. First he spread several newspapers on the pile of clothes that covered the contented sleeper; on these he laid three large rugs that he took from the floor; over these he distributed several cushions taken from different chairs; and over all he placed a pair of portières taken down specially for that purpose. On top of these he folded and spread a heavy tennis net, using the cords to tie the whole huge pile in place. Then tossing his ulster over his own bed, he got in and chuckled himself to sleep.

Jack in the meantime slept on, unconscious of the great burden he bore; but in the morning, when with great effort he got his eyes open and took in the situation, he slowly said:

"Well, I'm glad it's only clothes; I've been trying all night long to burrow out from under the Rocky Mountains."

SWIMMING A HORSE.

Pictures are often seen representing horsemen sitting bolt upright in their saddles while swimming their horses across a stream, the whole line of the horses' backs being visible above the water. The artists who make these pictures can hardly have ridden a horse while the animal was swimming, or seen the thing done. A French cavalry officer, in a military journal of Paris, the *Revue du Cercle Militaire*, gives this account of the way a horse should not be ridden, and of the way he should be ridden, in swimming a stream:

To begin with, it must not be supposed that a horse always swims naturally, and with ease, the moment he is off his feet in the water. The animal under such circumstances has but one notion; to keep his head out of the water, and to lift his shoulders as high as possible.

In doing this, his hind-quarters sink, and he finds himself almost standing upon his tail, or at least in a position three-quarters erect.

In such a position, if the rider draws upon the reins, or throws his body back in the least, the animal's hind quarters will sink more and more, his body will take a vertical position, and beating the water uselessly with his forefeet, he will finally sink.

As soon as the horse gets off his feet in the water, let the rider grasp a handful of the animal's mane, leaning at the same time well forward upon his shoulders, but without touching the horse's head. The rider's knees should be pressed tightly to the horse's sides; otherwise he is likely to be swept off by the water.

This is the only position which will enable a man to remain in the saddle, and the horse to swim at the same time.

The reins must be held loosely, and each well to one side. If the horse is to be guided in the water, give the loose rein a little jerk in the direction desired. But it is in the highest degree important never to pull on the reins.

SOUND ADVICE.

Kate Sanborn has written an entertaining book on the troubles and delights resulting from "Adopting an Abandoned Farm," and therein is described her liking for country auctions, and the chase they often led her. Her neighbors' comments were not always palatable, and yet no doubt proved good for the soul. She says:

One day, I heard some remarks on myself after I had bid on a rag-carpet, and offered more than any other woman knew it was worth.

"She's got a million, I hear," whispered one.

"Wanter know! Merried?"

"No, just an old maid."

"Judas Priest! How'd she git it?"

"Writin', I s'pose. She writes stories and sich for city papers."

But the candid advice of a farm laborer was even more to the point.

"I hear ye patronize auctions pretty reg'lar," said he. "Sometimes there's a good deal to be made that way, and then agin there isn't. Now, I knew a man that bought an old hat and a sight of other stuff; jest threw in the hat, and when he got home, and came to examine it, ef there wasn't three hunderd dollars, in good bills, chucked in under the sweater!

"You ought to git over to Mason's auction to Milldon, sure. It's day after to-morrow, at nine sharp. You see, he'd a fortune left him, but he run straight through it buyin' the awfulest things you ever heerd tell on; calves with six legs; all sorts o' curious fowl, and every outlandish critter he could lay his hands on.

"'T stands to reason he couldn't run that rig many years. Your goin's on here made me think o' Mason. He cut a wide swath for a time. Ef I'se you, I'd go over, just to take warning and hold up in time!"

A BULLET'S FREAK.

A few years ago there was in portions of the new West much lawlessness of one kind and another, checked only by an occasional piece of individual retribution, or by an outburst of vigilance-committee work. A curious shooting affair, which occurred in Medora, North Dakota, is thus described by Mr. Roosevelt:

I did not see the actual occurrence, but I saw both men immediately afterward, and I heard the shooting, which took place in a saloon on the bank, while I was swimming my horse across the river. I will not give the full names of the two contestants, as I am not certain what has become of them; though I was told that they had since been put in jail or hanged, I forget which.

One of them was a saloon-keeper, familiarly called Welshy. The other man, Hay, had been bickering with him for some time. One day Hay entered the saloon, and the quarrel became at once violent. Welshy suddenly whipped out his revolver and blazed away at Hay.

Hay staggered slightly, shook himself, stretched out his hand, and gave back to his would-be slayer the ball, saying, "Here, man, here's the bullet!"

It had glanced along his breast-bone, gone a roundabout course, and come out at the point of the shoulder, when, being spent, it dropped down the sleeve into his hand.

CAREFULLY ADDRESSED.

It is always well to be careful in the matter of addresses, but that there is such a thing as being overparticular is shown by the letter which was sent not long since to the cook of a gentleman living at Newton, Massachusetts.

The cousin of the cook, who had been but a short time in this country, came to visit her, and on going away, promised to write soon. He evidently looked about him carefully in order that he might fix in his mind the location of the house where she was living, for in due time arrived a letter addressed to:

MISS HANNAH REARDON,
At Mr. M——'s,
Private Way,
Dangerous Passing,
NEWTON, MASS.

The letter was duly delivered.

For the Companion.

MRS. CHING-LING'S MAID.

(A Sequel to An Afternoon Call.)

WE had arranged that Mrs. Ching-Ling's maid should bring the children to see me some day.

The maid had hesitated at first, saying as she was the cook it was not her place to take the children out. At last, however, she consented to bring three of them.

The hour for the visit came. I had lemonade and cake on my tea-table and was all ready when the knock sounded at the door.

There stood the maid and the three children—the oldest Miss Ching-Ling, a little boy called Jimmy and the baby.

I was rather sorry the baby had been brought because, being very young and small, it kept getting lost.

However, I welcomed them all heartily and asked them in.

The maid looked very nice in her cap and apron, but the children—well—the less said about the children the better.

I gave Jimmy a little cotton shawl to cover his bare shoulders. I tried not to see Miss Ching-Ling's knees sticking through the holes in her poor old skirt.

"How is your mamma, my dear?" I asked this young lady after she was seated.

"She's no better," answered the maid, in her usual way, laying the baby on the tea-table.

"That is hardly the place for a child," I said, as I took it up and held the poor thing while I passed the cake and lemonade.

Miss Ching-Ling and Jimmy refused to taste anything. I never saw such bashful children. All my urging had no effect.

"They always act like that," said the maid, with her mouth full of cake. She had two large slices in her lap and was drinking her third glass of lemonade.

"Poor little souls," I said. "Perhaps if you would induce their mother to make some clothes for them they would not be so shy and silent. I don't wonder they look ashamed."

"Oh, what's the use?" said the maid, indifferently. Now that the cake was all eaten the maid seemed rather restless and tired, I thought.

Just then I lost the baby. I was much alarmed because I was afraid I should tread on it, so I began to hunt anxiously under the tables and chairs, calling on the children to help; but they never stirred from their seats, and the maid was looking at something she had taken from her pocket and did not seem to hear.

I found the baby at last (it was under the sofa), and had turned back to my guests when I saw a strange sight. *The maid was spinning a top.*

So delighted was she with this toy she did not appear to care for anything else, and was dancing up and down, her cap awry and her apron flying in the air.

"Don't stop it; don't stop it!" she cried out, wildly, as I approached. "It's going to hum!"

"It seems to me," I said, as soon as I had caught my breath, "that this is very strange conduct for a nursemaid."

The maid really did blush a little.

"I only bought it this morning, mamma," she explained. "I couldn't help spinning it. Oh, it's humming! Do hear it!"

I drew myself up stiffly. "I think you had better go now," I said.

The maid looked very confused.

"Perhaps I had," she said, meekly, picking up the top and putting it in her pocket.

"And the children? Do you mean to leave them behind?" I asked, as she went slowly out of the room.

"Oh, I forgot," faltered she, coming back.

"Yes," I said, looking down into that maid's blue eyes and quoting his own words. "'I did my part all right, but you forgot, you know you —'"

But the maid was holding me tight round the neck and kissing all my words away.

GRANDMA'S ADVICE.

Is there a cross word that tries to be said?
Don't let it, my dear, don't let it!
Just speak two pleasant ones, quick, instead,
And that will make you forget it.

For the Companion.

RUSSELL'S GRAMMAR.

Russell is three years old, and his elder sister, Bessie, is trying to teach him grammar. Bessie herself speaks correctly, and she does not like to have Russell make so many mistakes. But she does not think her little brother is a very apt scholar.

"I singed my song to Mrs. Hooker, last night," said Russell. "and —"

"You should say 'I sung,' not 'I singed,'" interrupted Bessie.

"Yes," said Russell, hurriedly, "I sung it, and she thinked it was nice."

"O Russell!" cried his sister, with a little frown, "you must not say 'thinked'—there is no such word! You should have said, 'She thought it was nice.'"

"She did not say so, anyway," said Russell, stoutly. "She said, 'I think that's very nice,'—'cause I 'member, now!"

"Oh, dear," laughed Bessie, "can't I ever teach you the difference between the present and past tenses?"

"No, I don't guess you can," said Russell, wearily.

The next Sunday, Russell went to Sunday school.

"Did your teacher give you any candy to-day?" asked Bessie on his return home, for the little boy was often the recipient of such sweets.

"Oh, yes," said Russell, brightly, "and I'd have brunged you one if I'd have thunked of it!"

"I DO love to see children," said a sweet little woman, five years old. "They look so tind o' fresh and new!"

"You forgot —"

TO THE CHILDREN.

If it drizzles and pours
Is that any reason
The weather indoors
Should be dull, like the season?
There's something makes bright
The cloudiest places.
Can you guess? 'Tis the light
Of the smiles on your faces.

A. M. P.

For the Companion.

COWS.

Good-evening, Mr. Smith. Here's the milk-pail. It's very good of you to come over and milk while papa's away.

Do you mind if I go with you? I generally go with papa when he milks, and so does Angelina.

This is Angelina, Mr. Smith. She was a lovely dolly last Christmas. But she's very careless, and so she gets a great many bumps, and I do think she's nearly ruined her nose. And I wish I knew what she's done with her other hand.

Well, here's the bossy-cow. Isn't she a nice old bossy, Mr. Smith?

Brother said the other day that she "had an intelleck far above other cattle."

I asked him what was an intelleck, and he said he meant she was long-headed.

But I told mamma I didn't think her head was very long for a cow. And mamma said brother meant she had very good thinkers.

Now I never s'posed a cow had any thinkers, did you? For if she did she'd talk, wouldn't she?

Oh, there comes the puss-cat, wanting a drink, I s'pose. Go 'way, you little black thing. Don't trouble me when I am telling Mr. Smith all about the cows. What do you know about a cow?

Have you got a cow, Mr. Smith? Oh, haven't you? Well, cows are a good deal of bother, anyway.

Sometimes they'll shake their heads at you, and they'll chew up a dolly in no time if they get a chance.

I just barely saved Angelina the other day. But new milk is nice to drink, you know, and I do love cream. And mamma makes lots and lots of butter.

I tell you, Mr. Smith, if you had a cow just like our cow, those two cows couldn't be beat for making butter!

Enigmas, Charades, Puzzles, etc.

1.

PUZZLE.

Woods are glowing with the hints
Of my presence in their tints.
In each gorgeous *scarlet* splash,
In the *purple* of the ash,
In *bittersweet* a sign behold,
In the *chestnuts* crowned with gold,
In *maples* dressed in gay disguise,
In *woodbines* red as sunset skies.

2.

PECULIAR DIAGONALS.

* * * * 9 * * * *

Cross-Words.

1. In *architecture*, a structure in the form of a canopy, supported by columns and often used as a covering for insulated altars.
2. Those who play on certain musical instruments, used chiefly in Scotland and Ireland.
3. In *botany*, turbinate, *i. e.*, inversely conical, with a contraction towards the point.
4. A defamer.
5. Building.
6. The state of a superior or governor of a monastery.
7. One who foretells.
8. Veneration.
9. Determinations.

1, 2, 3, 4, 5, 6, 7, 8, 9. A name given to certain parties in the country, which take place in autumn.

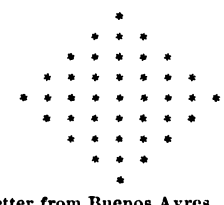
1, 10, 11, 12, 13, 14, 15, 16, 9. Something which usually accompanies the same kind of parties.

FRANK SNELLING.

3.

DOUBLE CENTRAL ACROSTIC.

1. Lamented.
2. Pushed down with force.
3. To imbue the mind.
4. To expel from a church.
5. That branch of mechanical philosophy which treats of bodies in motion.
6. Rejecting with contempt.
7. Those who convert cast iron into wrought iron by a certain process.
8. Guards.
9. Deeply impressed.
10. Declares solemnly.
11. Concurring.
12. Tables, or benches, on which meat and other things are prepared for use.



The fourth row of letters will spell the name of some places, most beautiful in the month of October.

The fifth row of letters will spell the name of some articles found in abundance in October.

C. D.

4.

A DIAMOND.

1. A letter from Buenos Ayres.
2. A certain point in the world's history.
3. Passionate.
4. Something all like to receive.
5. The name of a distinguished living American poet, born 1837.
6. Very lean.
7. In order of battle.
8. To have made way with.
9. A vowel.

5.

CHARADE.

My *first* is one of the human race;
Grain for the farmer my *second* sows;
My *whole's* a baboon with curious face,—
Red and blue cheeks, and a bright red nose.

Conundrums.

Which is the lightest city in the world? Cork.

Which is the most peaceful city in America? Concord.

When should a lady be apt to find an article of wearing apparel at her door? When there is a rap (wrap) there.

Which is the most famous march ever made? Middlemarch.

What dance is enjoyed by everybody who is able to indulge in it? Abundance.

What is the largest horn in the world? Cape Horn.

When are ball-players like water-jugs? When they are pitchers.

Answers to Puzzles in Last Number.

1. 1st line, but's; 2d line, nuts; 3d line, learn; 4th line, turn; 5th line, yore; 6th line, more; 7th line, old; 8th line, told; 9th line, September fourteen; 10th line, mean; 11th line, nuts; 12th line, abuts; 13th line, part; 14th line, apart; 15th line, them; 18th line, old; 20th line, bless; 21st line, say; 22d line, Holyrood day.

2. 1. Mass, age—massage. 2. Graves, end—gravesend. 3. Whist, ling—whistling. 4. Man, goose—mangoose. 5. Flap, jack—flapjack. 6. Poles, tar—pole-star.

3. Chicamagua—Michaelmas.

4. Phil, Adelphi, Al, Philadelphia.

5. A scent. A cent. Cents (sense). Ascent.

THE ANCIENT RHINOCEROS.

It is very interesting to look at the pictures of the world in the long past ages that geology presents to our imagination. We see that there was a time when even the polar regions must have bloomed with many of the splendid and varied forms of life that now adorn the tropics.

The fossil remains of these ancient forms preserved in the bosom of the rocks carry us back perhaps millions of years in the earth's history, and show clearly what wonderful revolutions the surface of the globe has undergone since the first plants and the first animals appeared upon it.

Who would think of meeting a rhinoceros nowadays on the prairies of northwestern Canada, unless, perchance, a travelling menagerie should pass that way?

Yet at one time, as recent discoveries prove, a creature closely resembling the rhinoceros of India and Africa dwelt in that now comparatively cold, snowy and barren region.

Remains of these extinct ancestors of an animal that in our day thrives only in the tangled tropical forests and under the hot equatorial sun have been found buried in the Canadian rocks, where now the cold blasts of winter blow over treeless plains and sweep the flanks of ice-encrusted mountains.

The rhinoceros of that remote age was no less formidable a beast than its descendants, for the skull of one of the skeletons discovered is three feet long, while some of its teeth are four inches across.

The fossil remains of many other forms of animals have lately been found there, including extinct species of the horse, the deer and the turtle.

In some far-away time perpetual summer must have reigned in regions where ice and snow now prevail for a large part of the year, or else animals that to-day love only the sun must have been inured to a more rigorous climate.

Geology has evidently only just begun to unfold the wondrous story of the world's history.

VALUABLE VOICE.

There are heights to be reached in every profession, and it is not to be wondered at if those of his own profession are considered superior to those of any other by the enthusiastic artist. Martin, the popular French singer, found food for reflection in an experience which he had with a cab-driver. The incident is related by the author of "Souvenirs d'un Chanteur."

Martin had a voice of great compass and most agreeable sound, of which he was decidedly proud. He had a weakness for drawing out compliments upon it.

One day, as he was being driven through the streets of Paris in a cab, he saw some one passing carelessly in front of the cab, and in danger of being run over.

"Whoa!" he cried, in his most sonorous tones. The coachman turned around excitedly.

"O Monsieur!" he cried, "what a beautiful 'whoa!' Ah, if I only had a voice like that!"

"Well, what would you do if you had?" asked Martin, with a smile, believing that he had been recognized, and pleased at the idea that his reputation extended even to the drivers in the streets.

"What would I do, Monsieur? Faith, I should become the first coachman in Paris!"

SUPERSENSITIVENESS.

A person who has not done anything to distinguish himself is generally not allowed queer habits. Eccentricity is not for common people. But for Washington Allston, one of America's most noted painters, all things were right. His excessive sensitiveness was shown in many ways.

When India-rubber overshoes began to be worn, he was induced to purchase a pair for his health's sake, but he could never put them on or remove them except with a pair of tongs.

But that same delicate sensitiveness showed itself in another way. His scrupulous conscience was illustrated by an incident occurring in 1816, when he was in urgent need of money.

He had just found a purchaser for one of his pictures, but thinking the matter over alone in the evening, he concluded that the subject of the painting was such that at some time it might have an immoral effect on some perverted imagination.

He immediately went to his patron's house, paid back the money, took the picture home and burnt it.

This was sensitiveness worth having.

THAT FLOWERY THEOLOGUE.

One must resort to description when a name is to be spoken that has slipped entirely out of mind. The *Northern Christian Advocate* says:

A certain young theologue went down from Princeton to Philadelphia to preach. He was one of those extremely flowery writers who dazzle rhetorically the tender souls of the younger members of the congregation, and the elders of the church were besieged to have him down again. They at length consented, but alas! they had forgotten his name. So they wrote to one of the seminary professors, saying: "Please send us that floweret, streamlet, rivulet, starlight man to preach for us next Sabbath. We have forgotten his name, but we have no doubt you will be able to recognize him."

He was recognized. He was sent. He became pastor of the church.

DOUBTFUL MERCIES.

The editor of a college paper says that a famous college president, a clergyman, was addressing the students in the chapel at the beginning of the college year.

"It is," he said in conclusion, "a matter of congratulation to all the friends of the college that this year opens with the largest freshman class in its history."

And then, without any pause, he turned to the lesson for the day, the third Psalm, and began to read in a voice of thunder:

"Lord, how are they increased that trouble me!"

It is easy to tell when a man is flattering your neighbor, but it isn't so easy to decide when he is flattering you.—*Somerville Journal.*

CHRISTIAN AND JEW.

Good men, honest in their own belief and tolerant of those of others, can usually find some ground of sympathy. Alexander Somerville, a missionary in the East, one day at Gibraltar had a long conversation with a Jew on the subject of Scriptural traditions. Of course, neither could comprehend the other's point of view, but that this was no bar to mutual respect, was proved by their manner of parting. Says the missionary:

We were standing in the open street. My friend was a firmly built man, with broad shoulders, and had bushy brown whiskers encircling his honest face. He was possessed of very long and strong arms; raising them so that they almost assumed a threatening aspect, he all at once threw them round my neck, drew me towards him, pressed me to his breast, and kissed me on both cheeks.

Certainly this appeared to me, a Scotsman, and quite unaccustomed to such demonstrations, the most extraordinary termination to an argument.

A week elapsed, and the day arrived for sailing to Malaga. I was at an early hour on my way to the harbor, and just at the spot where I had previously met him, I came upon my Jewish friend. We exchanged a friendly greeting.

"Good-by," said I. "I'm bound for Malaga."

I was not going to allow a Christian to be outdone by a Jew, so, grasping him firmly by the hand, I drew him toward me, and throwing my arms round his neck, pressed him to my heart, and kissed him on both cheeks, just as he had done to me.

I have often thought since, that if we, Christians and Jews, could in our intercourse with each other proceed a little more on this system, we should probably be able to understand one another better, and more readily find our way to one another's hearts than is often the case.

MUST BE TRUE.

One of the superstitions of uneducated people is that whatever is printed in a newspaper must be received as true. The superstition begets both humorous and serious thoughts when one reflects that thousands learn only from the public press, and trust it as the savage trusts the medicine-man. An English book, "Wild Life on a Tidal Wave," describes a conversation in a Yarmouth bar-room which amusingly illustrates this superstition.

The amphibious water-side population were exchanging ideas and drinks, and among them a plethoric boatwright and a stout sailor.

"I tell you thet it's no use thet one man one wote business," said the boatwright, emphatically.

"No use, matey? Why not? Fares to me every man has a right to have a woice in the fittin' of the wessel; it's just like a wessel arter all, for none need to go to sea in a wessel if she fare badly found. But 'taint so with this here wotin'; one's got to sign the articles no matter what skipper sails her," retorted the sailor, decisively.

"I tell you it's all nonsense," said the boatwright. "Brains is the thing."

"Ay, to run the wessel, yes, I believe in thet er. Some one must be master," answered the mariner; "but what I say is —"

"Didn't I tell you it was in the peaper, thet it's no good this uniwersal sufferage?"

That floored the sailor, and he answered, humbly: "Well, we all know ef thet's printed in the peaper thet's sure tew be right."

"Then shut up!" said the boatwright, fearing that a third person might appear on the scene and weaken his argument.

MR. GIGADAB.

"Fate tried to conceal him by naming him Smith," said Doctor Holmes of one of his well-known classmates. Fate made one man too conspicuous, it seems, by such a name—and the owner had to invent a worse one to protect himself.

There is a quaint old man in Manchester, England, who goes by the unique name of Gagadig Gigadab. His original name, so the story goes, was John Smith, but many years ago he began to brood over the possibilities of mistaken identity involved in such a common name.

The name figured frequently in the criminal records, and he became abnormally apprehensive lest he might be confused with some of these bad John Smiths.

At last what he feared so much actually happened. One morning the papers recorded the capture of an accountant in a bank for embezzlement, and through some blunder of the reporter the identity of the embezzler was confused with the subject of this paragraph, who was also a bank accountant.

Then and there he determined to assume a name like unto no other ever borne by mortal man. And in Gagadig Gigadab most people will agree that he has done so.

WHOLESALE PUNISHMENT.

It is doubtful if the most strenuous opponent of corporal punishment would feel that the chastisement meditated by Brer Tompkins, the father of thirteen children, was severe enough to do any harm.

He was seen one afternoon by his pastor, with a long fishing-rod in his hand, wending his way homeward from a neighbor's.

"What!" ejaculated the minister, in great surprise. "Is you go'n' fishin' at yo' age, Mr. Tompkins? I'm really s'prised!"

"No, I yaint gwine fishin', sah," protested Mr. Tompkins. "I know 'twouldn't be seemly, sah; but yo' sarmon las' Sunday mawnin' on sparin' de rod med sech a 'pression on me, sah, dat I done borrer dis rod ob Mr. Willis, an' I'se gwine t' stan' mah whole thuteen chillen in a row, sah, and jes' mek one good job ob hit, so's dey won't spile; an' I ken return de rod wid a clar conscience, sah!"

PERCHANCE.

A would-be literary woman, whose enthusiasm for Lord Byron's poetical works has led her to name her two boys Harold and Manfred, recently bought a little dog to which she gave the name "Perchance."

Replying to a visitor's comment upon the singular name of the animal she said, knowingly.

"I named him for Byron's dog. Don't you remember the line where the poet says, 'Perchance my dog will howl?'"

"Brown's Vermifuge Comfits," or worm lozenges, will be found a very beneficial medicine. They are pleasant to the taste, free from coloring matter, and no child will refuse to take them. 25 cents a box. [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

PINK-EYE.

Pink-eye in human beings has no connection with pink-eye in horses. Pink-eye in horses is a grave and contagious disease of the lungs and air-passages. The congestion of the eyes is but one of the symptoms.

In the case of human beings the eye presents essentially the same appearance, but is the sole seat of the disease. As it is the conjunctiva—the mucous membrane that covers the ball and lines the lids—which is inflamed, the disease is a form of conjunctivitis.

There are three forms of conjunctivitis, not counting one which is confined to infants. One of these forms is exceedingly contagious and very dangerous to vision. Another may result from a simple cold, or a foreign particle beneath the lid.

Pink-eye, the third form, comes between the other two. It may be due to a neglect of the simple form, or to contagion from a similar case, for the disease, if neglected, soon becomes contagious.

The color of the eye-ball may be either pink or red. The inflammation rarely extends to the cornea—the transparent covering over the pupil and iris—though minute blisters may form around it. But it may extend to the mucous membrane of the lids, which is but an extension of that which covers the ball.

The edges of the lids also become covered with a yellowish secretion that sticks the lashes together, while the lids often require in the morning a long soaking before the eye can be opened. The affection, however, does not extend to the inner portion of the globe. If vision is interfered with, it is mainly from a film of dried mucus, which gathers on the cornea. The ailment, beginning in one eye, is apt to be carried to the other by infection.

The disease begins with watering of the eyes and a burning sensation. In severe cases there is a copious running of the nose and often intense pain in the brow and around the eye. There may be also some fever and sleeplessness. In most cases the patient recovers in five or six weeks, though the effects may last two or three months. Even when blisters form around the cornea, they disappear of themselves.

The patient will get well without treatment if he has good hygienic surroundings and is careful as to personal cleanliness. Still, a rational and mild treatment will greatly facilitate recovery.

Infected children should sleep apart from others, and use different towels, bowls and baths. Nor should they attend school until all severe catarrhal symptoms have passed away.

For the Companion.

DUST IN SPACE.

Some of the oldest records of human history contain accounts of the fall of great stones from the sky. Until the opening of the present century it was generally believed by men of science that the ancients only imagined that they had seen rocks fall out of the heavens.

Modern science, however, has verified the truth of the ancient records, and we now know not only that stones and metallic masses, called aërolites or meteorites, do come tumbling down out of space, but that a fine dust, called cosmic dust, is continually sifting down through the atmosphere.

It is like the smoke and dust of a journey, for the earth is really journeying, along with the sun, toward the northern part of the universe, and as it goes it draws in with its attraction the refuse particles that apparently exist throughout space.

But while there can be no doubt of the existence of this silent rain of minute matter upon the earth, the difficulty has been to recognize it after it reaches the ground. Of late years, however, it has been found mingled in the ooze dredged up from the sea-bottom, and a few years ago when Baron Nordenskjöld visited Greenland he gathered a quantity of dust particles from the great snow-fields there, which were believed to have come from the sky.

This conclusion was afterwards disputed, but lately a new analysis has been made, which seems to show decisively that a large part of the material really is cosmic dust. A computation based upon the amount found on the Greenland moors indicates that the earth must gather in, over the whole of its surface, at least one hundred and thirty-two thousand tons of the dust of space every year!

TIMELY INVOCATION.

A maiden lady, who lives alone except for her servants, owns a fine parrot which her nephew brought back from a visit to South America. The bird was sent to a professional trainer to be taught to speak, but when it was returned it obstinately refused to utter a word, and its mistress decided that the teaching had been a failure. Polly's cage hung in a dressing-room which adjoined its mistress's chamber, and at night the door between the two rooms was left open.

One night a burglar got into the house, and after packing up the silver below stairs, crept stealthily up to the chamber of the lady, where he proceeded to gather together her jewelry. He had got most of her valuables into a hand-bag without awakening her, when suddenly an unearthly voice from the next room called out loud enough to arouse the seven sleepers:

"God bless our home! God bless our home!"

The burglar was so startled that he dropped his dark lantern, and then, in trying to recover it, stumbled over a chair and pitched headlong to the floor. The lady, suddenly awakened, screamed at the top of her voice, and the thief, now thoroughly demoralized, took a flying leap for the stairway outside the door of the chamber. He slipped, fell, and broke his leg, so that he was easily captured by the butler and coachman, who had come to the rescue of their mistress.

All this time the parrot had continued to cry at the top of its lungs:

"God bless our home! God bless our home!"

Polly evidently felt that the time for talking had come, and under the circumstances her mistress could not well get out of patience with her, although she screamed this one sentence for the rest of the night. Having begun to talk, indeed, she continued to chatter for the rest of her life, and was looked upon as a remarkably accomplished parrot.

WHAT THEY PLAYED.

There lives in Boston a lady whose faith is firmly placed in the mind-cure, and who is endeavoring to get her children safely through the illnesses and aches of childhood by its means. If little Margaret tumbles on her face, or if she has the stomach-ache, she is told that there is nothing the matter with her, and that the pain is imaginary.

She is flatly disputed whenever she says that she is ill, and assured that there is no such thing as illness save in the fancy, and it is not to be wondered at that the child finds this rather cold comfort when she is not feeling well.

Margaret's favorite playmate is little Elsie, but one day Elsie remarked to her mother with a sigh:

"I don't have much fun playing with Margaret, mamma."

"Indeed, Elsie," her mother responded. "Why not?"

"Because, mamma, she never wants to play at anything but being sick. She says her mother will never let her be sick at home, and so she wants to play it all the time when she is here."

ADVENTURE WITH A FISH.

A correspondent of the Ballymena *Advertiser*, writing from Sierra Leone, West Africa, reports a singular incident which occurred in that harbor. One of the boats moored off the public wharf was seen suddenly to start off up the river as if it were carried by the tide.

Some persons who witnessed the affair pursued the runaway, and on getting up to it found that it was being drawn along by a monster fish, known locally as a "sea-grapple." This is really a huge octopus, and for some time the occupants of the pursuing boat were afraid to board the other craft; but finally it was captured and towed back.

It is nothing unusual for such fish to visit the Sierra Leone harbor, it appears, and this is not the first time that they have made off with one of the boats moored there. Some of the fish are said to be of great size, the body alone measuring from eight to twelve feet in diameter, and the legs being proportionately long.

AFTER THE BATTLE.

Every schoolboy who studies Latin learns the old motto, "*Dulce et decorum est pro patria mori*" (Sweet and honorable it is to die for one's country). The Prussian cavalry officer of whom the following story is told, did not intend to be cheated out of a share of the glory of such a death.

It was after the battle of Gravelotte, the bloodiest fight of the Franco-German War of 1870. The cavalry officer, badly wounded himself, was greatly annoyed by the cries of some wounded soldiers lying near him.

At last, being unable longer to control himself, he testily called out:

"Stop your howling over there! Do you think you're the only ones killed in this fight?"

ILL-TIMED MIRTH.

There are times when persons with less than half of Doctor Holmes's brightness would do well to imitate his cautious resolve against ever being too funny.

A gentleman who had come home to his supper in a badly overheated condition swallowed a spoonful of red-hot tea, according to the Rochester *Talisman*. As men will, under such circumstances, he cast the blame upon his wife.

"My dear," he said, "this tea is so hot it has taken the coat off my stomach!"

"Oh, well," said she, with cruel wit, "what do you want of a coat on your stomach this hot weather?"

HOW IT HAPPENED.

Children's ignorance is sometimes more interesting than grown people's knowledge.

It was after a reading lesson, says an exchange, and the teacher asked:

"Now, Harry, can you tell me why it was that Ben Adhem's name led all the rest?"

"I don't know, ma'am," answered Harry, "but I suppose the names were arranged alphabetically."

Burnett's Cocoaine allays irritation, removes all tendency to dandruff, and invigorates the action of the capillaries in the highest degree, thus promoting a vigorous and healthy growth of hair. [*Adv.*

LEFT ON THE ISLE OF SANDS.

(A STORY OF ACADIA.)

In Two Chapters.—Chapter I.

A Strange Expedition.

One morning, in the spring of 1598, there was strange excitement in a certain poor turf cottage on the outskirts of St. Malo, in France. In this cottage dwelt the goodwife Saintine, with her two sons, Jules and Ba'tiste. With tireless labor she and her boys made a living, in some sort, by selling in the markets of St. Malo the products of her scanty garden-plot. Her husband, Christophe Saintine, was a convict, shut up for life in the St. Malo prison. He was a powerful man, a blacksmith, and had been a good citizen until, in an evil day, his violent temper had led him to strike down a man in a street brawl.

The Marquis de la Roche, a great nobleman, was about to set forth for the wilds of New France, there to found a colony; and he had authority to select, in the French prisons, such convicts as he might deem suitable for colonists.

In those days it was thought that convicts would do as well as any one for the peopling of a new land; and on the same principle, the latest and poorest grain, as a rule, was that which men saved for the next year's seeding.

On the morning on which my story opens, Jules had run home to his mother with the news that she was summoned, with her boys, to the St. Malo prison, there to bid farewell to her husband, who had been drafted by La Roche as one of the St. Malo contingent.

This little Breton city, with its vigorous and daring stock, had supplied the Marquis with nearly a third of his party; and this one morning was allowed the colonists for their leave-takings.

There were sorrowful scenes at the prison, in the glaring, gray-walled, sandy yard; but in some cases the sorrow was not without consolation. Christophe Saintine had been, for all his roughness, a good husband and father, and to his family, who, as long as he was in St. Malo, could visit him from time to time, his exile to the unknown wilderness was like a sentence of death.

But to himself it was far otherwise. In the New World there was hope for him. After a period of labor for the settlement, each convict whose behavior had been good would be given lands of his own, whereon to make a home for himself and for his family left beyond the sea.

The old look of hopeless dejection vanished from the blacksmith's face as he told the stories he had heard of the fertility and beauty of that New World, where gold and silver, as they assured him, might be picked up among the pebbles of the brooks.

As the goodwife Saintine and her boys, their farewells said, took their reluctant way homeward to the little turf cottage in the outskirts, they were weeping heavily, but a ray of hope had crept back into their hearts; and in the heart of Jules something else gleamed besides that ray of hope.

Jules Saintine was an active lad of fifteen. Ba'tiste was two years younger. Jules was a St. Malo boy, filled with the restless spirit of his race, and with stories of New World wonders heard from the lips of the sailors who frequented the city quays. The ship of La Roche was to sail in two days, and Jules, whose father was his hero, resolved that he would set sail with her.

He had many misgivings at the thought of leaving his mother and Ba'tiste; but his heart being set for New France, he easily deluded himself into a belief that it was a right thing to do. Ba'tiste, he argued, would be company for his mother, who would be able to get along well enough; while he would be a comfort to his father in that far world of wonders.

Under the circumstances, and impelled by his restless spirit, it was not hard to persuade himself that the course on which he was bent was just the one he ought to pursue.

The night before the ship was to sail he kissed his mother and brother in their sleep, and stole away. There was a great lump in his throat, and he dashed angrily from his eyes the tears that would gather and overflow. In the confusion on the quay and on shipboard he went upon the ship without being observed, and succeeded in stowing himself away below.

At dawn the vessel was under way.

Jules and the Viceroy.

The ship was under the guidance of one Chetodel, a noted Norman pilot. Besides her crew of hardy Norman and Breton marines, she carried La Roche, a band of paid soldiers, a few voluntary colonists of broken fortune, fifty turbulent convicts, a great store of provision against famine and of baubles for trading with the savages, and hopes, fears and sorrows innumerable.

Not till the ship's wide sails had carried her beyond the last glimpse of the shores of France did the Marquis take his convicts out of irons. Even then their freedom was rigidly limited.

Then it was that Jules crept out of hiding, and trembled in uncertainty as to how he would be received.

Jules was a courageous boy, but he had little bravado, or that audacity which so nearly borders on insolence. He stole shyly up to the side of a sailor whom he knew, and stood gazing in painful suspense at his own wooden shoes.

The sailor stared at him in astonishment, and gave a low whistle, as the readiest expression of his surprise.

"What in the world brings you here, chicken?" he exclaimed, in a moment.

"I wanted to come with my father!" murmured the culprit, for the first time realizing his guilt.

"Your father's pretty well taken care of, I fancy," answered the sailor with a harsh laugh. Then, after a pause, he continued, "Well, to His Excellency you must go! If *he* says you shall be whipped, or dropped over the rail to swim ashore, that's your own lookout. I think he will have no place for boys on a venture like this!"

The feelings of Jules, on hearing this speech from the sailor, are hardly to be described. Shuffling nervously, and trying to keep his feet on the reeling deck, he started to follow the sailor into the presence of the Marquis. His Excellency, in the full splendor of his uniform, which he made a point of wearing officially at certain hours every day, was standing on the quarter-deck, and looking backward somewhat wistfully toward the sweet shores of France.

With fright, and the first qualms of approaching seasickness, Jules was now a pitiable-looking object as the eyes of the Marquis fell upon him.

A few profoundly deferential words from the sailor, who, being boatswain, approached the commander directly, made clear the situation. It was evident that the Marquis de la Roche, now Viceroy of New France, did not want boys in his viceroyalty at this early stage in its development. At first his face was harsh, his voice like steel, as he began to rebuke the quaking boy; and Jules felt that if he got off with a terrible thrashing from the cat-o'-nine-tails he would be marvellously fortunate.

Then something in the boy's face or some home thought seemed to touch the haughty nobleman.

"See to it that you are obedient and diligent, child, as all must be whose fortunes are cast upon this venture!"

With these words, which rolled a mountain off the heart of Jules, the tall Marquis made a gesture of dismissal; and the boatswain led the boy away.

After the strain was over, however, the young landsman found himself possessed by all the nameless torments of seasickness; and for a day or two, as he lay in a heap in whatever corner seemed most out of the way of the sailors' feet, he repented with all the fervor of his soul.

As he began to recover, he saw his father for the first time since the day of the farewells in the prison yard.

If Jules wanted the satisfaction of giving his father a surprise, he had every reason to be content. Christophe Saintine's first thought was that he was looking upon an apparition, sent to tell him that his son had just died in the far-off St. Malo cottage. The superstitious Breton turned ghastly pale with awe and grief. But when he realized that it was his very son, in the flesh, who clung passionately to his hands, his delight was fervid and unrestrained.

Jules was perfectly and boyishly happy for the rest of the voyage. The boatswain impressed him into his service, and kept him reasonably busy. The boy did not object to this. It gave him a sense of importance, and made him feel like a real sailor.

Jules loved the sea instinctively. The ship was his delight; and every day he could see and talk to his father.

The wind kept fair many days in succession; and at last a low, long line of sandy shore, half veiled in surf, was sighted.

Instantly the whole ship went wild with excitement, which subsided somewhat as the wary pilot announced that the pale coast was that of the dreaded Isle of Sands.

This island, which is still called Sable Island, from the French Isle aux Sables, is the most perilous spot in the Atlantic. Even as long ago as 1598, vessels had been wrecked upon it. It has been called "the Charnel-House of North America." Its hungry sands are gorged with wrecks.

Formed by the deposits of two meeting ocean-currents, it is continually shifting, even like the eddies of the tide.

On the day when Jules espied it from the deck of the Breton ship, it was nearly forty miles in length, and was a slim crescent of pale yellow set in the gray-green seas. Now it is little more than half as long. Then, as now, it was divided almost from end to end by a shallow fresh-water lake, the windy resort of innumerable water-fowl.

As the wind was light, and blowing off the island, the pilot said that a landing might be effected without risk, and the ship cast anchor about three miles from shore. It was dangerous to go nearer on account of the intricate shoals.

The Marquis was rowed ashore, and so struck was he with the inaccessibility of the island that he resolved to make use of it as a temporary prison for his forced colonists.

His design was to leave the convicts on the island while he should explore the coasts of Acadia for a fitting place to plant his settlement. As soon as the site had been chosen, and some buildings erected there which might prevent his sorry charges from betaking themselves to the woods, he would return to the island and get them. Meanwhile, in the fair June weather, and with the provisions he would leave them, he thought they would be comfortable, and he knew they would be safe.

The convicts themselves were by no means ill-pleased with this scheme, which was carried into effect without delay; and as for Jules, he had no difficulty in gaining permission from the kindly viceroy to stay upon the island with his father.

When the last boat-load had been landed through the surf and the boat had returned to the ship, and the ship had moved away with swelling sails, the hearts of those left behind sank low for a little while, as the unspeakable loneliness of their situation dawned upon them.

Rising only a few feet above the level of the ocean, their island could boast not a tree from end to end. Hummocks of sand, piled up here and there by the winds, were all that broke the monotony of the sky-line.

The first night or two, the weather being fine, they took no thought of shelter, and Jules slept, half-rolled in his father's coat, on a soft, sweet-smelling patch of wild peas, in a sheltered hollow. Their wakings in the cool, dewy mornings, with the clear blue above them and a light wind waving the grass-tops and wild-rose thickets, seemed to them like passing from one delicious dream into another.

In wandering over the island they found acres upon acres of blueberry shrub in full bloom, so like the *airelles* or bilberries of their native land, and thought of the fruit that would soon be ready for their lips. In the inner meadows, and about the shores of the sweet-water lake, they came

Digitized by Google

Edward D Duffield Jan92

upon small herds of wild cattle, already established there from vessels wrecked upon the island, and several troops of shaggy ponies; while on the coast they saw wild hogs busy rooting in the sands, fattening on clams and other shell-fish.

With the sight of such abundance before their eyes they forgot to husband the provisions that had been left them by the Viceroy; and Christophe Saintine, more prudent by nature than his fellows, and made thoughtful by the presence of his boy, strove vainly to check the perpetual waste. He was, with but one rival, the most influential among the convicts; but on the question of economy his voice was little heeded.

It was not long ere cold east winds, and fogs that overhung the island like a pall for days together, drove the convicts to build themselves rude shelters out of some wreckage found along shore. The first gale, a very moderate one, visiting the island when they had been a fortnight upon it, blew down these flimsy shelters, and badly bruised some of the occupants. One man had his neck broken by a heavy timber falling upon it, and they buried him on the sandy shore.

CHARLES G. D. ROBERTS.

(To be continued.)

YOUTH'S PLEA.

Attend me, Virtue, through my youthful years;
Oh, leave me not to the false joys of time,
But guide my steps to endless life and bliss.
Greatness, or Goodness, say what shall I call thee
To give an higher appellation still.
Teach me a better strain, a nobler lay,
O thou, enthroned with cherubs in the realms of day.

Selected. —*Phillis Wheatley.*

For the Companion.

GRANDFATHER'S LAST VISIT.

"It's a letter from grandfather, isn't it?" said little Bess, as she laid the letter in her mother's lap.

"Oh dear!" sighed Alice, "grandfather never writes except to say that he is coming to make us a visit!"

"I don't know that I would mind grandfather's visits if he weren't so deaf," said Rodney. "I'd rather walk all the way from here to Brompton, than try to tell him the time of day!"

"He is coming very soon, isn't he, mamma?" asked Alice.

"Yes," her mother answered, laying aside the letter. "We may expect him any time."

"Well, that puts an end to the musicale, and I told all the girls it was to come off next week!"

"But we will have the musicale just the same, Alice. We may change the programme a little; grandfather would hardly care for French or German songs."

"O mamma! you certainly don't expect grandfather to appear at the musicale in his old-fashioned clothes—it would be too mortifying!"

"And he'll be sure to make blunders," said Rodney; "a deaf person always does!"

"I wonder what the Delanos will think of Grandfather Clarkson," said Alice. "They have a picture of their grandfather, who died ever so long ago. He is painted in his powdered wig and blue velvet coat. They almost worship that picture!"

"Oh, it is very easy to worship a grandfather in a picture!" said her mother, significantly. "It would be a different matter to have to entertain him for a few weeks!"

"Well, I hope he won't expect me to take those long walks with him!" said Alice.

"I'm afraid he isn't strong enough to take very long walks, dear, but if he is, I can find time to go with him."

"And I suppose to my lot will fall the task of reading the papers to him!" Rodney groaned at the prospect.

"I can find time for that, too," said the mother.

"You dear mother!" said Alice, beginning to feel a little ashamed. "You remind me of the little red hen, with your '*I* will, then!'"

"And what room is the grandfather to have?" asked Rodney. "Your humble servant's?"

"No, I think I shall give him my room," said the mother, again. "He will enjoy the wood fire these chilly spring mornings."

The little group was silent for a few moments. Alice was thinking, "How easy it always is for mother to give up! Still, it must be a sacrifice to give up her own room."

The kindly thought drove the frown from her face, and the mother felt encouraged to unfold her little plan for the grandfather's pleasure.

"I've been thinking," she said, "of one thing we can do for grandfather. He and Aunt Ruth live in that great house, shut in by silence; so, for the little while he is here, let us all speak just as loud as we can."

"I will!" shouted little Bess, beginning at once to act upon her mother's suggestion.

"And always introduce your friends to grandfather," the mother continued, "for elderly people are apt to be sensitive. You needn't feel ashamed of Grandfather Clarkson. *I* can remember when he was a fine-looking man, and one who liked to be well-informed on all important topics of the day."

"Grandfather!" exclaimed Rodney.

His mother smiled. "Grandfather hasn't always been old," she said. "Twenty years from now I shall be —"

"Not old!" cried little Bess; "don't say it, mamma! Not old, and deaf and wrinkled, like poor grandfather!"

"No, Bess, not so bad as that!" said Rodney. "We won't allow it!"

"Now," said mother, "we will move that easy-chair from the spare room in here beside the fire, and have your father's dressing-gown and slippers ready"—she stopped suddenly, wondering how the father, so full of business care, would like the grandfather's visit just at the busiest season of the year!

"Oh, there comes grandfather now!" cried little Bess, catching the first glimpse of a solitary figure coming down the street—a tall, spare man, bowed with the weight of years. His clothes were of old-fashioned broadcloth, and were none too good a fit. His high silk hat or beaver, as he called it, had done duty many years.

He tottered along, carrying his old-fashioned carpet-bag, while over his arm hung his dark blue travelling cloak.

"Poor old grandfather!" said the mother. "It may be his last visit! Do remember about speaking loud! Now, let us all run pell-mell down-stairs and give him a good welcome!"

Before the grandfather had time to ring the bell, the door was opened, and at the first glance he saw and felt a welcome in their smiling faces and outstretched hands. They led him to the arm-chair beside the fire.

"Well, well!" he said; "it's worth while to take a long journey to get such a welcome as this! Aunt Ruth thought 'twas too much for me to undertake; for there's no denying," he said, shaking his head slowly, "that I'm growing old!"

"You're not so old but that I love you!" shouted little Bess, delighted that grandfather heard her, for he nodded and smiled.

When the busy father returned at night, he welcomed the grandfather kindly, but he was tired and preoccupied. Grandfather could not hear a word he said, although he had heard the mother and the children all day long.

Before many days had passed, indeed, grandfather had come to a happy conclusion. "I do believe," he said to Mrs. Clarkson, "that my hearing is coming back. I can hear every word that is said! Aunt Ruth will be glad to hear that, for there's no denying, it *is* hard to talk to a deaf person!"

When the evening appointed for the musicale arrived, it was found that the French and German songs had given place to such old favorites as "John Anderson, my Jo," "Oft in the Stilly Night," and others of their kind, and no one enjoyed the sweet young voices more than the grandfather. Later, when the guests were gone, and the family lingered beside the fire to "talk over the party," grandfather praised the mannerly young men and the pretty, kindly-spoken girls.

"It's all nonsense," he declared, "to say the young folks have no manners nowadays. Why, bless you! the girls dropped the prettiest courtesys, for all the world like your grandmother when I first knew her, years ago! And it made me feel young again to hear those boys talk to me as they did. My hearing is coming back—that's certain."

Next Sunday Mrs. Clarkson was unable to go to church, so the young people escorted grandfather. The church was full when they entered, the old gentleman leaning on Rodney's sturdy arm.

Mabel Delano, who sat directly opposite, seemed very much interested in the stranger. After the service Rodney lingered to introduce grandfather to the minister, while Alice walked home with little Bess.

Directly in front of them were Mrs. Delano and Mabel. Alice heard the young lady say:

"Mother, did you notice Mr. Clarkson's father? He is deaf, and I couldn't help watching him, trying so hard to hear, when so many of us turn a deaf ear to those life-giving words. And when he sang 'Praise God from whom all blessings flow,' in that weak, quavering voice, I could have cried!"

Meantime, these were happy days for grandfather. He felt the newness of life and the spirit of hopefulness that comes with the bright spring weather. Moreover, every one seemed determined to make his visit delightful, and no one noticed that the busy father had so little time to spare.

But the grandfather, with the sensitiveness of age, had felt that his son had neglected him, and said one day to Mrs. Clarkson that he wished he saw more of "his boy."

"Why," said she, "I'm sure he would be delighted to have you go to his office and talk with him."

"Do you think so?" he said, his face brightening.

A few moments later grandfather started for his son's office.

No sooner had he gone than Mrs. Clarkson ran to the telephone and called her husband. Never had a gentler, kinder message swept the wires; and it is but just to say the whispered hint was very well received.

Grandfather returned delighted. After that he spent several pleasant evenings with his son. At last his visit had received its crowning grace.

On a pleasant May evening grandfather started on his journey home. Among the young people at the station to bid him good-by was Mabel Delano, who brought him a large bunch of roses.

"Why! they're the old-fashioned 'double velvet!'" exclaimed grandfather. "I haven't seen one for many years."

As he took the young girl's hand in his, she bent down and kissed him softly on his wrinkled forehead.

"You can't believe how happy you've all made me," said grandfather. "No, Alice, 'twasn't a little thing to do, to make an old man happy for one long month. I shall never forget this visit, and 'twill always be a blessed memory to you all."

He rose, and folding his daughter to him, raised his trembling right hand above the little group beside him. "God bless you!" he said, in faltering tones. "Aye! and ye shall be blessed!"

He sank into the seat, overcome at the thought that this was a last parting.

A few days later came a letter from Aunt Ruth, telling them that her father had made the journey as comfortably as possible; his fellow-travellers had been very kind—one gentleman even taking the trouble to see him safely home. "As for father," she added, "he seems ten years younger for his visit, and I don't know when he has been so happy!"

Some time later, just in the heart of the summer, the same little group gathered in the mother's room, where a few months before they had discussed the grandfather's coming. On the table lay the summons bidding them to Newkirk; the grandfather was failing fast. Over the mantel the sweet face of the grandmother in her youth and beauty smiled down upon them.

Alice and Rodney were thinking, "If it hadn't been for mother, how much we might have had to regret! Now we can always remember how happy he was here!"

Little Bess would not be comforted. She had planned to spend a happy fortnight with grandfather at the old homestead. She had so many things to tell him, so much to ask him! He had promised to show her the oriole's nest in the elm-tree. She couldn't imagine the old-fashioned garden without grandfather.

From time to time, in their hurried preparations, they spoke of him—and always as *poor* grandfather! Though even then, perhaps, all things were his—hope, youth, strength, and even life immortal.

ELIAKIM HUNT'S RAISING.

"Did I ever tell ye about Eliakim Hunt's raising?" inquired Uncle Silas Applebee, as we sat on the porch in the moonlight.

"Never did? Wal, in them days 'twas the custom to have plenty of rum at all the raisin's. And sometimes the boys took more'n was good for 'em, an' got reckless, an' come mighty nigh havin' some purty bad accidents.

"So when father was ready to raise his new barn, he says to all the folks, says he, 'I sha'n't have rum, boys. Ye needn't expect it; but ye shall have as good a supper as Melindy an' the gals can git up.'

"'That's all right, Applebee,' they says, an' every one on 'em come an' worked with a will.

"Mother an' the gals had done their best. There was two long tables, the whole length of the kitchen, twenty-five or thirty foot, an' in the front room, so 't all the men could set down to once. There was cold pork, brown bread an' beans, pum'kin an' mince pies, ginger-cakes an' 'lection cake, an' I do' know what else.

"All the gals in the deestrict was there to help wait on 'em, an' see the fun, an' the women, too. There was enough for all. Father wa'n't a bit stingy in pervidin', an' mother knew her reputation was at stake.

"Arter the tables were cleared, the men an' boys went to wrastlin'. They always did, arter a raisin', an' a good time they had. That was the time yer Uncle Dan throwed Salma Chase three times runnin', but I've told ye 'bout that afore.

"Wal, everybody said this was the best time they'd ever had at a raisin'.

"Eliakim Hunt was goin' to raise his barn the very next week. 'Twas a monst'ous one. No such mis'able little j'ice used as they use nowadays—hardly strong 'nough to hold up the ruff. Eliakim's barn hed blowed down, the winter before, an' killed a dozen head o' cattle for him, an' he meant to have one this time strong 'nough for any wind that might come. The timbers was more'n a foot thick each way, an' all mortised in together.

"Ye know how buildin's was raised in them days? They j'ined a whole side together on the ground; then they'd take long poles with iron spikes at the end, and pry it up an' raise it, till the ends of the timbers would slip into the sockets, an' it would stand firm.

"'Twas hard work an' resky, if one lost their head, fur if it give way an' fell back 'twould crush pretty much all on 'em to death.

"How many men did it take? Wal, seventy-five or a hunderd was none too many. Everybody went to a raisin' in them days, as they do to a vandoo now.

"Eliakim always was as mean as pusley. Still, we all thought he'd be too proud to make a fool of himself.

"The barn bein' so big an' the timbers so heavy, they like to 'a' had an accident. 'Twas the last side, an' the men was tuckered out. 'Twas a master hot day. The side was half-way up, when it begun to tip.

"'Lay to, boys! Lay to for your lives,' called father, for if it fell 'twould be the death of the most of 'em. 'Lay to for your lives.'

"The women screamed, an' there was nigh about a panic, but they rallied an' made a mighty lunge, an' the beams slipped into their sockets.

"Then such a shout as went up! Some on 'em was so beat out that they jest laid down on the grass an' panted.

"They expected then, that seein' as he hadn't passed any rum, Eliakim 'd invite 'em down to the house for supper, as father had. I knowed better, for sister Jane had been stayin' in the house with Polly Ann, who was kind o' sickly, an' she had come out a while afore, an' says she:

"'Don't you think Mr. Hunt is too mean to live? He wouldn't let Mrs. Hunt git supper for 'em. Polly Ann says her ma cried about it, but he wouldn't give in, an' there's nothin' cooked in the house but a loaf of bread an' a plate of nut-cakes.'

"I was only a lad, an' not a-workin', so I hadn't thought how mean it was of Eliakim till I see how beat out the men was. Some on 'em had come afoot four or five miles, an' of course, seein' as Eliakim had said nothin', they expected supper.

"'You aint goin' home to-night?' father asked one who was clean tuckered out.

"'I must. Mary 'd be afeard to stay alone with the young-uns. I'll be all right arter supper,' says he.

"'There aint to be any supper to-night. Polly Ann told Jane so. Her father wouldn't let 'em git any,' I said, kind o' thoughtless.

"It spread like wildfire; but most on 'em wouldn't believe it.

"As soon as the barn was raised, Eliakim he dis'peared. Some thought he'd jest gone down to the house to see if supper was ready, but he didn't come back. Then half a dozen o' the men went down to the house. Through the winder they could see Eliakim eatin' supper with his wife an' Polly Ann.

"He'd gone off for good, an' not so much as said much obleeged to the men!

"They pounded on the door awhile, and then they stalked into the kitchen.

"'What d'ye want?' asked Eliakim.

"'We want some supper, afore we go home!'

"'All we've got in the house is on the table; help yourselves,' says Mis' Hunt, quick, afore Eliakim could speak.

"They took a slice of bread an' a nut-cake apiece, an' went back to the barn. Then there was a reg'lar indignation meetin'. If ears burnt when folks talk about 'em, Eliakim's would 'a' sot his head on fire that night.

"Wal, father he asked some on 'em down to our house to supper, an' some o' the neighbors asked them that lived further off, and so all had supper; but no thanks to the Hunts.

"There was mischief brewin', though. What do you s'pose some scamps that had been there that day done?

"Why, they was so mad at Eliakim, that they went to that barn in the moonlight with iron bars, an' pried out the underpinnin', an' sent the whole pile of timbers down in a heap!

"Father an' I went up there the next day. 'Twas a pitiful sight, sure enough. Some o' the timbers was split, an' they was all in a heap.

"It was a bad an' onlawful thing to do, but for all that there wa'n't many that was sorry for Eliakim. An' he was purty nigh crazy.

"'I do' know why they done it,' he kept sayin', pitiful like. 'You didn't give no rum, Applebee, an' they never teched your barn.'

"'I wa'n't so everlastin' mean as to go off without thankin' 'em fur their help, nor yit to send 'em off without their supper,' said father, sternly. 'You brought it on yourself. One mean trick's ben paid off by another.'

"Eliakim winced an' shuffled about, but when father had had his say out, he went right to work helpin' Eliakim undo the mischief.

"'Twas a long job, an' cost Eliakim a pretty penny afore it was done. The beams was so long an' heavy 't he had to hire a dozen men with ox-teams to get 'em out. Then the underpinnin' had to be all laid over agin. Then how was he to raise it? He thought 'twould never do to ask 'em to come to another raisin' there.

"'Yes, 'twill, if you act like a man about it, an' not like a miserly curmudgeon!' says father. 'Tell 'em frank that ye know ye didn't do right by 'em afore, an' ye're sorry for it; an' if they'll help ye agin, ye'll do the harndsome thing by 'em. Then keep your word right up t' the handle.'

"'But my wife aint able to do sech a powerful sight o' cookin'!'

"'Ye mean ye don't want to do such a powerful sight o' pervidin'! Come now, be a man for once, an' see how 'twould seem.'

"It was a bitter pill for Eliakim to swaller, but he finally made up his mind that 'twas the best he could do. So he tackled up old Grimes, an' took Polly Ann with him to help him out, for everybody liked Polly Ann, she was so chirk an' pretty, even if she was sickly. They went to every place where he'd had help afore, an' every one on 'em promised to come. They kep' their word.

"I s'pose the consciences o' some on 'em had been troublin' 'em a leetle, for although the Good Book don't say, 'Thou shalt not tear down thy neighbor's barn,' it does say somethin' like this, 'Vengeance is mine, saith the Lord,' an' 'Do unto others as ye would that they should do unto you.' An' not one of 'em wanted their barns knocked in. So they was glad of a chance to make amends.

"Mother an' the gals an' some o' the other neighbors helped Mis' Hunt cook, until they was ready for any number. When Eliakim had got the better o' the stingy old Adam in him, he pervided as liberal as father 'd done.

"Polly Ann took me into the butt'ry an' showed me the rows of pies an' cakes an' cheeses, an' platters of cold meats an' loaves of bread an' pots of baked beans.

"'An' there's two pigs roastin' in the brick oven!' she said, kind o' proud.

"The men come early an' worked with a will, I tell ye. Why, by four o'clock the hull barn was up as good as it was afore, an' up to stay, too. Eliakim, he thanked 'em as gracious an' perlite as if he'd lived in a city all his life, an' asked 'em down to the house to supper.

"'Twas a fust-class set out, an' no mistake. A better supper they never ate, an' when 'twas finished they was all ready for fun.

"Our deestrict was right on the line betwixt Plymton an' Coventry, an' some o' the men was from one town, an' some from t'other; an' a sight o' rivalry there was, too. The Plymton boys was always tryin' to beat us, but we'd held our own until this year.

"Some of our smartest wrastlers had moved off, an' some o' the Plymtons had learned how to throw, so 't this year the Plymtons had beat every time, until at our raisin' your Uncle Dan had throwed Salma Chase three times runnin'. But I've told ye 'bout that afore.

"Wal, the Plymtons was mad enough, an' vowed they'd whip us this time. So when we went out from supper we expected fun, an' we got it.

"Seems 's if when Eliakim got a-goin' he didn't know when to stop. He stood right out afore 'em all an' says, says he:

"'I want ye all to have a good time, so ye kin remember Eliakim Hunt's raisin' with pleasure. Now let's make this a town fight, Plymton agin Coventry; an' I'll give five dollars to the side that beats. An' if Coventry gits it, I'll give five more for the music next June trainin'.'

"Wal, they jest went to work then! Both sides was on their mettle. They got together, each town by itself, an' chose the best wrastler on each side for bully, an' three others.

"Then they formed in a ring, an' Ike Huntress, the biggest man in all Plymton, went into the ring. He was their bully. Father acted as manager for our side. He knowed that Ike was tremendous strong, but that he didn't know much 'bout wrastlin', 'cept to knock a man down. So father, he picked out little Jabez Slocum.

"Now Jabez warn't nigh so heavy as Ike, but he understood how to handle himself; an' the fust thing Ike knew, he laid sprawlin' in the dirt.

"'Twa'n't fair!' 'Twa'n't fair!' 'Try it agin!' shouted the Plymton fellows.

"'All right,' says father; 'throw him agin, Jabez!'

"So Jabez threw him agin; but the Plymtons

Digitized by Google

warn't satisfied. They wanted to try it once more, an' so Jabez threw him the third time.

"'Twas a leetle trick he had with his left foot. He could 'a' throwed Goliath easy, I do believe.

"Wal, the Plymtons couldn't deny but 'twas fair enough this time; but they was hot to try it agin.

"So Salma Chase an' Simeon Low went into the ring, an' Simeon throwed Salma as easy as Jabez had Ike. Then your Uncle Dan an' Tom Harris tried it, an' your uncle throwed Tom.

"'Three times an' out!' says father. 'Be ye satisfied now?'

"They had to own themselves beat; so Eliakim give the five dollars to father to keep for June trainin', an' give the other five to Jabez an' Simeon an' your uncle; an' arter a deal o' talk they went off home.

"An' that's all there was to Eliakim Hunt's raisin'."

In Two Chapters.—Chapter I.

More than He Bargained for.

A young man, little more than a boy, stepped from the train at Seattle and looked about him with an air of bewilderment and anxiety. He carried a large black valise, and it was evident that he was a new-comer.

This youth, Jesse Garland by name, tired and dusty from a journey across the continent, had come to the State of Washington with the vague expectation of making his fortune. How he should make it, and what he should do first, now that he had arrived, he knew not.

He possessed a clear, bright eye, and in his face a good judge of men might have read signs of determination and will power.

It was a little thing—only a trifling difference of opinion about the tiering of a pile of stove-wood—which had caused him to leave his home on the farm where he was born. Toward his step-father, who was by no means unkind to him, Jesse had long entertained a little feeling of hostility. The boy had a hundred dollars of his own, and by the terms of his guardianship he was to be free after his eighteenth birthday.

That birthday had passed, four months ago, when, one May morning, this hasty difference of opinion arose about the wood-pile. Jesse impetuously declared that he would leave the farm, and his step-father said, "Well, Jess, as you seem to be discontented, it may be best if you do."

So the young man took his hundred dollars and set off for the new State of Washington. In order to hold his own against the "wild West," he invested two dollars and a half in a revolver and cartridges.

He carried his valise out to the entrance to the station and stood looking up and down the busy new city, wondering which way to go.

An alert man in a gray business suit passed him, and stopped for an instant to consult a memorandum-book which he took from his pocket.

"I'll ask him," thought Jesse. Waiting a moment to catch the man's eye, as he replaced the book, he said, awkwardly, "Could you tell me where I can get work, sir?"

The man glanced at Jesse, and an amused smile came into his face.

"Where do you hail from?" he asked.

Jesse told him, and then gave his name.

"What can you do?"

"I've always worked on a farm."

"Ever take care of sheep?"

"Yes, we always kept sheep."

The man regarded him keenly for a moment.

"My partner and I own several sheep ranges," he said, still observing the young Easterner closely. "We want a shepherd to go up the Skagit River. But it is some distance. Do you think you would be lonesome or afraid?"

"I guess not," said Jesse, hopefully.

The man smiled. "If you were put in charge of a flock of sheep, you would stick by 'em, I suppose?" he said, interrogatively. "You wouldn't leave 'em till you were relieved by another man?"

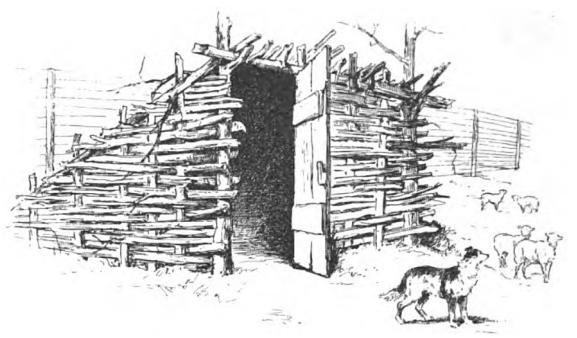
"No, I wouldn't," said Jesse.

"You will have a pony and two dogs; and we will pay you fifty dollars a month and find your keep. What do you say?"

"I guess I'll go."

"Very well then," said the man. "If you will come with me, I'll find lodgings for you till morning. Then I'll start you for the Skagit."

Early the next morning Jesse embarked on a steamer plying northward to Whatcom, and after a few hours landed at a new wharf in the woods.



The firm of sheep ranchmen had an outfitting post here. They provided Jesse with a pony and high Mexican saddle, in which, with a great sense of novelty, he managed to place himself. His valise was strapped up at his back; and then the partner of his friend at Seattle, Mr. Littlehale, gave him his final instructions.

"Take this path here and follow it up to the range," he said. "You cannot well miss it, for it keeps to the river all the way. It is a long way up there. You'll have just time to get to the 'shack' before dark, if you ride well. Dust right along! Let's see, have you got a gun?"

"I have a small revolver," replied Jesse.

Littlehale looked at him doubtfully for a moment. "Well, there's a gun at the 'shack,'" said he. "I guess you will be all right. You will find a Mexican shepherd up there. When you take charge he will come out. Get him to tell you all about the sheep, and how he is handling them. We shall depend on you, then, to take good care of the flock.

"You will find plenty of provisions in the shack. You can kill a sheep when you want mutton; and in the course of ten or twelve weeks we will send a man in, with fresh supplies, to see how you are getting on. Go ahead now. Good-by!"

Jesse started off. He could not well withdraw now, but he began to be afraid of his new work. He had supposed the sheep would be in some pasture near houses, as flocks of sheep are kept in the East; but the thought of a man coming to see how he was getting on, after ten or twelve weeks, puzzled him. It could hardly be possible that he was to be alone all that time.

He put his pony at a canter, but being unused to riding horseback he suffered not a little.

The road was merely a rough trail along the bank of the Skagit. For the first few miles there were occasional openings and camps in the forest; then followed unbroken wilderness.

It was no use to try to ride rapidly; he could not endure it. He dismounted frequently, and went on foot for half a mile. Two or three times he saw gray animals, which he supposed were deer, cross the road.

The sun set, and still he had come to nothing at all resembling a sheep-ranch. About him on every hand were wild mountains and forests, with the river brawling hoarsely along its rocky bed. Darkness came on; and halting beside the trail, he tied the pony and sat down to pass the night.

He had in his valise two little cakes which he had brought all the way from home. These he ate, and watering the pony at the river, allowed him to nibble about. Presently he fell asleep. When he waked, daylight was shining in the east.

Jesse felt very cold, and when he rose he found himself so stiff and lame that he could scarcely take a step. He had taken a violent cold. Upon climbing into the saddle, he cried out from pain, and was obliged to dismount and go on foot for a time.

He went on miserably two or three hours, seeing nothing of the sheep-ranch, and began to fear that he had lost his way.

At last the trail led down to a ford across a fork of the river; and then Jesse saw before him an extensive tract of open land, and at a distance a low cabin of poles. Near it was a large enclosure, surrounded by a wire fence, six or seven feet in height, from which a man with two dogs was letting out the largest flock of sheep that the Eastern lad had ever seen. There were hundreds upon hundreds.

Approaching, Jesse asked if this was Littlehale & Co.'s flock, and received a surly "yes" from the Mexican, who at once began to complain vehemently because a man had not been sent sooner to relieve him.

"Take care you the sheep!" he exclaimed. "Dees morning I go."

He was a small, long-haired, dark man. On his head was a *sombrero*, and in his belt a knife and a pistol. He returned but the shortest of answers to Jesse's questions about the sheep.

Impatiently he pointed to the dogs, then to the wire corrals, and said, "Night time, the sheep you will shut." He added something about *los leones*; but what *los leones* were, Jesse had no notion.

Turning his back, the Mexican went into the shack, where he hastily prepared food for himself, strapped a gun upon his back, and then mounted his pony and left at a gallop.

Jesse watched his departure rather dolefully, and then turned to look at the hundreds of sheep, now streaming out over the range. What was to be done first? The dogs coursed along on either side of the flock, barking occasionally. They were fine, intelligent sheep-dogs, in shaggy black and buff coats, each with a spangle of white at his throat.

Jesse rode to the shack, where he found a small stove and frying-pan, a quarter of mutton hanging upon a hook, and some flour and canned goods.

He found no gun there. The departing herder had evidently taken it away with him.

Jesse had never before attempted to prepare his own food; but he now fried mutton, baked a flour cake, and made coffee, and was by this time so hungry that he enjoyed his own cookery very much.

Then there was the problem of taking care of the sheep. Jesse had never before seen a flock of more than a hundred; but there seemed to be thousands in this flock. They had scattered over the range in all directions. The dogs were already out of sight with them. How in the world could he ever get them back inside the wire fence?

The pasture seemed to consist of a wide tract of land lying between the Skagit and the fork which he had crossed, open for the most part, but with here and there a little grove or thicket. On both sides were high, wooded mountains, with black ravines gaping back between them.

There was not a human habitation to be seen. The nearest settler, indeed, lived thirty-five miles away.

He was terrified, and shed tears like a child. He had learned only that the sheep must be driven into the corral at night—why, he did not know. Perhaps to keep them from the *leones*, whatever they were. There might be wild animals about!

From where he stood he could at times catch glimpses of the two dogs. Entirely without command, these faithful creatures were tending the sheep. They appeared to be patrolling the outskirts of the great flock, preventing single sheep from straying away.

Toward noon the sheep ceased feeding and grouped in the shade of the scattered clumps of trees, where they lay down to chew the cud. Jesse returned to the shack.

Presently one of the dogs came, and approaching his new master, wagged his tail in a questioning manner. Jesse made out that the animal was hungry, and fed him. Immediately the dog went back to the place where the flock lay, and soon the other dog appeared, to be fed in turn. Only one of them had left the sheep at a time.

Not knowing their names, Jesse rechristened them Jack and Jim. Without the assistance of these trained dogs the inexperienced young Easterner could have done little toward controlling the movements of this great herd of sheep; for the range was not fenced, nor inclosed save partly by the Skagit on one side and the fork on the other; and the water was already so low in the smaller stream that the sheep could cross it in many places.

At a distance of three miles up the range from the first wire corral, he discovered a second, and a week or two afterwards found that there was still another, four miles beyond. These were provided in order that the flock might be shifted from one part of the range to another, as the grass became short. The corrals were large inclosures, each about four acres in extent.

By three o'clock on this first day of his shepherding, the sheep were moving again; but they fed less steadily now than in the morning. An hour later Jesse began to ride around them; and with the aid of the dogs he headed the multitude toward the corral. By sunset he got them in, and shut the gate upon them.

Then, as the twilight fell, he again prepared his supper, fed the dogs, and picketed the pony near the shack.

Despite the presence of these kindly animals, he felt very lonely and strange as night fell. It seemed to him that he was at the very ends of the earth. He sat in the doorway of the cabin, and the dogs lay down beside him and gazed reassuringly in his face.

Presently he heard a curiously prolonged, lonely cry from the dark pine woods across the river. The dogs raised their ears and listened, extending their noses to sniff the air.

Soon after he heard the cry again, nearer, as if at the river-bank, and still again, after a time, on the range below the corral. The dogs whined and drew close to him.

Some minutes passed; then fierce growls and snarls resounded, apparently from the wire fence along the lower side of the corral.

Jesse had heard stories of mountain-lions. Could it be that these were the *leones* the Mexican talked about? He dared not leave the shack; but he fired off his little revolver twice from the door, hoping to frighten the animal away. The weapon now seemed to him a mere popgun.

So far as he could discover in the morning, the lion had not broken into the corral. At a point on the lower side several small bunches of fur clung to the barbs of the wires, and one of the latter was tinged with blood. He supposed that the beast had sprung against the wires with the intent to seize a sheep; but the wire was of the largest size, thickly barbed and very tightly strung, presenting so dense a hedge of sharp steel points that the beast had retired from his effort badly scratched, growling and snarling over its injuries.

He opened the gate so that the sheep came out by twos and threes, and counted them as they did so, scratching a mark on the gate-beam for each hundred. When the last one was out, he had twenty-four marks and eighty-three sheep over.

On the sixth afternoon of his shepherding, finding that the sheep were uneasy and inclined to stray on account of the shortness of the grass, Jesse shifted the flock to the second corral. Here, as at the first, there was a pole-shack, with supplies stored inside, and a little pony-shed of poles, with a gate, or clumsy door.

The place was nearer the river and the woods than the first cabin. It was late when he had made his preparations and finished cooking supper. He was already growing a little accustomed to the wailings of the mountain lions; and having called in Jack and Jim, he lay down to sleep.

Soon he was awakened by the growling and whining of the dogs. He heard his pony whinny uneasily, too, and after listening a moment, rose and went cautiously to the door.

There was a wide crack in it through which he peeped out, and by the starlight he could see three large animals, a few steps from the little shed. The dogs continued to growl and whine; and after a moment or two one of the great shadowy creatures shuffled toward the shack, extending its head as if snuffing the air.

"They are bigger than mountain lions," thought Jesse, a cold perspiration starting out over his whole body. "Maybe they are grizzlies!"

He drew back from the chink, and laying hold of a bench, propped the door with it. As he did so, he heard a sound as if the animal's head were brushing against the outside of the door.

ADVENTURES IN WILD AUSTRALIA.

THIRD PAPER.

At the time of the capture of the great snake to which I referred in my last paper, we were travelling along one of the mountain streams. The blacks, as usual, were keeping a sharp lookout, and carefully examining the numerous clusters of ferns in the scrub.

Suddenly they discovered something lying on the edge of one of these fern clusters, but very high up in the air. Notwithstanding their keen eyesight, they were unable to make out whether it was a serpent or a broken branch.

A young boy, whom I usually called Willie, climbed up a neighboring tree to investigate the matter. Erelong he called down to us, "*Vindcheh! Vindcheh!*" (Snake! Snake!) I was much surprised, for the object looked to me like an old leafless limb.

Willie came down at once, and lost no time in ascending the tree on which the snake was lying. When he had obtained a foothold near the fern wreath, he broke off a large branch, and with it struck at the serpent, which now began to show signs of life. The lazy reptile soon received so many blows on the head that it fell down, and proved to be about ten feet long.

While we were examining it, we heard Willie—who was now almost invisible, so high up had he climbed—calling down that he had found another snake. This made the blacks jubilant.

It was, however, more difficult for Willie to bring down this one, as it was protected by the leaves. He had to use his stick with all his might before he could drive it out.

At last the reptile attempted to make its escape, and crept out over the edge of the fern wreath, trying to lay hold of the tree-trunk; but the distance was too great, and it slipped.

It could not retrace its course, for Willie stood there hitting it, and so this python, sixteen feet long, fell off. In coming down it struck the crown of a palm-tree, which broke its fall; and quick as lightning it coiled itself like a corkscrew around the trunk of the tree.

The boy came down and immediately climbed up the palm-tree to his victim, which did not let go its hold until its head was crushed.

When we came to look for the first snake, we were astonished to find that it was gone. We all searched carefully everywhere among the stones on the bank of the river, but it was not to be seen. We were giving up the search when Willie, much to our amazement, came up, dragging it behind him. He had discovered it at the bottom of a hole in the stream, and had dived after it.

These reptiles show wonderful tenacity to life. The one in question, although apparently dead and motionless when we left it, had been able to crawl twenty paces and to keep himself concealed at the bottom of the river.

The natives, anxious to secure themselves against other mishaps of this kind, proposed to roast their game at once; but as we had no time for this, they procured a withy band, tied the two snakes together to await our return in the evening, and made them fast to a tree, around the trunk of which the reptiles immediately coiled themselves.

When we passed the place in the afternoon there was still life in them; but they were soon despatched, rolled together in bundles, and carried to the camp to be roasted for supper.

As speedily as possible the camp-fire was made, and stones were heated; for snakes are considered a delicacy, to be prepared in the most fastidious manner.

They were first carefully laid in circular form, in order that they might occupy as small a space

Digitized by Google

as possible. Each formed a disk, fastened with a reed; they looked like the coils of rope on the deck of a ship.

Large snakes, and the flesh of fish, cattle and man, are all prepared in an interesting manner: First a hole is made in the ground about one foot in depth, and in it a fire is built. Upon the fire

stones are laid, and over the stones fresh green leaves. The leaves of the so-called native ginger are used when available. Upon these the meat is placed, and covered with more leaves and more hot stones. The earth which has been dug out is then spread over the whole, which then assumes the appearance of an ant-hill.

Should the steam escape through any fissure, the vent is covered up and made tight as soon as discovered.

The baking is now permitted to go on undisturbed. The natives seem to know precisely when the meat is done; they never make a mistake. The hot stones develop an intense heat, which gradually bakes the food thoroughly, at the same time preserving all its flavor.

On opening this primitive oven, the outer leaves are found to be scorched, while the inner ones are fresh and green, and give the dish a most inviting appearance. Beef prepared in this manner is really excellent, and if leaves of the ginger plant are used, they give the meat a peculiar piquant taste which is very appetizing.

During my stay among the savages I adopted this mode of preparing my salt beef, after letting it soak in a brook over night to freshen it.

When the pythons were done, and were taken out of the hot leaves, they were perfectly whole as before. The bands were loosened, and the snakes stretched out to their full length and cut open with one of their own jawbones.

First the fat was taken out and handed in long strings to the hungry, greedy mouths; then the heart, liver, and lungs; and finally the body itself was divided.

Nothing is wasted, for even the backbone is crushed between stones and eaten; and the blacks lick up the small quantity of juice which drops from the meat, and enjoy it hugely.

What cannot be eaten on the spot is put away in the hut. In this case the leavings lasted four whole days, and some of the meat at last had to be thrown away.

It should be observed that the natives stand in mortal dread of poisonous snakes, and never eat them. If they try to kill one, they do so by throwing missiles from a distance. They were much surprised whenever they saw me go near a venomous snake, and kill it with a stick. On such occasions they seemed to realize the superiority of the white man.

I became quite fond of the flesh of large lizards. It is white, fat, and resembles chicken both in appearance and in taste. I cooked the flesh of those animals, and indeed all sorts of meat, as the natives did—simply by broiling. Ordinary broiling, and the above described elaborate baking process, employed to cook their choicest morsels, are the only methods of preparing food known to the blacks. They never boil anything, never eat anything raw, and use no salt.

I think it is quite noteworthy that while with them I did not feel the need of salt—a circumstance due, no doubt, to the fact that the meat was broiled instead of boiled.

Of all the dainties brought to me by the blacks I liked nothing better than the larvæ of certain species of large beetles. The best are found in the decayed trunks of old acacia-trees, out of which the natives cut them with their tomahawks. They are so fond of these grubs that they often cannot resist the temptation to swallow a few of them alive.

Generally, however, the insects are thrown on the hot ashes, where they immediately cook and become very crisp. Their taste is very like that of an omelette, but I found them even more delicate.

The savages who, for many long months, were my constant companions, are of medium size and are called blacks, though in reality they are chocolate-brown. They are, at present, the most uncultured human beings in existence, and the lowest in the scale of civilization. They have no idols, no worship, no sacrifices, but are intensely afraid of an evil power—their devil, whom they call *koingan*.

They know no numerals beyond three (*yóngul, yákkan, karbo*). All other numbers they vaguely express by the word "many" (*taggin*). They go altogether naked, both winter and summer. All their senses are well developed, especially the sight. Their sense of smell is also acute. In walking through the woods they will often take up a handful of earth or rubbish, and by smelling it ascertain if an animal has passed that way.

War exists among them in its most primitive form. They will lie in ambush and make a sly attack upon a weaker foe, but do not dare to wage open warfare upon their enemies.

Woe to the native stranger who strays into the domain of another tribe! If he is discovered, he is mercilessly killed and eaten, for human flesh is prized by them as the greatest delicacy.

But the chief danger in associating with Australian cannibals does not lie in their longing to eat you, but in their insatiable desire to get into possession of your belongings. I do not hesitate to say that an Australian native will mercilessly kill any man for a pipe of tobacco, if he thinks he can do so with safety to himself.

CARL LUMHOLTZ.

A FATAL FAULT.

It is the little rift within the lute,
That by and by will make the music mute,
And ever widening slowly silence all.
—*Tennyson.*

PEACE IN CHILE.

After a civil war which raged with varying fortunes for nearly eight months, tranquillity once more reigns in the South American Republic of Chile. That this is so is the result of the decisive victory of the Congressional, or Revolutionary, party.

The Chilean civil war broke out on the Seventh of last January. It was the crisis of a quarrel which had been going on for several months between President Balmaceda and the Congress of the Republic.

The President had been charged, among other things, with arbitrary conduct, with a corrupt use of the national treasury, with seeking to dictate a creature of his as his successor, with violating the constitution, with extravagance and gross favoritism.

On the other hand, the partisans of the President alleged that the charges were false; that he was the champion of the people, whereas Congress represented the aristocracy; and that Congress had attempted to exercise the powers which properly belonged to the President.

Which side was right is not yet clear, but will doubtless become so in the course of time.

The first demonstration of the war was the revolt of the fleet, with two thousand men. The Chilean navy declared against the President; while the army, numbering perhaps thirty thousand, adhered to his cause. The war, therefore, was in the main a struggle between the land and the sea forces of the Republic.

For several months the fortunes of war evidently favored the Congressional insurgents. They pursued the conflict along the long and narrow coast of the country, and succeeded in capturing several important seaports. In May, eight of the twenty-three provinces of Chile were reported to have fallen into the hands of the insurgents.

Then for a while their triumphant progress seems to have been checked. At all events the war dragged along for several months without any notable advantage being apparently gained by either side.

Valparaiso, the chief seaport, and Santiago, the capital of the republic, still remained in the President's hands; and at one moment it seemed as if he would prevail over his assailants. In the meantime, a Presidential election occurred in that part of Chile as yet unconquered by the insurgents, and resulted in the choice of Vicuña, Balmaceda's nominee and friend.

The end of the struggle came somewhat suddenly, and its result was rather unexpected. On the Twentieth of August, the insurgent forces began a series of operations directed toward the capture of Valparaiso, landing their forces at a small seaport twenty miles north of the city. The President hastened to confront them with a large part of his army, and the contending forces met at Concon.

The result of the battle was a complete victory for the insurgents, and in it the Presidential forces lost twenty-four hundred men. The insurgents at once advanced upon Valparaiso.

The President once more took his stand in an excellent defensive position near Placilla, but was fiercely attacked by the enemy, and a most sanguinary conflict ensued. The President's troops numbered twelve thousand, but in the battle he lost fourteen hundred.

The insurgent victory was complete and decisive of the whole war. The insurgents entered Valparaiso in triumph. President Balmaceda and his chief adherents hastened to take flight; and in a few days the Congressional forces occupied Santiago, the capital.

The Congressional "junta," as its executive body is called, at once proceeded to establish a provisional government, with Señor Jorge Montt at its head, and to apply to foreign powers for the official recognition of their government.

Whether the revolutionists, thus having won the power, will be able securely to establish themselves and set up a stable government the future alone can reveal to us.

For the Companion.

THE HUMMING-BIRD.

A flash of harmless lightning,
A mist of rainbow dyes
The burnished sunshine brightening,
From flower to flower he flies;
While wakes the nodding blossom,
But just too late to see
What lip hath touched her bosom
And drained her nectary.

JOHN B. TABB.

HISTORIC SITES.

The American people have not been wanting in a sense of the interest and real importance, to them and their descendants, of the spots which have become famous in their history. Travellers from abroad have noted with admiration the reverence paid by our people to such sites as Bunker Hill, Plymouth Rock, Mount Vernon, the fields of Lexington, Concord and Gettysburg, and the old hall in which the nation's independence was declared.

A determination to preserve public places indicates a genuine interest and patriotic feeling on the part of the people, because in this country we have no benevolent despotism which looks out in a paternal way for such memorials and expropriates for the benefit of the public beautiful or historic sites.

Bunker Hill monument was built and Mount Vernon was preserved by private and thoroughly patriotic effort.

However, the devolving of this peculiarly sacred duty upon private citizens has been shown to be attended with a considerable danger. It is a just saying that "Everybody's business is nobody's business." While many historic spots, much in the public eye, have been saved and guarded, many others have been neglected.

For instance, it has lately been announced that the site of Washington's camp at Valley Forge—where the dreadful winter of 1777-78 was passed, and where the real test of the courage, endurance and patriotism of the American people in the war of the Revolution was made—is to be subdivided and sold and, very likely, the traces of the heroic resistance made here forever obliterated.

The place where Washington prayed and suffered, and where his barefooted and coatless army left its footprints of blood upon the snow, brave against cold and starvation as it was against the enemy in the field, should surely be a sacred one in the estimation of the people; and the error of the omission sooner to preserve this place intact, and as nearly as possible as Washington left it, should be quickly repaired.

Every State in the Union, every county, has certain spots which are significant in the history of its own people. As the years go by all these spots become of greater interest and patriotic value. The time will come when the settlement of the colonies of the Atlantic slope and the pioneer days of the States of the Western plains and mountains will not seem so very far apart, but will blend together in historic interest.

It is the duty of the people of this generation to set apart these places, while there is yet opportunity to preserve them.

Historic sites, moreover, are not the only ones which should be protected from invasion and spoliation. The truest love of country is cultivated by a disposition to cherish and preserve spots remarkable for their natural beauty.

Places which command sublime or lovely views; valleys where nature has concentrated its wonders of vegetation; mountain forests which not only carry the visitor back to the days when such superb tree-growth covered all the land, but which still hold the key to the fruitfulness of the valleys and plains below; districts where singular and wonderful formations of rock and earth are found; all these have their part in the encouragement of patriotic sentiment and the formation of American character, as well as in their contribution to practical advantage.

As the land falls in larger and larger measure into the hands of private individuals whose use of it conduces to the general prosperity, there should still be found, in all parts of the country, many beautiful, ample and characteristic spots where the citizen who owns no land may always be at home, and where he may say, "This place is mine and my children's forever."

A noteworthy step toward the general preservation of such places has been the incorporation, in the State of Massachusetts, of a body of "Trustees of Public Reservations," who are empowered by law to acquire, hold and open to the public, free from taxation, beautiful and historic places and tracts of land within the Commonwealth.

Such a body of trustees as this might well exist in every State; and every such body would find abundant material for its effort. The good effect in the future of such a general movement throughout the country would be beyond all calculation.

KEEPING A SECRET.

As the letter-carrier closed the door of Miss Peck's boarding-school, a gust of excitement swept up the stairs and through the corridor devoted to the seniors. It pushed ajar the chamber doors and showed every girl opening a double-enveloped, card-laden invitation. A ripple of laughter came from one recipient, followed by the murmur:

"Sing praises! The strain of that secret is over."

"Alice," exclaimed a dozen others crowding into her room, "do you dare say you knew about this wedding and never told us? What! knew it two years ago? O heartless creature, and you never gave even a hint!"

"Of course not," spoke another. "Alice's besetting sin is knowing how to keep a secret. When I hear anything of interest I say: 'Oh, I know something so exciting; how it would astonish you; I only wish I could tell it; but it is a profound secret.'

"And then you all—Alice excepted—lay traps for me until you learn it in its length and breadth. Now Alice is not half so entertaining. Nobody ever suspects her of having a secret, so nobody tempts her to free her mind."

The person who reveals facts that have been entrusted to her in confidence, breaks all codes of honor. "Everything that is mine, even to my life," wrote Sir Philip Sidney, "is hers I love; but the secret of my friend is not mine."

There is no sin in secrecy unless secrecy be a mere cloak for sin. All of us tell to a chosen relative or friend many things which we do not want repeated. Often the telling of them to a friend relieves and assists us.

Some women are so sympathizing and so loyal that they are laden with confidences. They give a word of advice here, a bit of encouragement there; they smooth away difficulties, and as Browning says:

"God uses them to help each other so,
Lending their minds out."

Such a friend is a priceless treasure; but, alas! she is rare. Even King Midas, the richest person in the world, failed to find her. He had ass's ears, which he vainly tried to hide beneath his cap. At last he dug a hole in the ground and whispered into that hole, "King Midas has ass's ears." Then he covered up the hole. But a reed sprang up on that spot and whispered the secret all around.

William K. Vanderbilt once said to a friend, "Keep a secret to yourself, that's one." He held up his first finger. "Tell it to your mother, that's two." He held up a second finger. "Tell it to a third person, and that," holding up his three fingers, "is one hundred and eleven."

Beside the owner of a secret and the one to whom it is confided, is a third class of persons, the outsider; and her position is as delicate as that of either of the others. Too often she sniffs the secret in the air and applies the wedge of her curiosity, driving it in as far as the point will go. She plans leading questions, she contrives surprises, she lays traps for the unwary.

We all know her. We all dislike her. We all avoid her. We turn lovingly back to school-girl Alice, the friend who never pries into the secrets of others, and who faithfully respects those entrusted to her.

MAKING BOTH ENDS MEET.

When young people find themselves for the first time earning their own living, with no father to fall back upon, they are apt to be astonished at the way their money goes. It never seems enough. Everything costs a great deal more than they thought it would, and when they have to buy a three-dollar garment out of an eight-dollar weekly salary, it comes home to them with new force that three from eight leaves only five.

They had often done such sums at school on their slates, and it seemed quite natural; but now, when their board and washing cost five dollars and a half, it is something awful to find that their wages for a week will not quite pay for board and trousers, too.

Then for the first time black care settles down upon the young soul, and he wonders that, out of all the instructors of his childhood and youth, no one ever took the trouble to explain to him this fearful difficulty of making both ends meet. Perhaps he now remembers the cloud that hung over his father's brow, and the anxious look upon his mother's face, when business was dull, or work was slack, or unexpected expenses had to be borne.

He discovers gradually, if he has a fair share of

Digitized by Google

sense, and is destined to do well in life, that there is a partial cure for this malady. Economy is the cure; not wasting anything, taking good care of what we have, making the most of our chances, and saving the surplus of one week to make good the deficiency of another. This is a great discovery, provided we have the resolution to act accordingly.

Upon further observation of life, he perceives that this kind of fear, which tormented him so, is what keeps the honest part of mankind busy, attentive and careful. It sends the sailor out to the end of the yard-arm on a stormy night in January, and makes him willing to go there. It keeps the farmer's plow moving, the mechanic's hand working, the inventor's head cogitating, the lawyer's tongue wagging, and the merchant's ship sailing.

The wonder of it is that it not only keeps us all at work, but makes us glad to work, even though the work be in itself repulsive, because that corroding fear is a greater evil than the most disagreeable kind of work can be.

And so scarcely any living creature, bird, animal, fish, reptile or man, is quite free from this dread of coming short. It is to the movement of the world what the main-spring is to the watch; it keeps it going.

QUEEN AND PRIEST.

A short time ago, says the New York *Recorder*, the queen regent of Spain wrote to his holiness the pope asking him to grant a bishopric to a poor and humble priest, the son of a Tyrolese shepherd. The interest shown by the young sovereign in this peasant's son had its source in an incident which took place when Maria Christina was a little Austrian archduchess of five years.

She was one day roaming about the hills with her governess, when a violent storm came on, and they took shelter in a shepherd's hut which was near at hand. A little boy was amusing himself with some pebbles in a corner of the miserable dwelling when they entered.

Resenting the sudden intrusion, the boy marched up to the little archduchess, and gave her a smart blow on the back. Poor Maria Christina, offended and hurt by this extraordinary action, burst into a violent fit of weeping, and was pacified with the utmost difficulty.

A few years later, when her imperial highness partook of her first communion, she expressed the desire of paying for the dresses worn by some poor communicants, among whom happened to be the boy who had once struck her. She remembered him at once, and hearing that he wished to become a priest she undertook to defray all the expenses of his education.

Ever since that day the queen has been a true friend to the poor priest, and she wrote to him before asking from the pope the bishopric above mentioned, saying:

"I want you to become a bishop because you know so well how to *crossmare*."

In this word, which means the laying on of hands or confirmation, she made a sly allusion to the time when, as a boy, he laid hands violently upon her.

WHY HE COULDN'T.

A certain literary German whose manner of speaking was extremely deliberate, and who disapproved of impetuosity of any sort under any circumstances, had an amusing experience in a restaurant one day.

He was a well-known figure among the patrons of this particular restaurant, as he seldom dined anywhere else, and he generally was served by a waiter who had become used to his way of speaking; but one day a new waiter took his order, and brought his soup.

"I cannot eat this soup," said the gentleman, slowly, not looking up from his plate, after he had summoned the waiter for the second time. The man seized the offending dish before the customer could finish the sentence, and vanished with it. He reappeared in a moment with another supply of the same soup, which he placed before the gentleman, and then stood regarding him with an anxious face, wondering what could be the reason the soup remained untasted.

"I cannot eat this soup," again slowly remarked the literary man.

"Why not, sir? What is the matter?" stammered the unhappy waiter, who had been told he was serving an important person.

"I cannot eat this soup," said the literary genius calmly for the third time, "because I have not as yet been provided with a spoon." And looking up to catch the expression of relief on the waiter's face, he indulged in the low chuckle which was the only expression of amusement to which he ever gave way.

SCIENCE ON THE FARM.

Many farmers laugh at the notion of applying the principles of chemistry on the farm, calling such an application of science "fooling" and humbug. Yet farmers see their sons grow up and drift away because, having been educated in the public schools, the spirit of a scientific and progressive age has possessed them, and they seek elsewhere than upon an old-fashioned farm, scope for the education which they have already gained, and for the wider education which they crave.

Now there is no field which offers more ample scope for an educated and scientific mind than a good farm. The old-fashioned farmer says, "What do I want to know about chemistry? It's enough if I manure the ground and plant my seed; nature will take care of the rest."

But the application of manure is "chemistry;" and if the farmer or his boy understands the groundwork of that science, he knows what kind of manure is good for a certain field and what kind is good for another field; and his knowledge may make for him or save for him many dollars in a single year.

A knowledge of chemistry will enable him to save the valuable properties of his manures for the soil, instead of letting precisely those properties be evaporated and wasted, as they are in the case of most natural manures as now treated on the farms of this country.

But the most important function of science on the farm, after all, at the present time, is not the immediate material advantage which it may bring to the farmer, but the means which it will supply of interesting the young, of engaging their active and eager intelligence, and keeping them from places where they will be very much worse off.

Give a boy a fundamental knowledge of the principles of chemistry, and the processes and operations of the farm become at once wonderfully interesting to him.

When he has learned that the part of a plant or vegetable which it gets from the ground is found in its ashes after it is burned, he will be interested at once in ascertaining what those mineral parts are, and if they are supplied in the soil in which the plant grows.

Having found potash in considerable quantities in the potato-vine, phosphates and soda in Indian corn, phosphate of lime in wheat, and so on, he will be interested to know whether the food that is supplied to the plants contains these elements.

In precisely the same way, he will be interested to know what elements the food of the animals should contain to make them thrifty.

Once entered upon the path of this kind of knowledge, the farm life ceases to be mere drudgery. It is invested at every step with new interest, and becomes in a high degree a life worthy to be lived by an educated and thinking man.

DOUBLE NATIONALITY.

History supplies a great many cases in which men have changed their nationality very suddenly in order to serve personal purposes, but no case is recorded, perhaps, where one has changed so often as a certain railroad conductor who serves on a line connecting France and Germany. This functionary changes his nationality twice a day.

An American traveller who was riding on the train between Basle and Belfort relates that, shortly after passing out of Swiss into German territory, he had occasion to ask the *chef* of the train some question about the journey, and put the inquiry in French.

"*Nein, nein!*" said the conductor. "*Sprechen Sie Deutsch?*" (No, no; speak German.)

The American asked his question in the best German he could muster, and received an answer in that language.

Before long the train had traversed the narrow belt of German territory and entered France. The traveller again had occasion to make an inquiry, and this time addressed the same conductor in German.

"*Monsieur,*" said the chief of the train, politely, "*je ne parle que français.*" (I speak nothing but French.)

As the man had to retrace his steps, and become a German again before he went to bed, his changes, it is plain, came much oftener than those of the famous Vicar of Bray, who changed his religion half a dozen times under as many governments. "Because," as he explained, "he was resolved, no matter who was king, to live and die the Vicar of Bray."

SAD POETS.

The editors of periodicals at the present time have undoubtedly the disagreeable task of reading much poetry which is not only "unavailable," but utterly without merit; still, as the taste of the majority of readers in this generation is for that which is cheerful in poetry as well as in prose, it is not likely that any editor to-day would have such a depressing list of rejected contributions as the one printed in a magazine which bears a date over fifty years ago.

"My Wife's Grave," "Midnight," "Lament over the Grave of a Wife," "The Poet's Doom," "Reflections," "On Hearing the Eulogy of a New Friend," "Vengeance," "Let Me Weep," "The Poetry of Tears," and "Alone." Such are the titles of these unavailable poems.

It appears that the articles accepted were of much the same character, although they probably displayed marks of genius which induced the afflicted editor to accept them: "Autumn Musings," "The Last Song Bird," "The Mourner." "The Bereaved," "Shadows of the Past," "Solitude," and "Passing Away."

If any poems of a more cheerful order were received, they were certainly not considered worthy of any notice in that number of the magazine.

HAPPY IGNORANCE.

There was once a school teacher who received from her pupils a most elaborate jewel casket, of glass and silver. Not long afterward she announced, in family conclave, "That thing is horrid, but we really must use it." "We?" queried her mother. "Why, how many of us are expected to make use of it?" "As many as possible, I should say," was the innocent reply. "Isn't it a pickle jar?"

"*Signor Console*, I pray you tell me what this is for?" exclaimed an Italian shopkeeper, as he entered the American Consul's office, followed by a boy carrying a patent clothes-wringer. "I have had it in my establishment nearly a year, and I should so like to know what it is for!"

"Why, that's for drying clothes."

"Really, *Signor?* Most truly?"

"What did you think it was?"

A shrug of the shoulders served as the man's only response, but it afterward appeared that he had been trying to sell it to artists, as a great improvement in the art of photography.

TOO MANY LANGUAGES.

There is undoubtedly a good deal of advantage in learning foreign tongues from a nurse in childhood, but it is easily possible to do this at the expense of English. If the child is not to know its mother tongue there is not a great deal of advantage in having a smattering of a foreign one.

On the piazza of a summer hotel were observed not long since a group of over-dressed children who were about setting out for a walk under the care of a governess who was unmistakably French.

"Maudie," a small boy of the party said to his si-ter, "aint the Fräulein a goin' to come?"

"*Nona*," the girl answered, "*elle est mein gut*, and I be awful glad she aint well this morning."

These children had a French and a German governess at the same time, but neither of them was bothered about so unimportant a matter as English.

Throat Troubles commence with a Cough, Cold, or Sore Throat. "*Brown's Bronchial Troches*" give immediate relief. Sold only in boxes. 25 cents. [*Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. The Best Shoe in all Respects

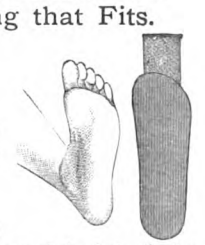
For Gentlemen is H. T. Marshall's Pat. Lace Congress.

It allows all the freedom of a lace shoe, without the trouble of daily lacing and unlacing, and prevents undue tension of the elastic. It has all the merits of both congress and lace, without their faults. It is made of the best material, in the best manner. Is nice fitting, stylish and serviceable, and costs **$3.00** to **$7.00** a pair. An indispensable luxury for

FAT MEN.

If you cannot get these shoes to suit you in shape or quality, take no other, but write to

H. T. MARSHALL, Brockton, Mass.,
Manufacturer of Men's, Boys' and Youths' Fine Shoes
And the Best Lawn Tennis Shoe Made
FOR LADIES' AND GENTS' WEAR.



At Wholesale or Retail at 160 Summer St., Boston.

N. B. I have licensed several firms to make this shoe, but all Congress shoes adjusted by lacings must have woven in front strap of each shoe "Marshall's Pat., Pat'd May 13, 1884," and any without this stamp are infringements, rendering owners liable for damages.

Waukenhose

A Stocking that Fits.

The BIG TOE Stays Inside.

Made the exact shape of the foot, allowing the toes to retain their natural positions.

A stocking thus shaped is not only **more comfortable** but **much more durable.** The big toe, having room enough, stays inside.

Ingrowing nails, corns, bunions, etc., due to wearing the old style stocking, are prevented and relieved by **Waukenhose.**

Sold by Dealers, or By Mail.

Men's: 4 pairs medium or heavy cotton, $1.00; 3 pairs fine cotton, $1.00; 2 pairs soft Lisle, merino, worsted or wool, $1.00.
Women's: We have added this season four numbers of women's Waukenhose. **Extra quality.** Prices, black cotton, 50c. and 65c.; Balbriggan, 60c.; Cashmere, $1.00.

Mention size shoe, and whether lady's or gentleman's.
WAUKENHOSE COMPANY, 76 Chauncy Street, Boston, Mass.

VAN HOUTEN'S COCOA

"Best & Goes Farthest."

"*Cap'en Cuttle*
Knows a good thing,
I tell ye; and when
He hails a better
Drink than VAN HOUTEN'S COCOA
He'll make a note
On it."

CAP'EN CUTTLE.

PERFECTLY PURE.

VAN HOUTEN'S PATENT PROCESS increases by 50 PER CENT. the solubility of the flesh-forming elements, making of the cocoa bean an *easily* digested, delicious, nourishing and stimulating drink, readily assimilated even by the most delicate.

Ask your grocer for VAN HOUTEN'S and take no substitute. ☞ If not obtainable enclose 25cts. to either VAN HOUTEN & ZOON, 106 Reade Street, New York, or 45 Wabash Ave., Chicago, and a can, containing enough for 35 to 40 cups will be mailed. *Mention this publication.* Prepared only by the inventors VAN HOUTEN & ZOON, Weesp, Holland.

The Standard Cocoa of the World.

a3.

Five Questions.

1. Would you like to take a photograph?
2. Have you ever heard of the Harvard Camera?
3. Have you ever examined our beautiful collection of photographs taken with it?
4. Have you ever sent for one of these sample photographs?
5. If not, do you want to be CONVINCED that the Harvard Camera is a real gem, and is capable of taking photographs of superior merit and beauty?

Then send us a two-cent stamp at once and we will mail you a sample photograph. We desire this privilege, feeling sure it will be the most convincing argument which we can advance for proving that the Harvard Camera is not a toy.

Those who wish to order a Harvard Camera and Complete Outfit without further discussion, may remit $1.75, and the Outfit will be sent by express, the receiver to pay the transportation charges. If it is to be sent by mail, enclose 50 cents additional.

FOOT-BALL AT PRINCETON.

By the Captain of the Princeton Eleven of '89.

Most of the articles on foot-ball have been devoted to explanation of the game or to discussion as to the best way to play it. I shall endeavor in this paper to dwell upon incidents which may give one some idea of foot-ball life at Princeton. It is hardly necessary to say that foot-ball is the leading game at Princeton, and that the interest taken in it is almost unbounded.

The game has become almost a necessary part of the life of the college; and every student seems to consider it a duty, even if he does not play the game, to be well versed in it.

As soon as the college opens in the autumn, the campus swarms with candidates for foot-ball honors. Almost any hour of the day one may hear the heavy thud of the ball as it is kicked to and fro, or may see men eagerly passing it from one to another. As this is the sight that greets the Freshman on his entrance to college life, it is not to be wondered at that a desire is bred in him to get out and try his hand.

Before many days are over, a large number of Freshmen are engaging in the sport. I remember well our first game in my Freshman year; indeed, I do not think I shall ever forget it. We had been in college only three or four days when, one morning, on going to chapel, we saw posted on the bulletin board a notice requesting all Freshmen who desired to play foot-ball to be upon the 'Varsity grounds at five o'clock, dressed for play.

At the appointed hour some twenty-four students presented themselves, all "eager for the fray." A motley crowd we were, too, and a comical figure we must have cut with our varied and peculiar costumes.

There were men of all sizes, from five feet upwards. The crowd included all those who had won glory at their respective preparatory schools, and were only waiting for an opportunity to make a "tear;" several who had had only a limited experience at the game; and some few who had never even seen a foot-ball.

But we twenty-four players were not the only ones present. Ranged in line along the field were many gentlemen of the Sophomore class, who, being kind-hearted persons, and taking a great interest in our welfare, had come down to see that we did not hurt ourselves, and to encourage us by their presence and applause.

These gentlemen, before and during the game, amused themselves by inventing appropriate names and epithets for the promising athletes before them.

After a little delay two teams were chosen, and we were ready to begin. The largest men were placed in the centre, the smaller ones on the end, the smallest of all as quarter-backs, and those of medium size as half and full-backs.

The ball was then put in play. Immediately a scrimmage ensued, with a confusion which it is impossible to depict. It is almost a mystery how all the players got out alive. But no one was hurt, though I have no doubt that numerous bruises were given and received.

Of course each one imagined that he knew more than his neighbor, and every one directed every one else. Every time a run was gained or a tackle made, our enthusiastic supporters of the Sophomore class signified their approval by long and vociferous cheers.

Once during the game I gained their plaudits. One of the largest men on the other side was running with the ball and making straight for me. "It is now or never," I said to myself. Bracing for the struggle I made a heroic leap for his neck. We both fell in a heap and the Sophomores cheered. I thought that I had performed a brilliant feat, and considered myself the hero of the hour; whereas the truth was that I had made a miserable tackle, and if the other man had had any force or skill I should have landed on my head.

The most amusing thing in the whole game, however, occurred during the latter part of it. The full-back on one of the teams was green at the game, and had been told to stand behind all the other men of his side and guard his goal. He followed out his instructions to the letter. At the beginning of the game he took a position between the goal posts, and never moved from the spot. At last the generous minded Sophomores, seeing him standing there, and pretending to suppose that he must be worn out by his terrific exertions, took compassion on him and sent him out a chair.

The poor fellow was so confused that he accepted the chair with thanks, and, sitting down on it, remained seated till the game was over, regardless of the sarcastic expressions which were hurled at him by the admiring audience.

When this game was over, each one thought that he was a promising player and would surely "strike the 'Varsity" in his Freshman year.

After one or two games among themselves the Freshmen are enabled to form some estimate of their material, and from it the best players are selected to constitute the Freshman team, subject to change. The team elects its captain, and a series of games is begun between the Freshmen and Sophomores. These games, which are played every afternoon, are interesting because of the rivalry between the two classes, and also because they are a great factor in training men for the 'Varsity, or regular college eleven.

The contests between Sophomores and Freshmen are generally pretty even and exciting. The Sophomores, as a rule, win the first games, and the Freshmen the last ones, when they have become more experienced. However, the Sophomores, when they see that the Freshmen are improving and becoming too strong for them, often trump up excuses for discontinuing the games.

Great importance is attached to developing a good Freshman team, for the strength of the 'Varsity for the next year is largely dependent upon the material thus brought out.

In addition to the regular eleven, numerous "scrub" elevens are organized among the classes and eating clubs. Consequently what are called "horse" games are of every-day occurrence, and give great pleasure both to the participants and the observers. These teams also help to develop material.

Meanwhile the 'Varsity and second eleven or "scrub," as it is usually called, are playing daily. Indeed, they lose no time in getting down to business. As soon as the men return to college in the autumn, work begins. It consists, for a day or two, in running anywhere from a quarter of a mile to a mile, in kicking, passing and falling on the ball; just enough exercise to get the stiffness out of the men, and to accustom them to handling the ball.

A large number of candidates of all characters and descriptions always present themselves at the start. It is plain at a glance that some of them will never amount to anything. Others look as if they might be made into good players with a proper amount of coaching, while upon others the word "foot-ball player" is, so to speak, stamped. Soon the poor men are weeded out, and only the best are left.

In a few days active play begins. We go at it easily at first, playing longer and longer each day, so as to harden the muscles and sinews of the men by degrees.

I suppose our first game lasts about ten minutes, the second twelve or fifteen, and so on. In all these practice games the whole college takes the deepest interest, and from the beginning of the season speculates about Princeton's chances for winning the championship. Some years matters look bright from the start. Nearly all the old men are back; there are very few places to fill and plenty of good material to choose from. The college, of course, is jubilant, and already, in the minds of many, the championship pennant floats for Princeton. The only question is, how badly Yale will be beaten.

A "Scrub" Game.

Other seasons do not open so auspiciously. Nearly all the old players have left college; there are many vacancies in the team, and the men to draw from are not particularly numerous or efficient. Things appear decidedly "blue," and the championship pennant is not even in sight. The "pessimists" say that the college is going to the dogs as far as foot-ball is concerned, while even the more sanguine begin to wonder seriously if Princeton will be able to beat Wesleyan and the University of Pennsylvania. Such are the ways of college men.

But it is impossible to predict foot-ball results so long in advance. Errors of judgment are made very frequently. For instance, the season of 1888 opened most favorably for Princeton, and it seemed as if she would be a sure winner. Nevertheless, Yale won the championship.

On the other hand Princeton's prospects could not have been worse than they were the beginning of the autumn of 1889; yet Yale was vanquished and Princeton took the lead.

But no matter what the prospects are, the practice games between the 'Varsity and the "scrub" go on every day, and the college men are always down in full force to urge on the teams.

The games are generally lively and exciting, and good running, brilliant tackling and accurate kicking are loudly applauded. The men play with snap and dash, and put their whole energy into the work. There is something in the sport that carries a man away, and makes him feel that he is playing the finest game in the world.

Amusing incidents are of frequent occurrence, and there is nothing the men like better than to get together and relate them. A rather funny one recurs to me now. It happened in one of the minor games a year or two ago. One of the rushers on the opposing eleven persisted in getting "off side," much to the disgust of the Princeton man opposite him. The Princeton player politely requested the gentleman several times to keep "on side," but without any result.

Finally he repeated once more, "You are off side, sir." The man on the other team replied, "Not to my knowledge." This was too much for the Princeton player. Putting himself into a somewhat threatening attitude he called out, "I will bring it to your knowledge, sir." This had the desired effect.

The treatment which a foot-ball player receives at Princeton is of a right royal kind. The numerous trips that are taken are extremely enjoyable, and some of the friendships formed among the players are of the firmest and most lasting character. If, at the end of the season, victory crowns their efforts, there are no persons in the world so happy as the foot-ball men.

Pleasant as are all the seasons at Princeton, no time of the year is so loved by the college at large as the two short months devoted to foot-ball.

EDGAR A. POE.

For the Companion.

UNDER STRONG TEMPTATION.

"Do you think, young man," said Mr. Carmichael, a Boston capitalist in Denver, "that you can tell a gold mine from a hole in the ground?"

The question was asked in a small office room in a new block, upon the door of which a tin sign informed the public, in bright gilt letters, that one Homan F. Everett, Chemist, Metallurgist and Assayer, did business there. The person to whom the question was addressed, was this hopeful and ambitious young expert.

"Well, yes, sir, I think I can tell you whether quartz has gold in it, and exactly how much to the ton," he replied, smiling. "Whether or not a mine will prove profitable and a good investment for capital, is a more difficult matter. I make a study of such matters, however, and should be very glad to examine a mine for you."

The older man was watching him keenly as he spoke. As he did so, he made up his mind that Homan was a good, clear-looking youth of honest appearance, but probably lacking in experience and inclined to talk a little too much like a book.

In this opinion he was not far from wrong. Homan Everett had graduated from the Institute of Technology less than a year before, and had been in the West but six months. He had received thorough instruction in the principles and processes of metallurgy, and was competent to assay ores; but in practical knowledge of the Rocky Mountain region, its mines and particularly its mine discoverers and mine boomers, he was as yet little versed.

"Still, a young nose is sometimes keener than an old one," the elder man thought to himself, as he listened absently to Homan's reply. "He might scent something which the other fellows didn't, and if the sharps bought him over, I could detect it in his face. Those other experts are too old and case-hardened for me. I shall send him up there."

A bargain was concluded. Homan was to receive twenty dollars a day for his services and travelling expenses.

He set off by train for Salt Lake City that evening, and thence journeyed northward by stage across the country into Montana. He entered into the spirit of his mission with enthusiasm, feeling pride in the fact that he was about to test his skill in an actual examination of a valuable property; and that on his professional report, for or against, a hundred thousand dollars depended.

This first year was an anxious one with Homan. He was still six hundred dollars in debt for his educational expenses, and as yet he had barely been able to support himself. He greatly desired to win reputation and money, and he looked forward ardently to the day when he should receive for his services such fees as are taken by celebrated mining experts.

The mine was situated in the side of a rugged mountain. A rough trail led up to it from a rude, new little "city" in the valley, two miles distant.

This "city" was at the end of a new stage road. It consisted of eighteen or twenty slab shanties, seven of which were drinking-saloons. It was one of those "lively places," in fact, where gambling, drinking and shooting were the favorite amusements of the population. There was no hotel, but Homan secured lodgings in the loft of a saloon.

He found Messrs. Warder and Rundlett, the proprietors of the mine, at another saloon, engaged in playing at cards. He had a letter of introduction to them from Mr. Carmichael. They were both men of very aggressive manners.

"Mr. Carmichael applied to me in Denver and sent me here to examine your mine," said Homan, pleasantly.

"Oh, of course," said Warder, after a glance at his partner, "that's all right. We are quite willing that he should examine it as much as he likes, and send us all the experts he wants to. The more the better. Our mine will stand any test they can put it to. The solid, gold-bearing quartz is right there, every time."

Homan was aware that both men were regarding him with keen, hard scrutiny. But they soon waxed very affable. They had decided that they had to deal with a very green young man, who could be easily imposed upon with fair words.

"When will you take a look at the mine, professor?" Rundlett inquired, and after that both he and Warder addressed Homan by that title, with a show of great respect. The young man was not affected by this bit of flattery; but he offered no objection to it.

They went to the mine together next morning. A shaft had been sunk to a depth of twenty-two feet, and a transverse tunnel carried off laterally, from the foot of it, forty or fifty feet into the solid quartzose rock of the mountain. The blasting had been done with gunpowder, and the rock on all sides was blackened; yet particles of gold sparkled through the grime.

Homan took the sledge and broke off "specimens" from several faces of the excavation. These samples were carried in a sack down to his room at the saloon. He had brought a portable assay kit, and tested the specimens the same afternoon.

Every fragment of the rock contained gold. As nearly as he could determine from the assaying of so small a weight of samples, the pay rock would yield from eight to ten hundred dollars to the ton.

"How did you find it, professor?" Rundlett asked him later in the day.

"Rich," replied Homan, briefly. "I will take more samples to-morrow."

"Oh, well," replied Rundlett, after a look which seemed to Homan a little like vexation, "take as many as you like. We will go up with you again in the morning."

They went to the mine again and Homan broke out another sackful of samples. Wherever he applied the sledge, the broken quartz glistened with gold specks. One circumstance only he noted as peculiar. The places where he had broken out specimens the day before, and which had been left clean and fresh, where the pieces of rock broke off, were now blackened with powder like the surrounding surfaces.

He took his samples down to the "city" and made a fresh assay.

Warder dropped in to note the result.

"It assays well," said Homan. "But to-morrow I want to sink the shaft a few feet deeper, and see how samples run at that additional depth."

Warder seemed displeased for an instant, but immediately said, "All right, professor. You shall have every facility for your examination that we can give you. It is our interest as well as yours and Mr. Carmichael's. To-morrow morning we will put three miners at your disposal."

He invited Homan to meet him and his partner at a neighboring saloon that evening, "for a social glass;" but the young assayer assured him that he must continue work on the samples. He kept his room, and at nine o'clock that evening he extinguished his lamp as if he had retired. But just after midnight he went out quietly, and walked through the unlighted street and up the trail to the mine, quite unobserved.

An idea had occurred to him—an idea of the nature of a strong suspicion.

It was a dismal and a very unpleasant walk, for the path was excessively rough. He made his way slowly up to the mine, and, after watching for some moments at a little distance, cautiously approached the shaft-head.

As he did so he heard a muffled report, like that of a blast, or a shot-gun, quickly followed by a second.

He listened attentively, and then bent down and applied his eye to a crack between the planks of the trap-door which closed the entrance to the shaft. He thought he saw the glimmer of a light below. Powder smoke was coming up through the crack, and his first thought was that Warder and Rundlett were sinking the shaft deeper in advance of their agreement.

Presently he found a wider chink between the planks, and as the smoke cleared, he was able to see what was taking place below quite plainly.

Both the proprietors stood in the tunnel a few steps from the bottom of the shaft; but instead of blasting tools, they had a double-barrelled, muzzle-loading shot-gun which they were loading. A charge of gunpowder was rammed down; but instead of shot they poured into the gun-barrels a gray but sparkling powder from a vial which Homan supposed contained gold dust.

Rundlett then capped the piece, and made ready to fire, saying to Warder, "Now find two other places where that young fool knocked off samples. Plague take him! He tried to skin the whole mine. It'll cost us a hundred dollars in dust to fix it up after him."

"Here's a spot," said Warder, holding a lantern to the wall, "and here's another."

"Stand aside," muttered Rundlett. Thereupon he discharged first one barrel and then another at the fresh spots on the rock.

"Well, well, well!" thought Homan; "here's a fine bit of rascality!"

Till that hour he had never learned that a gun charged with mixed drill dust and gold dust, and fired at point-blank range, will cause the particles of gold to penetrate a certain distance into the rock.

The partners went on with their odd gunning for fifteen or twenty minutes. They then came back to the foot of the shaft. Thinking that they were coming out, Homan was on the point of decamping, when he saw Warder take up an iron kettle.

"Have you got those bottles?" he said.

Rundlett produced two quart bottles from a basket which had previously been set aside. The contents of the two were mixed in the kettle, and then Warder emptied into it gold dust from three other vials.

"There goes another cool hundred into the pot," he muttered, with something much like a groan.

"Well, there's too much at stake to practise economy now!" said Rundlett. "The question is, Where will that smart young chap take a notion to sink his shaft?"

"Probably about here," said Warder, indicating a point some ten feet within the transverse excavation. The place was out of sight from where Homan lay; but he could hear the sound of the drilling of a hole, and afterward of another and another, for the space of an hour, or more. Then a fire was kindled, and, as Homan had reason to

Digitized by Google

believe, the liquid was boiled or heated. In the interest of his profession he would have liked to penetrate their methods of "doctoring" mines, but there was no way in which he could obtain a view of their operations; and at last, at about three o'clock, he returned cautiously to his room in the loft of the saloon.

He had witnessed quite enough to enable him to form an opinion as to the value of the mine.

Homan slept rather late in the morning, and while he was taking his breakfast, Rundlett came in to inform him that the miners had come to go to their work at the shaft.

His most prudent course would have been to proceed with the examination of the mine, dropping no hint of what he had learned, and reporting his discoveries only to Mr. Carmichael in Denver. But he desired to let the men know that they could not deceive him. He rose quietly from the table and said: "I have decided not to recommend the purchase of your mine to Mr. Carmichael."

"Look here! Do you think you can fool with us?" shouted Rundlett, losing his temper.

"Now," replied Homan, without changing his tone, "you had better keep quiet. I have had suspicions of you from the first. I was at your mine last night, and saw what was going on there! Is that explicit enough?"

The sharper started. Homan saw that he paled a little. The two men stood looking each other fully in the face, and strong as the young assayer felt in his advantage, the wicked gleam in Rundlett's eye made him wince a little. Never in his life had he encountered a glance of such thorough malignity.

But without another word Rundlett went out abruptly.

"I'll pack up and be off at once," thought Homan. "I've no need to stay longer. I can take the morning stage-coach out."

He rolled up a few samples of the quartz which had been "salted," or rather peppered with gold dust, to take away as curiosities, and then proceeded to gather up his kit of tools and instruments. His chemicals had to be packed carefully, and about ten minutes passed, perhaps, when some one knocked at his door.

It was Warder.

"Just a word with you in private, professor," he said, in a low tone, as he shut the door behind him. "Of course I know the game is up; but just what particular good will it do you to denounce our mine? Have you thought of that? What's this Carmichael to you? A capitalist—a man bloated with wealth wrung from the labor of poor men. He is out West here buying mines, to unload the money that he don't know what else to do with. It will not hurt him to bleed a little.

"Now my partner and I are poor men. We've had hard luck. We haven't two hundred dollars to our names. Now see here, let's talk business. Carmichael means to have this mine. You have made two assays of samples, taken from all over it, and find them rich. Two old experts have been here before you and reported the same. They saw nothing wrong. It would not hurt your reputation a bit to go back to Denver and report just what you found in the samples.

"Take samples along with you and assay them under Carmichael's own eyes. He'll buy the mine. Do that and say nothing of what you saw last night and we will give you twenty-five thousand dollars of the purchase money! I shall come to Denver myself to get it, and you shall have it sure and no fooling.

"You may set a detective to watch me there," he added. "If I fail ye, you can have me arrested before I get out of town."

Of course Homan ought not to have hesitated a moment. Yet in his poverty, his debt and his great desire to make a start, this sudden opportunity to obtain a large sum of money shook him as nothing had ever done.

He felt his breath come quickly. For an instant his thoughts were in a whirl. Then his sense of integrity and honor overcame the evil prompting.

Warder watched him keenly.

"You hold the game; we acknowledge it," he said. "We will make it thirty-five thousand!"

Homan turned hurriedly to his packing, and took up a small iron mortar and pestle used in powdering quartz, to put them into his sack. Then he stopped short with the implements still in his hands.

"Save yourself all this trouble, Mr. Warder," he replied, firmly. "I am not that kind of man."

The sharper's face hardened suddenly.

"You won't then!" he muttered. "I'm sorry. But —"

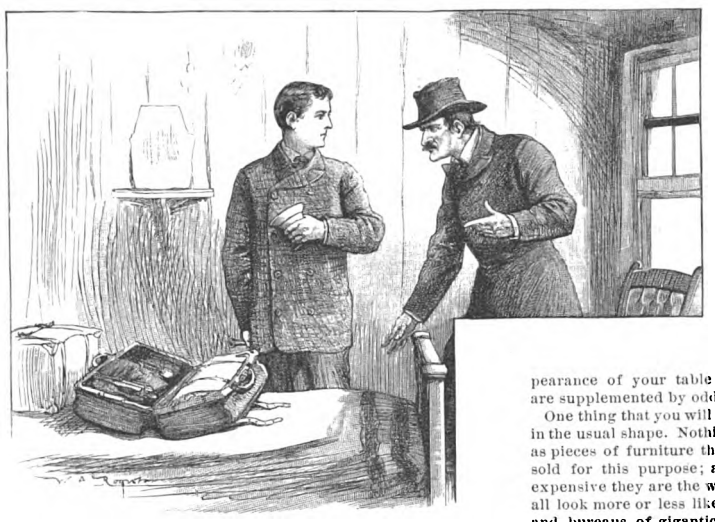
With a single quick movement of his hand, he drew a revolver and fired. The young assayer saw the motion, and instinctively raised his hand, and the bullet, aimed at his head, struck the mortar and spun aside. The mortar itself flew out of his numbed hand from the force of the blow.

Half-blinded by the flash and smoke, but obeying the impulse of self-defence, Homan sprang upon his assailant and struck with the pestle. Warder's pistol was discharged again as he did so; but with another blow Homan beat it from his hand.

They clinched, fell, and leaped to their feet again, both striking wildly; and when, a moment later, the door was burst open by the saloon-keeper and four or five others who had heard the shots, Homan was aware that Warder lay insensible at his feet, from a blow on the head, and that he was standing over him with the pestle in his hand, bleeding from a slight wound across his wrist.

Homan found that the community—honest at heart, in spite of its vicious exterior—was on his side, and he left the place the same day with his property.

A fortnight later, in Denver, he notified Mr. Carmichael that his report of the mine was ready.



"Well, my boy, what did you find?" exclaimed the latter, as he bustled in next morning.

Homan showed him the samples which he had brought home, and then exhibited the results of the two assays which he had made at the mine.

"Well, that looks pretty rich," said the capitalist. "So you find it all right, every way, and recommend it?"

"Scarcely," replied Homan, quietly, but smiling a little. "I went to the mine between two days and found the owners busy shooting gold dust into the rock with a shot-gun. They also appeared to be pickling the mine with a kind of golden liquid."

The capitalist gave a low whistle, looked a little foolish, and sat for some time without speaking.

"I am not that kind of man."

"When they found that I had detected their trick," Homan continued, "they tried to shoot me."

He had too much pride to speak of the offer which he had received from Warder to divide the purchase money.

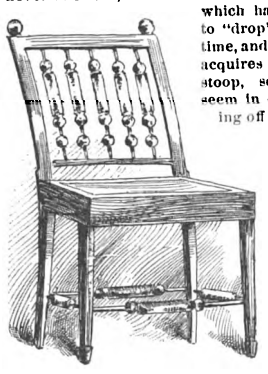
Mr. Carmichael settled with the young assayer, paying him exactly the fees agreed upon.

Two days afterwards a customer called to engage his services, to whom he had been recommended by Mr. Carmichael; and during the next three or four weeks, several others called. Homan ascertained that the capitalist was speaking a significant word for him frequently, to men who had large mining interests in the West. In consequence he soon found himself with all the engagements that he could meet. Very large fees came with some of these engagements, and within a year he was doing so good a business, and held the confidence of so many men of large affairs, that he could but feel thankful that he had possessed the strength of character to resist that sudden, strong temptation up in Montana, to play the knave.

C. A. STEPHENS.

For the Companion.

MAKING A HOME.



FOURTH PAPER.

Dining-rooms, China and Glass.

Some decorators consider the dining-room the chief feature of the house, and spend most of their effort upon it; but if you have thoroughly accepted the idea that no one room should outshine the others, you will not make this mistake.

If a dining-room is cheerful with well chosen, harmonious colors, and if you can give it a bay-window filled with cozy, cushioned seats and with flowers, you have done about all you can for the room itself. What remains to be done is chiefly in furniture.

You will need a table, of course, and pray do not get a narrow one. Four feet is the very least width that is desirable, and four feet, six or nine inches is much better. The ends should be square, never rounded, in order to avoid the "drop-leaf," which has been known to "drop" at the wrong time, and which with age acquires a permanent stoop, so that dishes seem in danger of sliding off the ends of the table. A good extension table is so expensive that while the family is small and entertainments few and limited, there is really no need of one, convenient as it is. A carpenter will make you a table four feet, nine inches square, of cheap whitewood, for a comparatively trifling sum, say eight dollars, and you can seat eight people at it.

The top of this may be left white, but the legs are to be stained walnut or enamelled black, and these should be placed so far under that they do not interfere with the comfort of guests. This is an important matter, never to be neglected in any table; for what is more disagreeable than to sit "by a leg" which you must embrace between your knees, or around which you must twist in such a way as to turn your back half-way upon your neighbor?

Dining-room chairs are an expensive item, too, and I know of no make-shift which will leave the room congruous. The chairs should have a solid seat—not too high, and yet not low enough to bring you below the level of the table. The back must not be perfectly straight, for sometimes it is a relief to be able to rest the shoulder-blades against it; nor should it be so open as to put you in danger of slipping through, nor so elaborately carved that you are made uncomfortable by projections.

A dining-chair, good in form, with sufficient decoration, may be found in most large cities, in oak or walnut with caned seat, for four dollars, and in mahogany for eight or ten dollars. To either of these prices two dollars will be added if the seat is upholstered in leather.

It was long customary to use a chair for each end unlike those at the sides, as particularly suggestive of state and dignity; but this is not necessary, and it is in better taste, as well as more convenient, to have all alike.

With your table for eight persons you should have eight chairs; for although six of them may spend most of their time against the wall, on the few occasions when you need them, the appearance of your table is spoiled if the chairs are supplemented by odd ones from other rooms.

One thing that you will never want is a sideboard in the usual shape. Nothing could be more hideous as pieces of furniture than most of the structures sold for this purpose; and the more ornate and expensive they are the worse they become. They all look more or less like combination washstands and bureaus of gigantic size, which have found their way to the dining-room.

Instead of these why not use the one I illustrate? Any cabinet-maker or large furniture store will make it for thirty-five dollars for polished walnut, or less for whitewood stained or enamelled. It is after an English design, and should be enamelled in a color to suit the wood-work of the room; but it looks best in black with brass hinges and ornaments.

Still another simple convenience for the dining-room is a box three feet square and three feet high. In this two shelves are fitted, and one side is arranged as a door to open and shut on brass ornamental hinges. Each side of the box is panelled with Japanese leather paper, around which a margin of three inches of the wood is allowed to show.

This margin is enamelled to suit the furniture or the paint of the room. The leather panels are outlined by brass-headed nails. Brass key-holes and knobs are added to the door, and when the box is neatly lined with paper, a most convenient sideboard is ready for one corner of your room.

Jenny must make up her mind to give her personal care to her china and glass, if she wishes to keep the pretty gifts that came on the wedding day. No maid that ever landed on these shores knows the value of the cups and plates which she handles so recklessly, and can have no conception what you suffer when she appears with a piece of your Copeland cup or Stokes-Crescent plate in each hand. So take care of these yourself, and make it your task to wash the dainty things after each service, the maid bringing you a wooden tub filled with *hot*—not warm—water, soap, a long-handled mop, fresh linen towels and a piece of clean chamois skin for the silver.

With these precautions, I do not see why you may not have and use all the fine china you can afford, always remembering to keep these expenses in proportion to the display throughout the house.

Once white ware was the only kind thought economical, since pieces, when broken, could be replaced without difficulty and without undue expense.

But white china looks so cold that stern necessity is the only excuse for its use; and as the decorated sets are now so cheap, this excuse is not so general.

English sets of one hundred and twenty pieces can be found for twenty dollars, and there are equally good American wares.

If you are frightened by the cry that you cannot match the English ware, why not give up a "set" here as elsewhere, and select your dishes with such variety among them that a few more odd pieces will make no difference? The main consideration should be to choose each article of good shape, good color and graceful design.

You will need of course a basis of regularity on which to build, and you cannot do better than select this in good French china, with decorations of buff bands or bunches of flowers, taking a design which some good store that you can easily reach always keeps in stock.

Of this ware get two dozen dinner plates, one dozen soup plates, two dozen tea plates, one dozen breakfast plates, four meat dishes, four vegetable dishes (two covered), and one soup-tureen.

To this you may add salad and dessert services, cups, tea service, butter-dish, salt-cellars, and butter plates, for which you have levied upon the whole world.

Salad bowls in pale-green ware are found at Japanese stores for two dollars, while a tiny one to hold the mayonnaise dressing is easily picked up for fifty cents. The plates can be of majolica, which is pretty if chosen with taste, and very coarse and ugly if not so chosen.

Very pretty plates at ten cents apiece are often shown; but if you can afford more than this, I advise you to put the money into better ware.

The dessert and fruit set may be equally inexpensive.

If a silver tea-set was not part of your wedding set, you can supply its place with a teapot of English ware of blue and yellow, of rough but "jolly" appearance. Coffee may be served—nay, is best served—in the pot in which it is made; but if you revolt against tin on the table, you can find a French coffee-pot made of china—a peculiar

chocolate color outside and dead-white inside. This ware can be subjected to intense heat, and coffee made in it, with the biggin which forms part of the pot, is most delicious.

For cups and the various little fancies of the table, it is a pleasant plan to institute the custom of giving each member of the family his own particular article. On birthdays and at Christmas these make very acceptable gifts.

Of glass I can only say a word—and that of warning. Do not use imitation of cut glass. There are many pretty sorts of glass which are pretty intrinsically, and owe nothing to any attempt to imitate. Plain glass, with an engraved line for every-day use, with thinner, fine goblets engraved with scattered stars for "occasions," are really in better taste for your table than any of the pretentious, heavy fancy dishes now in vogue.

Do not use colored glass except in finger-bowls and wine-glasses—if these last appear on your table.

Always see that your dinner-table has some flower on it. I do not mean that you are to buy roses in January and violets in August. Your flower through the winter may be a growing fern in a fancy pot, or slips of ivy planted close in a low, flat dish. In spring and summer the meadows or the tiniest garden will furnish a succession of blossoms, while in autumn a handful of the rich leaves nature strews even in our city streets gives one of the little touches which make home—home.

THE ORIGINAL HORSE.

A small party of French men of science, which included Prince Henry of Orleans and M. Bonvalot, has lately returned from a journey of exploration through the vast and almost uninhabited regions of Central Asia. The expedition brought back several stuffed specimens of rare animals found in that part of the world, and among them a specimen of the hemione, or Kiang horse. This animal probably approaches as near to the primitive horse as any now found in a wild state.

The home of the Kiang horse is the high plateau of Chinese Turkestan, between Lake Lob Nor and the mountainous region of Thibet. This plateau is covered with a growth of short grass, which the wild horses graze. The climate is very cold, the mercury in winter sinking to forty degrees below zero, Fahrenheit.

The Kiang horse is a shaggy, unkempt looking animal, having bodily somewhat the aspect of a donkey, except as to the tail and ears. It is, however, a genuine horse, having rather delicate legs and feet, and ears by no means resembling those of a donkey or mule.

The color of the head and of the upper part and sides of the body is a reddish-tan, shading to a bay, and though this color grows lighter from above downward, it contrasts strikingly with the pure white of the animal's belly and the inner side of the fore-legs.

Along the spine runs a well-defined stripe of thick, blackish-brown hair, extending to the root of the tail. The hair is long and shaggy, and adapts the horse to living in a cold country.

The Kiangs, like all the other wild horses, live in bands or herds of one hundred to two hundred individuals, each presided over by an old male. This leader gives the signal when any danger approaches.

The Kiangs are preyed upon frequently by wolves; but their most terrible and dreaded enemy is the ounce, or Turkestan panther, several specimens of which were shot by Prince Henry.

THE SONG OF THE RED CLOAK.

Founded on an incident in the history of Chester, N. S.

Come listen, good folk, to the song of the cloak,
The cloak of red and gray:
Hear how it saved the little town
That nestles where the hills slope down
To deep blue Chester Bay.

'Twas in times of strife far unlike the life
That Chester knows to-day;
The Revolution then was new,
And oft some bold New England crew
Came into Chester Bay.

Then was time of dread, for the strangers led
The flocks and herds away;
And old men raged, while women wept
For husbands strong whom battles kept
Afar from Chester Bay.

So old Captain Mill, on Blockhouse Hill,
One bright, cool day in May,
Seeing a Yankee vessel sweep
By Tancook's Isle, whose low shores keep
The mouth of Chester Bay,

Cried aloud in wrath: "Since this village hath
But weak old men to say
That Chester still shall keep her own,
We'll man the blockhouse all alone,
For King and Chester Bay."

Even as he spoke, there suddenly broke
From children at their play,
A wild, shrill cry,—"A Privateer,"
Echoed by voices hoarse with fear
For peaceful Chester Bay.

From houses and stores, the people in scores
Poured forth in their dismay:
The old men turned to Blockhouse Hill,
Longing for strength and old-time skill,
To guard their Chester Bay;

While the women sad,—some quickly clad
In their long, soft cloaks of gray,—
Hushing the wailing children, fled
To woods beyond the harbor's head,
The head of Chester Bay.

As into this throng, with his purpose strong,
The Captain made his way,
His quick eye saw the linings red
Of the women's cloaks, as on they sped
Away from Chester Bay;

And his face grew bright with a sudden light;—
His words were almost gay:
"Quick, quick, good women, turn your cloaks,
Here's a chance for a right good hoax,
To aid our Chester Bay."

The women obeyed. As they stood arrayed
In red instead of gray,
The Captain spoke,—and up and down
They bore a message through the town
That lies by Chester Bay.

Then to Blockhouse Hill strode old Captain Mill,
And where the cannon lay,
He helped the few old men and weak
To load the weapon that should speak
For lonely Chester Bay;

While from every street came the sound of feet
From squads, in scarlet gay,
Of women marching calm and still
Along the shore, and up the hill
That guards blue Chester Bay.

Then the cannon spoke, and the water broke
Before the ship in spray,
As—sails half-furled, the long-boat manned—
Swiftly she glided toward the land,
The point in Chester Bay.

Oh, but could it be that the crew did see
The brilliant red array?
The sails, half-furled, fast fluttered out,
With helm hard down she came about,
The ship in Chester Bay.

"Now God be praised," and the Captain raised
His hands in solemn way,
"The Yankees think the Redcoats here,
Every woman a grenadier,
And saved is Chester Bay."

'Twas just as he said, for with sails outspread
The vessel stood away;
But, e'er another sun went down,
Burnt and sacked was Lunenburg town,
Across still Chester Bay.

Now ended, good folk, is the song of the cloak,
The cloak of red and gray
'Twas thus it saved the little town
That nestles where the hills slope down
To deep blue Chester Bay.

GEO. P. BAKER.

UPLIFTING THOUGHTS.

A public man whose influence has been powerful for good in this country, said lately:

"My father was an uneducated, hard-working farmer. Yet some of his methods of training his children showed a keen insight and rare wisdom. He had the habit, for instance, of telling us as we ate our breakfast any story of kindness or courage or self-sacrifice which he had heard or read the day before; or failing these, he would repeat a noble thought tersely expressed, or a fine line of poetry.

"'There's a bit of gold, boys,' he would say, 'to carry with you. Don't let all of your thoughts be base metal.'

"We used to laugh at this 'old-fashioned' custom. But it would be impossible to measure the influence which these great ideas had in elevating the daily current of our thoughts. We could not give ourselves up wholly to trivial or mean things with this great thought ringing in our minds like the call of a trumpet."

A busy mother upon whom much of the actual labor of her household devolved, said once:

"I have no time to search in books for great thoughts to widen and lift my children's minds. But I try to bring into our family life the high, liberal charity taught by Christ. I try, too, to keep the children's attention fixed upon some subject outside of their own lives.

"One day it may be a new book, the next a political crisis in our own country, or a great flood in China. These things serve to turn their thoughts from personal gossip or squabbling."

There are many homes in which some idea like these is at work, lightening and uplifting the whole family life. There are others in which the members of the family resemble parts of a machine at work. They earn money, they eat, drink and sleep; but the life, the ennobling principle, is lacking.

However young or insignificant the reader of these words may be, he can do his part towards bringing the sunshine of a broader life into his home. The mere habit of speaking of things instead of people, if persisted in, will be like a window opened into a close and stifling room.

The atmosphere of our thoughts, as well as that breathed by our bodies, becomes foul and poisonous if kept too long shut in from outside influences.

Open the windows, then. Take the lives, the work, the thoughts of your brother men into your own, and you will be able to serve better Him Who is their Father and yours.

COWBOYS AND COSSACKS.

Our Western cowboys must look to their laurels in the matter of horsemanship. A French journalist, who saw some of them ride at the show of Buffalo Bill in Paris, says that they are surpassed by the Cossacks of Russia, who now form a part of the light cavalry force of the Czar. The cowboys perform some equestrian feats extremely well, particularly in taming wild horses, but our French observer declares that the Cossacks are the best "all around" horsemen anywhere to be seen. They are the roughest and the toughest of soldiers. At their barracks near Moscow there are few of the conveniences of civilized life; no beds except hard mattresses placed on sloping boards, and small, hard bags for pillows.

The men wear little dirty caps, unwashed blouses, trousers from which all color has long since faded, high flexible boots without blacking or spurs, a whip in their belts and a sword swinging at their sides.

There is nothing about a Cossack that savors of pipe-clay, nor even of soap and water. He comes in from his five hours' drill, and goes at once for his bowl of bitter beer, which he calls *kwass*, and his allowance of oatmeal porridge, without so much as washing his hands and face.

Nor does he join a mess at his meals. The mess is unknown in the Russian army. Each soldier takes his ration of sour cabbage, oatmeal, black bread and meat, direct from the kettles and carries it to the unfurnished table, where he devours it without reference to his comrades.

Our French traveller had the courage to taste these viands, and confesses himself unable to use words that will express the badness of the food. But the Cossacks like it all, and thrive upon the diet.

When they are mounted they are an entirely different style of creature. The regiment consists of a thousand men, who ride small, tough, agile horses, full of spirit, but well broken for their work. The colonel appears, and rides to the front. He salutes the regiment by crying aloud, *Idorovo molodtsy*, which is about equivalent to, "Good day, my fine fellows." To this the whole regiment responds by saying six or seven words in Russian, which mean "We wish your lordship good health," each syllable of which is pronounced distinctly and in concert, as American students utter their college cry.

Then the drill begins. "Imagine," says our journalist, "the equestrian programme of the most extravagant circus; add to this the complete repertory of Buffalo Bill's performers, enriched with the most unexpected variations; imagine all that horsemanship can achieve of most delicate, of most ludicrous, of most impressive, and of most crazy. All this was realized before us for two whole hours by a thousand men at once, let loose in a tempest of dust and of movement to make the head swim."

The drill finishes with three distinct march-pasts; first at a walk, next at a trot, and finally at full gallop, which last is perfectly terrific for speed and force. At the same time the charge is almost noiseless, because every part of the equipment is carefully made to avoid noise. There is no clashing or clicking of metal, for every surface is guarded with leather.

When all is done, if the colonel is content with the performance, he cries out, *Karacho*, which means, "Well done, my lads." To this the regiment reply with exact cadence as before, "We will do better next time, my lord." Upon this the regiment moves away to the stables to take care of the horses.

AT THE SAME SCHOOL.

Jules Simon, formerly one of the most eminent statesmen of France, is, as many other French statesmen are and have been, a regular contributor to the press. He is publishing in the Paris journal, *Le Temps*, what he calls "Mon Petit Journal." He wrote recently in condemnation of the personal animosity so often entertained by political opponents. Many politicians seem to feel that because a man is their political enemy, it is necessary that they should be his enemies in every way, do him as much harm as possible, and believe him capable of every moral fault.

The disposition of the Legitimist, whom M. Simon describes as drawing his coat about him whenever he passes near a group of Republicans, as if to protect his purse or to save himself from contaminating contact, is not uncommon. A curious anecdote of a friendship which was entirely independent of party feeling is related by the veteran statesman.

I have found nothing more easy and agreeable than to be at the same time true to my personal friends and to my party. Impartiality seems to me both a duty and a pleasure. When I was elected deputy for Paris, in 1863, I found in the Chamber many persons who had been my colleagues in the Constitutional Assembly. I hastened to greet them.

Jules Favre laughingly warned me, "They belong to the ministerial party, and are consequently your enemies."

One of the deputies of the opposite party, as indifferent as I to such considerations, came to me that first day, smiling, and with hand extended, to say:

"You will not refuse to shake an old friend's hand, because we do not sit on the same side?"

"Certainly not," I replied, "but—"

"But you do not remember me?" he said. "I recognized you at once;" and he introduced himself.

It was M. La Haichois, an old schoolmate. As boys we had been close friends. I was delighted to see him again, and we at once resumed the friendship of our childhood. I made some laughing comment on his party, and he replied, "I have been a Conservative all my life, and you, I suppose, regard all your friends on the Left here as so many little saints."

That was the extent of our political discussion. Our intimacy continued many years to our own great satisfaction, and to the disapproval of our respective political friends.

In the course of his long illness, which finally proved fatal, I once could not restrain myself from remarking how he had changed.

"Ah," he said, "you know it is sixty years since we were in the same class in school."

"You mean fifty years," I interrupted him, "that is long enough; don't add ten years, my friend."

But he was not mistaken. We began discussing the matter and comparing notes, and discovered that we had never seen or known each other before that day when he came so kindly to shake hands with me in the Chamber. He had had a brother ten years younger, and I had had one ten years older, in the school which we had attended.

He was the classmate of my brother, and I of his. We had recommenced in 1863 a friendship which had never existed.

For the Companion.

IN OCTOBER.

I wonder will they find it sweet as we
Shall Paradise?—these shy young birds that now
For the first time have put to test their wings,
And flown beyond the silent nesting-tree,
Beyond the skies that sheltered them in June,
To a far land which they have never seen?

What faith, what matchless wisdom they have shown!
How could they know that Winter follows close
Upon such radiant days and nights as these?
In what sweet dream was it revealed to them
That they by simply trusting to their wings
Might follow the dear Summer on her way?

The beckoning branches now sway back and forth
In vain to tempt the restless wings to stay;
The falling leaves pave all the earth with gold,
But they are not deceived—these Summer friends;
Their hearts have grown so strong with confidence
Born of some inward sight we cannot know,
That all the gracious overtures of earth
At this rare season cannot stay their flight.
By day I see the wings, by night I hear
Soft twitters in the air, and know they still
Are on their way: my bluebird that I loved,
And that I saw grow full of life and song
In this forsaken tree before my door,
My robin with the newly painted breast,—
They, too, have joined the winged caravan,
And think no more of me.

MARY A. MASON.

PHILOSOPHY OF CLOTHES.

Mr. Hume Nisbet, a special correspondent and artist, tells in his narrative of "A Colonial Tramp," an amusing story illustrative of the influence of old clothes. He had travelled over the western district of Australia in an outlandish digger-like costume, and had mixed with many rich and fashionably dressed men, without finding that his clothes subjected him to any discourtesy. But on entering Deniliquin, New South Wales, he received a lesson on the importance of dress.

He went to a hotel, and asked a pretty barmaid if he could have a room for the night. She glanced coldly at him, and answered that he had better ask the waiter. The waiter looked at him critically and said he would ask the master. The landlord came in, surveyed the correspondent, and reluctantly replied: "Yes, I dare say you can; John, take him up to No. 40."

John showed the way to the top of the house, and said, "Any luggage?"

"No, John, none but what you see here," pointing to his artist's traps.

"Then it is the rule to pay in advance."

"All right; get my bill made out for dinner, bed and breakfast, and I'll be down presently and pay it."

At dinner no one spoke to him. In the smoking-room, which he sought after dinner, several gentlemen were conversing about the Chinese opium-dens in Sydney. One gentleman, on being asked a question by the correspondent, looked him slowly over, then turned to his companions with a remark about "impudence."

Rising from his chair, Mr. Nisbet walked up to the group and said, "I beg your pardon, gentlemen, but is this—person, very deaf?"

"Not that I am aware of," muttered a young fellow.

"I am not bound to answer every question that a cad of a stranger may ask me," blurted out the man himself, his face scarlet with passion.

"Certainly not," replied Nisbet. "This is a public room, and the 'cad of a stranger' apologizes to you all for his 'impudence,'" and he went to bed.

The next day he called on a friend, a resident, who on hearing of the rudeness said:

"It must have been a stranger; I'll drive you down and introduce you to some of the natives, who will take that bad impression out of your mind."

They drove down, and as they were walking along the street met the gentleman of the smoking-room, whom Nisbet's friend greeted warmly, saying, "Let me introduce you, Mr. Smith, to my friend, Hume Nisbet, who has been so atrociously treated by some fellow—"

He stopped short in his speech, for Mr. Smith dropped the hand he had spread out, and stood looking upon Mr. Nisbet with a comical expression.

"Yes, that is the fellow," said the correspondent, whose hand was still in his pocket.

"What fellow?" cried the friend.

"The one who proved to me how necessary it is for a man to be dressed in society."

"Oh, hang it," answered the poor man, as he mopped his head, "don't; how the mischief could I tell who you were in such an outrageous get-up?"

"Just so," rejoined Nisbet, "but tell me about the Sydney opium-dens."

Mr. Smith learned a lesson about hasty judgment, and the correspondent received a new impression as to the importance of dress.

AUNT DOLLY'S GHOST.

Many years ago one of the oldest houses in the town of D—— was left vacant by the death of its sole occupant, a little old lady whom every one called Aunt Dolly. The house was in a bad condition, and since the heir did not care to make the necessary repairs, the sign, "For Sale or To Let" hung in the window for more than six years. At last a new factory was built in the town, a demand for dwelling-places sprang up, and the old house was rented.

Before the month was gone the German family who had moved in suddenly moved out again, declaring that they couldn't stand the ghosts.

People laughed, but when family after family moved out of the house, each insisting that strange and unaccountable sounds were heard there, always at night, it came to be generally admitted that something must be wrong.

For a long time the house stood empty again, and the children, going back and forth to school, would look mysterious and talk about Aunt Dolly's ghost, its big red eyes, and the terrible noises it made.

These noises were always heard in the back kitchen, which opened directly out of doors. At last the owner of the house determined to find out whether there was any foundation for the current reports. He took his gun and sat upon the stairs leading out of the kitchen to watch for the ghost. About twelve o'clock the back door, which hung loose upon its hinges, creaked ominously, opened with a slam, and the ghost slowly walked into the kitchen. The man started a little, but composed himself to watch the proceedings.

The ghost stood still a moment, then shaking itself once or twice, and giving its head a toss, it walked across the room and putting its head down in a corner, took a long drink from the old open well, fed by a spring very near the surface, which the man remembered to have been there when he was a boy. He had fallen into it once, and had been rescued by Aunt Dolly, whose reputed ghost was now leisurely refreshing itself.

Then the ghost gave a cough which made the windows rattle dubiously. The man laughed softly to himself, and waited. Suddenly, probably aware for the first time that a mortal was sharing its nightly vigil, the ghost put one foot on the stair and waited to be spoken to; for ghosts never speak except in answer to a question.

The man seized the hair which grew down over the ghost's forehead, and while he led the disturber of honest folks's slumber out of the back door and across the pasture to his own estate, he talked to it as probably no ghost was ever talked to before.

"So you're the sperrit, air you, you miserable old nag? And all these years you've ben a-disturbin' people an' a-takin' money out o' my pocket, an' all jest because old Aunt Dolly learnt you the trick o' comin' into the kitchen an' gittin' a drink when you was thirsty. An' this's the way you take advantage o' me when you're put in the barn cellar all to yourself. An' here you've ben a-kittin' off every night, an' gittin' home afore anybody suspected you'd a-gone. You're a pretty nag, aint you now?"

The horse, as soon as the story became known, was renamed Aunt Dolly's Ghost. The house was repaired, and no difficulty in renting it was afterwards experienced.

PROTECTED BY A CHILD.

Among the Royalists who were exposed to the fury of the mob on one of the most terrible days of the French Revolution, August 10, 1792, was the Count d'Haussonville. In an almost desperate situation he retained his presence of mind, and avoiding recognition by a simple expedient, passed through the angry crowd. The incident is related by his grandson in "La Vie de Mon Père."

My grandfather did not emigrate. Louis XVI., who had confidence in his rare courage and entire devotion, had made him promise not to leave him, and he was always one of those who in moments of danger hastened to the Tuileries to defend the royal family. He was with the king throughout the Tenth of August. When the royal family left the legislative assembly he found himself in a position of great danger.

He took advantage of the semi-twilight in the lobby to destroy his lace ruffles, and hid his gold-laced hat and his sword under the seats.

Then he joined the crowd which was leaving the hall and the offices. But the difficulty was to pass from the entrance to the assembly hall to the gate of the drawbridge of the Tuileries without being recognized. In this space and at the gate were the people, excited by having taken the palace, and by the massacre of the Swiss, which had occupied them nearly all day.

In crossing the garden, my grandfather noticed a child who had been hit by a bullet, and was moaning on the ground surrounded by several persons. He walked straight to the group, lifted the child in his arms without saying a word, and went on toward the gate, walking slowly and apparently quite absorbed in comforting the little child. His face was thus concealed, as he reached the gate and ordered the crowd aside.

He was allowed to pass unsuspected, and still protected by his precious burden, he passed through the streets and neared the d'Haussonville mansion. Then he left the child and a sum of money with a physician, with instructions that the little one should be given the best of care.

SQUIRE LOTHROP'S OPINION.

It is never safe to study the opinion of the multitude. "What do folks say about me?" asked an old lady who had been largely unfolding a budget of scandal. "I s'pose there's some bad mixed in with the good!" "Well, there," said her frank neighbor, "I do' know's there's any good spoke of to mix it *with*."

A man not especially well known had given a lecture in a New Hampshire town, without rousing much enthusiasm in his audience, and as he rode away on the top of the stage-coach the next morning, he tried to get some sort of opinion from Jim Barker, the driver. After pumping in vain for a compliment, he inquired:

"Did you hear nothing about my lecture? I should like very much to know how it was received."

"Wal, no, stranger, I can't say as I heerd much. I guess the folks was purty well pleased. Nobody seemed to be agin it but Square Lothrop."

"And may I ask what he said?"

"Wal, I wouldn't mind, if I'se you, *what* he said. He says just what he thinks, right out with it, no matter who's hurt, and he usually gits the gist on't. But I wouldn't mind what he said; the public was purty generally pleased."

"Yes," persisted the tortured man, "but I do want very much to know what Squire Lothrop's opinion was."

"Now, stranger, I wouldn't think anything more about the Square. He's got good common-sense, and allers hits the nail on the head; but, as I said, you pleased 'em fust rate."

"Yes, but I must know what Squire Lothrop did say!"

"Wal, if you will have it, he did say, and he's apt to git the gist on't, he did say that *he* thought 'twas *awful shaller*."

VAIN REPETITIONS.

A girl who was accustomed to conclude all her stories with the words, "Wasn't it funny?" was telling her mother of the sorrow which had come to a school friend.

"Just think," she began, "I asked Annie Platt this morning if she knew why Mary Wallis, that pretty girl from Iowa, wore black; and she said that Mary was out in a sail-boat with her mother and two brothers last summer, and a squall came up, and the boat capsized, and they were all drowned except Mary! Wasn't it funny?"

"I shouldn't consider it a subject for mirth," said her mother, dryly, and then the girl, who was really full of sympathy for her new friend, realized what she had said.

Anton Rubinstein, the Russian composer, in his autobiography tells of the confusion which overcame a certain architect of his acquaintance, who had a habit of interlarding all his remarks with the phrase, "You understand."

On one occasion he was explaining certain architectural matters to the Emperor, and according to custom, made free use of his favorite expression.

"Good heavens!" exclaimed Emperor Nicholas at last, irritably, "of course I understand. My dear fellow, how could I help it?"

DAISY'S CALENDAR.—X.

Now O-c-t in letters of gold
At the head of the calendar stand unrolled;
The frost is sharp in the morning air;
The falling leaves are faded and old;
The nuts are pattering here and there,
And we'll have our share of the harvest rare,
Though the brisk little squirrels chatter and scold.
You little red robbers, busy and bold,
There are plenty for you and the children, too,
To crack when the days are short and cold.
Then away to the woods while the skies are clear,
And sing till the birds come back to hear,
For silent and sober were brown October
Without our frolics, Daisy, my dear.

EUDORA S. BUMSTEAD.

For the Companion.

BLOWING BUBBLES AND WHAT CAME OF IT.

Little Peter and Prudie and Lyddie Sprague were keeping house while mamma and papa went to town. To be sure there was Grandpa Sprague, but he was taking his afternoon nap in his room, so he did not count. They had played "hide the thimble" "ring-around-a-rosy," and Lyddie and Prudie had danced till their little toes ached, to the *hum-a-hum-hum* of Peter's jewsharp. Then Lyddie had said:

"Let's blow bubbles!"

"Oh, yes, let's!" cried Prudie.

So Lyddie got the long, new clay pipes and Prudie a bowl of soapsuds and set it on the hearth of the broad, low chimney so they need not wet the floor, for the little girls had learned not to make work.

But it was found, after one or two trials, that the bubbles were too thin, and Prudie had to make another journey to the soap cask. Then they began blowing bubbles in good earnest—such big, strong ones! They would soar like tiny balloons, now up, now down, as Peter and Prudie and Lyddie puffed and chased them about the room.

By and by one dived into the black chimney and disappeared. Then there was more fun, sending them off up its broad, sooty throat, and watching them sail out at the patch of blue at the top and rushing out to see them float off.

Then Peter proposed smoking into the bubbles, as grandpa did once for them. Grandpa's pipe lay on the mantel all "charged" and ready to light when he should get up. Prudie wanted to do this part of it.

"Huh! girls don't smoke!" cried Peter, loftily.

"Ma'am Potter smokes! I've seen her! And she was a girl once, anyway!" retorted Prudie.

"Well, it's squinched her all up," insisted Peter.

Prudie didn't want to be squinched like Ma'am Potter, neither did Lyddie, so Peter put a live coal from the stove into the top of the pipe and puffed away manfully. The stem was very short and he burned the tip of his freckled nose once so that a tiny blister came upon it.

For a time they had great sport, watching the milky-looking bubbles float gracefully off, to the consternation of whole nestfuls of chimney-swallows, some of them tumbling out of their nests in affright, down onto the children's heads.

However, pretty soon Peter laid up the pipe, plunged his fat, brown fists deep into his pockets and scowled dreadfully. Then his face turned very white and he began to whine dismally. Lyddie and Prudie, very much frightened, brought him catnip and spearmint leaves to chew. But poor Peter was too sick to chew them.

Just then grandpa came out and Lyddie ran to him with the doleful tale.

"Tut! It's grandpa's pipe! Naughty thing for little boys—and big ones, too, I suspect!"

"But does it make you feel like Peter?" queried Lyddie.

"Oh, it did once," laughed grandpa.

"What made you want to do it again, then?" asked the little girl.

"The land knows, I don't!" groaned grandpa, looking with pity at Peter's distress.

"Will Peter want to do so any more?" persisted Prudie, pinching a spearmint leaf and holding it to his pale nose.

"Oh, dear me, I hope not," cried grandpa, sternly, throwing his pipe against the sooty chimney-back and breaking it all to pieces. "There, now, Peter, you and grandpa will take the pledge not to smoke any more as long as we live. Shall we, sonny?"

"Ye-e-es s-s-ir!" gasped little Peter, between his qualms.

When mamma came home and saw grandpa's old pipe lying in the chimney and grandpa himself trudging over the hill into the pines, she said he had gone off to fight a battle.

Prudie and Lyddie and Peter could not believe that dear old grandpa wanted to fight anybody. They wondered what mamma meant.

Do *you* understand?

For the Companion.

HOW BEN WET HIS FEET.

Two small boys were going home from school one sharp autumn afternoon.

"Look," said Benny Bruce, "the mill-pond is frozen over!"

"It won't hold you yet," said cautious Johnny Jones. "My papa says it has to freeze and freeze before it's safe."

"I'm going to try it," persisted Ben, "and if it holds, I'll go skating."

"I sha'n't go on," said Johnny, standing shivering on the bank and watching Ben as he ventured out. Only a few steps, when the ice broke, and splash! Ben was up to his neck in the cold water.

Johnny turned and fled to the grist-mill,—for Ben's father was the miller. Pushing open the heavy door, there was Mr. Bruce emptying a bag of corn into the hopper.

"Oh," panted Johnny, "Ben got into the water, and his feet are all wet!"

"I'll warrant it," said Mr. Bruce, starting out of doors. "He's always getting his feet wet. I'll show him!" and he hunted around for a switch.

"Oh, you'd better hurry," said Johnny, "for the water was up to his neck when I came away!"

Mr. Bruce didn't stop longer, but rushing to the pond had Ben out of the water in about two minutes.

And I think Ben was more careful after that.

Little Bess lived close to the water, and saw tugs towing ships in and out of the harbor daily. She had been learning to knit, and was working on a stocking when some one asked her how she was going to toe it off. "Oh," she answered, unconcernedly, "the old tug'll tow it off."

Mud Pies.

For the Companion.

A LAUGHING DUNCE.

A little boy once went to school,
Who laughed, and would not mind the rule;
He laughed so much that, deary me!
He never could tell A from Z.

For the Companion.

THE JINGLE-LESSON.

Kitty sat out under the sweet-apple tree in the golden October noontime, crying real salt tears into her Primary Arithmetic.

"Now what's the matter, Kittyleen?" asked big brother Tom, coming out with his Greek Grammar under his arm. "I supposed you were eating sweet apples and studying, and I came out to do so, too, and here you are crying."

"It's—this—dreadful—multiplication-table!" sobbed Kitty. "I can't never learn it, never!"

"Hard?" asked Tom.

"Oh, it's awful! Harder than anything in your college books, I know. It's the eights this afternoon, and I can't learn 'em, anyhow."

"Don't you know how much eight times one is?" asked Tom, picking up a sweet apple and beginning to eat it.

"Yes, of course. Eight times one is eight. I can say up to five times eight all right."

"Can you? Well, that's encouraging, I'm sure. Let's hear you."

Kitty rattled it off like a book, "Five times eight is forty"—and there she stopped.

"Oh, go right on!" said Tom. "Six times eight is forty-eight."

"I can't," said Kitty. "I can't learn the rest. I've tried and tried, and it's no use."

"Do you learn so hard?" asked Tom. "Now hear this, and then repeat it after me as well as you can:

'When I go out to promenade
I look so fine and gay,
I have to take a dog along
To keep the girls away.'"

Kitty laughed, and repeated the nonsense word for word.

"Why, you *can* learn!"

"But that has a jingle to it. It isn't like the dry multiplication-table."

"Let's put a jingle into that, then.

'Six times eight was always late,
Hurried up, and was forty-eight;
Seven times eight was cross as two sticks,
Had a nap and was fifty-six;
Eight times eight fell onto the floor,
I picked it up and 'twas sixty-four;
Nine times eight,—it wouldn't do,
I turned it over and 'twas seventy-two.'"

"Did you make that all up, now?" asked Kitty, in wonderment.

"Why, yes;" laughed Tom.

"Oh, it's splendid! Let's see, how is it?" And she went straight through it with very little help. "Ten times eight is eighty. That one's easy enough to remember."

"And now," said Tom, when she had the jingle well learned, "say the table aloud and the jingle in your mind as you go along."

Kitty tried that, and a very few times made it a success. With the ringing of the first bell she was ready to start for school, with those "dreadful eights" all perfect.

"You're the best Tom in the whole world!" she said, with a good-by kiss. "And I don't believe there's another boy in college that could make such nice poetry."

Tom laughed as he opened his Greek Grammar.

A BIRDS' HOTEL.

An interesting hotel for summer boarders is described by a Reading, Pa., correspondent of the Chicago *Herald*. Music is a popular diversion at summer resorts, but this place is no doubt exceptional for the quality and variety of the music furnished by the guests. The proprietor had his attention called, not long ago, to the fact that ladies on leaving home for the summer are often at a loss what to do with their pet birds, not wishing to inflict their care upon friendly neighbors, nor to trust them to careless servants. So he advertised for "bird boarders," and now his house is full.

The rates of board vary with the different species of birds, according to the amount of attention they require, and the character of food suited to their tastes. Canaries are boarded for twenty-five cents a week. A common soft cracker, with mixed seed and occasional hard-boiled eggs grated, with plenty of cuttle-fish bone, is all they demand. The noisy parrot is considered a profitable boarder at fifty cents a week. It is entirely satisfied with crackers, peanuts, sunflower seeds, and unhulled rice.

More aristocratic birds, however, such as bullfinches, nightingales, and mocking-birds, must have ants' eggs, which are prepared in Europe and shipped here, together with meal-worms and expensive seeds of particular kinds. One dollar and a half a week is charged for the board of these species.

The landlord says that the companionship which his feathered boarders enjoy in their summer boarding-house adds materially to their well-being, and in the case of song-birds to the quality of their singing.

Among the interesting bird guests this season are a collection of Hartz mountain and English canaries, several macaws, Cuban parrots, American finches and nightingales. The landlord endures the noise with equanimity and feels thankful that his guests cannot get out of their cages and storm the business counter with their complaints and remarks, as sea-shore visitors sometimes do.

SARAH'S LETTER.

Mrs. Trimmer, who, in the last century, wrote a series of delightful books for children, was herself a most precocious little girl, and showed such talent in letter-writing that her parents early prophesied for her a literary career. The following letter, written when she was between ten and eleven, is worth quoting, as a specimen of the sort of epistle which children were expected to compose a hundred years ago.

"Dear Grandpapa and Grandmamma,— As I now think myself capable of writing a letter, I do not know of any to whom I can address myself with more justness and propriety than yourselves, for you are my parents in a double capacity, and therefore may reasonably claim my utmost duty and gratitude. By your indulgent care and tenderness, under the gracious hand of Providence, you have blest me with the best of mothers. Let me, therefore, beg a continuance of your blessings and prayers, to enable me to set a right value on the privileges I enjoy by having a rational being, and to put in practice the duties I owe to God, my neighbor and myself; and it shall be my daily prayer to the Almighty that He will make the remainder of your lives happy, and receive you at last into everlasting felicity. My Grandpapa and Grandmamma Kirby and all my papa's family join in suitable commendations with your most obedient and dutiful granddaughter, Sarah Kirby."

Imagine a youthful Maud or Ethel of the present day sending home such a solemn, stilted little letter from the sea-shore or mountains! Would not grandma pack her trunk at once and fly to nurse her, taking the family physician in her train? Yet little Sarah Kirby was not a prig; she simply "followed the fashions" of her day.

ADJUSTABLE.

A teacher in a mission Sunday school says that her boys, though their knowledge of the Bible is unhappily slight, ask her questions which oblige her not only to keep her information well in hand, but also to be exceedingly careful to say exactly what she means when telling them anything.

They had a great deal of trouble, principally caused by a lack of attention, in remembering how many and what the commandments are.

"You can never forget how many commandments there are, I am sure," said the teacher, the second Sunday, when six, seven and eight had all been proposed as answers to her question, "for you can count your fingers, and then you will remember how many commandments there are for you to keep, for there are as many commandments as you have fingers on your two hands."

"Jest as many, an' no more, ma'am?" inquired one boy, with a revival of interest.

"Just as many, and no more," replied the teacher, with a smile.

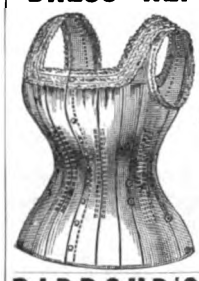
"I guess I'll bring along Jim Soper, lives next door to me, next Sunday," said this boy, at the end of the lesson, and he received a cordial reply to this remark.

The next Sunday he appeared accompanied by his friend, whom he kept close at his side during the lesson. When it came his turn to answer questions he said, cheerfully:

"Yes'm; ten commandments for me, ma'am; I remember about 'em all; but here's Jim, my friend; he aint got but four fingers on his left hand, on account of an accident, an' me an' Jim's been talkin' it over ever since last Sunday which one of them commandments wouldn't belong to him."

ODD SHAVING HABITS.

A Boston barber tells a reporter for the St. Louis *Globe-Democrat* that of men who shave themselves not more than one in fifty can use the razor with both hands, and he adds some curious facts about the shaving habits of different people.



I know a wealthy Back Bay man who shaves himself standing in the corner of the room and facing the wall. He was a poor country boy, and, like most boys, bought a razor on the sly. There was no looking-glass in his chamber, and rather than let his folks know what he was about, he faced the wall and scraped away by the sense of feeling. Once accustomed to this method he never needed a glass.

I know an old farmer who shaved himself sitting on a milking-stool and looking at his reflection in a bucket of water. That was what he did as a boy, and he said that he couldn't shave standing up.

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

Be on Guard

against imitations of *Pearline.* When they are not dangerous, they are worthless. They are usually both. *Pearline* does what nothing else can. It saves labor in washing, and insures safety to what is washed. It is cheap, thorough and reliable. Nothing else will "do as well;" it is just as well to have nothing else.

Beware Peddlers and some unscrupulous grocers will tell you "this is as good as" or "the same as Pearline." IT'S FALSE—Pearline is never peddled, and if your grocer sends you something in place of Pearline, do the honest thing—*send it back.* 284 JAMES PYLE, New York

Children always Enjoy It.

SCOTT'S EMULSION

of pure Cod Liver Oil with Hypophosphites of Lime and Soda is almost as palatable as milk. Children enjoy it rather than otherwise. A MARVELLOUS FLESH PRODUCER it is indeed, and the little lads and lassies who take cold easily, may be fortified against a cough that might prove serious, by taking Scott's Emulsion after their meals during the winter season.

Beware of substitutions and imitations.

IT COSTS MORE to make Royal Baking Powder than any other, because its ingredients are more highly refined and expensive. But the Royal is correspondingly purer and higher in leavening strength, and of greater money value to the consumer. Attempts may be made to substitute other powders for the Royal by the grocer, because of the greater profit in them to him. Send them back.

The chemist of the department of Health of Brooklyn, after examining the various powders, said: "The Royal is superior to all baking powders with regard to leavening power, economy in use, and healthfulness."

DON'T WEAR STIFF CORSETS.

THE LAST BRITISH WOLF.

The wolf is a very hard animal to exterminate. It is practically absent from the Eastern United States, but stray individuals are still found in the mountains even there, and probably will be found for centuries to come. There are wolves in every great country of the continent of Europe, after many centuries of civilization. In France several hundred are killed every year. In Great Britain, however, there are no wolves. Tradition records that the last one was killed in the year 1700, and the story of how it was done has been told by many a fireside.

It was in Sutherlandshire, Scotland, that the scene of the little story is laid. A shepherd, named Polson, had discovered in the rocks near Flen-Loch the den of a wolf which had been ravaging the country.

Polson had with him his son and another young shepherd-boy. The mouth of the den was very narrow. Discovering from certain signs that the old wolf was not at home, and being himself too large to enter the den, Polson sent the two boys in to see if there were any young wolves.

The boys crept in, and presently discovered a bed in which five lusty young wolves were lying.

They called out: "Father! Father! We've found the little wolves!"

"Then choke 'em, quick!" Polson shouted into the hole.

The boys began to beat the young wolves with their sticks, whereupon the little animals set up a terrible yelping, which could be heard outside the den.

Suddenly the she-wolf jumped out of a bush close by and rushed past the shepherd and into the narrow hole that led to her nest.

She leaped so quickly that Polson could not stop her until she had got partly into the hole; but he managed to seize her by the tail.

"Father! Father!" the boy called out from within; "what is it that stops the light?"

"You'll find out," exclaimed Polson, "if the tail breaks!"

He held manfully to the she-wolf's tail, his feet braced against the entrance to the cave. The young wolves yelped, the she-wolf struggled. It was a terrific struggle, with the she-wolf's mother-love pitted against the man's father-love.

Presently the shepherd, bracing himself anew, managed to whip out his hunting-knife, and stabbed the wolf repeatedly in the haunches and sides. She could not turn about, and the man had the advantage as long as he could cling to her tail.

She sank down dead at last, and as the boys had already succeeded in killing the little wolves, she was the last she-wolf on British soil.

SATISFIED WITH LESS.

The old story of the man who saw a thousand squirrels, and then acknowledged that he was at least sure he did see *one*, has many an every-day parallel. One such instance of "tapering off" may be found in the little book entitled, "How I Spent My Summer Holidays."

One day, when we were travelling by steamboat on the River Elbe, my father sat down on a large wooden chest; but he had not occupied this post long, before he found that a quantity of yellow stuff was oozing out below on the deck. He had been sitting on a box of eggs.

Beating a hasty retreat to the extreme end of the boat, he began to admire the scenery, when an old woman, the owner of the eggs, found him out, and insisted on his purchasing the whole case. My father apologized, but explained that as we should only stop one night in Dresden, it would be impossible for him to make use of fifteen hundred eggs. The old woman was irate, and we uncomfortable; but presently the captain appeared, saying, politely:

"I think you were sitting on that box of eggs?"

"Yes."

"I fear that some of the eggs, by accident, were broken."

"Possibly."

"I fear the owner has suffered loss."

"Possibly."

"Would it not be possible to satisfy her?"

"I could hardly pay for fifteen hundred eggs."

"Oh, by no means. She would never expect that."

"Then how much would satisfy her?"

"Would one mark (twenty-five cents) be considered too much?"

One mark was accordingly offered the old woman, and accepted with profuse protestations of gratitude.

PARCHED CORN.

A Confederate soldier, of General Bragg's army, has much to say of the state of semi-starvation in which he and his comrades were much of the time kept.

While we were at Chattanooga my father paid me a visit. Rations were mighty scarce. I was very glad to see him, but felt ashamed to have him know how badly off we were for something to eat. We were living on parched corn.

Finally I hit upon a plan for getting him a good dinner. I invited him to go with me to the Colonel's tent.

"Colonel Field," said I, "I wish to introduce you to my father, and as rations are a little short in the mess just now, perhaps you will be good enough to invite him to dine with you."

"Certainly," answered Colonel Field, "I shall be happy to have both of you remain to dinner."

I accepted the invitation with many thanks, and just then a young negro came in with a frying-pan of parched corn and dumped it on an old cloth.

"Master," said he, "dinner is ready;" and we all sat down. The Colonel, like the private soldiers, had nothing to eat but parched corn.

UNCONSCIOUS SATIRE.

A very grim pleasantry is furnished, no doubt without any intention, by a sign in the window of a doll-shop which stands in the Rue de la Roquette, in Paris. The sign reads:

HEADS REPLACED
AT THE LOWEST PRICES.

The joke of the matter is that the shop is very near the place where the guillotine stands!

THE Lowell *Courier* ventures to suggest that if you stroke a cat's back the wrong way she naturally doesn't feel fur straight.

For all purposes of a pain-reliever, for both internal and external use, "*Brown's Household Panacea*" is highly recommended. Price, 25 cents. [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

DIPHTHERIA: THE LATEST WORD.

The Milroy Lectures this year were on the natural history and prevalence of diphtheria. The lecturer gave it as his opinion that soil and geological formation have something to do with its prevalence; that it is especially common in damp valleys; and that in England it is most prevalent during the last three months of the year.

The greater number of the persons attacked are between two and twelve years of age, and the liability is greatest between two and five years.

Many attacks of diphtheria are accompanied by simple sore throat and tonsilitis, and many apparently simple attacks of sore throat have really an infectious character. The same fact has been noted on this side of the Atlantic.

Some physicians look on diphtheria and scarlet fever as modifications of the same disease, and the occurrence of both at the same time in the same family seems at first sight to countenance this view. But the theory is disproved by the entire absence of diphtheria in several thousand cases of scarlet fever treated in the London Fever Hospital.

The probable explanation of the occurrence of both in the same family is that the condition of the throat in a family affected by scarlatina affords a soil favorable for the reception of the diphtheritic poison.

When diphtheria does occur in connection with scarlatina, it is almost always as a sequel to it. So, too, the sore throats due to bad hygienic surroundings and imperfect drainage furnish excellent soil for diphtheritic microbes.

Many cases of diphtheria end unexpectedly in fatal heart-failure, sometimes when the patient has seemed in a fair way to recovery. In such cases a post-mortem examination reveals a fatty and granular degeneration of the muscular fibres of the heart.

This fact emphasizes the need of prompt treatment to secure the speediest possible recovery. It follows, too, that in all cases, until complete recovery, everything should be avoided which makes demands on the heart, a very slight effort being often fatal; and that the physician should always make a careful examination of the heart, and advise accordingly.

A BASE-BALL DOG.

A Scotch collie dog on Lookout Mountain, Tenn., has been taught to play base-ball with his master, a stalwart negro.

It is strictly a game between pitcher and catcher, and two balls are used. As catcher, the dog shows not only remarkable agility and skill, but a study of his movements forces the conviction that by closely observing all the motions of the pitcher, he is able to calculate for position, distance, and style of ball, and thus almost infallibly to catch the sphere, if it is fairly pitched.

His activity, enthusiasm, strict attention to the game, and steadiness of nerve before a noisy crowd of admirers, are remarkable. The game is a silent one. The pitcher does not speak, and the dog utters no sound. A slight motion of hand or head by the pitcher indicates to the agile catcher what style of ball is to be pitched; and the dog quickly takes his position and attitude accordingly.

This base-ball club of two members plays two styles of the game, which may be respectively called "walking" and "stationary" games. In the one the pitcher moves onward at a moderate walk, the catcher being a long distance in advance, and sharply alert as the first of the two balls is pitched.

At long distance he has time to gauge the speed, height and line of the ball; and it is a very high or badly pitched ball that does not stop with a thud between his firm jaws.

He cannot throw the ball back; and to carry it all the way would make the game too slow to suit his active temperament. He has learned the speed of the pitcher's walk, and swiftly running back a certain distance, drops the ball and gets again at catching distance as the pitcher sends ball number two and stoops to pick up number one, which has been deposited where it will be convenient for him.

In the stationary game the pitcher stands still, and the catcher regulates his distances by motions of the pitcher's hand, which indicate the style of pitching he is to expect,—a "hot-liner," long, short, high or low, or one which he is to catch on the single bound. He is equally successful at all, and seldom misses.

This dog is about two years old, and has been playing on system nearly a year. A younger brother of this sagacious dog is nearly always present at the games, but will not learn the art, and shows no interest in it.

LAKE WINNIPEG WOLVES.

In the winter of 1890 deer were unusually scarce in the forests east of Lake Winnipeg. A wet, cold summer had destroyed an uncommonly large proportion of fawns. Consequently wolves were without their accustomed food supply. Their distress made them forget their fear of human beings.

One morning in January news reached Winnipeg City that a band numbering one hundred wolves had slain many Indian hunters along the east shore. This turned out to be true.

Several of the men were caught on foot. One climbed a tree and shot twenty wolves. Another clubbed a dozen to death before they pulled him down. One hunter mounted a platform erected on poles for the purpose of keeping skins above the reach of wild beasts and vermin. He had hardly begun firing when the wolves pressed and leaped about the posts in such numbers that they threw down the platform and tore the man to pieces.

The same band had visited other camps. How many Indians in all were devoured could not be exactly ascertained, as more than one hunting party was said to have been completely wiped out.

MIND-READING FOR BOYS.

Harold Morse's father belongs to a society for "psychical research," and the child has heard a good deal of conversation on the subject of mind-reading. His mother is afraid he "thinks and understands too much for a child of his years."

His father, however, is not at all alarmed, and a few days ago repeated to Mrs. Morse a remark of Harold's in his "children's mind class," which was certainly well calculated to allay her fears.

Harold had collected the class—much against the will of several members of it, who would have preferred to remain out in the yard—on the door-steps.

"Now you wait here a minute," said he, and presently he returned with suspiciously bulging pockets. His father, in the hall, listened for what would come next.

"Now," said Harold, appearing before the class, "you must all *think, hard.* How many apples have I in my pockets? The boy that guesses right can have them all; but of course he'll divide, for there are just enough to go around!"

WONDERFUL GOLD MINE.

One of the wonders of Australia, and one of the greatest natural curiosities in the world, is the Mount Morgan gold mine in Queensland. The precious metal contained in this mine, which has paid a dividend of not less than six million dollars in a year, was deposited by a hot spring.

Mount Morgan is a hill about five hundred feet high, containing at its top a cup-shaped deposit made by the hot spring which once gushed out there, and in this deposit the gold exists. Truly a cup of Cræsus! Through untold ages the waters dropped their glittering burden, and now man comes and extracts the hoarded metal to add to the wealth of the world.

Specimens of the ore from this strange mine have recently been sent to the United States, that they might be compared with the deposits of the great hot springs in our own Yellowstone Park. It was but natural to suppose that the Yellowstone springs had also a golden treasure in their cups, but the most careful search by geologists has thus far failed to detect any trace of it.

CAUTIOUS.

Many years ago, when printed music was dearer than it is now, a plain, quiet old man, evidently from the country, went into a music-store and asked to see a certain book of tunes. The clerk laid before him an oblong volume, with two tunes on a page, a book familiar to old-time choir-singers.

The old man drew out of his coat-tail pocket an ancient yellow fife, and opening the book at the first page, began to play softly, turning the leaf with careful fingers as each page was finished.

The clerks, very much amused at first, grew weary of the droning noise after a time, and one of them, waiting till a tune was ended, ventured to say, politely:

"Do you think you will take the book, sir? Does it seem to suit you?"

The fife was lowered, and the player, looking over it at the youth in mild surprise, said gently:

"I cannot tell. I have played only half the tunes," and he placidly turned another leaf.

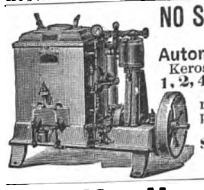
TOO MUCH.

A little boy had his first pair of rubber-boots, and could not be contented till his mother went down to the brook with him to see him wade.

With loving care he dragged a board across the brook for her to walk upon, while he waded beside her in water which came nearly to his boot-tops. Suddenly, as if he had just realized what she was deprived of in being a woman, in shoes, he took her hand and said with affectionate earnestness:

"Indeed, mamma dear, I will not wade another minute where you can see me. It must be too temptationy for you to bear."

SELF-WINDING.



An exchange credits a watchmaker with a word from his trade to describe the amiable nuisances who talk too much.

The watchmaker had been called from his work to hear from a customer a long story about the behavior of her watch, told several times over.

"Oh dear!" said he; "I hate to have these self-winding talkers come in!"

No wonder the name of Burnett is so well known; ask for the best Flavoring Extracts in any part of the world, and Burnett's are handed you. At last the foreigners are finding this out. [*Adv.*

LEFT ON THE ISLE OF SANDS.

A STORY OF ACADIA.

In Two Chapters.—Chapter II.

A Long Waiting.

For a time there was occupation and amusement enough for all. Jules took delight in fishing in the lake, and in scampering over the island on the back of whatever pony he could capture. Others, when tired of lolling in the grass, hunted the wild cattle and pigs; and as a flint and steel and tinder had been left them, they feasted on liberal roasts of fresh pork and beef, and when they were tired of these meats they had another resource in the wild ducks and geese.

This state of affairs lasted until all the tinder was used up. A wild, hot-headed Gascon, undertaking to make a fire and cook a dinner, tried patiently for half an hour to get a light by using withered grass for tinder. Exasperated at his failure, he suddenly started up with an oath, cursed the flint, and hurled it into the sea.

A comrade, furious at the mad act, sprang upon him, struck him in the face, and bore him to the ground; it was then a fight to the death; and the Gascon succeeded in killing his adversary.

The next moment, ere he had fully regained his feet, the Gascon was struck down by a terrible blow from a billet in the hands of Christophe Saintine, who had run up to separate the combatants.

"There is a Ship!"

This was the first bloodshed among the islanders; but thereafter the real natures of the men began to appear. Several fatal quarrels followed. Jules, though a favorite with most of the men, would have fared badly on several occasions but for the general respect inspired by his father's determination and physical prowess. The St. Malo blacksmith wielded a sort of half-acknowledged authority over his fellows, and but for his ascendency the convicts would have found themselves in a state of perpetual feud.

As for Jules, he soon learned a marvellous degree of prudence in dealing with the dangerous tempers of those about him.

By the time they had been six or eight weeks upon the Isle of Sands, the convicts began to expect, with ill-grace enough, the return of La Roche to take them to the main-land. As another month slipped by they began to desire his coming. Yet he came not.

Little by little their eagerness and anxiety deepened. As the chill winds of autumn blew upon them, they began to be consumed with fear lest the Viceroy had abandoned them, and they did little but watch the empty horizon from dawn till dark.

Jules's spirits fell day by day to a deeper dejection as he marked the anxious furrows increase in his father's face. At last, after a night through which they had shivered and lamented, they emerged from their huts to find the pools hard frozen, and a fringe of thin ice even along the coast.

Then they knew they were deserted—left to their fate.

For a time they were like madmen, shouting and yelling that they were betrayed—that the King had sent them here to perish, in order that he might be no longer at the cost of feeding them. Some swore while others prayed; and Jules clung, sobbing and broken-spirited, to his father.

Christophe Saintine kept a stern silence, thinking bitterly of the heartlessness which could condemn his innocent boy to such a fate; but Jules, at last, suggested that the Viceroy's ship might have been wrecked, or driven to some other part of the ocean. At all events, he was so convinced that the Viceroy could be guilty of no such cruelty as he was now accused of, that he half persuaded his father to a new hope.

The blacksmith, in the midst of a general clamor, thundered a demand for silence, and urged his comrades to be men and to consider what should be done. He declared that all must do what they could to secure themselves against the approaching cold, so that when the ship should come for them, in the spring, they might not be found merely a lot of skeletons upon the beach.

What Jules had guessed was indeed the truth. The Viceroy, having found in Acadia a place fit for his infant settlement, set out to return to Sable Island. But a great gale drove him right across the Atlantic, and his ship was wrecked on the coasts of the Duke de Mercœur, his bitterest enemy. He was thrown into prison and kept there five years before he could get a message to the King; and the fate of his wretched convicts, and of the boy whom by some chance he remembered, so vividly as even to recall him by name, weighed him down with a mountain of remorse.

Meanwhile, how was it faring on the Isle of Sands?

There were but forty of the convicts now. Eight more had met their death in brawls. As the weather grew more and more deadly in its severity, the men found it difficult to keep from freezing in their sleep; and Jules, unhardened and homesick, suffered most. For the additional warmth of close crowding, the islanders now slept in two small huts, the chinks of which they stuffed with dry grass and seaweed.

All the provisions left by La Roche had vanished ere this. All the blueberries and cranberries had been consumed, and there was no alternative but to eat the raw flesh of the wild cattle.

At first such fare was regarded with disgust, and Jules went hungry two days before he could overcome his repugnance; but in a little while the men began to relish it; and, indeed, it was a strong and sustaining food.

At last it happened, as the sun went down on a lurid November night, that a frightful hurricane descended upon the island. Hardly had the men taken shelter in their huts when these were blown to pieces like a pack of cards, and the unhappy beings within were left unsheltered in the howling blast.

Seeking the nearest hollow, they all huddled together in the withered grass, each striving to get beneath his fellow to escape something of the searching cold. As for Jules, his father had wrapped him in a thick coat which had belonged to one of the murdered men, and was now busy scooping a hole in the sand that might afford him some more shelter.

That night, though all followed the blacksmith's suggestion, and burrowed into the sand in little groups, no fewer than three men died from exposure before morning. But the experience had taught a needed lesson; and they set out to build themselves a better shelter than those with which they had hitherto been content.

They constructed their new shelter in the heart of the island, under the brow of a hillock well matted with grass and vines. Selecting the heaviest wreck-timbers they could drag, they sank them deep into the sand, and made a low-roofed den, half hut, half cave.

On the roof and up the sides they heaped sand and grass, on which they piled bushes, which were kept in place by more beams, well secured. To keep out the pitiless searchings of the icy wind, they lined the gloomy dwelling with hides from the wild cattle; and here all winter they lived like weasels in a burrow.

As their clothes gave out they replaced them with pieces of raw-hide; and soon, in their uncouth garments, their shaggy beards, matted hair, and miserable squalor, they began to look like some kind of nameless monster, as much brute as human.

Their broils became far less frequent as they approached the depths of their misery, and grew more and more dependent upon one another for the warmth which kept their wretched bodies alive. Terror, too, drew them closer together, as the winter storms yelled over their retreat, and the island trembled under the mountains of water that thundered down upon it, grinding off great slices of the beach.

But with the return of spring, and kindlier skies, and indolence and ease, the quarrels recommenced.

For occupation, and to keep up hope, Saintine got the men interested in hunting the seals that swarmed about the island, and in preserving the furs by drying the skins in the sun and washing them with salt water.

Thus the summer slipped away, not all unpleasantly. But no ship came.

Winter returned with all its horrors, and passed, and came again, till they began to calculate that the island had been five years their prison. For most of them it had become their grave. There were now but twelve men left—including Jules, now grown as tall as his father—to possess the great store of furs and hides which had accumulated. But at last their deliverance drew near.

La Roche had succeeded in sending word to the French king. Henry IV. was filled with compassion for the unhappy convicts. He ordered a relief expedition to set out with all speed.

It was decreed that Chetodel, who seemed reluctant, should lead the expedition. The pilot obeyed with the best grace he could assume, and after a little delay the rescue-ship set sail, with wind and weather favoring.

On just such another morning as that on which he had first set eyes on the Isle of Sands, Jules stood on a rise of the shore and gazed vacantly to seaward. He had no hope, no expectation of deliverance, and even his longings had grown dull and apathetic.

Suddenly he saw a sail on the horizon. His heart began to beat with choking violence, and he gazed, looked away, and gazed again, before he dared let himself believe his eyes.

Then he ran to his father and his fellows.

"There is a ship! There is a ship!" he gasped. "Come to the hill!"

It was a pitiful-looking group which gathered silently on the sandy hill to watch, with eyes of passionate yearning, the ship which they had no doubt was sailing past them. It seemed to be heading far away to the southward.

After some hours of watching, the ship's course was changed. Soon they knew that she was bent on making the island. Later in the day she came to an anchorage, some miles out, and a boat put in for shore.

Then the islanders broke out in a riot of joy. Jules and his father embraced and sobbed, and told each other they would see once more the little cot outside St. Malo. Others threw themselves down, grovelling in the sand, or rushed into the surf to meet their rescuers. That same night they all were taken aboard.

As the weather remained favorable, the ship stayed another day at her anchorage, enabling the islanders to bring off their great stock of skins and furs. Then she made all haste away from a coast so dangerous, and trimmed her course for France.

The breasts of the rescued convicts were now in a tumult of mingled hopes and fears, for they knew not whether it was to fetters or to freedom they were returning.

Sailing up the channel, Chetodel kept a course so close to the French coast that it was thought he was going to make St. Malo; and Jules's eyes grew dim with emotion as the well-known headland loomed into sight.

But no! St. Malo was not their destination. Chetodel kept on as far as Le Havre, and there his passengers were landed.

With hair and beards all untrimmed, and in their coats of hide as they had been when rescued, they were taken straight to Paris and to the King, where, in trembling doubt, they told the whole story of their sufferings. Christophe Saintine, as leader, spoke for the party; and he was careful to explain that his son Jules was not a convict—a statement which Chetodel at once corroborated.

Digitized by Google

To King Henry their story proved profoundly interesting. When he had questioned them closely, touching innumerable details as to their daily life on the island, and touching the wealth of hides and furs they had brought away with them, he finally vowed that they should now have a chance to win happier fortunes. He gave each of them a full pardon, with a present of fifty golden crown-pieces, and secured them in the possession of their valuables.

To Jules, as he could not give him a pardon, he made an additional gift of one hundred crowns, declaring at the same time that if he would return to Paris after embracing his mother and brother, he should have a position as one of the keepers of the King's forests.

Travelling was difficult in those days, and long ere Jules and his father could get home, St. Malo had heard of Chetodel's arrival. But as for the names of the scanty band who had survived the horrors of the Isle of Sands, that was something no one could find out; and there was little hope in the hearts of Goodwife Saintine and her big boy Ba'tiste. They tried hard to persuade themselves that one of their dear ones might have returned, but of seeing both again they never dreamed.

Then came a report that the King had pardoned the survivors, and loaded them down with gifts. But in this report there was no word mentioned of Jules.

"There was naught to pardon my boy for! Surely, then, Jules is not among them!" sobbed the goodwife.

Then for weeks came no further tidings. Christophe and Jules, tired of waiting for a ship, had started to walk to St. Malo.

One evening, toward sundown, as mother and boy sat dejectedly eating their poor meal of black bread and cabbage, the wanderers arrived.

The joy of such a home-coming cannot be pictured. We will leave them there, and retrace the naked, ill-kept road, with its row of poplars along one side, till we find our way by twilight into the city.

CHARLES G. D. ROBERTS.

The End.

TOWARDS THE GOAL.

Think not what "might have been."
'Tis such a crooked path, all life at best,
We must climb up, for this is not our rest.

HETTIE'S MUSICAL EDUCATION.

For more than three years the way in which Hettie Ketchum played on the cabinet organ at the church, and on the piano at Captain Lummis's house, had been the wonder and admiration of the people of Auroraville.

One day the matter came under discussion at the sewing circle, which had met that afternoon with the wife of Postmaster Trafford.

"I don't care," said Mrs. Trafford, who was sewing actively on a gingham overskirt for some unknown American heathen; "I've been to concerts up to Lake City, plenty of 'em, and I never heard any one of their crack players that could come up to our Hettie, when she gets to going on them variations to 'Home, Sweet Home,' or 'The Mocking-Bird,' or 'Nearer, my God, to Thee.'"

"And to think," said Mrs. Rufus Beals, holding up the stocking that she was knitting to see if it was time to "narrow;" "to think that that little red-haired creetur has studied it all up herself, and never had any teaching except what Almira Osgood give her before she died."

"I tell you it's surprising," Mrs. Trafford went on; "and it's a mean shame that the folks here in Auroraville don't do what they've said a hundred times they would do—get together and see to it that that girl has some advantages."

"Well, Mrs. Trafford," said Mrs. Beals, almost spitefully, and dropping several stitches as she did so, "somebody's got to make a move about it if it's going to be done. Here's this town, that's always been so great for music, and now it's got a chance to show the world what's in it, and yet nobody makes a start to get that girl educated."

She glanced over at Mrs. Tarbell, Squire Tarbell's wife. All the other ladies also glanced at Mrs. Tarbell. She was the person in Auroraville who always "made the move" if a move was ever made.

Feeling herself referred to, this lady proposed that the society act that very afternoon, and appoint a committee to collect subscriptions to send Hettie Ketchum to the Conservatory at Boston for one year, with the understanding that if her progress justified it, the necessary steps might afterward be taken to send her two years more.

"You know," said Mrs. Tarbell, "her uncle, the captain, said he would give fifty dollars a year any time, though he isn't a rich man, and he's done about all for Hettie that anybody could have expected him to. Fifty dollars don't go a great ways in Boston; but there are others that'll subscribe. I'll answer for Tarbell's giving twenty dollars."

Mrs. Tarbell was put at the head of the committee at once, and within twenty-four hours the subscription to send Hettie Ketchum to the Conservatory was the talk of the town.

The girl was an orphan; she had a home with her uncle, Captain Lummis, a hard-working half-merchant, half-farmer in the village, who had accumulated a little property, and had, among other possessions, a piano which had come to him in the way of trade from an embarrassed customer up at Lake City.

On this piano his niece Hettie, who was ambitious and industrious, played at every spare moment. She played upon the organ at the village church excellent accompaniments for the congregational singing. Her "interludes" and "voluntaries" on this instrument—which was very wheezy, and gave Hettie a great deal of unneeded exercise in the working of the pedals—were greatly admired.

But as the remark made by Mrs. Trafford at the sewing circle indicated, the surprising variations upon popular songs which Hettie had learned to play were her chief title to the admiration of the people.

To hear a familiar air struggle along under Hettie's fingers, carried first with one hand and then with the other, while her right hand continually shot off into a series of fantastic and irrelevant movements, was a thing of wonder and delight.

"Half the time," said Postmaster Trafford, "you think she's lost the tune in all that toodle-de-eedle-de-eedle-de-oodle-de-oo, an' then first you know back she lights on it again, like a hawk on a hen-roost. She'll go all over the piano, mebbe, but she'll carry that 'ere tune along through the whole of it, right side up with care."

Though the broaching of the plan to send Hettie to the Conservatory aroused a good deal of enthusiasm, Mrs. Tarbell and her committee had hard work to obtain the three hundred dollars that were necessary for the first year. At last, with the aid of two ice-cream festivals in aid of the fund, at which the people of Auroraville ate a great deal of very poor ice-cream with a great deal of public spirit, and after Captain Lummis had "stood in the gap" with an additional twenty-five dollars, the amount was made up.

And so Hettie went to the Conservatory. The hopes and fears of the town of Auroraville were with her. Her regular letters to her uncle and to Mrs. Tarbell went the rounds of the village.

They were full of enthusiasm and confidence. Her teacher had praised her—some, she said, and she had heard several celebrated performers play.

"One thing I learned right off," she wrote, "and that is that I didn't know anything about playing when I was at home—not a thing!"

This was rather astonishing to the Auroraville people, but it only served to raise their anticipation as to what Hettie would do when she came home, if her playing was to be so much improved that what she used to do was nothing at all in comparison.

The months went by. Spring came, and the people began to talk of Hettie's return. In May, Captain Lummis had a tuner come down from Lake City, and put the piano in the best possible condition.

Meantime, Hettie had sent home with one of her letters a programme of a piano recital at the Conservatory, with this "number" upon it marked with a loop in intensely red ink on each side:

Toccata in F, op. 143—Baumberg-Fiedelspiel.
MISS HENRIETTE KETCHUM.

"Henriette! Well, of all things!" Mrs. Trafford exclaimed, when the programme came to her. "Why, that girl was christened 'Hettie' and nothing more. What business has she got to go and give a Frenchy name like that?"

"And what is she playing there?" said the postmaster. "I never in the world heard of any such kind of a piece as that."

"I should have thought," his wife put in, "that at a big concert, with a printed programme like that, she'd 'a' played one of her nice pieces, like the variations to 'Home, Sweet Home,' or 'Rocked in the Cradle of the Deep.'"

The end of June came at last, and with it Hettie Ketchum back to Auroraville. Every man, woman and child who had attended either of the ice-cream festivals of the summer before felt a proprietary interest in her, and almost every one of them had driven, ridden or walked over to the railroad station at least fifteen minutes before the train arrived which was to bring her.

The train came in.

"Goodness! There she is! Did you ever!"

Half-a-dozen women said this at once as a radiant girl, with rich auburn hair, snapping brown eyes and a complexion considerably less freckled than it had been a year before, rushed out upon the platform from one of the cars.

Her hair was brought high up in a long, slim, fuzzy knot such as no one in Auroraville had ever seen before; her hat, both sides of which sloped up to a sharp point in front, like the ridge-pole of her uncle's pitch-roofed barn, was covered with a great number of bright red and yellow artificial nasturtiums; her gown was a close gray basque, buttoned diagonally down from the shoulder, and though plain, looked very trim and stylish.

"Well! Hettie's made a pretty smart use of her clothes money," said Mrs. Tarbell, smilingly.

"*Our* clothes money, you mean," said Mrs. Trafford, somewhat scornfully.

The next moment Hettie was kissing all the women and girls and shaking the men and boys by the hand, and being cordially welcomed. But she seemed to detect a certain faint chilliness under the outward warmth of her reception, as if things were not altogether right.

She was glad to hear from Mrs. Tarbell that it had been arranged that on the very next evening but one the members of the Hettie Ketchum committee and their husbands and families, together with all the rest of the Auroraville people who had contributed directly to the fund which had sent her to the Conservatory, should assemble at Captain Lummis's and hear Hettie play on the piano. The work of collecting subscriptions for her second year had already begun, and it was important to see if the progress she had made justified the people in taxing themselves further for the purpose.

On the evening appointed, Captain Lummis's big, old-fashioned sitting-room was more than full. People were standing in the hall on one side and the kitchen on the other, all looking grave and expectant. Hettie had been practising on the piano, and groaning a little over the dreadful flatness of its quality, and the unmistakable fact that it was still somewhat out of tune, in spite of the Lake City tuner's efforts.

"But never mind," she had said to herself. "These good people won't know the difference. The piano is loud, anyway, and my playing will astonish them so much that they will never think of the tone of the piano."

Almost before they knew it, Hettie had begun. She lifted her hands in the air and let them fall upon the piano; she swayed lightly to right and left; now she bent forward toward the keys, and then sat straight up; and all the time the piano responded with an unsteady, unmelodious, incomprehensible clatter.

She warmed to her task, and let her hands fall more and more rapidly, and with more and more violence. The old instrument roared and screamed in an undefined, resounding crash of sound. Still Hettie played on, now and then rolling her eyes upward, but paying no attention to the people, who were looking at one another in astonishment, and showing signs of uneasiness.

This performance had gone on at least ten minutes, and Hettie showed no signs of stopping, when Captain Lummis thought it time to interfere.

"Hold on, Hettie! hold on!" he shouted, at the same time moving around until he stood in front of his niece.

Hettie ceased playing, and looked at her uncle in astonishment.

"There now," said Captain Lummis, "you've shown us that you can do that kind of piano gymnastics, or whatever you call it. Now play something, Hettie!"

Hettie's jaw had fallen, and she looked at the captain in astonishment.

"Why, uncle," she said, "I was playing something, and that is the best piece I have. It's one of Moszkowsky's great sonatas. I thought—I thought I'd surprise you all with it!"

"Well, I rather guess you did surprise us," said he, "but you didn't please us any too well. We kind of thought you'd play the variations to 'Home Again' for the first piece. Now, go ahead with it."

"'Home Again!' that's it!" Postmaster Trafford called out, encouragingly, from the corner.

"But, uncle, Mr. Trafford!" said Hettie, "I can't play that sort of pieces any more! I haven't played them since I went away. They don't play such things in Boston, you know!"

"Is that 'ere that you've just been playing the kind of pieces they play in Boston?" asked her uncle.

"Why, yes."

There was dead silence in the room. It was a very uncomfortable moment. The thought that Hettie could not play the variations to "The Mocking-Bird" or "Home, Sweet Home" as well, after all this expenditure and trouble, as before she went away, fell upon her Auroraville friends like a dreadful chill.

Hettie tried to solve the difficulty to her own advantage by playing a *scherzo* movement from a sonata of Mozart's which she had mastered. The people liked this piece somewhat better than they had liked the selection from Moszkowsky, but it aroused very little enthusiasm.

Mrs. Tarbell, standing by Hettie's side at the piano, tried to persuade her, in a whisper, to play one of the old variations.

"I just can't do it," answered Hettie, sadly. "You see I have played such different things, and things so much better. I don't like the old pieces any more, and don't feel any sympathy with them; and, anyway, I don't believe I could remember any of them."

The people went home rather earlier than they had expected to go, and on the way they discussed Hettie's playing very earnestly.

"Well, I tell you what," said the postmaster, and he seemed to express the general sentiment, "I'm disappointed. We all had faith in Hettie Ketchum, and we wanted to educate her, and I'm afraid we've educated her a little mite too much already."

The subscription for the next year at the Conservatory languished. No ice-cream festivals were held for the purpose during the summer. Hettie even fancied that she felt a certain coolness toward her on the part of her old friends.

Perhaps some other girls, in this situation, would have shed many tears. In Hettie, however, it developed her native resolution and did her more good than her neighbors' continued financial assistance could have done her.

"Uncle," she said to Captain Lummis, "I think I can tell you what is the matter. You see I have really learned what is good music. But these kind people here at Auroraville, when they had once contributed something toward my education, all felt that they owned a share in me; and feeling that way, it was perfectly natural that they should want me to do what they thought was best, and not what I thought was best."

"I guess you are right, Hettie," said her uncle.

"I'm convinced now," she went on, "that it was a great mistake to accept their help. I am grateful for it, but now I'm going to depend on myself for my musical education!"

Hettie took the village school for the next year. She obtained some pupils on the piano and organ over at Lake City, whom she went over and taught on Saturdays. She even earned some honorable dollars in superintending the making of several new black silk dresses for the Auroraville ladies, to whom city fashions in dress were more intelligible than city fashions in music.

The next autumn Hettie went back to Boston with resources of her own earning sufficient, with the aid her uncle was able to supply, to obtain the best instruction. Proving her talent and her industry, she became a successful musician; and in time paid back all the money which had been advanced in her village for her first year's education.

The people of no town were ever prouder of a native who had won distinction than the Auroraville people now are of that brilliant performer on the piano, Miss Hettie Ketchum.

EDSON KEMP.

QUEEN OF NIGHT.

O'er wealth and poverty, the worst, the best,
Her lustre falls, and, through the listening air,
Breathes but of peace and beauty everywhere.
Serene and pure she mounts the azure heaven,
Telling the wondrous love her God to man has given.

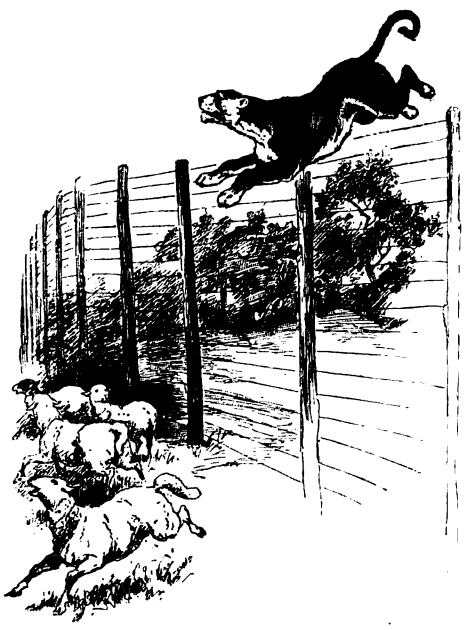
BIZ.



In Two Chapters.—Chapter II.

Jesse Stands the Test.

Jesse listened a moment, in great alarm, to the sound which the animal made just outside the door. Then he took his little revolver and snapped it through the chink in the door. He thought that he might thus scare the creature. But the imperfect weapon, provided only with rim-fire cartridges, failed to go off.

He had scarcely cocked it for a second trial when he heard a crash of poles at his pony-shed, followed by terrific growls and a wild cry of fright or pain from the horse. The dogs whined and barked.

Again Jesse peeped out at the chink and saw,

in the gloom, that the grizzlies—if grizzlies they were—had broken into the shed and attacked his pony. The loose pole structure had been half demolished in the struggle; and the ferocious roars and growls of the now excited animals made Jesse quite sure that they were grizzly bears.

He snapped his revolver again. This time it went off, but it did not seem to attract the attention of the bears in the slightest degree. By this time they had pulled down and throttled the pony.

The dogs would have rushed forth, and no doubt have attacked the bears; but Jesse, though much frightened, was cool enough to know that to let them out would very likely mean to lose his only means of managing the flock.

He fired off the little revolver three or four times; but the bears, paying no attention to the shots, dragged the body of the pony down toward the river.

He kept his door propped and watched anxiously, fearing that they might return for him or the dogs. He resolved, as soon as morning came, to let out the sheep and then set off down the river at his best pace. He had no taste for a life in the midst of savage beasts. Toward morning his intention to decamp was strengthened by the sound of mountain-lions crying in the woods again.

But with the rising of the sun Jesse's courage revived a little. He dared not go down to the border of the woods at the river, where the bears had dragged the horse, lest they might be lingering near; but he ventured forth, firing his revolver at intervals, and opened the corral gate.

He thought, too, of his promise not to leave the flock. But he was in great fear that the bears or the *leones* would make an end of him. He resolved, for his own safety, to move into the sheep corral. He doubted if the wires would keep out grizzlies, but the *leones* had not broken in as yet; and he felt that the wire fence would be, at least, a little protection. He carried the shed poles and a part of the shack poles inside the wire fence of the corral, and built a little shack within it. He also put his supplies in the corral.

Then, remembering that he had not fastened very securely the door of the shack at the first corral, he went back to attend to it. There he found that some animal had entered during the night, and made an effort to open the cans of meat and soup with its teeth.

Manifestly the surrounding forests abounded in wild beasts. What should he do with them, practically unarmed as he was?

He missed his pony badly in getting the sheep back to the corral that afternoon. It took him more than two hours to get the straying bands all inclosed. Without Jack and Jim he could not

Digitized by Google

have succeeded. He passed the night at his new shack inside the wire fence, and was not molested, although toward midnight he heard the bears growling down near the river.

The next night a lion came out of the woods across the fork, wailing dismally as he approached the corral. It walked slowly around the fence, the sheep drawing away from it on all sides as it moved along. Jesse kept the dogs behind him in the shack; and when the creature had come along near the shanty which he had erected just inside the gate, he discharged his revolver at it from the door. With a hoarse snarl the beast sprang away, and for some time he heard nothing of it. After awhile it returned, as he knew from the timid movements of the sheep; but it did not break in.

Night after night experiences of this sort were repeated. Late one night he was waked by a great rattling, and by the moonlight saw a bear clawing the wires.

The beast made a prolonged effort to get in, but retired, growling, after a time, and sitting down a little way off, licked its scratches.

Jesse wondered why the lions did not leap over the wire fence into the corrals; but thus far none of them had done so, perhaps from the fear such creatures feel of getting into a snare. But on the second night after he had shifted the flock to the third corral, and erected his shack inside it, he had an experience of this sort.

Wearied with running several miles on foot to head off straying sheep, he soon fell sound asleep within the little shanty. Suddenly he was waked by the noise of the sheep rushing past the cabin.

Jack and Jim were barking, and had run out of the shanty; Jesse ran out, too, although as yet he was but half awake.

He was able to get no farther than the door, for the flock had crowded in a dense mass between the shack and the wire fence. The moon shone over the mountain-tops so that it was bright as day; and out in the rear of the shack Jesse could hear a great commotion, Jack barking and the sheep bleating.

He forced his way out through the throng. Jim kept close to him, leaping over the backs of sheep. Presently he discerned the cause of the tumult.

A long, dark-colored animal, crouching low and lashing its sides with its tail, was inside the corral, stealing upon the rear of the flock. Even as Jesse caught sight of it, the beast darted forward, and with a bound sprang among the sheep.

Jack had got through the flock and dashed at the invader, barking fiercely. Then came a rush of the frightened flock from that side; they leaped upward, tumbling headlong over each others' backs. Jesse tried to stem the tide and get back to his shack door to get his pistol, but was knocked off his feet.

It seemed to him then that more than five hundred sheep jumped over him. Before he could gain his legs, one after another knocked him down again.

Above the hubbub he heard Jack yell as if injured. Jim, like himself, had been overborne in the mass of sheep. At last the greater part of the flock rushed past; and, half-smothered, Jesse

again and, much alarmed, went to the shelter of the little cabin, calling in the dogs. Jack was bleeding and badly hurt.

The lion, which was a very large one, turned, holding the sheep in its mouth, and coursed along the wires toward the lower end of the corral. Meantime the whole flock came crowding back around the cabin again.

Jesse kept himself concealed and watched for several hours, while the lion ate its fill of mutton. A little before daybreak a fog arose and obscured the moonlight, so that he could no longer discern objects. The sheep moved tumultuously at times; but the lion had disappeared when it grew light, having eaten a part of the sheep.

Probably it had leaped out as it had leaped in.

As Jesse let the flock out to feed, he discovered that one other sheep had broken a leg, and that two more had been trampled to death. This foray disturbed him almost as greatly as the slaughter of his pony. If the lions began to jump the wire fence, he saw nothing but disaster and danger ahead. Jack, too, was so badly torn that he was unable to go out on the range.

With only Jim to help him, the young shepherd had to run from one side of the range to the other nearly all day. Four sheep crossed the fork and were lost in a ravine. He dared not leave the main flock to pursue them, and he reflected uneasily that their bodies would attract still more wild animals to the range.

By the time he had inclosed the flock at sunset he was on the point of dropping from sheer fatigue, and he had no doubt that he had run forty miles.

When Jack had recovered a little, Jesse drove the whole flock to the first corral, seven miles distant, in the hope of leaving this particularly bold panther behind. For more than a week he was not troubled, although he heard lions every evening. Then his old enemy leaped the fence again, and another stampede followed.

Jesse made a mark on a sheet of paper for each day, and counted the marks often. "If only I can live till they send a man up here," he thought, "I'll leave this place without delay."

He had made his sixty-ninth day-mark, when, as he was heading the sheep for the corral toward sunset of that afternoon, a man on horseback, leading a pack-pony, came in sight at the ford. At last he was relieved!

The man was a raw young German, who had experienced nearly as much difficulty in reaching the range as Jesse himself had encountered.

In reality, this was the turning point in Jesse's career, the real test of his character.

Many young men who go to the far West, finding the conditions of life hard, become disheartened and homesick and go home again, often requiring assistance from their relatives to enable them to return. Others stick to whatever they undertake, and often succeed brilliantly.

Jesse had thought that he should leave the sheep range on the Skagit the moment he was relieved, and felt a very strong inclination to take his wages for the ten weeks and buy a ticket home.

But now that valuable something which is termed "grit," and which Western people call "sand," rose in him. He set his teeth hard. He had writing materials in his valise, which his mother had given him, bidding him write often, and he now wrote two letters.

One was to his mother. It was not a letter recounting the dangers and the hardships which he had endured, although it cost him an effort not to speak of them, for he naturally craved a little sympathy. He merely wrote:

"DEAR MOTHER.—I am sorry I could not write you sooner; but the place where I work, herding sheep, is a long way from a post-office. I am well, and I earn fifty dollars a month and board. If things go right, I think I shall stick to this job till I get money enough to go into business for myself.

JESSE."

The other letter was to his employers, to whom he had determined to give a piece of his mind. The letter ran:

"GENTLEMEN.—This was a nice place that you sent me to, and got me to promise I wouldn't leave. Your range here is swarming with mountain-lions and grizzlies.

"You told me I should find a gun here; but I didn't. I have nothing to defend myself or the flock with. The grizzlies took my pony right out of the shack, and the lions have got to jumping the corral fences.

"I've lost twenty-three sheep, and you may think yourselves well off that it isn't ten times as many. There have been plenty of nights here when I didn't expect to see daylight again.

"If you think I am going to stay here and fight lions and bears with my bare hands, and run forty miles afoot every day, you are mistaken. I want you to send me up a good riding pony and a good gun, with plenty of cartridges and some poison.

"If I don't get them in the course of four or five days, I hereby give you notice that I'm coming out, and your sheep may take care of themselves.

JESSE GARLAND."

He sent these missives out by the German next morning.

When Mr. Littlehale read Jesse's report, he laughed outright, and slapped his fist down with emphasis.

"That's 'biz!'" he exclaimed. "Straight 'biz.' I took that boy's measure to a T!"

"That rascally 'Greaser' must have stolen the gun," he said to his partner. "What a time of it that boy has had! It was too bad. But he's evidently the right sort. What he says has the true ring to it. Gun! He shall have two guns, and we'll send him another pony to-morrow."

Just at nightfall, the third day after, Jesse saw the German coming back. This time he was leading a riding pony, and had two leather cases strapped to his saddle.

"Dot vos two goons, meester," he said, "und somedings in dot box vot der boss dell me I no eat—dot vos vot you call bizen! Und dot boss he say you vos one brick, und you shall shoot dem vildt animals like plazes!"

They had sent up a Winchester and a heavy double-barrelled shot-gun. Jesse felt his spirits rise as he handled the new weapons.

"Now, I'll see if I cannot have better order on the Skagit," he muttered to himself. "There are going to be some dead lions around here, if I can shoot straight."

He began to practise at a target with the carbine next day, and two nights afterward he had the satisfaction of sending a ball through the sides of the big mountain-lion which had terrorized the range for two months.

"No more blackmail in mutton for you, old fellow!" exclaimed Jesse. "I've fed you a long time, and your skin ought to be in good condition!"

With a good pony to ride, Jesse was no longer exhausted at night by hard running. He was able to watch more leisurely; and his carbine often spoke out, loud and sharp, from behind the wires of the corral.

During the month of September he shot four lions, and in October killed a silvertip bear.

When the man with supplies came up again, he sent out six lion skins and a bear skin to Littlehale & Co., as evidences that the guns had been much needed at the range.

As he grew accustomed to managing the flock and acquired experience, Jesse came to like the work far better. He presently ceased to be lonely. At the end of the year, the proprietors made him a considerable present, in addition to his wages. They could well afford to do so, for he had done the work of two ordinary shepherds.

When he had been in charge of the flock twenty months, he was allowed four weeks' vacation, and went home on a brief visit to his mother and other relatives in the East. It was then that he told his story.

It was his intention, he said, to continue "shepherding" for two years more, when he hoped to have saved enough money to buy a flock of sheep for himself.

C. A. STEPHENS.

LOST IN THE DESERT.

Mr. A. J. Duffield, in the course of his "Travels Abroad," was making his way into the interior of Bolivia in company with fifty mules "laden with merchandise," and "ten muleteers heavily laden with ardent spirits."

The company had travelled all night and had made about forty miles, besides climbing about five thousand feet, when Mr. Duffield committed what he styles one of the greatest follies of his life. He left his companions and started off alone across a desert in which there are no permanent tracks, nor any landmarks or guideposts.

"It was from no love of adventure," he says, "that I set out alone from Culupo; it was simply to escape from the torment of the clouds of dust raised by the fifty mules. My companions assured me that I could not miss my way. So on I went over level ground at an easy pace.

"Before me lay a motionless sea of sand, and above me hung the sun pouring down heat. But the air was sweet. It penetrated my bones, and I went on mindless of all things save the bliss of being. This uncommon feeling lasted for some five hours, when I waked as if from a happy dream to find myself all alone.

"I had no sense of danger, but pulled up the mule to get a steady view of things. In front nothing was to be seen but the mule's ears, behind nothing but its tail. I knew enough of mules to believe that this one knew what it was about, so for another hour I allowed it to go at its will. Then we came up to what I imagined must be my own troop of mules.

"'How far are we from Mescanti?' I inquired, in a confident tone.

"'This,' said the courteous Indian, in cultivated Spanish, 'is not the trail that leads to Mescanti.'

"'Where, then, lies the trail?' I inquired.

"'Yonder,' was the reply, and the dark-faced child of the sun pointed indefinitely with his chin to a part of the world at right angles to that over which we were then passing.

"Being in haste, for the day was now waning, I bolted off, and came on not one track, but three tracks, but they all ran in the same direction.

"It was now six o'clock. In a few minutes the sun would set and I should be left in the dark. Still I had no fear. On taking a steady view around the world, I observed a dip in the distant hills. There, if anywhere, I should find water.

"We sped on our way. The sun set and the night quickly became dark. There was no moon. Soon I caught sight of what seemed to be a torch. It proved to be a star and was a long way off.

"Still we kept on. Midnight came and the cold was intense. We reached what seemed to be a deep, yawning pit, which lay in a direct line with the star. Down went the mule into what turned out to be an extinct volcano—a crater of pumice. We climbed the other side with difficulty, making a great cloud of blinding dust, and on reaching the solid earth I proposed to give the mule a drink of water.

"To my horror there was no water to be had. The strap which had fastened the horns containing the water to the croup had given way. To my actual thirst was now added an imaginary one, which became intolerable. In my distress I had no heart to mount the mule, and walked at its side, picking up one or two pebbles to roll under my burning tongue, which began to swell, or so I imagined, as my thirst increased.

"Soon my attention was called to a mysterious stretch of darkness, over which hung the friendly star, and as I was peering into it, the mule turned with a suddenness which nearly hurled me from the saddle. I pulled up, and heard the sound of rippling water!

"We had reached the precipitous banks of the Mescanti River. If the mule had not started back we should have fallen down a steep place and been killed.

"The mule had found the river; it was now my place to find the ford. This did not take more than an hour, and I gave the first drink to the mule. After half an hour's rest I was again in the saddle. We swam the river, and in less than five minutes were in front of a roaring fire in an Indian's hut at Mescanti—saved!"

OUT DOOR HEALTH.

Better to hunt in fields for health unbought
Than fee the doctor for a nauseous draught.
The wise for cure on exercise depend;
God never made His work for man to mend.

—*Dryden.*

For the Companion.

A PARADISE OF CHILDREN.

Although America is of all countries the one in which the rights of childhood are most regarded, it is not by any means the foremost in provision for its comfort or enjoyment.

Many Americans carry their theory of respect for the character and individuality of the child to an extreme which approaches error.

Children's liberty of thought and action is allowed to reach almost to license; but we have only lately begun to take notice of their physical needs, and to make public provision for their recreation.

In this respect we might well take a lesson from the city of Paris. The wonderful pleasure-grounds which are to be met at every turn are open to the children unreservedly.

From the Bois de Boulogne, with its hundreds of acres of hill and valley, and the gardens of the Tuileries, bright with statues and flowers and fountains, to the small squares and places, or even to the peaceful old churchyards with their quiet paths and green arbors, there is no spot where the happy little creatures do not find room for out-door diversion.

You will find them making sand-pies,—the streets of Paris are too clean to provide mud,—whipping their gaily painted tops, pegging away at marbles with shrill French enthusiasm, playing soldier, or *cache-cache* or prisoner's base, or "I-spy," eager and almost as swift as birds, and to all appearance much less given to quarrelling.

Perhaps the universal courtesy with which they are treated, may be the cause of the courtesy they in turn show to their companions and elders; but whatever the reason, it is certainly a most charming trait in their behavior.

To see a French boy, hat in hand, answering or asking a question, or a French girl, standing with kindly deference until her mother or her mother's friend is seated, is to see a very pleasant sight indeed.

But it is not alone in playgrounds that the beautiful city takes care of its children. There are the ever fascinating Gingerbread Fairs. You come suddenly, at some street corner where there is an open space, upon a village of tents, with merry-go-rounds, swings, Punch and Judy shows,

and all manner of devices pleasing to children. There are captive balloons in which you can soar above the house-tops, and toboggan slides which dip frantically, as if into the bowels of the earth; and clowns, jugglers, and acrobats, and streets upon streets of toys, and candy and gingerbread!

Gingerbread everywhere; walls of it, chunks of it, bricks of it; in slices, in blocks, in shapes of men and elephants, ships and houses; ornamented with gold and silver, glistening with frosting, covered with a mail of parti-colored comfits, packed full of plums, bristling with nuts sparkling with tinsel, fashioned into every device which the wit of man can conceive.

And oh, so cheap! The poorest small pocket holds sous enough for a treat.

Then there is the Garden of Plants, the great botanical and zoölogical nursery of the nation, with its long lanes flanked by pretty houses, some large as barracks, for the monkeys or the gracefully awkward camelopards, some tiny enough for the smallest forms of animal life.

There are conservatories filled with rarest butterfly-like orchids, and tall tropical palms; whole buildings devoted to aquariums, and rare, strange nooks, where the trees are cut into grotesque forms, as if one had strayed into some goblin country.

In the centre is a great oval amphitheatre without a roof where, every fine day, a perpetual circus goes on; and where, for a sou or two, a good boy or girl may ride upon any creature, from an elephant to a goat not much larger than a good-sized cat.

There are brilliant houdahs, in which a dozen can sit at once, regally borne by some gigantic Jumbo; there are queer little saddles fastened on the hump of a camel, or a dromedary, or an ostrich; there are cushions across the back of a deer, or a zebra, or a Shetland pony, or some strange creature that looks as if it had wandered out of the Arabian Nights.

There are bands playing with fine flourish of

Digitized by Google

drums and cymbals; there are travelling musicians with every variety of noise, from a hurdy-gurdy to a calliope whistle; and the air is full of flower fragrance and the joyous tumult of children's voices. What could be more like Paradise?

Here and there you will stumble, in some of the narrow streets of the old city or the broad

In a Paris Park.

boulevards of the new, upon a magic gateway, where you drop five cents into a lion's mouth. He swallows it without winking. Then you knock at a low door, and presto! you are in Fairyland. Real Fairyland this time, if there ever was such a thing!

There is the palace of the Sleeping Beauty, with her scullions and courtiers and maids of honor dreaming away in the gardens and halls, while she herself lies with sweet, closed eyes on the silken coverlet of her pretty bower. Only you are not allowed to kiss her awake.

There are talking birds and singing pigs, and strange enchantments all about you. There is an elephant with a staircase in his left hind-leg, and a suite of rooms in his monstrous body, and a supper-hall in his big forehead, whence you can look out on the world from his twinkling eyes.

If you turn to the right you will meet little Red Riding Hood, with the Wolf talking to her in very good French, and the old Grandmother being gobbled up before your very eyes, if you wait long enough. If you turn to the left, there is Jack the Giant Killer slaying his fearful Goliaths; or Hop o' My Thumb piloting his train of brothers through the woods; or the fatal castle of Blue Beard, with Sister Anna looking from the battlements; or some other dear old friend of childhood the world over.

Then there are dwarfs and fairies running about everywhere with cakes, ices, and strawberries and cream. You have only to sit down at any one of the small tables amid the flowers to be sure of that.

By and by, as you wander through the shady lanes, not quite certain yet whether you are sleeping or waking, you see a tempting small door leading into a magic tower,—and lo! you are out in the work-a-day world again, with the portals of Fairyland closed behind you, and only a blank wall on a busy street to show where it had been.

Perhaps the next best thing is to go riding about, perched at your ease on top of the huge, lumbering omnibuses, where for only three cents you can travel hither and thither over the smooth pavements of the most brilliant city in the world. A child in his sober senses would hardly choose to stay inside when the strange, circular, small stairway invited him to mount up above, and go rolling along over the heads of ordinary horses and carriages.

Beautiful bridges cross the shining river; palaces and temples rise like some rich intaglio of carving and gilding; cathedral spires and church towers mount like fine frost-work into the soft summer air; there are groups of wonderful statuary and shining fountains in the flower-decked public places, gardens and parks, and long vistas of strange loveliness opening at each corner.

One feels like a portion of some royal procession, and yet the whole triumphal progress costs but three cents. That might not matter so much to a grown-up man, whose pockets may be full of jingling silver, but it means much to a small boy who never has any change to spare.

The simple way in which the children are dressed cannot help being an attraction to other healthy little people. No frills or furbelows, or stiff cuffs and collars, to make one afraid of soiling or spoiling; but the plainest short gowns and trousers, with stout boots and thick stockings; and almost invariably a big, dark blue cotton or woollen blouse, belted at the waist, with famous pockets which will bear any kind of rough usage.

This is the way you will see tall boys and girls returning from school, little boys and girls at play with nurses and mothers, even young men and women in the normal schools and institutes. It is such an easy-going, comfortable, happy-go-lucky sort of costume that it seems the finest thing imaginable for comfort and for fun.

One example which the people of Paris set to the rest of the world is the habit of enjoying everything together. Rich or poor, you see the entire family in company. On Sundays and holidays they go into the parks, the woods, the streets, out upon the gay boulevards or the quiet country places, in the myriad small steamboats that glide like water-flies up and down the Seine, to the forests of Fontainebleu or the Gardens of the Luxembourg or Tuileries, but all together.

The big brothers and sisters, the little brothers and sisters, the father and mother, the baby, even the old, old people, smile and chat and sit in the grass, and eat their homely lunch in such happy and hearty fashion that it is a joy to watch them.

Perhaps of all the reasons which could be gathered together from this to Christmas, there is none stronger than this happy, healthy union of family interests and amusements, to prove that Paris may well be called the Paradise of Children.

MARY ELIZABETH BLAKE.

USELESS GRIEFS.

Live not in vain regrets:
It is sad waste to company with ill,
And leave no room for better guests to fill.

Selected. —*Mary Weatherbee.*

THE DARDANELLES QUESTION.

The water passage which is, perhaps, the most important, politically, and is the most anxiously watched in the world, is the little, narrow strait known as the Dardanelles.

It is the channel which joins the Sea of Marmora, and indirectly the Black Sea, with the Grecian Archipelago, and so with the Mediterranean and the Atlantic beyond. It is the narrow strip of water which separates, at a breadth of from one to four miles, the Continent of Asia from that of Europe in that corner of the world.

It is forty-seven miles in length, strongly fortified on both sides, and is under the control of the Sultan of Turkey, through whose dominions on either side it flows.

The main significance of this water passage is that it is the portal of Constantinople and the Black Sea. For centuries, therefore, it has had a great military and political importance. It is the only southern water outlet by which the great Empire of Russia can reach the oceans.

Intimately connected with the Straits of the Dardanelles is the long existing ambition of Russia to obtain possession of Constantinople, and the European part of the Sultan's dominions. This has really been the purpose of Russia for two centuries.

But the other powers of Europe, and especially Great Britain, have always been opposed to the attainment of this Russian ambition, which has brought about two wars within the past forty years.

The Crimean War of 1853–6 was fought on the issue whether Russia should have the right to establish naval stations and sail her war-ships on the Black Sea, and to send her war-ships, as well as her merchantmen, through the Dardanelles.

The defeat of Russia by the allied powers of Great Britain, France, Italy and Turkey in that war resulted in the Treaty of Paris, which practically forbade Russia to do either. It had already been settled fifteen years before, by the treaty of 1841, that no war-ship of any nation except Turkey should pass through the Dardanelles without the consent of the Sultan.

But in 1871 Russia took advantage of the general confusion of European affairs caused by the Franco-German war, to demand the removal of the restriction upon her having naval stations and sailing war-ships in the Black Sea; and she succeeded. England could not oppose her alone, and could get no help from the other powers.

Six years later, Russia entered upon a war with Turkey to gain possession of Constantinople; but although she was victorious over the Turks, an English fleet entered the Dardanelles to protect the ancient Turkish capital; Russia was forced to give up her design; and by the Treaty of Berlin the powers of Europe once more balked her ambition.

Ever since 1871, therefore, Russia has had the right to maintain her fleets in the Black Sea, but has not had the right to send them to and fro through the Dardanelles. In the latter part of August, the European world was startled by the announcement that Turkey had permitted certain Russian ships, transports carrying soldiers, but not technically war vessels, to pass through the Dardanelles.

Thus the object for which the Crimean War was fought, and which actuated the powers in restraining Russia by the Treaty of Berlin, seemed likely to be lost by the consent of Turkey, which empire the powers, for their own reasons, have always sheltered from Russian aggression.

While the ships sent through the Dardanelles were not exactly military armaments, all Europe has been stirred by the fear lest this act is only the entering wedge to the attainment by Russia of her long-cherished design of capturing, not only the water-ways, but the dominions of the Sultan.

No doubt the event has given a more warlike aspect to European affairs. It remains to be seen what action the powers will take, and whether Great Britain will interfere, as she has done before, with the progress of Russian encroachments in Southeastern Europe.

AWARDS.

A hero's crown for the man of men
Whose right arm shall prevail!
But what befits their prowess then—
What laurels shall their brows attain,—
What guerdons to their lot remain,
And what hosannas hail,—
Who fall and fall, and fall again,
And rise again—to fail?

GRACE ELLERY CHANNING.

THE COMING ELECTIONS.

No one who has eyes and ears in good working order needs to be told that a political canvass is going on, and that some important State elections will take place in November.

This is called an "off year." The elections are not general. The people have to choose neither a President nor a Congress. The officers to be chosen are State officers. Under such circumstances the voting is usually light, because the interest of the citizens in local affairs is not so universal as it is in national matters, and because the politicians put out less effort and spend less money in off years than they do when national officers are to be chosen.

But there are special reasons this year for an unusual degree of activity. It happens that elections are to be held in several of the largest States, and in each of them circumstances make the politicians, whether Democrats or Republicans, extremely anxious to succeed.

Last year the Democrats carried the election in many States which are wont to give Republican majorities. Next year the Presidential Election will take place. The Democrats wish very much to hold the ground they have gained, and the Republicans are resolved, if possible, to regain it and to put themselves in position for the great contest of 1892.

New York is to choose a Governor and other State officers. It is admitted to be rather a Democratic than a Republican State, and yet it gave its electoral vote to Harrison three years ago. The control of this State, as the most populous in the Union, is regarded as of the utmost importance by both parties. New York was carried overwhelmingly by the Democrats last year. The contest in November is expected to be much closer, and it will be fought in the keenest manner.

Ohio has usually been Republican, but last year the Democrats carried it. Now a Governor is to be chosen, and national importance is given to the canvass by the fact that Major McKinley, whose name has been given to the present tariff law, is the Republican candidate; while the Democrats have nominated for reëlection Governor Campbell, who carried the State in 1889. Another reason why this election is interesting is that the legislature to be chosen in November will choose a successor to Senator Sherman.

Pennsylvania gave about eighty thousand Republican majority in each of the last two Presidential elections, and yet it elected a Democratic governor last year. A State Treasurer is to be chosen next month, and each party will put forth strenuous exertions to carry the State.

Massachusetts is another State which is almost always Republican; but last year, while the Republicans carried the legislature and most of the State offices, the Democratic candidate for governor had nine thousand plurality. The Republicans are carrying on a vigorous canvass to "redeem the State," and of course the Democrats are also doing their best to keep what they have gained.

There are also interesting contests in Iowa, and in one or two other States, but they need not be mentioned particularly.

Although these are all State elections, national issues are much discussed and the result will be claimed by the successful party as a verdict of the people upon them. The Democrats hold, and apparently with good reason, that the election last year signified a popular condemnation of the "McKinley Tariff."

Now, should the Republicans be victorious, they will assert that the triumph means that, after a trial of the law, and on further consideration, the popular opinion has been changed. And of course the Democrats, if they succeed, will hold the result to signify a repetition of last year's judgment.

"Free silver" is also involved. In general, the Democrats are rather more inclined to favor "free coinage" than are the Republicans. The election of 1890 was regarded as a victory for free coinage. The Republicans, for the most part, maintain that the present silver law should stand.

Consequently a Republican victory may be taken as an adverse expression of the people on free coinage; while a Democratic victory, in those States where the Democrats have declared themselves in favor of the measure, will indicate that the people wish the experiment to be made.

AGAIN THE FIRESIDE.

With the sharper chill of the evenings and the ripening of the nuts comes the time when families and household friends gather after supper around the open hearth, and the dancing flames seem to make part of the company.

There is a companionship in fire which none can fail to feel. No man of business is too prosaic, no careful housekeeper too preoccupied, no child too intent on play, no young girl too deep in a novel, no old person too far sunk in memories of the past, no sharp modern youth too unsentimental to experience the mingled charm of homely comfort and ethereal beauty that glows within the hollow of the hearth.

No wonder that the united taste and fancy of the family are called upon to decorate this natural shrine of the home. The tiles around it may be gay with birds, butterflies or flowers, the handiwork of some artistic member; or perhaps somebody with an antiquarian taste prefers to copy in dull blue a quaint series of Scripture pictures from the ancient tiles of Holland, such as were imported to adorn old New England homes of a century or more ago.

All the family old enough to read, and all their friends, may be pressed into the service of searching books and dictionaries of quotations for a suitable motto to inscribe above it; unless, indeed, one of them is bright enough to invent a motto—a task by no means as simple as one would think. And when the right motto is secured, some one must paint it, carve it, or embroider it upon drapery for the mantel, with as many illustrations and embellishments as fancy and artistic capability may suggest.

Of course such work may be bought and paid for instead of being done at home; but now, when almost every family has some member with artistic accomplishments, it is pleasanter and more significant to have it done in the household.

"Who shall tell the first tale?" from Chaucer; "Blow high, blow low, not all the winds that ever blow can quench our hearth-fire's ruddy glow," from Whittier; "While I was musing the fire burned," from the Bible, are good mottoes that have been used for this purpose, but may well bear further use and an infinite variety of decorative devices.

A hospitable and excellent motto is from Emerson: "The ornament of a house is the friends who frequent it."

Shakespeare, Scott, our American poets, and many also of the prose essayists afford good searching-ground whence fit phrases may be selected. The search is a delightful amusement, and often leads one into quaint and pleasant by-ways of literature which might not otherwise be explored.

But, after all, no matter how beautiful the hearth, the hearth-fire is more beautiful; no matter how fit the motto, it will count for nothing unless the daily conversation in the circle around the cheerful blaze is also fit and cheerful. Unless its warmth and radiance evoke an answering warmth and radiance of the spirit, the brightest fire that ever burned might as well be a heap of ashes.

ACTION AND SENTIMENT.

John Walter and his brother Edmund were strikingly unlike in temperament. John was a man of feeling; Edmund was a man of action.

The contrast had been noticeable from early childhood. If there was sickness in the house, John overflowed with sympathy, while Edmund was nurse and errand-boy. Both were good sons, dutiful and affectionate, but so different! If they could have been made into one, the result would have been almost an ideal character.

As the boys grew to be men the contrast came more and more into relief. To a stranger they might have seemed to have hardly anything in common; but they were as loyal to each other as they had been to their father and mother. Each supplied the other's lack.

John had a thousand reveries and dreams which he never thought of confiding to Edmund, but he loved to hear Edmund dilate upon his work, the great things he was doing and meaning to do; and Edmund, on his part, wanted no better listener than his brother John, though he knew well enough that John lived in a world where he himself was a stranger.

Edmund was the more prosperous, and the more useful, as those words are commonly understood. Perhaps he was not the less happy. At all events, John was proud of him, and he was proud of his brother John.

Such differences are constitutional. They are not to be avoided or counteracted by any effort of will; but every one, every young person, at least, may do something, be it more or less, to develop in himself the side which is lacking. If he was born a sentimentalist, he can watch against becoming incapable of action. If his bent is toward a

Digitized by Google

life of outward activity, what the world calls "business," he can cultivate, or seek to cultivate, a habit of thoughtfulness and reverie.

Edmund may never enjoy sunsets and poetry, flowers and music, as John does; and John may never become the energetic man of affairs, to whom every one instinctively turns when something must be done, and done at once; but each will be the better for watching against unnecessary one-sidedness. The best life is one in which action and sentiment are happily combined.

THE STUDY OF AMERICANISM.

A new kind of a school is about to be started. The University of Pennsylvania has received seven hundred thousand dollars in gifts to be used for founding a School of American History and Institutions.

Prof. Francis N. Thorpe has been long planning for this, and it is he who secured these generous donations. He is also to be dean of the new school.

The feature of the school is its distinctive Americanism. It is to be organized, equipped and administered in such a way as to bring out the place that American institutions should hold to-day in the study of the world's progress.

The school will have several courses, as follows: First, the history of American legislation in all the States and in Congress; second, State constitutional history; third, the history of the great movements in legislation; fourth, the history of the church; fifth, the history of diplomacy; sixth, the history of municipal affairs and the growth of cities; seventh, the history of politics and political parties.

A department of journalism will also be started, and a prominent man will give his attention especially to the history of the American newspaper and its growth.

The library will contain fifty thousand volumes, and will be complete in every line bearing on American history, literature and law.

The school is to be opened in Philadelphia, in October of this year; and Professor Thorpe has already received over five hundred applications for entrance.

This kind of school is one of those natural things which, when once begun, makes one wonder that it was never thought of before.

But public interest in all that relates to our native land is decidedly on the increase. Our Flag movement, which is still sweeping the country, is one mark of this new patriotic sentiment among the people. The endowment of this school and the great number of applicants before it is even opened, are also marks of the growing feeling our people have that America ought to be of foremost importance to all Americans.

Boys who are intending to be lawyers, newspaper-men, or statesmen, will do well to keep this kind of study in mind. Any one, indeed, who has the good of his country or of his city at heart, ought to become master of all that America has experienced in the solving of our great problems.

HIS UMBRELLA.

Mrs. Maria Drummond, who for many years held a high position in England, among people of the truest rank, had, as a girl, the opportunity of helping a great man in his wooing.

His suit was successful, and he did not forget that gratitude was due the kindly friend who had seen his difficulties and helped him in overcoming them.

Mrs. Drummond, then Miss Kinnaird, was staying with her father at Torquay, and thither also came Lord John Russell, to pay them a long visit. At an hotel near by lived Lady Ribblesdale, a young and pretty woman whom Lord Russell had known before, and whom he was always eager to visit whenever his young hostess went thither.

At length his visit came to an end, and the two took their last walk together to invite Lady Ribblesdale to accompany them home to luncheon. She, however, had an appointment elsewhere and was obliged to decline.

As Lord Russell and his companion were climbing their homeward path, he stopped and said, with a twinkle in his eye, "I have left my umbrella at the hotel. What shall I do?"

It was a brilliant day, without a cloud, but the sympathetic young lady said, gravely, "Oh, you must go back for it instantly. We won't wait luncheon for you, so don't hurry in this hot sun!"

He took her at her word, and did not appear at the table. Afterwards she was told that he went back to make his proposal of marriage, and that Lady Ribblesdale accepted him.

When the lady wrote her on the subject of the engagement, Lord John Russell enclosed a slip of paper bearing the words:

"Of course her sister must be chief bridesmaid, and will hold her gloves, but you must be second bridesmaid, and *carry my umbrella*."

MODEST.

Eugene Delacroix painted many poor pictures as well as many masterpieces. But he recognized the faults of his work. He could never satisfy himself, and worked with untiring, restless energy, producing work both good and bad in his eagerness to accomplish something like his ideal. After he had become celebrated as a master, dozens of his pictures were refused at the Salon.

M. Jean Gigoux relates, in his "Souvenirs d'un Vieil Artiste," that one day Delacroix showed his *Barque de Don Juan* to his friend M. Française, and begged him to correct it.

"What can I do now?" he said. "Look, there is a shoulder in profile above the front view of a chest. The man is dying of hunger in the midst of the ocean, and I have represented him fat and well. It is insane! How could I do it? Retouch it, will you not? I cannot. I had a fever of production when I did it. Come, retouch it for me, M. Française."

"But —" protested Française.

"No, no, retouch it all, all,—you do beautiful things every day," urged the great artist.

Corot's modesty was surprising. When a friend criticised his work, it is related of him that he often offered his palette in perfect good faith, saying, "I do not know how to do it. Do it yourself." And if the friend accepted it, Corot would watch his work, murmuring, "That's it. I understand. A little more, if you please. Oh, that will go a great deal better now!"

A great contrast to the disposition of these men was that of Courbet, who not only believed himself one of the greatest artists in the world, but felt himself to be in a position to patronize literature. Of Molière he once said, "Oh, yes, there is a man that ought to be brought to light; yes, I must certainly bring him into greater prominence."

A Yard of Roses.

Each subscriber to *The Companion* will receive, within a few days, the Annual Announcement of the features of the paper for the coming year, and with it a copy of a beautiful painting entitled "A Yard of Roses."

This painting has been reproduced at large expense, and in a very perfect manner. We believe that our subscribers will be pleased with its excellent design and rich coloring, and that they will find it an attractive addition to the decoration of their homes.

PECULIAR PRAYERS.

An anonymous writer contributes to the *Atlantic Monthly* some recollections or stories of the public prayers of the Puritan fathers of New England. In a Maine town, near the sea-coast, was one of many communities where the men were, so to speak, a cross between farmers and sailors, and where, as a natural consequence, the cultivation of the soil was somewhat neglected.

The minister of a neighboring town exchanged with the minister of this community, and as a drought was upon them, the people sent him a request that he would pray for rain. This he did, as follows:

"O Lord, thy servant is asked by this people to pray for rain, and he does so. But thou knowest, O Lord, that what this soil needs is dressin'."

A member of a certain Massachusetts parish, prominent for his thrift and personal consequence, was also notorious for his overbearing assumptions and pompous airs. Under the distress and fright of a dangerous illness he "put up notes" on several successive Sundays, and after his recovery, according to usage, he offered a note, to be read by the minister, expressive of his thanks.

The minister was somewhat "large" in this part of his prayer; recalling the danger and the previous petitions of the "squire," and returning his grateful acknowledgments with the prayer that the experience might be blessed to the spiritual welfare of the restored man. He closed with these words:

"And we pray, O Lord, that thy servant may be cured of that ungodly strut, so offensive in the sanctuary."

Doctor Barnes of Scituate had for a parishioner a rich but hard, grasping, penurious and quarrelsome man. In course of time he died, and at his funeral the minister dealt with him in no gentle phrase.

The next Sunday the bereaved widow came herself to the parsonage, bringing the usual "note," and at the same time preferring an earnest request that, as the minister had already given her husband such a raking at the funeral, he would quietly pass him over in his prayer. She added that her husband had always been kind and good to her and to his family.

"Well, well, we'll see," said the aged and venerated pastor. His curt relief of himself in his prayer was this:

"Thou knowest, O Lord, that thy departed servant was a good provider for his family; but beyond that, his friends think, and we think, the less said the better."

"FOR NOTHING!"

In some parts of Africa a young man is not considered grown up until he marries, and naturally a bachelor has a pretty hard lot. Doctor Pruen says that one day, in a strange village, a little chit of a boy marched up to him, stuck his arms out, put his hands into what would have been his pockets, had he worn clothes, and putting his head on one side, looked up at the white man and said, in an impudent voice: "Are you married?"

On another occasion my wife and I had been visiting a chief of a small village, and as we were going away, we heard the steps of people running after us. So we waited a moment, and up came two young men quite out of breath. As soon as he could get his breath, one of them said, pointing to my wife:

"How many cows could I get one like that for?"

I tried to explain to him that in England people did not get their wives in that way.

"For nothing!" he exclaimed, delighted; "could I get one like that for nothing?"

I told him in answer to one of his questions that if he came to England, he would be allowed to ask a woman to be his wife, but that I thought she would probably say: "No." His friend, upon this, looked at him, and bursting into a hearty fit of laughter said, with emphasis:

"Yes, I expect she would say no."

NEW LAKES ON MARS.

There is one point of view from which the formation of a new lake in Southern California by the overflowing of a sandy desert with water from the Colorado River possesses peculiar interest. It may throw light upon some of the mysterious changes that have occurred upon the planet Mars. Near the equator of Mars there is a region which has been believed to be part of the dry land of that planet, and which has been named Lybia by the Italian astronomer Schiaparelli.

But a few years ago a change occurred in the color of "Lybia," and some of the observers thought that it must have been suddenly overflowed with water, since it had assumed the color characteristic of the other regions of Mars that are supposed to be water-covered.

Other similar changes have been seen by telescopists on Mars.

Now that a new lake has actually been formed on the earth by the unexpected filling up with water of a depressed area of dry land those who believe that a similar occurrence, on a larger scale, has taken place on Mars will probably be strengthened in that interesting opinion.

A Good Reputation. "*Brown's Bronchial Troches*" are world-renowned as a superior remedy for Coughs, Hoarseness, Sore Throat and Bronchial affections. Containing nothing injurious, they may be used at all times with perfect safety, and are especially adapted for children and invalids. Sold only in boxes. [*Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

RIVERVIEW ACADEMY, Poughkeepsie, N.Y. 56th Year. Prepares thoroughly for College, the Government Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

Blowing Church Organs.

The expense of blowing Church Organs can be greatly reduced and the usual annoyances and delays avoided by using **Whitney's Boston Motor,** which is made in various sizes to suit either large or small pipe organs. It will furnish all the wind required for any pipe organ, without noise or jar. Full particulars gladly given upon request. Circulars FREE.
F. E. Whitney, 65A Sudbury St., **Boston, Mass.**

METROPOLITAN College of Music,
19 & 21 East 14th St., New York City.

Has no equal for the thoroughness of instruction and the absolute safety of its methods. Fall term begins Sept. 14th. Residence department for lady pupils from a distance. Dudley Buck, President; Albert Ross Parsons, Vice-President; H. W. Greene, Secretary and Treasurer. For particulars send for College Annual.

The Chautauqua Home Reading System

begins its fourteenth year this autumn. The course includes American History, Government and Literature. The reading is definitely outlined and helpfully supervised. Thousands of parents take this course in order to keep in sympathy with their children who are in school or college. The plan appeals to thoughtful, earnest people who feel the loss of educational opportunities. Address *The Chautauqua Office*, Drawer 194, Buffalo, N. Y.

Dixon's Graphite Paint.

If it is worth your while to paint it is worth your while to get the best paint. For tin, metal or shingle roofs, and iron work, Dixon's Graphite Paint is not only the best but the most economical. It is not a cheap, useless mixture fixed with a fancy name. Graphite is a form of carbon as pure, sweet and healthful as charcoal, and impervious to the action of alkalies, acids, or any known chemical. Graphite paint covers 2 to 3 times more surface and lasts 4 to 5 times longer than any lead, mineral or metallic paint. Send for circulars.

Tissue Paper Entertainments.

Effective, refined, easy to prepare, inexpensive. Child characters all dressed in Tissue Paper. They are
The Floral Rainbow (for 42 Boys and Girls),
War and Peace (for 48 Boys),
The Story of Joseph (for 20 Boys),
The Darling of the Year (for 12 Girls).
Send 5 cents for new Book and 120 Samples Tissue.
DENNISON MANUFACTURING CO.,
Boston, New York, Phila., Chicago, Cinn. or St. Louis.

AS AN INVESTMENT—
The Bear Valley Irrigation Co.,
(of Redlands, California,)
OFFERS $1,000,000 Preferred Stock, bearing 8 per cent. dividends, payable semi-annually at National Park Bank, New York, at $105 and accrued interest from July 1st.
ALSO $600,000 Common Stock, on which dividends are being paid at rate of 10 per cent. annually, with a large surplus of earnings in dividend fund, at $110 per share.
LESS $800,000 already sold of its INCREASED CAPITAL.
Business thoroughly established. Profitable from the beginning. Ably and honorably managed. Sound and profitable investment.

PRICE LIST AND FASHION PLATES SENT UPON REQUEST

$10. World Typewriter for $5.

THE WORLD TYPEWRITER was placed upon the market a little more than four years ago. It is offered to the public as one of the best machines for letter-writing. It is practicable, durable, simple and speedy, and will do as good work as any typewriter upon the market. It is intended as a legitimate companion to the office or professional desk, the stenographer's table, the schoolroom, and for any other place where the pen or pencil is used. During the four years that the WORLD has been before the public fifty thousand have been sold. The compactness of the machine gives it advantages

not possessed by large and weighty typewriters. It is but 12 inches long, 6½ inches wide, and 2½ inches high, and weighs about 3 pounds; consequently it can be easily placed in a convenient position on the desk or in the drawer, not necessitating an extra table and change of position whenever a letter has to be written.

THE SPECIAL OFFER.—We have 500 of these $10.00 machines, which we offer for $5.00 each. As this is a bargain we cannot promise that the stock of 500 machines will last long.

Any Companion subscriber who will send us two new subscribers and $2.00 additional will be entitled to one of these machines as long as the stock lasts. **It must be sent by express and charges paid by receiver.**

For the Companion.

A PHENOMENAL SCOUT.

By General Oliver O. Howard, U. S. A.

"Should you drive to pasture five horses over these wave-like knolls, and leave them for an hour to graze, it would be next to impossible to find them." This was the writer's note concerning the lava beds which touched and terminated the Camas Meadows, along the southwestern border of Montana.

Here was, at one time, one of the meeting-grounds of Bannacks, Shoshones, Flat-heads, Nez-Percés and other Indians, where they assembled to dig roots, trade, run races, gamble, or settle past grievances by long-continued "pow-wows."

Here, in the Nez-Percés War, our forces encamped on the Nineteenth of August, 1877. The enterprising Chief Joseph halted some fifteen miles away, easterly, toward the mountain gateway to the Yellowstone Park. Then, instead of allowing his tired warriors to sleep, he left his women and children there in a safe nook, and, with his fierce red men, rode rapidly back to disturb our sleeping camp.

So here took place the night engagement, usually called "The Battle of Camas Meadows," after which our columns resumed the famous long march in pursuit of the still fleeing Indians.

Hardly a day after this action, while we were threading their main trail through a narrow stretch of the meadows beside a well-wooded ridge on the right, and in full view of a spur of the Rocky Mountains from our left front, a cry from some of the men behind us was heard:

"Heigho! What's that?"

Looking back we saw at first a great cloud of dust, and soon, with our glasses, we could descry a body of Indians riding straight towards us at a considerable speed.

"They are friends of ours," somebody exclaimed.

Yes, for they were following the road, were too few in numbers to bear hostile intent, and were holding up a white flag by its staff and shaking it out to the breeze.

This stranger group proved to be the first instalment of a company of Bannack scouts, which Captain Bainbridge, the commander at Fort Hall, a hundred miles south of our line of march, was bringing us for reinforcement. There were ten or twelve in the advance group.

How handsomely they rode! How gaily they were attired! Their plump little horses, white and lightish gray, were decked off with bits of fur and strips of red and blue flannel; manes and tails were as artistically arranged as a full-fledged warrior's hair—that is, nicely braided and tied up.

As soon as the group had drawn near they made a halt. Rainé, the half-breed interpreter, in his looks and ways more Indian than white man, rode up to a staff officer and told in short sentences of broken English, who constituted this brilliant cavalcade, and announced the near approach of the main company of scouts not yet in sight.

That evening, to the bivouac, which we named Camp Benson, the small but very welcome reinforcement came up and rejoined its advance guard, and enlivened our camp-fires with news and words of cheer.

Fisher the Scout.

Nobody there will forget the happy visit of Bainbridge. He was very proud of his Indians. He must return to Fort Hall the next day, he said, but he would leave with me a remarkable leader, Mr. S. G. Fisher, whom he then brought up and introduced. Fisher was a white man, yet no Indian was ever better acquainted than he with Indian life. He was one of the few civilized frontiersmen who had won, and ever after retained, the admiration of all the Indians of that region.

He was the real chief of the Bannack scouts. The words Captain Bainbridge spoke of him were good and assuring, but I soon began to know him for himself and to appreciate his achievements, past and present.

At a little distance, when mounted, he appeared like an Indian. There was the same swing of the body, the same turn and cling of the legs, and easy, graceful use of the arms; no jerky, angular motions like those of the cowboys on balky ponies. He was about six feet tall, of symmetrical frame, well-knit and muscular.

His scouting dress, except his broad-brimmed hat, was Indian throughout. There was the variegated deer-skin jacket, well ornamented, the loose-fitting deer-skin trousers, held up by a handsome leathern belt. There were the many-buttoned leggings, and, to finish the effective apparel, the small, embroidered moccasins.

His hearing was somewhat defective at that time, so that his eyes had to do double work; and he seemed rather sallow of complexion for perfect health. Like so many other remarkable men of our generation, the first acquaintance furnished little to mark him, except, perhaps, that clear and steady eye which indicates courage, and a beaming face which bespeaks the absence of hatred.

During our unique Indian chase of 1877, usually called the Nez-Percés campaign,—where, in continuous pursuit, the cavalry marched over eighteen hundred miles and the infantry over fourteen hundred,—we had very many scouts. The terror caused by the Indian outrages had disturbed large districts of Oregon, Washington, Idaho and Montana; so that, deserting their homes, tradesmen, farmers, prospectors and miners had congregated here and there, often with their families, behind barricades for mutual protection.

Many of the men at these rendezvous were employed by our field forces, sometimes only for a few days, in the capacity of scouts. They were dispatched upon errands, or sent out in different directions to hunt up fresh Indian trails or the hostile parties themselves. They reported to the aide-de-camp who had charge of gathering and furnishing information.

Qualities of a Scout.

It is not possible even to indicate all the good qualities one must possess for the effective leadership of a scouting party which is seeking for Indians. He must be tough and sinewy, able, without excessive fatigue, to ride sixty or seventy miles in a day. He must have a keen eye, able to catch the dimmest trail, able to descry the faintest Indian sign and interpret its meaning.

He must be so quick-witted as to read the face of an Indian, and cope with his clandestine manœuvres. He must be so cool in his observation and judgment as to form right opinions concerning his adversaries—that is, concerning their plans and movements, in order that he shall not, by glowing or by unduly depressing reports, lead his general into error or upon a false scent.

In brief, a goodly supply of trustworthiness, loyalty, sobriety, sagacity, slyness, boldness, ingenuity, activity, energy, diplomacy, endurance and unending persistency is essential to the perfect scout. It is not too much praise to say that we found the desirable qualities in the modest, unobtrusive Fisher. The day after the gay and brilliant Indian scouts overtook our moving troops, he with his party hastened to the front.

He soon got his eyes upon his wild game, and watched the irregular masses as they ran the gauntlet of Tacher's Pass. He followed them closely through the beautiful forest of Madison Basin, and kept his general thoroughly informed of what his savage foes were doing.

As we were detained for supplies at Henry Lake, and again, a little later, delayed for a few hours near the great Geysers to protect and care for several wounded civilians whom the Indians had maimed and abandoned, Fisher got a large distance in advance of us. He had clung to the hostiles' newly-made trail, clambered over the steep hills and up the mountain side and through the most difficult thickets of closely-grown small trees, then dry and seasoned and tough, on and on to Mary Lake, situated at the very mountain-top.

Here he had an unpleasant experience. His Indian helpers, who had been so full of cheer, greatly coveted some forty mountain horses that were turned out a few miles back of the advance for a night's grazing. After a secret talk they deserted their brave chief, stole the horses of their friends, and came near succeeding in driving them beyond our reach or recovery.

Fortunately, however, by prompt information, and a sudden arrest and disarming of the chief young Indians, including Rainé, this disaster was prevented. The other scouts who were implicated were compelled to look up the stray animals and lead them back.

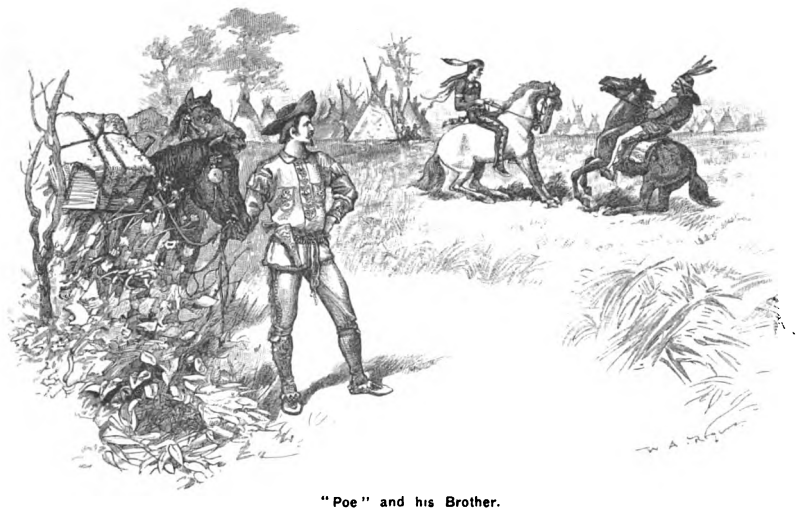
Deserters.

After this affair these helping Bannocks,—the very men who had been so brilliant and promising at Camp Benson,—with few exceptions would serve us no more. They put on injured looks, declared that scouting did not pay them sufficiently, and made off for other and more congenial fields.

Fisher, having now but two or three with him, never left the freshest trail except to get side views of the fleeing host. He saw them well across the Yellowstone River, their ferriage being a little below the Yellowstone Lake. They had crossed in Indian fashion, with all their ponies and luggage.

He saw them enter the extensive forest beyond, and followed their rear so closely that a white man, Mr. Simmons, who had been captured near the Park and carried off by the Indians, was enabled to escape to him. This man had been for some days with the hostiles, expecting maltreatment or death; but for some unexplained reason, while the other travellers who were surprised in the Park had been severely wounded and left behind for dead, Simmons had been spared.

The information that he brought was most valuable. It saved us from a long and tedious march through that immense blind forest in a circuit which, but for his timely warning, we must have made. We had now only to follow the chord of the arc to come again very soon upon the heels of our enemies.



But I will not follow further Fisher's good work in this campaign. He had many a narrow escape and many a new experience, which he has doubtless often related to his children. He kept with us during that long campaign, till his services were no longer required. Then, with two attending Indians, he steered straight through the almost boundless woods and over the broad prairies to his home near Fort Hall.

At the close of this memorable expedition the general wrote of him as follows: "Night and day, with guides and without, Fisher hung upon the skirts of the enemy. The accuracy, carefulness and fulness of his reports, to one attempting to chase Indians across a vast wilderness, were a delight."

Now, to give young people an idea of the experience and training to which this able frontiersman had been self-subjected, I will offer a scrap of his previous history substantially as he himself has told it.

Fisher's Story.

"Prior to the Bannack Indian War, which occurred in 1878," he said, "Camas prairie, in central Idaho, was an annual resort or meeting-ground for several Indian tribes. It was here that the Bannacks, Shoshones (Snakes), Piutes, Nez-Percés, Umatillas, Sheep-eaters and portions of other tribes met about the middle of June, remaining a month or more together.

"Poe" and his Brother.

"The men passed the time in gambling, running horses, trading and dancing; while the squaws, and more particularly the older ones, were gathering and drying, for winter use, the roots of camas and yampa.

"The departure of most of the Indians for Camas prairie made times dull at my trading-post on the Fort Hall Indian Reservation. I decided to follow them. Securing the services of my friend Poe-ap-ah as guide and interpreter, I packed five ponies with articles for trade and provisions, and started on our trip of a hundred and thirty miles.

"After crossing Snake River, which at this season, June, is at its highest mark, by the help of a friendly Indian, we made a night ride across a forty-mile stretch of lava which was destitute of water, keeping the old Oregon wagon road of 1846. I greatly enjoyed this cool night's ride, listening to Poe-ap-ah's stories of his many adventures. When he was but a boy he had been guide, night-herder and guard for the early Oregon immigrants, often accompanying them as far as the Blue Mountains. It was while in this business that he learned to speak English and also won his name, Poe-ap-ah, which means 'Road Father.'

"Three days more brought us in sight of the great Indian encampment.

"When we were within a few hundred yards of this wild camp, Poe—as I called him for short—asked me to stop. I did so. He began to ride his horse in a circle, at the same time making signs with his right hand.

"Suddenly I saw an Indian, well-decked out with bright streamers, mount the bare back of a large snow-white pony and make toward us at a run; but when yet a hundred yards distant he wheeled his horse and dropped out of sight, clinging to the opposite side of his charger. In this position he ran around us in a circle. Poe was going through the same manœuvre in an opposite direction.

An Exhibition of Horsemanship.

"For the next ten minutes I witnessed as fine riding and handling of horses as I ever had seen. Presently their war horses were dashed up side by side, from opposite points, and then were fairly set back on their haunches, while Poe and his brother shook hands. They had not met for several years, but had recognized each other by signs.

"After introducing us by telling me that the new-comer was his younger brother, and explaining to him that I was his big white friend, the object of my visit was explained. We proceeded to one of the largest Indian gatherings that I had ever seen. Several thousand persons were present, big and little, old and young, all rigged out in fancy toggery.

"Our packs were soon taken off, and the animals turned loose with thousands of others, to enjoy the finest of bunch grass. With a few willows and two pairs of blankets we soon constructed a sort of 'wickieup' sufficient to shelter us from the sun.

"I sold my entire stock of vermilion and other paints within an hour after my arrival, for there was to be a great dance that night. Such a dance one seldom sees! There were grim faces hideously painted, and topped off with huge head-dresses of feathers. The dance was made more ghastly and frightful by the changing reflection from camp-fire to moonlight, as the Indians whirled and twisted, stooped and raised their naked bodies, at times jumping high in the air and coming down stiff-legged, while giving appalling, piercing yells. Time was kept with the continuous and monotonous beating of raw-hide drums. The dancers wore only war-bonnets, breech-clouts, moccasins and paints.

An Unpleasant Situation.

"I may as well own that I did not feel a placid sense of safety, being, as I was, more than a hundred miles from the nearest white settlement, and here alone with a multitude who seemed demons in look and action.

"While the dance was going on, the old women were preparing a 'Big Eat' of baked roots, roasted fish and venison. Near morning this feast was eagerly devoured by a hungry mob.

"Learning that an old discarded war-chief was encamped at a point up Wood River, and that he had a large quantity of furs and skins on hand, I decided to hunt him up, and if possible, to trade off the remainder of my goods before starting home.

"Just at sundown, after a long day's ride, we found old Kay-tzant-po-hog-ant's camp. He had won his name, 'No Good Medicine,' by foolishly attempting to prove to his tribe that he was bullet-proof. He had put a heavy charge of powder into his rifle, substituting for the bullet a rose-bud of the proper size, which he had previously neatly covered with tin-foil. This he shoved down the barrel of his gun, and in the presence of his astonished followers, placed his left hand over the muzzle and pulled the trigger.

"The experiment was not successful. The old prophet's hand, in shrivelled, twisted and knotty shape, looked like a diminutive dwarf-pine that had struggled for existence at the extreme limits of the timber line.

"As we rode up, I greeted him with the usual salutation, 'How!' He did not return the 'How,' nor even condescend to give me a nod of his black head, but, turning his back, told Poe to tell me that his heart felt bad toward all white men.

"I said to Poe, 'You tell the old rascal that my heart often feels that way towards the Indians, and that if I kill one Indian it makes my heart feel all right again.'

"This bold response on my part was meant for what the frontiersmen call 'bluff.' Evidently it 'out-bluffed' the old Indian, for he at once declared that his heart felt better, while he gave me his hand to insure my speedy friendship.

"I stood well with him from this time on. Every trade I proposed was accepted without any opposition, and I soon closed out my remnants for a valuable lot of beaver, mink, otter and other furs and skins.

"Before I left the next morning, he gave me a few pounds of dried venison. It was a welcome gift, for we were entirely out of provisions. At the same time he assured me that he was my 'big friend,' and would remain so as long as we lived.

"On reaching the main trail that afternoon, we fell in with a few Indian families on their way back to the reservation. They were living on dried roots and were not backward in helping finish my small stock of meat. After that we had dried meat and roots for supper, and roots 'straight' for breakfast. In fact, it was a root diet with me for the next two or three days, for I was too dainty to eat gophers and ground-hogs—about all the game we could find along the lava beds.

"One old squaw supplied me with raw, half-dried yampa roots, which I ate almost continuously, trying in vain to appease my hunger.

"In this condition the fourth day of July, 1870, found me. As the day advanced the heat became intense.

"As I was riding slowly along in advance of the sombre, silent, hungry and patient little band, contrasting the present with former days, my reverie was suddenly broken by a shout of 'Look! Look!'

Fresh Meat.

"Turning in my saddle I saw Poe, who was close behind, pointing toward a large black-tail deer which was limping along over a little knoll scarcely a hundred yards away. Having seen no game for the previous two days I had that morning left my Winchester rifle in one of the packs, but I had a revolver in the holster.

"Before Poe could get a rest for his gun on the two sticks which he, like the most of his tribe, carried for that purpose, the deer was out of sight over a little hill. Fresh meat was what we wanted, and having Old Ironsides, my best horse, under me, I at once gave chase.

"The big buck led me a lively race, up-hill and down, over rocks and brush, for a couple of miles, notwithstanding that one of his hind legs was broken. Coming up with him at last I opened fire with my pistol and severely wounded him, at which he turned on me, and, with a mad plunge, struck my horse full in the chest. The blow did not inflict serious injury, for as good luck would have it, the buck's horns were 'in the velvet,' having but a soft bunch or knob on each prong.

"It was his last plunge, for as Old Ironsides sprang to one side, I sent a bullet through the buck's brain. Poe came up, and we soon had the deer skinned, quartered and loaded on the packs.

"On reaching water, a few miles farther on, we pitched our camp; but while we were unsaddling and taking off the packs, up rode two swarthy

Digitized by Google

Indians along our trail, and demanded the slaughtered deer. They claimed that they had wounded him early that morning, a long way back in the mountains, and had since been following his tracks.

"No doubt this was true, but I was too hungry then to be liberal or even honorable, and so refused to give up the carcass.

"After much parley, 'Tin-ie,' a little Indian in my outfit, proposed that we wrestle for the deer. The boy had great faith in my ability to throw the braves, for he said he had often seen me throw the best men in his tribe.

"I consented to this, and also offered to shoot at a mark, offhand, for the meat.

"One of the fellows was a tall and powerful man, of about my own height, but at least twenty-five pounds heavier. After walking around me several times and feeling of my arms and legs, he declined to wrestle, and also refused to shoot except with a rest, which I in turn refused. Finally we compromised the matter by giving the strangers the hide and the hind quarter that they had wounded.

"In the mean time the squaws had fires built, and were eagerly waiting the meat settlement. In less than a minute after the treaty was concluded the entire three quarters of venison was roasting before the fire.

"Two days later, after reaching home, the old squaw who had supplied me with roots on the journey came and demanded sugar, coffee and flour. I gave them to her, and continued so to give for the next two years. Her begging became so annoying that at last I refused her.

"'Well, I fed you when you were hungry; now I am hungry, and you won't give me anything,' she said. This little argument on her part won her a fresh supply.

A Persistent Beggar.

"Selling out my trading-post and leaving the country, I lost sight of the old woman for ten years. After this time I bought the place again, and had scarcely become settled, when one day, while I was at dinner with my family, in walked an old squaw, bent and gray.

"Pointing towards the door I told her to go out; but she paid no attention to this. Walking up, she extended her black and bony hand, while she proceeded again to repeat, in the Indian language, the same old root story, which I interpreted to my wife and children.

"The old woman not only got her dinner, but left with a flour sack well filled from the table and cupboard. By close calculation I find that those roots have cost me about twenty dollars a pound, and the end is not yet; but as the old squaw has seen a great, great many snows, while my hair is only slightly grizzled, I live in hope."

Some time after the adventurous expedition of S. G. Fisher, which he has so graphically described, during 1873 and 1874, he held a trading-post in the neighborhood of Ross's Fork, Idaho, situated some fourteen miles from Fort Hall. There was at one time news of an Indian outbreak, and already there had been much suspicious excitement and threatening conduct on the part of the Indians on and off the Ross's Fork Reservation.

The white people were in great fear, and speedily shut themselves up in buildings belonging to the Indian Agency and hastened their messengers to Fort Hall to apprize the officer in command of their precarious condition. He dispatched Lieutenant Wilson of the Twelfth United States Infantry, with a detachment of troops, to the assistance of the beleaguered whites.

Wilson started during the night, and reached the Agency before daylight, galloping with his small force toward the occupied buildings. He intended to dismount and let the horses run wild in case he was fired upon, and thereafter to fight his way on foot to the imprisoned people.

But on nearer approach, to his surprise he found that the Indians had withdrawn. The siege was already raised and the great distress relieved.

The withdrawal was effected by the ever watchful Fisher. During the night he had crept out, on hands and knees, among the bushes and high grass, near to the place where the Indians were in council. He observed that there were two parties, the old and the young. The young urged the massacre of all the whites shut up in the buildings, but the old Indians were more moderate. Fisher believed that with prompt encouragement to their merciful mood, the more cruel could be overborne.

He made all the haste consistent with secrecy that he could, working his way back to the Agency buildings. Then he came out boldly, took the main road, and walked fearlessly into the Indian council.

He joined at once in their speeches, which his knowledge of the Indian language enabled him to do, and soon persuaded them all to do something better than to murder him and the other white people about them. They listened to his brave words, and, admiring his courage, quietly withdrew and became most friendly.

"Blessed are the peace-makers;" are they not called the "children of God?"

Why He Retired.

When in 1878 the terrible Piute and Bannack war had broken out, Fisher was entreated to go to eastern Oregon and take the chieftainship of the scouts. He would not go, declining all offers, however flattering or remunerative.

He at first gave no reasons, but finally, being pressed for them by an officer who was his warm friend, he said that he scouted so differently from other scouts, and often was obliged by his sense of duty to expose himself so much more than most of them did, that he felt too apprehensive that he would be killed if he went again.

It was a reason that once did not weigh much with him; but now he had a family of children to support, and no matter if the work was attractive, he believed that he must avoid the extreme danger.

This way of thinking on the part of the fearless Fisher seemed very strange to all of us who knew him. But we were ready to see that he practised a real self-denial in keeping himself from the excitement of the campaign and from the pleasure that commendation for valor always gives.

This time he pronounced in favor of a higher duty, namely, the immediate protection and support of his family.

A few years later, in 1885, I visited Fisher's home near Ross's Fork. In the change of agents on the reservation, he had somehow lost his official rights as an Indian trader; but he remained there in comparative poverty as the Indian's friend.

He took me in his buckboard carriage, and we visited Indian houses and farms scattered over a fertile valley for twenty-five miles. Fisher was everywhere received by the Indian householders with the utmost confidence and affection.

I found that when they were too poor to buy seed for planting, he habitually loaned it to them, and gave them innumerable credits in trade.

"Do they ever repay you?" I asked.

"Yes, invariably; or unless some unforeseen providence prevents."

It is this good man and phenomenal scout who has at last become the Bannacks' agent; and for this favor all the friends of the Indians who are interested in the Ross's Fork tribes rejoice.

For the Companion.

MODERN SURGERY.

By John S. Billings, Surgeon U. S. A.

Three hundred years ago English writers treated of "cheirurgery," or "chirurgery," as being the art of treating wounds, fractures and dislocations, tumors, deformities, etc., by the use of the hands, or of instruments applied by the hands,—the word being derived from the Greek *cheir*—a hand.

Gradually the term, both in spelling and pronunciation, was changed to the modern "surgery," and the old "chirurgian" has become a surgeon; but the meaning has remained nearly the same, though the methods have greatly changed and are now applied to forms of disease which would formerly have been considered as hopelessly beyond the reach of surgical treatment.

These changes have been largely due to four causes, namely: the discovery of anæsthetics; improvements in the means of preventing or stopping the loss of blood from wounded vessels; the discovery that inflammation and the formation of pus and abscesses after wounds are largely due to certain minute organisms, and of means for excluding these; and lastly, to improvements in methods of diagnosis,—that is, of finding out just where the disease is situated, as when certain parts of the brain or of the organs in the abdomen are affected.

Anæsthetics.

Before the effects of ether and chloroform were known, one great object of the surgeon was to operate quickly, so as to keep the patient in pain as little time as possible. He finished the work of his knife and saw without stopping to check bleeding, and wasted no time in deliberation.

In these days the patient breathes in the vapor of ether for a few moments, and, falling into a deep sleep, lies a motionless, unconscious body, upon which the operator can work carefully and deliberately. He knows that he is causing no pain, and that he can take an hour or two, if it is desirable, to make the careful explorations and to carry out the numerous precautions which are now known to be necessary to secure the best results.

When, in the middle of the sixteenth century, the famous French surgeon Ambroise Paré substituted the tying of wounded blood-vessels for the cauterizing of them with a hot iron, which had been the practice up to his time, the triumphs of modern surgery first became possible.

When it was proven that the hemorrhage from a cut artery could be stopped by so simple a method as tying a bit of thread around the severed tube, and that, in most cases, this was not followed by pain or special danger, the operators became bolder, and did not hesitate to amputate limbs, and remove tumors which before that time they would have left alone.

Still, however, they did not recognize the importance of making the loss of blood as little as possible, nor could this be done effectually until operations were made painless by anæsthetics.

Now the surgeon stops each bleeding orifice as it appears, by means of small spring clamps, thus not only preventing loss of blood, but enabling him to see clearly the various parts in the depths of the wound, which is kept as dry as possible; and often he seeks to save for the patient a large part of the living tissue of blood which is contained in the part to be removed. He effects this by compressing this part tightly with an elastic bandage before he begins to cut, thus squeezing out the blood into the central vessels.

"Listerism."

About twenty years ago Joseph Lister, then a surgeon in Scotland, came to the conclusion that many of the bad results which follow wounds and operations were due to the fact that very minute organisms, the *bacteria* as they are called, got into these wounds in some way, and that these proceeded to grow and multiply, causing irritation, inflammation, the production of pus, etc., which in many cases resulted in what was called pyæmia, a very fatal affection and the dread of the surgeon up to that time.

It had been known for a long time that injuries in which the skin was broken or severed, forming an external wound, were much more dangerous than those where no such wound occurred,—that, for example, a broken leg or a dislocated ankle was much more dangerous when the skin was torn than when it was not; and it was supposed that the entrance of air into the tissues was in some way the cause of the trouble.

Mr. Lister—he is Sir Joseph Lister now—thought that it was not the air itself but the bacteria in the air which should be guarded against; and he effected this by covering the wound with dressings saturated with substances which would kill all bacteria that came in contact with them.

He also was careful that the water with which the wound was washed, the sponges, the instruments, the ligatures, and in fact everything which was to be brought into contact with the wound were thoroughly sterilized—that is, so treated as to kill all the bacteria in or on them. If he had to make a wound himself, as in a cutting operation, he did it in the midst of a cloud of spray of a solution of carbolic acid, which is poisonous to bacteria, and is, therefore, what is called "antiseptic."

The results which he obtained were so excellent that other surgeons rapidly took up his methods, and made many experiments to see how they could be improved.

It was found that most of the troubles following wounds were due to minute globular organisms which are known as *micrococci*, which means little grains or granules, and that the commonest form of the pus-making *micrococci* is one called the *staphylococcus pyogenes aureus*, because it produces a golden-yellow color when it grows in gelatine or potato, or other similar substances.

This is very commonly found on the surface of the skin of the living human body, and especially in the crevice between the ends of the finger-nails and the skin beneath, so that surgeons now pay more attention to securing perfect cleanliness and sterilization of the skin where they propose to operate, of the hands and finger-nails of themselves and of their assistants, and of the water, sponges, thread, instruments, etc., which they use, than they do to the air, which is thought to cause very little danger.

Diagnosis.

The last cause of the good results of modern surgery to which I have referred above is improvement in diagnosis, and especially in the means of determining the exact place where certain tumors are growing within the body, or where bullets or other foreign bodies are located, or the course through which they have passed.

It is now often possible to determine within an inch the precise point in the brain where a tumor or some other cause of compression or irritation exists, because it has been discovered that different parts of the brain have each a special connection with certain muscles, or certain regions of skin, so that a numbness confined to a certain part of the surface of the arm, or a loss of power in or spasm of certain muscles, as for example, a squint of one eye occurring suddenly, will indicate the precise point of the skull where, if an incision be made and a piece of bone cut out, the surgeon will find the cause of the trouble, and thus be able to remove it without causing serious disturbance of other parts.

Probably the most wonderful thing in modern surgery, in the eyes of a skilled surgeon who has been in practice for twenty-five years, is the comparative certainty with which large gaping wounds, such as those produced in an amputation through the fleshy part of the thigh, or in a removal of a large tumor, are now made to unite and heal without the production of inflammation or fever, or of more than a drop or two of pus.

So, also, either of the three great cavities of the body, the head, the chest or the abdomen, are now opened without hesitation for the removal of foreign bodies, of tumors, or of effused fluids, in the confident expectation that no evil results will follow.

It has been found by experience that in the organs which are closely packed in the abdominal cavity a certain amount of extra mechanism is included, which is available in case of emergency, or which can be removed if it gets out of order.

Extra Organs.

An engineer provides one or two extra pumps and engines for a large system of water-works or of drainage, in order that if one of his pumps gets out of order the work shall not stop.

So a man has more liver, more kidney and more intestine than he actually needs for use at any one time, so that in case of disease or injury one kidney may be removed, or a damaged piece of intestine cut out, or the whole spleen may be excised, without producing fatal results, and these operations have now been performed so often, and with such good effects, that there is little hesitation in undertaking them.

Although the mode of packing the organs in the abdomen, so that not a quarter of an inch space is wasted, and all are free to move and slide over each other when the body is bent, or in the movements of respiration, is in most cases perfect, so that they are held in their relative positions during running, jumping, etc., and yet are not bruised or injured, it happens, sometimes, that one of them gets too loose and falls into a place where it does not belong, and thus causes pain or inconvenience by dragging down its attachments.

A few years ago this was considered to be beyond the reach of surgical art; but now the abdomen is opened without hesitation, and the too-movable organ is fixed in its proper place by stitches, so that it shall contract adhesions and henceforth remain where it belongs. The results are, in the great majority of cases, perfectly satisfactory.

Some of the operations which the surgeon thinks are the most remarkable proofs of skill and of advance in his art may not appear so to most people because they do not appreciate the dangers and difficulties to be overcome; while on the other hand what may seem very wonderful to the layman may not specially surprise the skilled surgeon.

Probably both surgeon and layman, however, will agree that the complete removal of the larynx, which is the box-like structure at the top of the windpipe which contains the apparatus for the production of voice, and which forms the projection in the front of the throat commonly called Adam's apple, and the substitution for this of an artificial larynx, by means of which a person can speak, is something of a marvel. This has been done several times with good success.

In one case, which occurred twelve years ago in Glasgow, the artificial larynx was made of hard rubber, having within it a vibrating metal plate or reed, something like those which you can see in the ordinary harmonicas or accordions. With this the man could speak in a resonant, loud and clear voice, and with perfect distinctness.

It is true that the voice was monotonous in tone, for he could not tighten or relax the vibrating reed, as we can do with the membranous bands in the natural larynx, and thus produce successively varying tones; but he used several different sorts of reeds—some thicker and heavier and some thinner and lighter—and could thus give himself a deep bass or a high soprano voice by a slight change of mechanism.

The operation of removing the entire larynx from a living man was first performed in 1866, and has now been done about one hundred and forty times—in most cases on account of cancer of the organ, which, if left alone, would be fatal.

A New Nose.

The making of a new nose to replace one which has been lost by injury or disease may also produce curious and striking results. It is true that this operation is not a new one, for it was known many hundred years ago in India, and was fully described three hundred years ago by an Italian surgeon named Tagliacozzi.

Perhaps some of my readers may have seen a story by Edmond About, which was translated into English and published a few years ago under the title, "The Nose of a Notary." This is a modern version of a tale given in the works of Van Helmont, in the middle of the seventeenth century, to the effect that a certain lawyer, having lost his nose in a duel, had a new nose made from the skin of the arm of a porter who was hired for the purpose.

At first the new nose was a great success, but the porter took to drinking too much, and as his face became red and swollen, so did the nose of the unhappy lawyer. The diseases of the porter affected that portion of him attached to another person, and when finally the porter died, the nose died also, and fell off, leaving the lawyer as badly off as at first.

This is, of course, merely a flight of fancy, but it indicates the old method of making a new nose. At present, when this is desired, it is effected by taking a portion of the skin of the patient himself, usually from the forehead, and modelling it into the desired shape.

In like manner the loss of a lip or of a portion of the cheek can be replaced by what is known as plastic surgery.

Large ulcers which are slow to heal are sometimes treated by planting in their surface small bits of skin freshly snipped off. Each of these bits adheres and grows, forming a sort of small island of skin on the raw surface, until finally the edges of these islands meet and unite, so that the whole ulcer is healed over or cicatrised.

Grafting.

This method of "grafting," as it is called, may be applied in many ways. A cavity left by the removal of a tumor may be filled with perfectly clean and sterilized sponge, and the skin closed over it. Presently the living tissue of the walls of the cavity will begin to enter the spaces in the sponge and to organize, as it were, the effused blood contained in it, so that gradually the pores of the sponge are filled with living flesh provided with new blood-vessels. Then comes a process of absorption and removal of the substance of the sponge itself, so that after a while it is entirely gone, and the loss of substance has been repaired.

A cavity scooped out of a diseased bone may be filled by a graft of bone-making tissue taken from an animal, or with a blood clot, a nerve may be grafted to another nerve and thus be enabled to resume its functions, and the transparent front of an animal's eye—the cornea as it is called—may be grafted into the front of a human eye, to replace an opaque, diseased and irritable cornea, although there is little chance that the new cornea will remain transparent.

Another form of grafting in modern surgery is that by which, in case of obstruction of the lower opening from the stomach or of a part of the bowel, due to the growth of a tumor, that part of the digestive tube above the obstruction is made to communicate with the part below it by making openings in them and stitching or clamping the two together so that these openings are opposite and close to each other, thus permitting the food to take a short cut around the closed natural passage.

Modern surgery is bold because of increased knowledge, and it preserves thousands of lives which a century ago would have come to a premature end owing to the want of this knowledge.

There still remain a host of troubles which it cannot remedy; but every year gives it new powers and a broader field.

It is well to remember that every discovery or improvement made by a surgeon in Boston, or London, or Vienna, not only benefits his own patients, but is promptly made available through the press for the good of the patients of all other educated surgeons throughout the civilized world. There are no patents on surgical operations.

This increase in knowledge increases also the responsibility of the modern surgeon, and the labor which he must undergo to obtain it.

It now requires not only years of study to fit a man to undertake such responsibilities, which place the life of his fellow-man at the risk of the point of his knife or the cleanliness of his fingers, but he can never stop studying and say, "I know enough now."

He must read the latest journals and the newest books if he would not have his soul troubled by that most bitter of reflections, "There was a way by which I might have saved her life, but I did not know it until it was too late!"

If, then, any of my readers wish to become surgeons—and I hope there are some such among them—let them bear in mind that they must have trained brains as well as skilled fingers to ensure success, and that these things are not acquired by wishing, but by work.

IN MID-OCTOBER.

Thou tranquil stream, unknown to sage or poet,
How gently glide thy waters down to sunset
Under the boughs of maple and dark cypress!
How softly glows the sundown in thy thickets
Gentle and still as evening kneeling barefoot—
Like a sad Carmelite in silence praying—
Before an altar in an old cathedral!

Low pipes the wren within her dusky coverts,
Low calls the red-bird in the clumps of hazel,
The partridge whistles in the fields of stubble,
Blithe children shout far upland in the village
And on the twilight hang sweet stars of laughter,
Still thou, thou goest on thy path in silence
Crystal as prayer to God ascending upward!

What sing'th to thee the brown wren in the quiet?
What the blithe red-bird twittering in the hazels?
Whisper they aught of old days or traditions
Now dim as sunset on the purple gum-leaves?
I hear the kine low on the upland pastures,
I hear the squirrel bark within the forest—
Yet what hear'st thou of legend or of story?

What knowest thou of other days and races?
Hath ever here stood youthful chief and maiden
Slender and lithe, with dusky, love-lit faces?
Or in the gloom beside thee, 'neath the cypress,
Moored bark canoes within the gath'ring twilight?
Have human hearts here beat with human passion?
Their flint-spears deck the hills—know'st thou aught of them?

Here, in the Long Ago, the smoking camp-fires
Glowed in three hamlets by thy crystal waters,
The old men sat and smoked before the lodge-doors,
One prophet watched the lodge-fires lit in heaven:
Now in six villages laugh pale-face children,
And strange, new men walk o'er the chieftains' ashes,
And wag rough beards, and every one is prophet.

Now folds the Twilight her grey cloak of nightfall
Quietly over all the farms and hamlets.
No more is heard the laughter of the children.
No more the low of home-returning cattle.
Yet barks the squirrel in the woods, and softly
A brown leaf falls upon thy placid bosom,
And Night the acolyte kneels down between us.

CHARLES J. O'MALLEY.

TRUTH WILL STAND.

A good many traditionary anecdotes are still remembered by the old people of Virginia of a certain Josiah Allan, a Presbyterian minister, who was noted in the early days of this century for his eloquence, the intensity of his zeal, and his love of fun.

Like many of the most eminent preachers of those days he travelled from place to place, and wherever he went his hearers were quickened to a more zealous faith in Christ, a warmer charity for each other, and it must be added, a keener appreciation of jokes.

On one occasion, Mr. Allan arrived in the evening at a plantation in Fauquier county, where the attorney general of the United States was also a guest.

After supper this gentleman broached some of the infidel doctrines which had recently been introduced into this country from France; he avowed his own disbelief in the New Testament, and declared that Christianity "had had its day, and was fast losing ground."

Mr. Allan replied to him with all earnestness, and the argument continued until bedtime. As the house was crowded the two gentlemen were obliged to occupy beds in the same chamber. Their voices in hot discussion were heard by their host until he fell asleep, and when he went the next morning to call them to breakfast he found them sitting bolt upright in bed, still arguing, as they had been doing all night.

Mr. Allan, when forced to leave, drew his host aside and said, "I could not sleep until I rooted out this poison from his mind. It will corrupt the whole country! It will turn the nation away from the Saviour!"

No effort could restore him to his ordinary cheerfulness. He went away full of gloom and foreboding.

There is a peculiar significance in this story just now.

The attack upon the Christian religion made at that time was very similar to that which is urged at the present day by certain magazine writers and novelists. It was sustained then, as it is not now, by many of the foremost statesmen and thinkers of the country, while the cause of Christ was misrepresented by sectarian bigotry and ignorance.

Yet the nation was not corrupted nor turned from the Saviour. The churches, the asylums, the hospitals, and the peaceful, happy homes which cover the country now from sea to sea are the outgrowth of His teachings; and honesty, freedom and brotherly love exist among us only because we have made Christianity the basis of our national life.

Many good men and women are alarmed to-day by the assault upon their faith, as Josiah Allan was then, but with as little cause.

Such assaults are nothing new. They have been made for nearly nineteen centuries. But Christianity calmly continues its progress throughout the world, unchecked by opposition; not only because it is founded upon historical facts, but because it contains within itself the only living divine truths known to the world, the faith, the purity, and the virtue which make a man not a brute, but a son of God.

THE BAY PSALM BOOK.

The first book printed in the English language in America was a book of psalms. This was in 1640, and since the book was printed and first used in the settlement on Massachusetts Bay, it was and is commonly called the Bay Psalm Book. Only eight copies of the original edition are known to be now in existence. One of them was sold within a few years in New York for twelve hundred dollars—say seven times its weight in gold. The duty of compiling a new psalm book "for the use and edification of the saints in New England" had been entrusted to the Rev. Mr. Welde, the Rev. Richard Mather, and that glory of New England Puritanism, noble John Eliot, the Apostle to the Indians.

These three parsons were graduates of Emmanuel College in Cambridge, England, and were writers of good, sound, sensible sermons, but it must be confessed that they did not shine as poets. Their lines are of irregular length, the sense is often confused and unintelligible, and the grammar is sometimes shocking. One would have hard work to parse such a stanza as this:

"And sayd he would not them waste: had not
Moses stood (whom he chose)
'Fore him i' th' breach: to turne his wrath
Lest that he should waste those."

The printing of the book was done in Cambridge upon a "printery," or press, which friends in Holland had given to Harvard College in 1638.

Some of the colonists were not satisfied with the new psalms, and it was soon decided that the verses needed "polishing." The work was undertaken by President Dunster of Harvard College, assisted by a young tutor named Lyon, who wrote some "Scripture Songs" which were printed at the end of the psalm book. As the Puritan young people had no merry ballads and roundelays, these songs of Mr. Lyon's manufacture were no doubt enjoyed, but they read queerly enough now. Here is a portion of the song of Deborah and Barak:

"Jael the Kenite Hebers wife
'bove women blest shall be:
Above the women in the tent
a blessed one is she.
He water ask'd: she gave him milk
him butter forth she fetch'd
In lordly dish: then to the nail
she forth her left hand stretched.

"Her right the workman's hammer held
And Sisera struck dead:
She pierced and struck his temple through
and then smote off his head.
He at her feet bow'd, fell, lay down
he at her feet bow'd where
He fell ev'n where he bow'd down
he fell destroyed there."

It is pleasant to think of the three reverend versifiers with their severe but kindly faces, clad soberly in sad-colored garments, great knee-breeches, square-cut flapped coats, with heavy cloth or frieze stockings and leather shoes, with square white bands around their necks, and black skull-caps on their close-cropped and unpowdered heads; seated with ink-horn and quill-pens at a table covered with Hebrew and Greek Lexicons and a great Breeches Bible.

In winter they must have had to draw their writing-tables fairly within the great stone fireplace, else their ink would have frozen and their hands would have been too stiff to hold the pen. And though they were "full of Grace and Zeal," they must often have sighed and groaned and mended their pens and tried fresh quills, and perhaps scratched their heads while they cudgelled their brains for their halting lines, just as any sternly prosaic man nowadays would wriggle and twist, were he forced to write page after page of something that would pass for poetry.

If the Puritans had known no better psalms, we should not wonder at their quietly and happily accepting those of the Bay Psalm Book, but they had used in England Sternhold and Hopkins's Version of the Psalms, which contained such noble and stirring lines as:

"The Lord descended from above
and bow'd the heav'ns hye
And underneathe his feete he cast
the darkness of the skye.

"On cherubs and on cherubines
full royally he road
And on the winges of all the windes
came flying all abroade."

They had to sing instead in their new version:

"Likewise the heavns he down bow'd
and he descended & there was
under his feet a gloomy cloud
And he on cherub rode and flew:
yea he flew on winges of windes
His secret place he darknes made
his covert that him round confinde."

The psalms, too, were very long,—some had one hundred and forty lines,—so that it often took half an hour to sing one of them, during which time the patient congregation always stood.

HIS "LITTLE EXCELLENCY."

For twenty years the late Deputy Windthorst, affectionately nicknamed the "Little Excellency," took an important part in the discussions of the Reichstag. Born a Hanoverian, he was a minister of justice under King George when Hanover was a separate kingdom, and might have had an office under the Empire after his native country was absorbed by Prussia. But he preferred to remain a simple deputy. It has been said that it is less difficult to govern a country than a political party, but this indefatigable "Little Excellency," by force of energy and determination, and by the influence of his innumerable short, emphatic and practical speeches, kept together and led the German Catholic party, a strangely assorted number of men of title, bourgeois, small landholders, conservatives and democrats.

Windthorst was the son of a peasant, and is described as a quiet, homely man, without much voice, and very near-sighted. His eyes were fine and merry, his lip was firm, and his forehead broad. Even with these redeeming features he was so plain, and his figure was so insignificant, that it was said, "Bismarck is the ideal type of a soldier, and Windthorst is the caricature of it."

But the sensible and amiable statesman did not take this to heart. Not long before his death he fell down the stairs of the Reichstag and bruised his nose. His accident might have been ridiculed, but he won the scoffers to his side by immediately sending the reassuring news home to Hanover that his beauty was uninjured. When the newspapers made merry over it, the old gentleman laughed, and mailed the papers to his wife.

He was never disturbed by ridicule. On one occasion, when he was addressing the Reichstag on the affairs of the church, he for the first time in his career as a speaker made use of many long words. This, from him, seemed incongruous and absurd. The deputies burst out laughing. Windthorst showed no anger, but turning to the stenographers said, "Note that the German Reichstag scoffed at the Church of God," and went on speaking.

He was minister of justice in Hanover from 1851 to 1853, and from 1863 to 1865. This was always a source of pride and satisfaction to him. He told with much enjoyment, however, an incident which illustrated how slightly one Hanoverian esteemed his position, subject as it was to change.

Windthorst was looking for apartments, and having found what suited him, he asked the landlady, who knew who he was, to name the price, saying that if it were satisfactory he would take the house; to which she replied, significantly, "Oh, I cannot rent it to you. I don't wish my house to be changing tenants every six months."

MY PICTURES.

"Exquisite!" I'm glad that you like them.
"The wonderful artist!" Unknown—
Or, at least, not given due credit
For all that we often see done.
There's a delicate toning in this one,
Those sorrel and grass tints are fine,
Where the meadows sweep up on the hillside
In that waving wind-tossed line.

"The Homestead!" Yes, that bit is priceless.
How the hollyhocks seem to sway
From its rioting wealth of a garden
In the breeze of a childhood's day!
And the warm, glad tints of the sunshine
Seem to light up its time-worn gray,
And illumine the winding path that leads
To the well-sweep over the way.

"Inspiring, indeed!" See the mountains
Like priests in the distance shine!
As bearing our highest thoughts with them,
They enter some unseen shrine.
"My collection would challenge the critics"—
Ah, where is the critic so rash?—
My pictures are all above censure,
They are framed by a window sash.

EDITH PERRY-ESTES.

HIS YOUNG MISTRESS.

A New York *Herald* reporter was taking "a modest chop" in a Sixth Avenue restaurant when two young women came in and sat near him—students at the Art League, as soon transpired from their conversation. The head-waiter, an aged colored man, had already attracted the notice of the reporter, and was now eying the young women with peculiar interest. Soon he made an errand to rearrange something at their table.

"Excuse me," he said, in his soft, old voice, "I've been hoping you'd excuse me since the first night you came in if I asked you what part of the South you came from."

"Me?" said the girl, pleasantly. "I come from Tennessee. I suppose you knew I was Southern by the way I talk."

"Yes'm; yes'm," the old man answered, hastily, taking the plates from the waiter in charge a little flurriedly. "My young missus she marry down in Tennessee. She was one ob de Kentucky Prentices."

He stopped abruptly and looked at the girl, who was staring at him. "She marry one ob de Tennessee Sinclairs," he added.

"Why, that was my mother!"

"She was my young missus," said the old man.

The girl held out her hand to him.

"Why, my mother always loved her old people so much," she said, the tears springing to her eyes. "She always wanted to know what became of all of them after the war, but she never could learn much. Now—" she stopped. The old-time slave was trembling all over.

"Please tell—please tell her that Ike, Yellow Ike alluz —"

The girl was looking at him steadfastly through a mist of tears. "She's dead!" she said.

The old man leaned on a chair for a moment; then the habits of a lifetime came to his aid; he took a dish from the waiter as he came up, although his hands still shook a little.

"I'll wait on these ladies," he said, and then gave some directions about another part of the room. He caught the proprietor's eye fixed reprovingly on him; but he meant to wait on those ladies if it cost him his place.

Pretty soon he brought in some dish that had not been ordered.

"There is nothing here fit for you, missy," he said in an undertone; "is you named for your ma?" The girl nodded.

"I thought I knowed you by the favor," he continued, and with an attempt at a smile he took himself off to a little distance, and stood waiting their call.

As the reporter was putting on his coat he heard the Southern girl say, "I suppose he would rather never have seen me at all, than to see me here like this." But the reporter believed that she was wrong in that opinion.

SAVED BY A LASSO.

A New Jersey woman, Mrs. Schmults, visited Colorado last winter, says an exchange, and after many lesser excursions set her heart upon making the ascent of Pike's Peak. The hotel people and the guides shook their heads. The thing could not be done. No one had been to the top since November. It would be necessary to take the old trail all the way, as the carriage road—to the Half-way House—was completely blocked with snow. Finally a young guide, Steve Brown by name, undertook to see Mrs. Schmults safely up the mountain and down again. She rode a little Indian pony.

"It was wonderful," said Mrs. Schmults, "what intelligence the pony showed. In some places we had to pass between rocks where the space was so narrow that he had to sidle through. In the worst places he planted his hoofs, which had been sharply shod, in a straight line, one after the other.

"It was enough to take one's breath away, on the edge of those sheer precipices, to look down into the valley thousands of feet below. The sensation is a peculiar one, for when you are on horseback you seem to be hanging out over the cliff. And another great rock, rising on the other side of the trail, does not increase your sense of security.

"Sometimes we were scrambling upward at an angle of forty-five degrees, or so it seemed, and again we descended to get around some great mass of rock that blocked the way. The air became more and more rarefied, and my breath came quickly.

"The guide kept ahead on his mustang, looking back now and then to see how I was getting along. From the pommel of his saddle hung his lasso, and when I inquired its use, he told me that he often had to tie travellers round the waist with it on the descent, to keep them from losing their seats.

"After we had got above the timber line, the horses were scrambling up a very steep bit of the trail when my pony began to slip back on some loose gravel. I thought I was gone. If the pony lost control of himself we should certainly go down the mountain together.

"Steve heard the grating of the pony's hoofs, and turned like a flash. The next instant his lasso was swinging about his head, and before I realized what was going on, it had settled over my head and pinioned my arms to my sides.

"With one turn of his wrist Steve pulled me from the pony, who, relieved of his burden, quickly recovered his footing. I did not comprehend, till it was all over, what a narrow escape I had had, and even now I don't like to think too much about that incident of the climb."

KEEPING UP HIS CONSEQUENCE.

An English physician, resident in Persia, was called to go some ninety miles to prescribe for the governor of one of the provinces. He found him suffering from gout, and gives an appalling description of his surroundings—thirty or forty persons always in the room, every window of which was tightly closed, though the day was excessively hot.

Having prescribed for the noble patient, I escaped to my quarters under the pretext of dining, and lay down to rest. Two hours later my servant announced that my dinner—furnished by the governor, according to agreement—was about to be served; and a large tray, having some six dishes on it, with bread and all accompaniments, a huge bowl of iced sherbet and a bottle of wine, was brought in.

I was very hungry and anxious to fall to, and was conscious of something like anguish when, to my astonishment, my servant, whom I had brought from Shiraz, ordered the whole away in an indignant voice.

When my dinner had disappeared, I demanded an explanation. It was this:

"I know, sahib, that the dinner I sent away was quite enough for the sahib, and a good one, but here in Persia a man's position is estimated by the quantity of the dinner sent him, and the number of the plates. They have sent you six plates. I have told them that you couldn't think of dining on less than eighteen.

"If I had allowed you to eat the dinner that was sent, good as it was, you would have been looked down on. Are you less than the prince's physician? Certainly not. They would send *him*, or rather he would demand, at least twelve plates. I assure you I am acting in your interest."

The man was right. Dinner for at least twenty-four persons was brought on three huge trays. I tasted some half-dozen well-cooked dishes, and my servant removed the rest, and I observed him, with the master of the house and numerous hangers-on, dining in the open air on what remained.

LECHUZO THE BRAVE.

Turn about is fair play. The hero of the Spanish bull-ring now is not a toreador, or slayer of bulls, but a bull, who has repeatedly cleared the arena of his antagonists. He has not killed or dangerously wounded any man, but he has put to flight every toreador, picador, chulo or banderillero, who has dared to enter the arena with him; and though the crowds have come to see him slain, his conduct has been so valiant that the people have demanded that his life should be spared.

This bull's name is Lechuzo. He made his first appearance in the arena at San Lucar, in Andalusia, in 1888, and so suddenly cleared the ring of his enemies that the people rose in admiration, and demanded his reprieve; for in spite of his bravery, he would have been treacherously approached and put to death for the satisfaction of the multitude if the people had not intervened.

Again, at Cordova, after the wounds had been healed which the picadors inflicted upon him at San Lucar, Lechuzo drove all his enemies before him, and again his life was spared at the demand of the spectators.

Lechuzo is now eight years old, and is classed as invincible. It is quite possible, however, that an increasing sensibility on the part of the Spanish people—a growing sense of the cruelty and folly of the bull-ring—has something to do with his repeated reprieves.

If Lechuzo, the brave bull, puts an end, by his impetuous and unfailing valor, to the slaughter of bulls in the ring in Spain, he will have done a good service to the Spanish people as well as to his own kind, and will deserve a monument at San Lucar, the scene of his first triumph.

PATCH AND ALL.

An old sea-dog, Sawyer by name, was a privileged character on a certain man-of-war, writes a correspondent, because of his age and the length of time he had been in the service. He eked out his pay by making and selling uniforms for the other men, and as he had the market entirely to himself it was natural that he should become a little autocratic in his dealings. On one occasion a young sailor wished to buy a pair of white duck working-trousers.

Old Sawyer, holding a pair of second-hand trousers at arm's length, descanted upon their various excellencies until he was compelled to pause for breath. At that point the young fellow ventured to ask, meekly:

"And what might the price be, Mr. Sawyer?"

The old man hemmed and hawed, and began thus:

"Waal, young feller, I reckon you know what white duck costs from the paymaster, don't you? Fifty cents a yard, aint it? And so many yards is two dollars altogether. Then there's the thread, ten cents we'll call it, two dollars and ten cents; and the making will bring it up to three fifty. I calkerlate ye won't quarrel with that; and then there's this blue patch," he continued, stroking it lovingly, "I put that in myself last summer, an' it's a good piece of work. I'm 'fraid I shall have to charge you twenty cents extry for that patch, say three dollars and seventy cents altogether."

The money was paid and received without a word, neither party seeming to think it surprising that patched trousers should cost more than whole ones.

GOOD ADVICE.

There was much homely wisdom in the advice given by an old New Hampshire farmer to his dreamy son who, neglecting his proper work about the place, spent many hours upon certain foolish verses that he could not make sound right, even to his own uncritical ears.

"Seems to me, Bill," said the farmer one night, looking across the "living-room" table at his son who, with his forehead painfully knotted, was gazing disconsolately at a half-covered sheet of paper, "seems to me as ef, ef you'd really been cut out fer a poet, the Lord would ha' planned it some ways so's you could ha' fetched a couple o' words that 'd match out'n your brain, 'thout quite so much turrible hard work an' face-twistin'.

"Ef I was you, Bill, I b'lieve I shouldn't take to po'try till I'd found there warn't another nameable trade I was fit for. A hoe," he added, in a meditative tone, "a hoe, now, would set full as easy in your hand as a pencil does, Bill!"

For the Companion.

SOME CHRISTMAS HINTS.

Just three days till Christmas, and Lily Brown and I are having such fun getting ready!

The afternoon of Thanksgiving Day I was over at Lily's and we got to talking about Christmas, and wondering what we would get this year, and telling each other what we would like to get, and I suppose we became excited and talked pretty loud, for Lily's brother Ned, who was studying in his room across the hall from us, called out, "Girls, did you never hear that it is more blessed to give than receive? Why don't you talk about what you are going to give this Christmas?"

Now, I am ten years old and so is Lily, and when we came to think about it we felt ashamed that we have had so much experience in receiving and so little in giving.

And so we are seeing how many gifts we can make to others this year.

Ned says that if you were to hear of the number of Lily's gifts you would think she "had fallen heir to a gold mine," but that you would quickly change your mind if you saw them.

I know of twenty-seven gifts that I am going to give, and for fear that you may think I have fallen heir to a gold mine, I shall tell you what some of them are.

Some of them are not worth anything in money, but mamma says that a thing is worth giving when the one that receives it is happier because it is given to him; and some people care more for the love that goes with a gift than for the money that was paid for it.

My most expensive gift is for mamma; Aunt Nora showed me how to make it, and grandma gave me everything I needed for it except the ribbon and floss, for which I had to pay thirty-three cents. I forgot to say that it is a crazy patchwork cushion.

For papa I have knit a pair of coarse mittens for him to wear while he does his evening chores; the yarn cost twenty cents, but oh! how long it took me to knit them, and I did every stitch of them.

I have made a paper-doll house for Cousin Nettie out of a big pasteboard box. I cut out holes in the sides for doors and windows; then with a pencil I made the pieces I cut out look like doors and window-shutters, and then I fastened them to the house again.

For hinges I pasted one edge of a strip of cloth to the door, and the other to the side of the house.

Red paper marked with a pencil made a pretty carpet, and the curtains are of tissue-paper.

There are pictures hanging on the wall with colored pasteboard frames, and the furniture is made of pasteboard, small boxes and such things.

For little Cousin Nora, I have made a picture-book. I took four pieces of paper-muslin—each piece was about fifteen inches long and nine inches wide—and stitching them together down the centre on the machine made a book of sixteen pages. I scalloped the edges of the leaves with the scissors, and pasted in the pictures. I have seen books made like this before, but Aunt Nora has made mine different from all the others.

I left space by every picture for a piece of blank paper to be pasted, and on each paper Aunt Nora wrote something about the picture.

To make it plainer I will tell you about one picture. It is one of a little girl with book and slate on her way to school, and with her is a very large dog. Aunt Nora wrote this about it:

"This girl is going to school. Her name is Linna. The dog's name is Hero. When they get to the schoolhouse Hero will turn around and go back home, and then Linna's mamma will know her little girl is safe at school. When Nora is as big as Linna, her papa will buy her a book and slate, and she will go to school. Nora has a dog, too; if you ask her to do so, she will tell you about him."

And so you see that everybody to whom she shows her book will tell her the same stories about the pictures.

FRIDAY IN THE CITY.

My gift for grandma is a foot-warmer. It is two cushions tied together at two of the opposite corners with ribbons. Just the top side of the top cushion has to be pretty—it is of crazy patchwork, and mamma says I did my work well, only she doesn't know how much practice I have had lately. A ruffle from an old gray cashmere dress is pleated around the edge of the top cushion, and hides the lower cushion.

After Christmas if grandma wants to keep her feet warm while she is sewing, she can put a warm brick between her two cushions, and then her warm footstool will be ready for use.

My gift for Ned Brown is a kind of a joke, but I think that he may like it.

Ned is the greatest boy to collect, and he has collections of ever so many things. But I've something new for him; it's a nut collection.

The case for the collection is a big, flat pasteboard box, and with long, thin strips of wood papa divided it into twenty-six little square compartments, and one big one as big as four of the little ones together.

Then out of note-paper I made a little blank book that would just fit into the big compartment. The book has twenty-six pages besides the blue cardboard covers, and in it he is to write descriptions of the nuts—a page to a nut.

I have started the collection for him with ten nuts, counting a piece of cocoanut-shell as one, and that is all I can get. Do you suppose he could ever find sixteen more? As you may well guess, I didn't write the descriptions in the blank book.

Papa told me how to do Ned's nut collection. Of course I couldn't think of so many gifts if others did not help me with their suggestions, and help me make some of them, too.

I was a subscriber to *Our Little Ones*, a magazine for small children, for three years, and I have them all. When I was a very little girl mamma taught me to be careful with books, and these are not torn any and are very little soiled.

I have picked out fifteen of them to keep. I think so much of them all, but those fifteen I just couldn't give away.

The other twenty-one magazines will make gifts for fourteen children—two magazines to some and only one to others.

For Aunt Mary Doane, who washes for mamma sometimes, I have made an ornamental fan to be put on the shelf over her fireplace.

From heavy pasteboard I cut out a fan the size of a large palm-leaf. This I covered with crimped tissue-paper and bound the edge of it with a strip of the paper—pasted it on. Then I put five picture-cards on the fan, one in the centre and one in each corner.

To fasten the cards to the fan I threaded a large needle with narrow ribbon, and then I pushed the needle through the card and fan, and back through the fan and card, and then tied the two ends of the ribbon together in a little bow.

Each card was tied down at two corners, and every card has the picture of a cute child or children on it. I chose that kind because Aunt Mary is so fond of little children.

To finish off the fan I took a wide strip of the tissue-paper and tied around the handle in a pretty bow. And for my part I think the fan is real pretty, even if Aunt Nora did laugh when she saw it, and I just feel sure that Aunt Mary will be pleased with it, too.

Aunt Nora is so very particular how things look, anyhow. I had become quite discouraged in trying to think of a gift for her, for I knew she couldn't care for anything that I can make, and I haven't any money with which to buy nice gifts. So I was very much relieved when mamma made a suggestion.

You see grandma lives in the next house to ours, and it seems to me that Aunt Nora is always wanting me to go down in town or somewhere for her. And I usually go, but sometimes I am pretty cross about it. Well, I have an envelope with thirty of my prettiest picture-cards in it for her, and with them is this little note:

Dear Auntie Nora, I did sigh and sigh,
For I had no money a nice gift for you to buy.
To make you something lovely I did wish to try,
But my poor work could only shock your "artist's eye."

But whenever you want an errand done
Just give me a card and see how I'll run!
And until these thirty cards are all given out,
I'll go at once, and never grumble or pout.

I don't know what Aunt Nora will think of this kind of a gift, but I do know that I'll be glad when I get all my nice cards back again.

And now I want to tell about Jimmy Crow, the man that works in the garden and saws wood, and such things, for papa. He lives by himself and does his own cooking, washing and mending.

Last summer he was always teasing Lily and me because we were such "tomboys;" he said we would never be any help to our mammas, and that he didn't believe we would ever be able to even hem a towel or make the most common kind of cake.

Lily and I have a partnership gift for him. I have learned how to make cookies, and Lily can make real nice biscuit, and I am going to bake a pan of cookies, and Lily is going to make sandwiches out of some of her biscuits; and we have each hemmed a towel, and we shall take a large paper bag and put the towels in it first, then in smaller bags put the cookies and sandwiches, and put them in the large bag; and to make things look fancy we'll tie up the bag with a wide ribbon of colored tissue-paper.

We have made up this rhyme to write on a card and pin to the bag:

We can use a needle and thread,
And we can cook—
You'll take back some things you've said
When inside you look.

I am afraid you will not think my gifts very nice, but I hope they will please the ones for whom they are intended; mamma has always helped me to decide if a gift was appropriate.

Although I have spent all of my money and done a great deal of tedious work (oh! knitting those mittens was just awful, but papa is as bad as Jimmy Crow about thinking little girls ought to know how to knit and sew and cook) yet I am already paid in anticipating the pleasure of giving.

And if the gifts I receive this Christmas do not equal my expectations, for of course I have thought some about what I may get Christmas, I think that I shall most truly believe, anyhow, that "It is more blessed to give than receive."

LYCEUM LEAGUE OF AMERICA.

The organized movement for raising our National Flag over the public schools was first proposed by THE YOUTH'S COMPANION, and thousands of schools have in this way shown their patriotism.

We now propose a new patriotic Society, to be called the LYCEUM LEAGUE OF AMERICA, which shall consist of young men's debating clubs organized in every State and Territory under our direction and advice, and whose object shall be to make young men acquainted with public questions of the day and to educate them for more intelligent citizenship.

We have been developing the plans for this great movement for over a year; it has the approval of leading educators. The full announcement will appear later. THE YOUTH'S COMPANION.

ON A PLANTATION.

"You can live very well on a plantation," writes Octave Thanet, in the *Atlantic Monthly*, "if, as the negroes say, 'you understand yourself.'" It is evident, however, that in Arkansas, as elsewhere, those who are themselves energetic and thrifty have much to "put up with" in their dealings with their dependents and neighbors, too many of whom are given to "a patient endurance of avoidable evils." "As an illustration of plantation methods and Arkansas character," says the writer, "we always remember our cow-shed."

The plantation carpenter being too busy with houses to condescend to cow-sheds, we appealed to Thomas Jefferson Pope, who is indifferently carpenter, blacksmith, wood-sawyer, butcher, or tinker, and between whiles makes a crop. Thomas Jefferson is amiability itself; he said he would build a shed for us, "jest *too* quick."

The interview was on Thursday. Friday it rained. Saturday was "pig-killing day." Sunday, of course, we could not expect him, but we were comforted to know he was "studying 'bout" us. Monday he appeared in person with a "helper,"—it always takes two men to do anything in the South, if it be no more than mending a fence,—and they looked at the yard and talked together for an hour.

Tuesday he came again, and carried off our best hatchet. Wednesday he really set to work, and worked steadily, effectively, and according to plantation standards, rapidly, until the shed was complete save for doors. Then he was called away to make a coffin. He said, very justly, that cows could wait on him better than "co'pses," and that as soon as he "got Gather Robinson's coffin done he would fix our doors jest *too* quick."

I trust that he was not two months making the coffin, but two months did we wait doorless; meanwhile Albert nailed the cows in every night, and unnailed them every morning.

We came South three helpless women, accustomed to have men open the doors for us. One of us had a pretty conceit of her artistic cookery; and yet we were obliged to send for an old black woman to show our Northern cook—and us—how to make bread without compressed yeast.

Now, thanks to Amy, our present waitress, from the North, we are accomplished paperhangers, and thanks to Christine, our cook, also from the North, we can spread whitewash artfully over our fences and out-buildings. Indeed, should need come—and need, like a good neighbor, drops in without formality—we can show a variety of handicrafts.

Constance is a good machinist, mending the broken locks and lamps; Madonna, who is the carpenter, makes beautiful furniture out of packing-boxes and cretonne. We are our own best glaziers, and once we built up a demoralized chimney with old bricks and an improvised mortar of sand and whitewash.

HOW SNAKES CLIMB.

How do snakes climb? is a question which has been frequently asked. Many have thought that they accomplish the feat by wrapping themselves about the tree and following a spiral course upward. Several years ago, a story went the rounds of the papers to the effect that two wood-choppers, having felled a large oak-tree several feet in diameter and very tall, found in its top two common black-snakes.

After pondering for some time the men arrived at the conclusion that one snake had taken hold of the other's tail, and thus by coöperation they had been enabled to clasp the trunk, and by circling about it had ascended to the top.

Whatever probability may have attached to this conclusion has recently been dispelled by the observation of two young naturalists while hauling fire-wood from the forest.

A black-snake measuring, perhaps, a trifle over six feet was found clinging to the side of a small tree, around which it could have wrapped itself nearly twice, had it wished to do so. Instead of this the snake passed right and left at short distances, catching the folds along its under parts over and behind the slightly projecting roughnesses of bark.

As the snake rested only five or six feet off the ground, one of the young men grasped its tail, to test its climbing qualities, but so great was the force with which it pulled upward that it proved a difficult task to hold it. Finally, becoming annoyed at this ill treatment, the snake reached down threateningly at the offending hand, and losing its hold fell to the ground. It was borne home in triumph, but was afterward returned uninjured to the forest.

COUNTING THE COST.

It is seldom that a witness acknowledges in court that he has counted the cost of false as well as truthful testimony.

A negro in a Georgia court-room was reminded by the judge that he must tell the whole truth.

"Well, yer see, boss," said the witness, "I'se skeered to tell de whole truth for fear I might tell a lie."

"Do you know the nature of an oath?" asked the judge.

"Sah?"

"Do you understand what you are to swear to?"

"Yes, sah; I'm to swear to tell de truf."

"And what will happen if you do not tell it?"

"I 'spects our side'll win the case, sah."—*Boston Traveller.*

BOYER FEEDS THE BEAR.

Solomon Boyer, a teamster in the employ of one of the big tanneries in the Loyalsock region, had a laughable, yet trying adventure with a bear while on his way from the woods with a load of bark, recently. As he emerged from the woods with his team he stopped to give the mules a breathing spell and to eat his dinner, which he carried in a tin bucket. He had scarcely opened his bucket and begun to eat, when a bear came out of the woods on one side of the road, only two or three rods in the rear of the wagon. Bruin sauntered along, paying no attention to the team; but Boyer, desirous of seeing what the bear would do, threw a bit of salt pork in his way. The bear stopped, smelt at the pork and gulped it down greedily.

Then the animal, noting the source of the morsel, came toward the wagon and rose on his haunches as if to say that another bit of pork would prove acceptable.

Boyer laughed and tossed out a second piece, which Bruin devoured, and then posed again. But Boyer wanted the rest of his dinner himself and paid no attention to the shaggy black beggar. The bear, seeing that the teamster was no longer aware of his presence, snorted sharply two or three times and walked back and forth across the road as if reconnoitering the situation. Presently he growled; but Boyer, thinking the beast would go away if he got nothing further, continued his eating.

The bear ventured nearer and finally climbed up the ranks of bark at the hind end of the wagon and had his head and shoulders above the top of the load before the teamster was aware of his presence. Boyer was unpleasantly surprised at this movement of Bruin's, as he was wholly unarmed.

"There," cried the teamster, "get out o' that!" and he threw a bit of pork into the road. The bear dropped down and went and picked it up; but as soon as it was swallowed and there was no more forthcoming, he made another charge upon the wagon.

Boyer started the mules onward, but knew that he could not hope to escape with the heavy load of bark. An idea came to him. He would coax the bear on by feeding him the lunch until they should come to a friend's house a mile or two along the road. Then he would get a gun and shoot the old beggar.

The teamster sat on the bark, facing rearward, his big dinner bucket at hand. When the bear came up with the wagon and threatened to climb up on the load, Boyer tossed out a piece of pork. The supply of this edible was limited, so he tossed the beast a slice of bread which fell butter side up. Bruin nosed it, then licked the butter off and left it.

The next slice fell butter side down, and the bear ignored it. Boiled eggs and cheese-pie fared the same; Bruin wanted pork. Boyer dealt this out in small bits which failed to satisfy, and the bear was growing ugly and aggressive.

At length Boyer saw his friend Pealer at work in a field, and called to him to run for his gun. The man seemed to realize the state of the case, and set off on a dead run for his house, a quarter of a mile distant. But the supply of pork was out before Pealer appeared, and the poor teamster was in a sorry plight.

The bear climbed upon the load; Boyer tossed him the last piece of pork, and then jumped from the wagon and tore down the road. Bruin, probably thinking that the teamster was fleeing with a stock of coveted pork, started after him. The terrified teamster had a fair start, but he stumbled over a stone and fell full length, and the bear was close upon him when there came the loud report of a gun.

Pealer had come at last. Boyer arose and looked around. There lay his late pursuer struggling on his back in the road. A second shot ended the bear's struggles, and Boyer was out of the difficulty. He declares that he'll never fool with another bear.

JUSTIFIES THE NAME.

An instructor in natural history who believes that it is better to deliver little lectures to his pupils than to let them get their knowledge out of books, talked to them thus one day on the subject of the hog:

"The hog, my young friends, is, from the point of view of food, the most important of animals to the human race. There is no part of his structure which has not some alimentary or industrial use; even his bristles are used in the manufactures.

"But from the point of view of character and mode of life, it must be confessed that he possesses certain habits and dispositions which fully justify his name!"

This reminds one of the opening lines of a composition once submitted by a boy in a New England school:

THE GOOS.

The goos is so called becaus it acs kinder silly and don't kno any betr.

AWKWARD INTERRUPTION.

If we could never blame others unless we were innocent ourselves, what would become of pulpit exercises and family discipline?

Father—So you want an excuse, do you? An excuse for being late to school? What were you doing with yourself—playing marbles?

Son—No, sir; I couldn't find my overshoes.

Father—You couldn't, eh, you careless boy. They were where you left them, of course. You ought to be thrashed for —

Servant—Please, sir, Mr. Nextdoor wishes to know if you are ready.

Father—Yes—yes, of course. Right away—right away. Where in creation is my hat?—*Good News.*

CORRECTED.

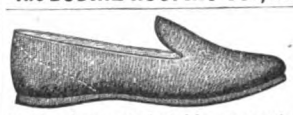
If a man keeps his ears open he will sometimes get a lesson in the accurate use of language when he least expects it.

"Bessie," said papa, "won't you have a little piece of this chicken?"

"No, thank you," said Bessie.

"What! no chicken?"

"Oh, yes, I'll have chicken, but I don't want a little piece."—*Philadelphia Record.*



THE Atlanta *Constitution* reports the following sign as to be seen in that city: "Going out to do whitewashing done here."

Worms.—In children bad breath and hard, swelled stomach are symptoms of worms. Give "*Brown's Vermifuge Comfits.*" A sure remedy. 25 cents a box. [*Adv.*

Itching Piles.

Cuticura Soap
FOR BAD COMPLEXIONS RED ROUGH HANDS AND BABY HUMORS.

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvellous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin and softest hands, and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.
Sold throughout the world. Price, 25c.
Send for "How to Cure Skin and Blood Diseases."

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

MUSCULAR RHEUMATISM.

Muscular rheumatism has its seat in the fibro-muscular structure—where muscle changes into tendon. It attacks all ages and both sexes, its subjects having a constitutional tendency to it—a so-called rheumatic diathesis. Its chief characteristic is pain and stiffness of the muscles.

Attacks are induced by exposure to draughts, or by strains. They generally pass off in a few days or weeks, though sometimes they become chronic and recur for years, especially in wet weather.

There are several varieties of muscular rheumatism. One is popularly known as "stiff neck." It occurs mostly in children, and is liable to recur. Persons thus affected should avoid draughts in cold, damp weather, especially draughts upon the neck and upper part of the chest.

Another variety attacks some muscle in the wall of the chest, usually on one side. Every breath causes pain, and this is sometimes excruciating and spasmodic. A plaster or a bandage over the part will generally afford relief, by restraining the respiratory movement.

A third variety affects the scalp, causing a dull, aching pain in the front or the back of the head.

A fourth variety affects the upper part of the back and shoulders, and occurs chiefly in persons much exposed. In a fifth variety of the disease the walls of the abdomen are affected.

A sixth variety is known by the name of lumbago. Its seat is in the muscles of the loins—the small of the back. It may be on both sides, or only on one. As these muscles connect with the bodily movements generally, almost every movement causes pain, and the patient finds relief only by remaining at absolute rest in bed. If he is able to keep about, it is with pain and in a stooping posture.

The treatment of muscular rheumatism requires in the first place absolute rest of the part affected; and if relief does not come from that, the advice of a physician should be sought.

AIR-SHIPS.

Any one who has ever dreamed of flying must have a vivid impression of the pleasure that would be derived from the ability to navigate the air.

From the days of the Montgolfiers and their hot-air balloons to the present time, many false hopes have been held out that man was on the point of making a highway of the atmosphere, as he has done of the sea. But repeated disappointments have bred general incredulity on this subject.

When, however, a man of the scientific reputation of Prof. S. P. Langley demonstrates, as he has recently done by a series of original experiments, that heavy bodies can be sustained in the air, with rapid motion, there is good reason to hope that the problem of mechanical flight may yet be solved.

The principle upon which Professor Langley worked will be readily grasped by any boy who has ever shied a thin, flat stone, or a piece of slate, into the air or upon the surface of smooth water, and watched it skim along.

Professor Langley experimented with thin metallic planes, and discovered that the time of fall of such a plane, even though it may be heavily weighted, can be indefinitely prolonged by imparting to the plane a sufficiently swift lateral motion. In other words, the plane may be made to slide through the air without descending to the earth.

By tipping the plane so that as it moves forward the air will strike against its under surface, the tendency to fall to the ground is counterbalanced. One of the most interesting facts shown by the experiments is, to quote Professor Langley's words, that "the force required to sustain inclined planes in horizontal aërial locomotion diminishes instead of increasing when the velocity is augmented."

It is only necessary that the flying plane shall carry its own motor and steering apparatus, in order to transform it into a veritable ship of the air. We may soon see Professor Langley's idea put into practice, for Mr. Maxim, in England, is reported to be about to launch a flying machine, constructed on this principle, and consisting of a plane one hundred and ten feet long by forty feet wide, which is to be propelled by a screw driven by a petroleum condensing engine weighing eighteen-hundred pounds.

Such a machine speeding through the air with a load of passengers would be almost as wonderful a sight as Prince Ahmed's flying carpet.

NO PLACE FOR HIM.

Until ten years or more ago, the Texas Pan Handle, through several months of each year, afforded pasturage for vast herds of bison, commonly known as the buffalo, an animal which, in its wild state, at least, has almost entirely vanished. On a certain occasion two gentlemen, prominent in Texas politics, were hunting in the buffalo region, and one of them, getting within range of a herd of the ruminants, brought down a large bull.

Knife in hand, the hunter was approaching his quarry, when all at once it rose, bellowing and ready for business. Since the gun was empty, flight was the sportsman's only recourse, and an instant later a wild-eyed man was seen tearing away, with a furious brute closely following.

Hunter number two, meanwhile, was watching the scene from a hill-top too far off to be of the slightest assistance to his companion.

A tragic termination of the chase seemed inevitable, for the fleeing gentleman was a heavy weight, and already the space between pursuer and pursued began to diminish. Suddenly the fugitive was seen to strike off at an angle, and the breathless watcher heaved a sigh of relief when his friend's objective point was found to be a cave but a few rods away.

At the very entrance to this seeming place of safety, however, the fleeing man turned aside and dashed with such frantic speed across the plain that a marked gain was made upon his pursuer.

But this could not last long, and finally, the fugitive's strength utterly failing him, he fell completely exhausted; while the buffalo, faint from loss of blood, dropped at almost the same instant and within less than a rod of the prostrate man.

Hunter number two now came up, and his first question was:

"Why didn't you run into the cave, colonel? That would have shielded you from the buffalo."

"Buffalo!" came the panting but contemptuous response; "why, general, there's a bear in that cave as big as two buffalo."

HER BARGAIN.

The following true story is told in the "Journal of Emily Shore." It illustrates the truth that if one really desires an article, the most sensible way is to purchase it as soon as an opportunity occurs.

A little girl near us was one day playing before the house, when a woman appeared and begged a few pence. She had a baby in her arms, and the child was so delighted with the little thing that she asked the woman if she would sell it to her.

"What will you give for it, miss?" was the counter-question.

"Half-a-crown."

"Very well," said the woman. "Let's see the money."

It was produced, and the sale made. The little girl took the baby, carried it up-stairs and laid it on her bed, and after she had fondled it "enough for once," scampered down-stairs, calling to her mother:

"Mamma, mamma! I've got a live doll! I always wanted one, and now I've got it."

The baby was found, and the story frankly told, but though the beggar woman was sought all over the town, no trace of her could be discovered. Meanwhile the baby's little "owner" begged so hard that it should be kept that the parents yielded, and the living doll became a household blessing.

PAT'S DEVICE.

The graceful hint succeeds best. If it is also witty, it is pretty sure to prove irresistible. Up one of the long hills of County Wicklow, says the Utica *Times*, a mare was drawing a heavy load of travellers. The driver walked by her side, trying to encourage her as she toiled slowly and wearily along.

The six passengers were too busily engaged in conversation to notice how slowly the car progressed. Presently the driver opened the door at the rear of the car and slammed it to again. Those inside started, but thought that he was only assuring himself that the door was securely closed.

Again Pat opened and slammed to the door. The travellers inquired angrily why he disturbed them in that manner.

"Whist," he whispered, "don't spake so loud—she'll overhear us."

"Who?"

"The mare. Spake low," he continued, putting his hand over his mouth and nose. "Sure, I'm desavin' the crayture! Every time she hears the door slammin' that way she thinks one of yez is gettin' down to walk up the hill, and that raises her sperrits."

The passengers took the hint.

STEP-HOUSE.

A New Hampshire lawyer, with evident appreciation of his little step-daughter's wit, tells two stories about her.

Shortly before his marriage with her mother, the four-year-old said one day, when the approaching wedding was being discussed:

"I'll be glad when Mr. G—— comes here to live."

Her mother was pleased.

"Why will you be glad?" she asked.

"'Cause p'r'aps then we'll go away sometimes."

After the wedding the step-father attempted to correct the child for misbehavior at the table. She rebelled, and said with flashing eyes:

"This isn't your house anyways."

"No," he said, gently, "it is *our* house."

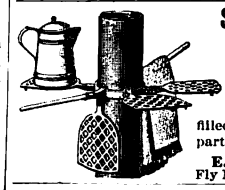
"No, it is not," she replied, "it's just your step-house."

PAID IN KIND.

A Hoosier lad of twelve years was industriously at work upon a pile of wood in his mother's back yard, when he was approached by a playmate.

"Hello, Ben," said the youngster, "do you get anything fer cuttin' the wood?"

"Well, I reckon I do," replied Ben. "Ma gives me a cent a day fer doin' it."



"What you goin' to do with yer money?"

"Oh, she's savin' it fer me, and when I get enough she's goin' to get me a new axe."

Burnett's Cocoaine has earned a just reputation for promoting the growth and preserving the beauty of the human hair. Instead of possessing the heating and rancid qualities of all animal preparations, such as bear's grease, etc., it is a cooling vegetable oil, extremely agreeable and cleanly. [*Adv.*

Twelve Pages, Including Four Extra Pages. Single Copies, Five Cents.

For the Companion.

A HEDGE FENCE.

A hedge fence was what Nancy Mott called it; but to the uninitiated it seemed only a possible wind-break of tall, thick-set, glossy-leaved Osage oranges.

But, at any rate, it had been set out for a hedge fence, and it had in reality more than fulfilled the intent and purpose of its owner, Nancy Mott.

When old Obed Mott died twenty years before, the farm was divided into two equal parts from the back fence to the highway in front; and young Obed and Nancy, the only children, took possession of their respective portions.

Obed chose the half facing the cross-road; and he had also the wood-lot, as an offset to the old house and outbuildings on the main pike, which portion fell to Nancy.

He built a house, and then brought home a wife. But Nancy kept the even tenor of her spinster life in the old home.

Obed continued to "work the place" as he had done for years, carrying on Nancy's portion on shares. He kept up her fences, looked after her stock, and took care of things generally.

Nothing happened to make this otherwise than satisfactory until, some years later, Nancy's cow broke through the front part of the line fence, and totally destroyed Obed's garden. The cow was an unruly creature, and had caused damage before; but this was the last feather. Obed's wife felt righteously vexed. The garden had been a fine one.

"Somethin's always gettin' in," Obed complained to Nancy that day. "You've got to git rid of that snoopin' critter, Nancy, or else somethin's got to go up steers as that's hoss high, bull strong an' pig proof."

"Fences aint immortal, no more'n folks," she retorted, stung by what seemed a sign of waning interest in her and her possessions. "Yes, it's time somethin' went up that won't tumble down if you let your finger at it."

Unfortunately, the next thing Obed did was to mention the matter of a new fence at an evil moment, when an advice giving relative of his wife was present.

"Obed, if you have your eye open fer futur' troubles, you'll take each one o' you half o' that air line fence, an' be holdin' fer it," was this relative's prophetic advice.

Prophetic it surely was, for if Obed had had "an eye out for futur' troubles" he could not have done a surer thing to bring them than to take this advice, which he did.

He went to Nancy. "You can take front or back, ary one," he said, can be construed his suggestion with regard to a division of the fence, having weakly propped it up by quoting his authority and reasons for the step.

"I'll take the front half," said Nancy, sharply, with a spasmodic tightening of her lips.

The next week, the old fence was cleared away, during Obed's absence from home. When he came back an unknown workman was plowing a deep furrow right on the line.

"Women don't know nothin'," was Obed's disgusted exclamation, as he first noted the proceeding from a back window. "I'll have to go an' see 'bout it."

He drew on his boots and went, and was met by Nancy.

"What air you thinkin' 'bout, Nancy?" he began.

"Tendin' to my fence," she replied, coolly.

"Well, that aint the way to build a fence."

"Taint? I'd like to know how else you'd start a hedge fence?"

"A hedge fence? You don't mean to say that you're goin' to set out a hedge fence?"

"That's just what I'm goin' to do. I'm goin' to build somethin' that'll be hoss high, pig proof and bull strong," she answered with emphasis.

Obed went away speechless, but soon returned with his wife.

"It'll be just a breedin'-place for snakes," said Obed's wife.

"I aint afraid of 'em!"

"I'll take ocasns o' money to keep it lookin' anyhow, after it's growed," Obed argued.

"I aint got nothin' else to lay it out on," Nancy returned.

"But a picket fence would've ben so much nicer," Obed's wife lamented.

"You can put a picket fence 'long your half, or a stump fence or a caterpillar rail fence," Nancy snapped. "This is my half now."

Millie comes through the Hedge

"But you might 'a' consulted somebody 'bout it, seems to me," said Obed.

"I don't consult others 'bout family matters," she answered, with dry significance.

So they let her alone, and the fence-building went on. The Osage oranges were well set, and for two years were well tended by the man who took the job.

It was excellent soil, and they grew rapidly. They were splashed—that is, bent lengthwise along the row and pinned to the ground, that they might become impenetrable when from the protrans branches others should shoot up. And the feeling which began with the suggestion of the fence grew with its growth.

Obed talked it over at home with his wife, and Nancy thought it over in hours of loneliness.

Obed's wife's relations thought it an outrage, and advised Obed to get out an injunction or something of the sort. But Obed had wisdom enough left to refrain from legal proceedings.

"'Twould be goin' from bad to wuss," he remarked, "and I don't see how a body'd injine a lot o' growin' stuff like that."

Then another idea took possession of Nancy. She seldom saw Obed now—even the children did not come to see her. It was so much farther around the road, and the old path was closed. Obed had ceased to farm her portion, saying he "s'posed she'd want to run her place, as she'd run her fence, alone;" and she had promptly and spiritedly replied that she could do it well enough. So at last she felt herself left to the mercies of her hired man, Ike.

"Ye're goin' to have that fence trimmed up?" Ike queried, one morning.

She looked out. How it had grown! Those plants had been in perfect sympathy with her. They had sent out branches in every direction, until the line was a mass of thorn-covered branches. The hedge was impenetrable.

"Serves 'em right!" she exclaimed, under her breath. "They'd no business to make such a fuss over that cow's doin's, nor over that fence neither. No, I aint goin' to trim it. Let it grow," she went on, in a lower tone, "till we can't see nothin' of nary one of us."

That was how the long line of thickly interwoven branches came to be left to shoot skyward untrimmed, until it lost all likeness to the hedge she had at first planned.

She was nervous and trembling from an attack of neuralgia one September morning when Ike informed her, as he swallowed his third cup of coffee, that the "barn leaked like all git-out, an' the hay'd got wet, the cow'd got the colic eatin' apples, and Nep 'd gone lame with one of them 'sage thorns in his foot," ending with the announcement, "Obed's 're gone to the Fair, an' I'm goin', too."

"They didn't use to forget to ask me to go with 'em," Nancy murmured to herself, as she hurried off to the east room which faced the hedge.

To be sure, she knew she had before now refused to go to the Fair with them, saying she had Nep; but he was lame—and they had certainly forgotten her. Then there was the barn, and the cow. If the orchard fence had been built, she would not have had the colic.

Then came the thought that there used to be no worry for her when Obed had charge; but he had left her alone.

She turned to the window involuntarily, and looked over the fields as she had done daily for years; but she could see nothing now but tall, waving branches, which seemed to nod at her and say, "You see we've done it; aren't you glad?" The aspiring tree-tops had at last fulfilled her wish; at last she could not see even Obed's chimneys.

She was alone indeed—and she was intensely miserable.

Ike drove off as she looked, calling out to her that the cow was dead. She saw Nep limping out by the hedge, and she went back to the kitchen with an aching heart and a throbbing head.

The day was a long one. How many times she went to the east room to look toward Obed's she could not have told.

It was late in the afternoon when she aimlessly wandered there again. Had Obed's folks come home? Blue smoke was curling up. But they would stay late at the Fair on a Thursday—the best day.

Bennie must be at home. She did remember that Ike said he had cut his foot; but she had not been there.

A cloud of smoke rolled up. She picked up another pair of glasses and put them on. That was flame that shot up above the trees then, surely! Something was wrong.

She shook violently as she hurried back to the kitchen. How could she get there? She must go! It was too far around. There was the old path; but the hedge was too thick to penetrate.

One second she hesitated; then her eye fell on the axe by the wood-pile, and catching it up, she hurried down the old path.

But who was that? Millie, six-year-old Millie, this side of the hedge, her dress torn, her face and hands scratched, and the tears rolling down her cheeks. She had pierced the hedge.

"Aunt Nancy! Aunt Nancy! The house—afire—Bennie—" was all she could say.

Nancy Mott was never able to tell just how she did it. But she forgot rheumatism and neuralgic pains. The axe was sharp, the place the child had instinctively chosen was the thinnest—Nancy dimly recollected that the men said it would not grow so well on the old, beaten pathway—and the tough stems fell before even her weak, awkward strokes.

She soon had made an opening large enough to crawl through; and leading Millie by the hand, she dragged her trembling limbs to the house.

Sheets of flame poured from the chimney, and the house was fairly enveloped in a pall of smoke. In the kitchen the atmosphere was thick with smoke and the odor of burning wood and sweets.

As soon as she could see clearly she discovered Bennie upon one foot, hobbling about, frantically pushing back great pieces of burning soot which fell behind the old "fireboard," or dashing water from the bucket upon the board itself, which now and then burst out into a blaze.

A roaring fire in the stove was keeping up the conflagration, while the contents of a burning kettle of molasses added to the smoke and smell.

Nancy hastily threw aside the stove covers and tossed a handy bowl of salt upon the fire—bowl and all. Then setting Bennie down, his foot bleeding afresh from his exertions, she took from him the iron rake, dragged out the burning board from before the old fireplace, deluged it with water and pushed back the falling soot to die out upon the stone hearth.

Then when the roaring and crackling began to cease, she sat down on the old board in the midst of soot and water, and cried.

It was a forlorn group that Obed and his wife found an hour later when they entered the smoke-begrimed kitchen. Then came the children's confession as to the origin of the trouble; they had built a "big molasses-candy fire." Nancy, too, explained why she was there, and rose to go.

"You'd better stay—now you're here," said Obed's wife, not unkindly.

"There aint nobody there," Nancy answered, in a tone of utter hopelessness; "an' Nep's gone lame an' the cow's dead. I've got to go."

Obed looked at his wife. "I guess I'll go an' see," he said, nodding at her.

Nancy turned toward the back door, though her brother had started toward the front door.

"Why, which way did you come?" he asked.

"Aunt Nancy cutted the hedge, she did!" cried Millie.

"Cut the hedge!" ejaculated Obed.

"Yes, I did!"

Nancy dropped down on the horse-block and hysterically wrung her wet apron. "An', Obed, go get somebody to cut it all down, an' put up a picket fence—anything but a hedge 'tween us, Obed—I can't stand it any longer!"

People were surprised when the tall young trees went down. A few days' work undid the growing trouble of years. But people were still more surprised when Obed calmly dismissed Ike, and again took charge of Nancy's place. Then Nancy, the strain and worry removed, took to

Digitized by Google

her bed, and for ten long months lay racked by inflammatory rheumatism.

It was midsummer again before she left the west room where she had lain, and again looked over toward Obed's.

"It seems good to see over there," she said, putting up her glasses as they wheeled her to the window. "Why, I told you to put up a picket fence, an' you've let the old hedge grow up agin!"

"There's picket fence enough," said Obed's wife; and Nancy's eye, following the direction in which she pointed, roved down the smoothly-clipped, green tops of the new-grown fence to where a neat gate had been let in; and over it two young osage saplings had been twined in a living arch of foliage.

"We might just as well've had it so years ago," she went on to say, "only we didn't start out right to have nothing."

"'Cept a hedge fence," added Obed, jocosely.

"An' it takes just sech starts to get just such a hedge fence as we got," Nancy significantly replied.

It was the last reference, either direct or indirect, to the old trouble. Obed carried on the farm once more, and peace reigned between the two houses.

AT ALFORD'S CABIN.

Alford's Cabin was the name of a stage-coach eating station, half-way between two thriving Rocky Mountain mining towns. It was kept by Mrs. Nancy Alford, a small, cheery and exceedingly active woman, who claimed for herself the distinction of having crossed the plains with an ox team in '59, and the further honor of having been the first white woman to enter Fairplay Gulch, in which her cabin stood.

Her husband's grave, over which the snows of three winters had drifted, was under a clump of stunted and gloomy pines up the rocky slope of the mountain.

There were two little grassless and sunken graves beside that of Aunt Nancy's husband. In one of them her little girl of five years had been laid, and in the other her boy of six.

"I aint never been back to the States sence I come out here, and I never expect to go now; all I care for in this world is up there," Aunt Nancy would say, with a wave of her hand toward the pines under which were the three graves.

The cabin was a long and narrow one-story structure of three rooms. Its exterior was dreary, and without a suggestion of the brightness and comfort within save for the turkey-red calico curtains with white lace borders, and the flowering plants at the four front windows.

The immediate surroundings of the cabin were dreary and cheerless; nothing could be done to make them less so in that rocky and barren region with its early and late snows.

But within, things were very different. "Aunt Nance Alford's cabin," "Aunt Nance's grub" and Aunt Nance herself, were topics on which the stage-drivers discoursed until Aunt Nance's fame had spread far and wide.

She was a short, slender and wiry little woman, about fifty years old. She always wore a plainly made starched calico gown, with a white apron tied around her waist, the strings in a neat bow in front.

A snowy-white handkerchief was always pinned around her throat, and no one ever saw her when her dark-brown hair, but little touched with gray, was not brushed to a satiny smoothness.

One day in the early spring, Jack Hughes, one of the stage-drivers, brought Aunt Nance a letter from the nearest post-office, eight miles distant. Letters came rarely to Aunt Nance, and they always filled her with pleasurable excitement.

This was in a large brown envelope, and Aunt Nance drew out a photograph with the letter.

She glanced at it eagerly, and saw the face of a young and delicate girl of perhaps fifteen years.

"Who in the land can *she* be?" said Aunt Nance. She unfolded the letter, glanced at the signature and read it aloud, "'Your affectionate niece, Marcia Merrick.'"

"I declare I'd most forgot I had such a niece," said Aunt Nance. "But, of course, she's my sister Lucy's girl. Lucy's name is Merrick. I aint heerd from her for two years. It's time some of 'em was writin'."

She sat down and read the letter slowly, her eyes filling with tears as she read. She wiped them on a corner of her apron when she had finished the letter, and said to Kate Dooley, her "help:"

"It's from my sister's girl. My sister is dead, and so is her husband. Their girl, Marcia, seems to be all alone in the world, and not very strong. She wants to come out and stay with me awhile, and try this mountain climate for her health.

"Well, she can come; I'll make her more than welcome. It's many a year sence I see any of my own folks, and it'll do me good to see somebody right from New Hampshire, with the Doolittle blood in her veins. I was a Doolittle, Kate."

She read the letter again. It was well-written, and stated briefly in addition to the news which Aunt Nance had already communicated to Kate, that the writer was nearly sixteen years old, and that she would have her own living to make, for her parents had left her little more than enough money to take her to Colorado.

If her aunt was willing to receive her, she would come with some friends who were going as far as Denver in a few weeks; and if the climate proved helpful, she would look around for some way of supporting herself as soon as she had grown a little stronger.

"We'll talk about her supporting herself when there's occasion for her to do it," said Aunt Nance, as she folded the letter and restored it to its envelope.

She took up the photograph and looked at it long and lovingly.

"She's a Doolittle, out and out," she said. "She has the reg'lar Doolittle nose, and her grandfather's chin right over agin. She's downright purty; she looks like her ma, and Lucy was the best-lookin' one of our family. But she didn't write a word about her brother! I wonder how that is? Lucy had two children."

The next stage-coach going toward the east from Aunt Nance's cabin carried a letter from Aunt Nance to her niece.

Three weeks later the stage-coach came whirling up to Aunt Nance's door, and Jack Hughes called out, when he saw Aunt Nance at the open door:

"Light load to-day, Aunt Nance. Only one passenger, and I guess she's the one you're looking for."

A young girl, her plain black dress and hat covered with dust, stepped to the ground. Aunt Nance embraced her warmly.

"You're Sister Lucy's Marcia!" she exclaimed, excitedly. "I know without asking. You're a reg'lar Doolittle, and you don't know how glad I am to see you!"

"You don't reely look right strong," Aunt Nance said, while Marcia was eating the elaborate dinner prepared expressly for her. "But, la! my dear, you'll look like another girl after a summer up here in this mountain air. I've got a nice, gentle saddle-horse that you can ride 'round the cañons on, and I'll take you over to the hot springs for a month, later in the summer. Oh, you'll have roses enough in your cheeks, and be so plump you won't know yourself in three months!"

Then she suddenly asked in a softer tone, "Where is your brother David, Marcia?"

Marcia's smile gave place to a pained and troubled look.

"I don't know, aunt," she said.

"Don't know? Why, how is that?"

"It is more than a year since we have heard anything from David," said Marcia. Then she added, "That is one reason why I wanted to come West, Aunt Nancy, besides what the doctor told me about my health. I think David is out here. I did not write anything about it, for I thought I would rather tell you all about it myself. I thought you might understand the story better, and feel more kindly toward him if I told it to you."

It was a brief and sorrowful little story of a boy's waywardness that she told, not an uncommon story of a naturally well-disposed boy being led into wrong-doing by evil companions, and finally running away after bringing disgrace upon his home.

"All we have known for nearly two years is that he is in the West. We heard once of his being in this State. If I could only find him! I am sure he could yet be saved. He is so young, not yet twenty."

"I'll help you find him," said Aunt Nance, earnestly. "We'll begin at once. I know all the stage-drivers around here, and people in nearly all the mountain towns. If he's anywhere in this part of the State, we'll find him, dear! Merrick aint a common name."

The mountain summer soon came on, in all its soft and tender beauty. Marcia lived out of doors much of the time. She rode on horseback down into the grassy gulches, or far up to the mountain summits, where the snow lay in little patches throughout all the summer days. Soon the color came to her cheeks, her thin shape grew rounder and fuller.

The night of the Nineteenth of August was one long remembered by the dwellers on that mountain side, and by those in the gulch below. They referred to it long afterward as "the time of the big storm."

"I never see such a storm as this in all the years I've lived in the mountains," said Aunt Nance, as the night came on with a terrible roaring of the wind through the cañons.

Few travellers spent the night at her cabin, and there was no one there that night but Aunt Nance, Marcia and Kate Dooley.

At nine o'clock the wind abated its fury. At ten it had died away so that no sound was heard but the pouring of the rain. Marcia and Kate Dooley went to bed.

It was eleven o'clock when Aunt Nance, rising to go to bed, stopped suddenly, threw up her head and listened intently.

The rain was falling softly now, and high above its gentle sound she heard a voice shriek out as if in mortal terror. Then she heard men's voices shouting wildly.

"What in the name of wonder is going on up there on Taylor Mountain at this time of night?" she asked of herself, as she hurried to a door and looked out into the darkness.

She heard the cries repeated, and they seemed nearer now. She had heard cries at midnight before in that wild and lawless region, and she knew what too often they foretold.

"Dear, dear!" she said, with more of irritation than of fear in her voice, "I wonder when this country's ever going to get civilized, so folks'll live as if they was Christians! There's mischief going on up there! I saw them Taylor Mountain boys whispering together and looking savage when they were down here to dinner to-day. I've a notion to—who's that?"

The rear door of the room had opened suddenly, and been closed in eager haste.

Aunt Nance turned quickly. Before her, his back to the door, his hands spread out upon it as if he would hold it against all resistance, stood a hatless and coatless young man, his clothes drenched and tattered, his face ashen pale, his eyes wild and staring, while his slender form quivered with fear.

"Oh, please come in and shut that door!" he cried, stretching out one hand imploringly. "They're after me—those men are! Can't you hide me? I haven't done what they say I have. Hide me! Hide me!"

Aunt Nance slowly closed the door, but seemed to hesitate.

"Ma'am," said the young man, "I've been wild for a long time, but I am innocent of this wrong, and if you'll help save me I will live a right life from this moment. I'll go back home to-morrow—back to New Hampshire!"

"New Hampshire?" Aunt Nance caught eagerly at the words.

She closed the door, walked across the room until she stood within a foot of the trembling fugitive, and looked up into his face, her own heart beating wildly.

"Are you from New Hampshire?" she asked, slowly.

"Yes, yes—oh, are they coming?"

"From what town?" she asked, eagerly.

"The town of Rockingham."

"Now tell me your name, quick!"

"David—David Merrick!"

She took his wet cheeks between her hands and drew his face down to hers, while she kissed him soothingly.

"I thought so—I thought so," she said, with her arms around his neck. "You've the Doolittle eyes, David. Don't be afraid."

The door of Marcia's room had opened suddenly, and she stood there with a shawl thrown lightly around her. The next instant she cried out:

"Oh, it's David—my brother David!"

The tramp of feet was heard outside. The look of amazement on the boy's face gave place to one of terror, and Aunt Nance said, quickly:

"Go in there with your sister, David!"

A moment later six or seven rough-looking men filed into the cabin. Aunt Nancy knew them every one. She met them standing with her back to the door of the room David and his sister had entered.

"He come in here, didn't he, Aunt Nance?" said Joe Haskin, the leader of the crowd. "We seen him, and we want him. Now, didn't he come in here?"

Aunt Nance replied fearlessly, "I don't tell lies, and I won't tell one now. He did come in here, Joe Haskin. He's in here now, and what's more, he's going to stay in here!"

"Do you know what him and another feller done?"

"I neither know nor care," replied Aunt Nance, boldly, "but I know this—you men aint his judges. Vengeance don't belong to you—it belongs to Him!"

She pointed upward as she spoke, and then she added, "You can't lay your hands on that boy to-night. He's in this room behind me, and you are six or eight men to one woman, but there's not one of you that'll lay your hands on me to move me from this door.

"*You* wouldn't, Joe Haskin, when you remember how I walked three miles in the worst snow-storm we had last winter to nurse you back to life and strength, when you was at death's door with pneumony.

"*You* wouldn't, Hi Sanders, when I had you brought right here and took care of you myself when you had that broken leg last fall.

"*You* wouldn't lay hands on the woman who closed your wife's eyes in death less than a year ago, Tom Leesom. Every man of you has set at my table agin and agin, with or without money—it made no difference.

"Touch me? Why, I don't believe I, myself, could keep you from using that rope you've got outside, on the man who'd lay rough hands on Aunt Nance Alford."

"No, you couldn't," said Joe Haskin. "You're right—we'd make mince-meat of him! An' if you're goin' to stand 'fore that door and—"

"I am," interrupted Aunt Nance, "and there aint no other way into the room."

She waved her hand lightly toward the open door. "Good night!" she said.

They went out into the darkness.

Before noon the next day Joe Haskin rode up to Aunt Nance's cabin. She went to the door, and he did not dismount.

"Well," he said, "if things don't turn out queer sometimes! We got after the wrong fellow, sure enough, last night. You see there's been a gang of cut-throats and hoss-thieves lurkin' about on Taylor Mountain. The boys got tired of 'em, an' last night they took after a couple of the sneaks.

"It seems that this young fellow told the truth when he said he didn't b'long to 'em. He was wandering along on his way to Eagle Cliff, and took refuge from the storm with some o' the gang.

"The guilty ones was caught this morning down in Deer Gulch, and they'd the grace to say that the young fellow with 'em didn't belong to their gang. If you've got him in your cabin yit, you sort o' 'pologize to 'im for the little inconvenience we put 'im to last night, an' say that

Digitized by Google

we'll do anythin' we can for him, now't he's out o' bad company."

He was done with bad company from that day forth. The promise he had made in his terror he kept faithfully, although he did not have to go back to New Hampshire to keep it.

Invading lines of railroad have driven the lumbering old stage-coaches and their jolly drivers to other parts of the mountains, and there is now a little brown railroad station on the spot where the cabin of Aunt Nance once stood.

It is a dinner station, famous all along the line; and if you were to travel that way, you would be likely to be met at the door by a tidy and talkative old lady, who would be no other than Aunt Nance herself, while David and Marcia Merrick, in homes of their own, may be found in the prosperous little town but a few miles distant.

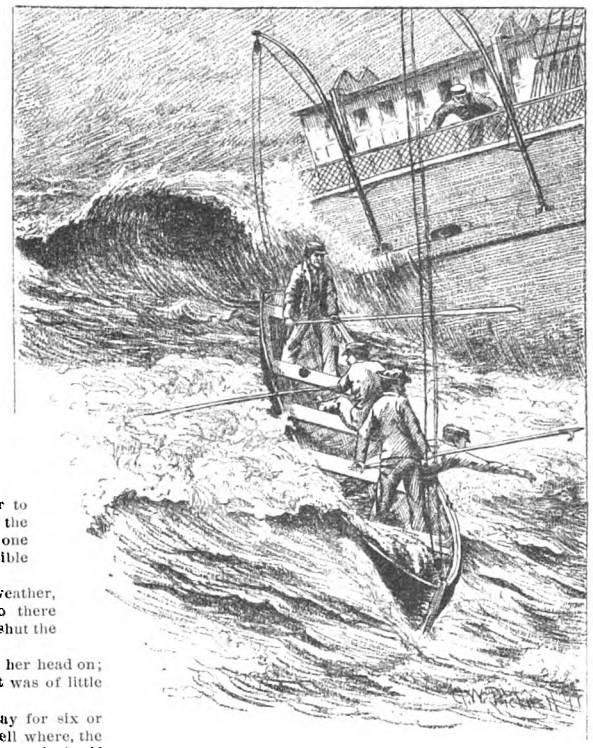
DRIVEN ON THE NORTH SHORE.

"How is it I'm not a lake captain now, and why am I running a Duluth hotel, and speculating in Duluth real estate? Well, gentlemen, I can tell you if you have a mind to listen.

"It was like this," the landlord went on, speaking to a knot of travelling men gathered about the open fire. "I had followed the lake for twenty-five years or more, in every berth from a common sailor's up to the captain's. I had been shipwrecked three or four times, and upon two occasions nearly drowned; still I was happy, and kept my nerve.

"True, I had said once or twice that the time would come when lake navigation would be the worse for the loss of my services, but really I had never seriously thought of retiring.



"We were heavily loaded and bound east from Duluth, making the last run of the season. It was late, too late for safety, along the latter part of November; but the season was mild, and bade fair to remain so long enough for us to make the trip.

"We had a good run out, and were somewhere off the Apostle Islands when one of those peculiar lake storms came down on us all in a breath. It didn't appear to come from any particular point of the compass, but seemed taken with the one idea of making it as lively as possible for the crew.

"We'd had an eye out for heavy weather, and were already close-reefed, so there wasn't much of anything to do but shut the hatches and hang on.

"I made an earnest effort to keep her head on; but the wind shifted so often that it was of little use.

"After knocking about in this way for six or eight hours, drifting no one could tell where, the constant strain upon the craft began to make itself felt. Our cargo shifted and began plunging around between decks and in the hold.

"Things were looking pretty smoky at best; but to add to the general gloom, about this time, while we were trying to stay-lash one of the boats and a part of the rigging, two of the crew were lost overboard. As I saw the poor fellows clutch wildly at nothing, and then disappear in the black waters, I shuddered with horror, and calling all the others in, made no further attempt to do anything but keep aboard; hoping 'twas in the steamer to ride out the storm.

"I don't know how many hours it was. I hadn't the heart to keep track; but after a while we began to settle heavily to one side, and every gust of the storm on the other side would almost turn the keel out.

"The wind now became steadier, and this made us a little hopeful; but it blew—well, I've never been in a hurricane, unless perhaps that was one; but the force of the wind was so great that it was as hard as a rock, almost, to press against.

"And now, to offset what little hope there might be in the increasing steadiness of the wind, the mate reported a leak forward. Soon it was impossible to keep ahead of the water with the pumps, and I saw that the fires would presently be out, and the ship at the mercy of the storm.

"Then I concluded 'twas no use; to stick to the craft only meant making her our coffin. So I told the boys that we must try to lower the boats.

"Something was wrong with the davit tackles, and in attempting to lower the first boat we swamped her. But the second and third we managed to get into the water keel down.

"While we were at work we were unable to communicate easily with each other, and when we assembled to get into the boats, another lad was missing. The men, for the first time, showed signs of losing their nerve; and I found I was made of the same kind of clay, for I weakened a little myself.

"It seemed almost impossible to get into the boats, for the ship pitched to leeward so that a man was likely to strike the water fifteen or twenty feet from the place where he intended to strike it; and we couldn't load and lower away in the usual manner, for the boats would surely swamp in the attempt.

"The mate went first, and he was followed by the others in turn, until all were safe aboard but John the cook and myself. When I gave him the word, the poor fellow lost his head and slipped. The last I saw of him was his pale face gleaming in the black water, as he came to the surface only to be struck by a displaced spar.

"I needn't tell you how that accident affected me; any man who says he has a nerve that nothing will affect, either doesn't know what he's talking about, or else doesn't regard the truth. But I braced myself for the effort, and succeeded in getting into the boat alive.

"I had meant to take charge of the first boat, and put the second under the command of the first mate; but in the tumult the mate and I got into the first boat. The third officer was a splendid sailor, and rather than risk a transfer in the heavy sea, I let the boats stand off, manned as they were.

"For a time the two boats kept about the same course, but gradually they drifted apart, and in an hour we lost sight of our companions.

"Up to this time, you see, gentlemen, our experience had been that of those who suffer ordinary shipwreck; but from this point we started on a new tack.

"I sat in the stern, and using an oar in place of a disabled tiller, kept the boat headed to leeward. The other boys spelled each other by gangs of two in bailing; for the boat had been badly sprung.

"We shipped a good deal of water in addition to the leakage, for the sea danced along the gunwales during the whole run, and occasionally spilled over.

"I tell you, gentlemen, the swell of that sea made a lasting impression upon my mind. The big wave of every third set would almost drive me from the rudder, and it was all I could do to keep from throwing myself headlong into the bottom of the boat. I sat there, my head turned to the right, and looking over my shoulder, counted the waves; and when the ninth came up behind me it seemed to be a mighty mountain of water towering right over my head, ready to break and crush me.

"I had hard work to resist the temptation to spring away from that overhanging, trembling mass of blackness; and it was only my long experience as a sailor, and the certain knowledge that for me to desert the rudder meant death to all, that kept me stanch.

"For days afterward I could get no sound sleep; and when, finally, completely worn out and exhausted, I would lose myself for a moment, that wall of water would appear above my head and over my shoulder, trembling, swaying backward and forward, sinking and rising, and cause me to start wildly out of my sleep.

"I stayed there, though, and with the big oar for a rudder kept the boat headed steady to leeward, and so we drifted with the storm.

"When we cut loose from the ship we judged it was about noon, and after we had been adrift an hour or more snow began to fall, mixed with a driving, biting sleet.

"As we scudded along, I cast about in my mind, vainly attempting to ascertain our course. When the gale struck us we had not made the easternmost of the Apostles; and this led me to suppose that the storm was driving us in a northerly or westerly direction; because, if the wind had come from the west or north, it would before this have driven us upon the islands.

"We hoped that we were going toward the northeast, for in that case there would be more water ahead of us. That was the only time in my experience when Lake Superior didn't seem large enough; and during that sail I wished from the bottom of my soul that she was as big as the Pacific Ocean.

"I sincerely hoped we were not drifting toward the northwest, for I knew Beaver Bay was the only point between Duluth and Port Royal where there was the least chance of our making a safe landing, and to strike any other part of the North Shore meant certain death.

"Bound for the North Shore of Superior, and swishing along through the inky water as fast as the driving gale could carry us! We had no idea where we were, whether near to or far from the shore, or at what point we'd strike it. None of us spoke, but we all thought the same thoughts.

"Hour after hour passed; the snow whitened everything upon the boat, and caused the water to look blacker by contrast. Through the driving sleet I could see the forms of my companions rising and falling with slow precision, as they bailed; they were white as tombstones, and just as silent. The only sounds that broke the stillness were the shrill piping of the storm and the swish of the water as the ballers emptied their buckets.

"And now it began to grow dark. I dreaded the night; matters were bad enough by daylight. Every man of us knew there wasn't a chance in a thousand we'd strike the North Shore but to be dashed in pieces against its walls of stone—to be gathered up by the foaming waters, and cast in death where no friend could ever come.

"The hours went on. I fancied, long before I did hear them, that I heard the waves pounding against the rocks, and roaring within the caverns of the shore. I pictured a thousand times the shock, as our boat should crash against the cold, wet stones. I felt, in anticipation, the water's cold embrace. You know a man's body seldom rises in the waters of Superior.

"Still the waters bore us on; still the snow fell, and the storm swept round about with unabated fury. Still, with most of us, the man rose above fatigue. For one poor fellow, however, nature refused to continue the struggle, and he sank exhausted in the bottom of the boat.

"The others continued their monotonous labor; two would bail while one gathered strength, then he who had taken respite would join in again, and one of the other two sink in weariness.

"I sat in my place; the numbness of cold was in my flesh and bones, and I was fast falling asleep.

"A movement on the part of one of the men roused me. He ceased his labor, and standing up, listened. Then I heard what he had heard.

"Gentlemen, I can feel that sensation now; and whenever I see the lake angry under the lash of a driving storm, the same feeling of utter despair again comes over me.

"They all heard it now—the distant thunder of the waves on the rocks; and I saw all three men turn and look at me. It was dark, and of course I couldn't really see the expression of their faces; and yet I did see them, gentlemen—every face sprang at me out of the darkness, and every line of horror in those faces was as plain to me as if the sun had shone upon them.

"My mind saw it all, and memory caught and has kept the horrid picture. There was the certainty of coming death on every one of those drawn faces.

"Then, to cheat the heart and mock the soul, came strange and vivid pictures—pictures of green fields and pleasant stretches of woodland, with groups of cattle straggling homeward, and troops of happy children playing.

"Nearer and nearer, more and more distinct came the booming of the surf. The angry crash was all about us, and so filled our ears that we could not hear one another call.

"We expected the crash—we shrank from it; we cowered in the bottom of the boat. Then all at once that deafening noise, that tumult of sound, was behind us.

"That was all; where before it had been in front of us and all about us, it was now seemingly behind us. We could see nothing in the darkness and the snow.

"I was bewildered. I thought I had lost my reason; and then I heard the voice of the mate:

"'Captain, we've run into a bay! We're saved! we're saved!'

"Then I realized what had happened; and man that I was, I cried like a child.

"In a few moments we grounded on the beach, and getting out, removed the silent form of our companion. He was dead.

"We put him back again, and protected him as best we could from the ravages of wild beasts. Then as I turned away and set my face toward the wilderness, I shook my hand against the treacherous lake, and told her she should never have me again; and she never has had me!

"Out of fourteen four were left, and our prospects were not much brighter now than when we were at the mercy of the waters. But with new hope we began our weary march.

"All night we tramped, and all the next day, with but a morsel of food to sustain us. It grew steadily colder, and about noon Schilling, a Swedish sailor, told us in piteous broken English that he could go no farther. We used our last match in lighting a fire, gave him half our store of food, and went forward.

"In three or four hours the other sailor gave out, and we—the mate and I—had to leave him. What a time of horror that was! The expression of despair and anguish that was on that man's face, as we turned away and went on, has haunted me ever since.

"His feeble and helpless calls came to our ears while we were still in hearing, growing fainter and fainter as we went on.

"As night approached we saw, away ahead on the lake shore, a thin line of smoke; and before dark we came to an Indian tepee. There were two Indian women and three or four children in the camp, and from them we learned that we had run into Beaver Bay.

"They gave us food and hot drinks. The men came in shortly. We told them about our companions, and employed them to go back along the trail with food and stimulating drinks.

"The sailor we left last struggled onward all the afternoon, and when the Indians came to him he was still alive. He lived, but both hands and one foot had to be amputated.

"Poor Schilling had let his fire go out, and when they found him he was dead.

"No more of it for me, gentlemen; the lakes have had me in their power for the last time. When I have a call East, I always go and come by rail.

"Bedtime? Well, I guess so. Tony, rake the fire down and put on some more coal. I feel chilly. That's it; now show the gentlemen to their rooms."

A GERMAN MANŒUVRE.

Every year the German army is reviewed by the Emperor, whose purpose is to see that the practice and discipline of the troops is maintained, and to test whatever new military theory may be considered worth a trial. These reviews or manœuvres, as they are called, are held in the autumn in the north and south of Germany, and are so arranged that each division of the regular army shall be exercised once every year.

The division at Hanover was paraded before the young Emperor and his court on the Twelfth and Thirteenth of September, 1889. It was an affair of two or three days in duration, and comprised a dress-parade and a mock battle.

All through the weeks preceding the Twelfth and Thirteenth, the little city of Hanover was alive with workmen setting up columns and dressing them out in flags and bunting, along the ways from the railway station to the castle. Gradually the way became bordered and covered with decorations. A line of gas jets was constructed on either side with which to light the streets for the evening reception.

On the evening of the Eleventh the Emperor arrived, and drove under the lights and amidst the cheers of the crowds to his castle. More than a hundred thousand people had arrived during the last few days, and besides these, on that night fifty thousand regular troops were quartered in or near the town. Each householder was obliged to accommodate a certain number of soldiers according to his income, or to pay for their accommodation elsewhere.

It was near a village called Bömerode, not far from Hanover, that the parade was to take place. The city authorities had built a "grand stand," affording room for five thousand people, just outside the little town, so situated at the base of a long, gradual slope that the spectators had a good view of the vicinity.

Here, at seven in the morning, men, women and children of all grades in life began to gather, in every conceivable kind of vehicle or on foot. Coming out of the woods from Hanover, those of us who walked took a path directly across the fields to Bömerode, five miles away. Along this path, to comfort the weary walkers, energetic Germans had made hundreds of temporary drinking places out of two barrels and a board.

Beer was to be had at almost every step; and not beer alone, but everything else one could wish for, even to collar-buttons, writing-paper, and other things as little suited as these to a parade or a hot walk across the country.

Though the review was not to begin until eleven o'clock, the entire population of the city, with all the visitors, was in motion hours beforehand; and by nine o'clock the huge field outside Bömerode was almost surrounded by people.

Mounted police and soldiers kept them back—all in the best possible humor, in spite of the many exciting arguments as to where the line was—and the crowd, with proverbial good-nature, stood patiently awaiting the appearance of the troops.

Each little family had brought along the friendly sausage and black-bread loaf, and father and mother and children ate away in placid calmness. It was a peculiarly German sight; for here were not only thousands, but hundreds of thousands, standing close together, quietly eating and drinking and laughing the hours away.

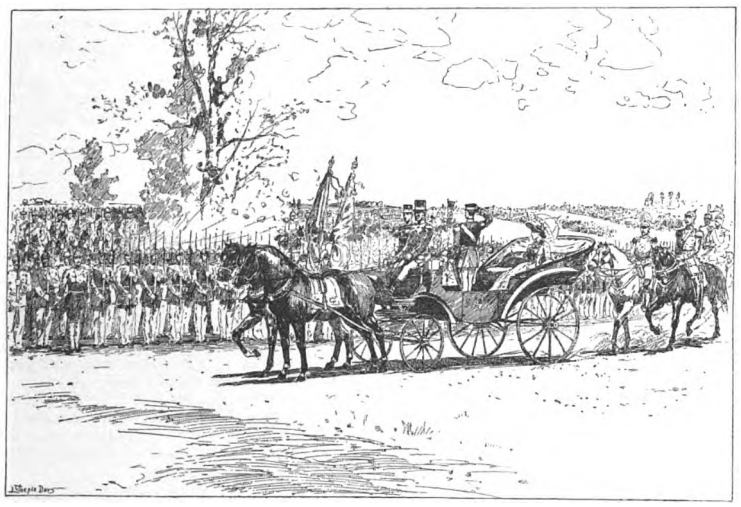
At last, at ten o'clock, we could see a long, worm-like line coming over the three flat roads that lead to Bömerode. Now and then came the flash of the sun from the helmets or guns; and at regular intervals the mounted officers cut off companies and battalions.

It is a difficult matter to realize the size of such a parade; but when one thinks that the foot-soldiers, almost shoulder to shoulder, made a continuous line two miles long and a battalion deep, it conveys some little idea how great a mass of men we had before us.

Behind them, coming slowly but surely into line, were the cavalry and artillery; and finally, away on the ridge of the hill, the ammunition and supply wagons. At eleven o'clock fifty thousand men stood motionless, at present arms.

Suddenly all the bands struck up the national hymn; and in a moment half a hundred thousand men opened their throats and gave a mighty cheer. The crowds of spectators took up the cry; and for a long minute there rose from the plain a cheer that was more impressive than any amount of display or any number of cannon.

With a glass we could see, from the grand stand, the cause of this demonstration.



The Emperor had driven upon the field in an open barouche, unaccompanied except by the Empress, and was standing up in the carriage, his hand at his cap in the military salute, motionless as a statue. The silent figure standing there had a wonderful magnetism to it, and cheer followed cheer. It was a grand salute.

Slowly the sounds died away, and the Emperor, mounting a horse, rode with an escort around his

Digitized by Google

troops. Then came the march homeward to Hanover, and the long tramp across the fields for the spectators.

The next day was devoted to the mock-battle which, though much more indefinite as far as the spectators were concerned, was vastly more impressive. Instead of occupying the field at

Saluting the Emperor.

one side of the village, the manœuvre included all the country round about, with Bömerode for its centre of operations. The line of pickets extended over a tract of country ten miles long by six or seven wide.

The country about the town is quite open, with the exception of two groves, each of an area of an acre or two. One of these was within the line of the pickets and the other just on the border. We found that by sitting in the tops of the trees on the edge of the grove at the border of the line, we could see with a glass all that took place in or around the village.

Early in the morning the inhabitants and visitors had gathered from Hanover to the best points of observation as on the day before, and at ten o'clock the three roads again became filled with regiment after regiment. The Emperor, with his guard, took up his position under some poplars at the entrance of the town; and as soon as he arrived it became evident that the troops were dividing into two parts. When they had taken their positions the firing began. The batteries on the roads became white clouds of smoke, and protected the companies which, lying at full length on the ground behind them, awaited orders.

Suddenly long lines of infantry smoke began to move slowly down the sloping plain. Then a horseman went out from the Emperor's guard to the reserves near us; and in a moment they moved forward by companies, up across the road and under their own guns.

Each squadron drew up into line and fired, half kneeling and half standing, and then withdrew to give place for the next; and the white line on the hills was checked.

All this time scouts and squads of cavalry were dashing by under us around the edge of the grove, and they added much to the picturesque part of the day with their spears and flags. Here a squad ran off to bring in ammunition wagons, and there another party took up their position behind a solitary haystack.

Meantime, the crowd also watched, and tried to get nearer. There was a constant good-natured contest going on between the pickets and spectators. The guards had to move continually up and down the line to keep the people in their places.

Sometimes the soldiers on guard could not resist the temptation to collect into little groups, and talk of the scenes before them; and this left long, unguarded places in the line. The active boys were not slow in learning all this, and they soon found that if they could cover the two or three hundred yards between us and the grove nearer the village they would get a much better view of everything. Once there in the thickets, no mounted soldier could get them out.

When, therefore, the pickets, in their lively interest in the scene, collected an eighth of a mile away, one venturesome young fellow started on a three-hundred-yard dash for this other grove.

In a minute he was discovered, and half-a-dozen horsemen started in pursuit of him. The battle was forgotten in an instant, and the crowd cheered the runner with might and main. He had the start, but he had to run over plowed ground; and his pursuers had horses. It was a close race, but the boy plunged into the underbrush of the grove just as the first horseman was upon him, to the infinite delight of the spectators.

Jeers followed the baffled horsemen as they disappeared around the wood, and the attention was turned again to the fight. It was only a few moments, however, before the laugh turned; for, slowly, with hanging heads, four boys came walking across the fields, pushed on by the butts of the horsemen's spears. The soldiers had cleared the grove.

But now came the final movements. The reserve behind the town came into position, and in a few minutes the two forces were opposing each other in two great straggling lines.

The day ended with flank movements and mock charges. Then the three or four hundred thousand people turned toward Hanover after a long, tiresome day. Such is the manœuvre; it grows larger and better each year, and embodies all the latest schemes in military strategy or military discipline. Now that smokeless powder is being introduced, the whole plan will change. It will always, however, be a brilliant and inspiring sight.

SAFETY.

O thou, upon high errands sent,
Fear not the dark, the storm, the tide!
God marked the way his message went—
Thou shalt not want a guide.

Ida Whipple Benham.

WHY WAR DOES NOT COME.

Both the Emperor William of Germany and his Chancellor, General von Caprivi, have recently declared that there is no reason to believe the peace of Europe will soon be broken. The young Kaiser spoke of war with horror. The Chancellor said that no European government desires to begin a conflict which would probably be more terrible than any of the past.

This is in harmony with the opinions lately stated in *Harper's Magazine* by M. Blowitz, one of the best informed writers on European international affairs. He explains why the great powers desire peace and yet think it necessary to remain armed to the teeth.

This is not, as is commonly supposed, because France and Germany are likely soon to go to war. Each country has strong reasons for keeping the peace.

The Germans can see nothing to gain and much to risk by a war with France. They find it difficult to govern Alsace-Lorraine, which they took from France in 1870. More French territory would be no gain but a real loss to them. Their military renown and influence in Europe could not be increased by a successful war. On the other hand they might lose territory, supremacy and glory by an unsuccessful war. Plainly they must and do wish to keep their winnings in peace.

The French people, M. Blowitz says, wish to fight Germany, and would take the risks if their ruling party would let them. But it is composed of statesmen whose strongest desire is to establish the Republic firmly.

Now they believe a war with Germany, whether successful or unsuccessful, would destroy French Republican institutions.

If France were beaten she would, they think, give up her present system in disgust and return to Imperialism or Monarchy. If she beat Germany she would insist on making a Dictator, perhaps an Emperor, of her successful general. So freedom would vanish in either event.

Therefore all French Republican statesmen wish the peace to last till Frenchmen shall have ceased, like Americans, to conceive that they could live under any sort of monarchy or dictatorship. Generations must pass before that will be their frame of mind.

Russia, Italy, Austria and Great Britain have equally cogent reasons for desiring peace. Why, then, are all constantly preparing for war?

Because a general war is likely to begin, in spite of their wishes, as soon as the Emperor Francis Joseph of Austria dies. He is in fair health for a man of sixty-one years of age. Hence the truth of Caprivi's assertion that war is not likely to begin soon.

Why does the peace of Europe thus depend on one man's life? First, because personal loyalty to Francis Joseph is the only political sentiment common to the Hungarians, Germans, Slavs, Czechs, Croatians, Tyrolese, and numerous other races composing the infirm Austrian Empire. Secondly, because his heir is generally despised.

The next in succession is an ignorant, insolent, stupid, immoral young man. After him comes another still worse. Both have incurred punishment from their uncle, Francis Joseph, by cruel and dissolute public conduct. When the respected Emperor dies no influence will remain to keep the jarring races of his Empire together.

If the Austrian Empire were to break up, what would become of the fragments? The opposing races are so located and mingled that it is incredible they can peacefully partition their territories, and set up a number of Independencies. The Hungarians will seek to establish their nationality, the seven millions of Germans will naturally be drawn to Germany, the Slavs to Russia, the Tyrolese to Switzerland or Italy.

Germany will not endure to see a new Russian Protectorate on her frontier, nor will either Russia or France quietly submit to further aggrandizement of Germany. Italy has long been hungry for that piece of Austria which borders upon Venetia.

Hence the death of Francis Joseph will, says M. Blowitz, bring on that great war which the Powers dread, and for which they constantly increase their preparations.

An American, looking at the terrible complication, will find new reason to be grateful to Providence for delivering this continent from the hereditary principle in government.

WILL.

To do, and not to dream,
To be, and not to seem,
Purpose to fulfill;
To strive in spite of pain,
Failure, disgrace, disdain,—
This, I think, is Will.

Herbert D. Ward.

"BULL MARKETS."

Within the last month or two the great markets for American railway stocks and bonds have been excited by the sudden appearance of a "bull movement."

Prices of such securities advance when there are people who believe that a further advance is coming, and who buy so as to sell again at the expected higher prices. These people are not as a rule investors, though investors also buy at such times. In the language of stock exchanges, these people are "bulls," and if great numbers of them buy at the same time, the result is a "bull market."

When a bull market is fully under way men buy almost indiscriminately any stock on the list. It is a remarkable fact that a fine return of the earnings of a railroad beyond the Mississippi will cause not only the stock of that railroad but the shares of corporations that have not a mile of track west of the Alleghanies, to advance.

Therefore the speculators who buy at random are not so much to be blamed for leaving it to chance what they shall speculate in, as they are for speculating at all. They are as apt to make or lose money in one venture as in another.

There are times when this rush of outsiders to buy in a speculative market becomes a craze of almost national extent. Such were the "South Sea Bubble" of 1711 in England, the "Wild-cat" Bank stock craze of 1836 in this country, the Panama Canal delusion in France during the last ten years, and the Argentine Republic investment mania in England still later.

Such movements are most frequent in railway stocks, because these shares afford a favorite investment for surplus money which any one may own. An advance in the price of a railway stock comes when for any cause the railway has suddenly become more valuable than before.

If the railway's business all at once increases, it will be able to pay larger dividends to its stockholders. If the business of all the railways, or of all in a particular section, were to increase at the same time, one might expect a "bull movement" on the market.

This is the case in the present year. The astonishingly rich crops of this season have altered the whole outlook for the Western railroads. Grain carried as freight is their greatest source of profit, and they have never before had so much to carry.

The people who raised the grain are richer, too, and the railroads will carry other freight back to the West to sell to them. The public imagination becomes thoroughly excited by such news as this. Great numbers of people buy stocks "for the rise," and so prices advance.

One is apt to hear much of the immense amounts of money "made" by speculators in a bull market. Nevertheless, the wisest advice, to young and old, is to keep away from it. In the first place, such speculation in stocks is after all nothing but gambling.

What money is secured by such means is not money earned by honest labor, and success at the start is quite as apt to ruin the adventurer as failure. It gives him the fatal taste for gambling.

Even if it were a legitimate venture, the outsider is likely to come to grief. In a "bull movement," prices are always carried far above their proper level. The professional speculator buys stocks at the lower prices, calculating to sell to these very outsiders at far higher figures. He will take good care that the inducement for other people to buy shall appear most tempting when he himself is anxious to sell.

The result will be that the hopeful outsider who bought stocks on the advice of his broker friends will sell them at lower prices, with a loss of money that will teach him a needed lesson.

A GIRL'S LAUGH.

Lilian smiled, and such a smile! Dimples deepened in her rosy cheeks, bewitching curves settled about her scarlet lips, and amusement danced in her brown eyes. Every boy in the room silently voted her charming, and envied the one whose sally had so brightened her face. Only her mother looked grave, and slightly shook her head at the girl.

"Why, mamma," Lilian said in astonishment, when the two were left alone together; "I thought you liked me to smile; and that is the reason papa calls me Sunshine. He says that smiles drive away moods and bad temper, just as the sunbeams break up the clouds and dry up the rain-drops."

"Yes, dear; but do you remember how last month we longed for rain? How the sun scorched the grass and fruit, and how people suffered for water? And how would you like to have the sun shine all night? The best of things in excess or out of place are always uncomfortable and often wrong. What was it that amused you so a little while ago?"

"Why, Charlie was telling about Miss French. Her new black wig fell off in school and rolled under the table; and when one of the boys picked it up and handed it to her he said, 'This cloud has a silver lining.'"

"It seems to me that the remark was both pert and cruel; but your laugh made those dozen boys think it clever and witty. Each one of them wished that he had said it. Do you not see how by your keen sense of the ludicrous and by your very good nature, you often put a premium on what is wrong?"

All of us were interested a few weeks ago by the newspaper accounts of the act of a noble Englishwoman. Among her dead husband's manuscripts was a collection of tales for which she was offered thirty thousand dollars. Upon reading it she discovered that it was morally unfit for circulation.

Did she smile and say: "It is naughty, certainly, but no worse than Tolstoi or Zola; and I can do great good with that thirty thousand?"

The temptation must have been very great; but Lady Burton seated herself upon the floor, and leaf by leaf with trembling hands burned the manuscript in the fire until the whole volume was consumed.

Good-nature, a happy disposition, the desire to please and conciliate are noble qualities which every girl should strive to cultivate; but better than all is that moral courage which enables her to frown upon whatever is unkind, unjust or unholy in word and in action.

Ruskin assures us that "The buckling on of the knight's armor by his lady's hand was not a mere caprice of romantic fashion. It is the type of an eternal truth—that the soul's armor is never well set to the heart unless a woman's hand has braced it; and it is only when she braces it loosely that the honor of manhood fails."

"YO-HEAVE-HO!"

Any one who has been on shipboard, or alongshore where weights are to be raised by means of ropes drawn over pulleys, has observed the peculiar magnetism which there is about the action of a number of men together in this way, and particularly about the cry of "Yo-heave-ho! Yo-heave-ho!" which accompanies it.

Often men whose duties do not call upon them to take part in this work, and who a moment ago were content to be perfectly inactive spectators, have been seen to seize the ropes and pull with all their might and main with the rest.

"Yo-heave-ho! Yo-heave-ho!"

The spectator hears the music of this traditional cry which, in a form not very different from that in which it now strikes his ear, was used in Greece and Egypt for a similar purpose. It stirs up in his breast the instinctive poetic feeling, and fills him with a longing to join his fellows in the task.

But perhaps more potent than the sound of the "Yo-heave-ho-o" is the mere sight of men "all pulling together." What several others, standing close together, are doing all at once on perfectly equal terms, is just what one wants to do himself, especially if all the others are doing it with a good heart, and with a song.

"Why," said one well-dressed man who had taken hold of a tarry rope when the cry of "heave-ho" had begun, "it's play to pull on a rope with a lot of other fellows, no matter how hard you have to pull."

It was "play" because these men were pulling all together. It was the participation—the spirit of fellowship that went with it—which made it sport, and not any mere fascination about pulling on a rope.

This is the explanation of much downright hard work that is done in sports and games. What the men and boys who take part in them are seeking is the fun of "pulling all together."

Machinery has relieved men and women of much hard work, but it has also, in a considerable degree, taken the "fun" out of hard work—the old-fashioned "hurrah-boys" way of working, in which companionship and good spirits went with hard toil.

It has thrown men more upon themselves; each one attends his machine or his part of it, and though his work may not tax his muscle heavily, it often becomes a wearisome routine with him.

In the tasks and burdens of life, a great deal may be gained, both in results and in individual cheerfulness and happiness, by introducing the

Digitized by Google

same spirit which men feel when they shout "heave-ho-o" and pull all together upon a rope. Companionship is a very good substitute for a steam-engine.

MINISTER AND ENGINEER.

A story is told of a judge who became so interested in the statement of a would-be assassin who had just missed fatally stabbing his victim, that he exclaimed at one point of the narrative:

"Ah, you should have struck more to the left!"

The judge was the last man to have committed a deed of violence, but his surprise that the thing had not been done more skilfully caused him to forget the question of life and death which was involved.

A somewhat similar story is told of the French minister, M. de Freycinet. In the midst of the trial of a man for high treason, he became deeply interested in an argument with the accused to the effect that his crime might have been committed much more easily and cheaply.

M. de Freycinet was a man of fine character and ability. Before he became a politician he was a skilful engineer. When he was President of the Judicial Council a man who was accused of helping tear down the Column Vendôme in 1871 was brought before him.

The man confessed his guilt, but pleaded that he was young and fanatical at the time, and that he had been drawn into helping pull down the Column by his pride as an engineer in arranging scaffolds and ropes to accomplish the feat.

"You are a criminal," said the minister, severely. "You insulted the history and the glory of the country in destroying that Column. But,"—he reflected a moment,—"how did you do it? As a question of engineering I should like to know—"

"Oh, it was very simple," replied the accused; and he sat down at a table, drew a plan, and calculated lines, curves and angles, while the minister bent over him, following the work with intense interest.

As it went on, however, Freycinet shook his head, shrugged his shoulders and smiled, and when it was finished, took paper and pencil, and said:

"That isn't bad, but you might have done it much more easily and economically."

Then in his turn covering the paper with curves, angles and calculations, he proved that twice as much time and money as were necessary had been expended.

"However," he concluded, severely, "you were guilty of high treason against the nation, and must pay the penalty."

The engineer did not escape a light sentence, but he had much satisfaction in replying, "Ah, monsieur, did you not just now say that it had cost me too much already?"

RETURNING THE FAVOR.

Theoretically we all think that we are quite as ready to yield to others their rights as we are to insist upon our own. But sometimes the fact that one is trespassing unwarrantedly on the domain of another is brought home to him forcibly.

There is a story told recently of a former prominent judge of Massachusetts, not now living, which involves a neat rebuke of the autocrat of the court room.

The judge had taken a train in Boston to return to his home in Quincy. He discovered after he had started that the train was express, and would not stop at his station. Accordingly as the cars were approaching Quincy he pulled the alarm line, the engineer whistled "down brakes" and the train came to a stand.

The conductor rushed into the car.

"Who pulled that rope?"

"I did," replied the judge.

"What for?"

"Because I wanted to get off."

The conductor thereupon made some remarks to the judge more forcible and less respectful than he was accustomed to hear. Judge B. thereupon complained to the president of the road, who told him that he would inquire into the matter.

When next they met the judge asked the president if he had reprimanded the conductor for his insolence.

"I spoke to him," he replied.

"Well, what did he say?"

"He said he would come up some day and adjourn your court!"

The judge appreciated the man's witty way of saying that he had the right to control his own train, and did not pursue the matter further.

CROWDING INTO CITIES.

A few months ago not only London but the world was startled by the statements, unfortunately but too well founded, in General Booth's "Darkest England."

The campaign then begun by the General has been vigorously conducted. The funds for which he asked have been contributed, and all his plans are in a fair way to be carried out.

Meanwhile the people of London are not permitted to forget the scheme or the reform which the scheme is intended to effect. London is now flooded with Salvation Army matches in boxes labelled "Lights in Darkest England." The boxes also bear various mottoes:

"Love thy neighbor as thy-self." "Provide things honest in the sight of all men."

There are also given on the boxes the following reasons why people should buy these matches:

First: To raise the wages of the matchbox makers. Second: To fight against sweating. Third: To help the poor to help themselves by labor.

A very great part of the evils against which General Booth is contending may be traced directly to the overcrowding of cities. The evils, some of them at any rate, are making themselves manifest in certain of our large American cities. The abominable sweating system is one of these evils, and one of the worst. Perhaps it is impossible to exterminate that system, but it is possible to make the evil less.

Let every one who is considering a project of removing from the pure air, the healthful labor, the sweet quiet of the country, to seek employment in the city, consider also that he or she is adding one more to the vast and increasing army from which the sweater recruits his forces.

LOVED AND LOST.

The love between Robert Browning and his wife was ideal, in the true sense of that much-abused word. And her death, after a few short years of married life, left the poet inconsolable. To him she remained always the dearest and most lovely of created beings, and her gift seemed to him far greater than his own. A writer in the *Christian Union* gives the following pathetic sketch of a chance interview with him:

I was travelling in Italy. There were few tourists in my compartment, and all were absorbed in books or revery, until the close of the long, tiresome day. Then it was that the elderly gentleman who had sat by my side without moving his eyes from the landscape, made a comment that invited conversation.

"You are fond of poetry?" he asked, when something in the shifting splendor of the Italian skies evoked from me a Byron couplet.

"Oh, yes," I responded. "I love poets and poetry."

The old gentleman grew young, and never shall I forget the wonderful thought and imagery that flowed in a continuous stream from his lips.

"Who are your favorite poets?" he asked, abruptly.

I named them, and without further comment, quoted my favorite poem, one of Mrs. Browning's. When I had finished, my companion resumed his post by the window, and did not deign to notice me again.

I was much discomfited. Had I given offence? Before reaching our destination I ventured to say:

"I suspect, sir, that you do not like Mrs. Browning's poetry."

The dark eyes of the stranger turned pitifully upon me, and he said, "Madam, that sonnet is the sweetest, and its singer the most precious gift life has given me. She was my wife."

A POLITICAL FISHERMAN.

In Canada the rancor of political party feeling is extreme, for "The smaller the rat-pit the keener the fight." The parties call one another "Tories" and "Grits." Judging by their respective newspapers, the Tories should all be jailed for plundering the Dominion, and the Grits banished for reviling their country. Yet, as among other English-speaking people, the man who talks as if he would like to boil all of the opposite faction in oil, is usually on the best private terms with many of them. A Canadian correspondent gives this instance:

Captain Van Flack, who owns the net fisheries at the mouth of the Votiawasaga River, is an out-and-out Grit, and a humorist in the bargain. One day, when the take of fish had been small, he took to vilifying the Tories before a politically mixed company.

Tories were, he said, all thieves, drunkards, fools, and what was worse, they let "the Yankees" destroy the lake fisheries! None of the Tories present ventured to expostulate with the angry captain.

When he had cooled down some one happened to mention the name of Christopher Robinson, an eminent lawyer of Toronto. Van Flack at once began eulogizing Robinson. Never was there a better lawyer, or an honester, kinder man!

"But Christopher Robinson is a Tory," said a bystander.

"Yes," said Van Flack, looking bewildered for a moment. "Yes, he's a Tory. Sometimes you *do* find a speckled trout in amongst a boat-load of suckers."

ENLARGING THE ABBEY.

Kings and poets have had their burial in Westminster Abbey. Long before the Reformation, the church was not only a royal burial-place, but had seen coronations, royal weddings and christenings. Edmund Spenser was the first poet whose burial in the abbey was distinctly a tribute to his fame.

Although Chaucer had preceded him, it was rather as clerk of the royal works that he was given such high distinction. After that, England continued to allot places there to all whom she delighted to honor, but she will soon be in the embarrassing position of having no more space to offer.

A hundred years ago, a French writer made the statement that "The people are not more crowded in the streets of London than are the funeral monuments in the Abbey."

About the same time, a mock "petition from posterity" appeared in one of the new-papers, urging the country to provide space for the coming generations of distinguished men. Year after year the overcrowding has continued, until now there is almost no space for added memorials, and room for but few burials.

A Royal Commission was some time ago appointed to consider the question of making an addition to the Abbey, but it has as yet broached no suggestion which is universally acceptable. So sacred an edifice is this church, in the minds of all English-speaking people, that it can scarcely be altered or enlarged without offence to some antiquarian soul.

WHISKEY DID IT.

Seldom have Shakespeare's words, "Oh, that men should put an enemy in their mouths to steal away their brains!" been so strikingly illustrated as in a touching incident.

One of the best Greek scholars in New York is a guard on the Sixth Avenue Elevated Road. Not long ago a famous professor in one of our leading universities published a volume on certain features of the ancient Grecian dialects, of interest only to scholars. The L guard referred to above wrote to a New York new-paper, pointing out several errors made by the professor in his book. He signed himself "Sixth Avenue Elevated Guard, No. ——."

For a month, writes the Pittsburg *Dispatch*'s New York correspondent, I watched the badges of the guards on that road as I made my daily trips back and forth. One morning I was rewarded by finding the learned man I sought.

"How does it happen," I asked, showing him my card, "that you, a Greek scholar of first rank, should be doing such work as this?"

He looked at me sadly, and his red face grew more flushed than usual. "I was the best Hellenist of my year at Dublin," he said. "My Greek is still what it used to be, but my career has been ruined by—whiskey."

To relieve cramp and pain in the stomach use *"Brown's Household Panacea."* It is purely vegetable, and is excellent for both internal and external use. *[Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

RIVERVIEW ACADEMY, Poughkeepsie, N. Y. **56th Year.** Prepares thoroughly for College, the Government Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

BRIGGS'S PATENT TRANSFER PATTERNS.
Twelve good designs with full instructions how to stamp, sent on receipt of 5 cents.
J. WALKER, Box C, 3, **Irvington, New Jersey.**

Baby Laughs.
The new materials of Silk and Wool Shirts and Bands for Babies are so soft, so elastic, so durable, so little shrinkage and so healthy that they make every mother happy and every baby laugh. Open front, finished with silk and ribbon. All styles made by
T. O. GARDNER & CO., 125 Kingston Street, Boston, Mass.

A SAFE 6% INVESTMENT
Secured by stock of the Temperance Temple built at Chicago for the National W. C. T. U. deposited with American Trust and Savings Bank, Trustee for the bondholders, and by the faith of 200,000 women whose organization is a synonym of sincerity and honor.
$300,000 TEMPLE TRUST BONDS.
Date July 1, 1891, due in ten years, 6 per cent. interest payable semiannually, New York. Denomination $500. You can deposit money at any National Bank for one or more bonds at par, accrued interest, and exchange, where bonds will be delivered on notification. Address orders and inquiries to **H. C. SHAW STOCKING CO., Lowell, Mass.

Bad varnish is the very dust of time. Six weeks is enough for the worst of it.

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.
The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.
MURPHY VARNISH COMPANY.
FRANKLIN MURPHY, President.
Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

Donald Kennedy,
Roxbury, Mass.

Dear Sir: I took your Medical Discovery for one year for Scrofula on my knee. When I began I was told by the Doctors my limb would have to be amputated, but it cured me. Well, that was 13 years ago and no signs of it since. I thought you and the world ought to know it.

Yours very truly,
MRS. M. D. DALTON,
Aug. 8, 1891. Edina, Mo.

Kennedy's Medical Discovery sold everywhere. Price $1.50.

An illustrated book about Exercise and the use of Chest Weights, Rowing Machines, etc., by DAVID ORR EDSON.

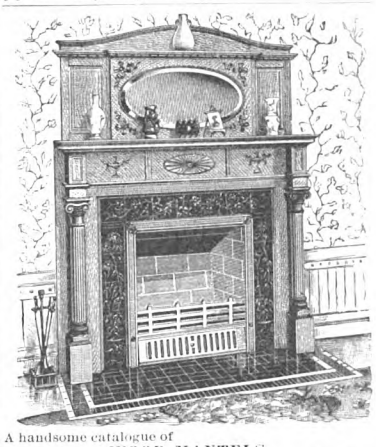
Also our complete and artistic Catalogue of Gymnasium, Exercising, and Outing Goods will be sent FREE to responsible parties.
MERWIN, HULBERT & CO., 26 W. 23d St., N. Y. City.

This young lady examines the young scholar.

"Johnnie, where is Carlsbad?"

"Part of it in every drug store in the United States."

"How do you make that out?"



"The Carlsbad Sprudel Salts are imported from there, and are the solid evaporations of the Sprudel Spring."

"What have they done for you, that you know so much about them?"

"Why, they have cured papa of his dyspepsia, and in the place of a cross father, they have given me a kind and loving parent."

Dyspepsia will spoil the most angelic temperament. Too much bile inactivity of the liver will start it. Try the Carlsbad Sprudel Salts. A standard, a never-failing remedy. The genuine have the signature of "Eisner & Mendelson Co., Sole Agents, New York," on every bottle.

A sample bottle mailed upon receipt of 35 cts. in postage stamps.

A handsome catalogue of
WOOD MANTELS,
showing Grates, Tile, Hearths and fittings, with plain directions for setting, will be mailed to your address for eight cents in stamps.
BANK AND OFFICE OUTFITS

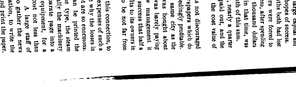
JOHN BARLEYCORN'S LAST STRONGHOLD.



Digitized by Google

older dailies no really able newspaper on one or another side of politics. Here is at once a chance for a new paper to gain readers.

It may be that all the papers in the city are dull or badly edited. A new, interesting, ably-managed newspaper is likely to take the fancy of the people very quickly there.

One or the other of these two conditions has usually been the cause of the great successes won by newly-founded city dailies in recent years. Yet it has often happened that the founders of a newspaper have believed this state of affairs to exist when it really did not exist at all.

The successful editor, in fact, must have a wonderful capacity for understanding what the newspaper readers of a city actually want. He cannot even judge one city from his experience in another. Exactly the kind of newspaper which succeeds in one place may meet with absolute failure elsewhere. And that is partly why the founding of a city newspaper means so often the loss of his fortune by a millionaire.

ALEXANDER D. NOYES.

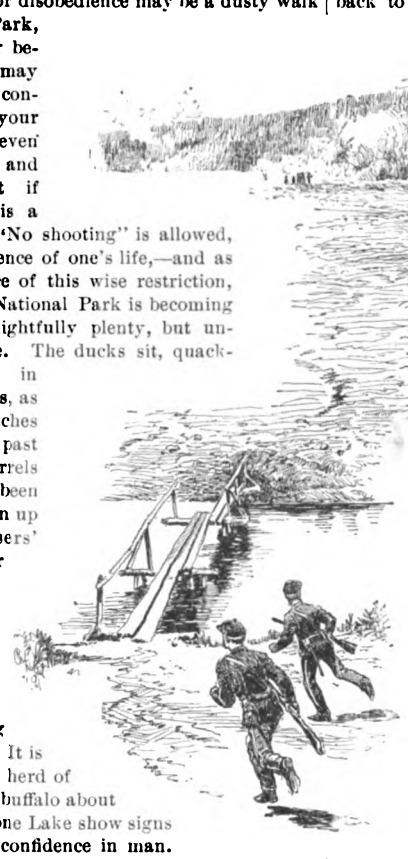
SOAPING THE BEEHIVE.

When you go to the Yellowstone Park, certain notices giving forcible hints as to your conduct will present themselves to your eye from signboards nailed to the trees. They are of this sort:



EXTINGUISH YOUR FIRES.

NO SHOOTING.

GATHER NO SPECIMENS.

DO NOT DEFACE THE FORMATIONS.

These are all very proper and necessary; and the penalty for disobedience may be a dusty walk out of the Park, with a soldier behind you. It may involve the confiscation of your luggage, or even heavy fines and imprisonment if the offence is a grave one. "No shooting" is allowed, except in defence of one's life,—and as a consequence of this wise restriction, game in the National Park is becoming not only delightfully plenty, but unusually tame. The ducks sit, quacking quietly, in the little lakes, as the stage-coaches rattle close past them. Squirrels actually have been known to run up men's trousers' legs, and deer are increasing in numbers. It is said that the herd of two hundred buffalo about the Yellowstone Lake show signs of increased confidence in man.

Unusual vigilance will be practised by the Park Superintendent to protect this bison herd, and if nature would but kindly endow the poor beasts with a prescient instinct to remain in the Park, and not to wander beyond its boundaries, this last remnant of a once mighty race might survive here for centuries, to remind future generations of the countless herds which once roamed over the entire West.

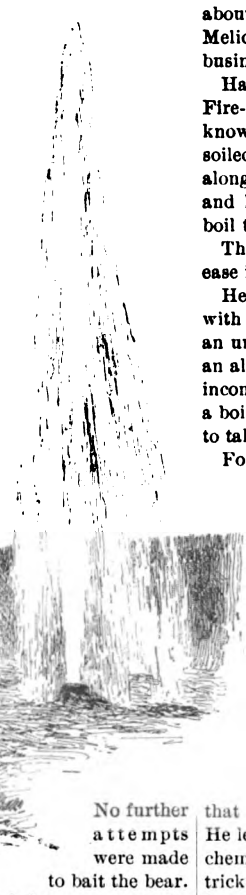
Another and less pleasing result of prohibition of "shooting" is the multiplication of bears. Black bears, "silver-tip" bears, cinnamon bears and "roach-back" bears are found in the Park in greatly increased numbers, and some shooting may have to be done to keep these creatures within proper limits.

At the Cañon Hotel, the landlord told me that he "wasn't fond" of being out after nightfall, latterly, for the bears had grown too bold. There were two "silver-tips" about the premises that evening, picking up kitchen scraps; and at the Trout Creek lunch camp the lively and efficient young Irishman in charge of the eatables said that of late he had carried all the kitchen refuse to a distance and thrown it into the creek, to prevent the bears from gathering about the tents at night.

He gave us a very laughable account of the uproar which the brutes made after dark.

At the Upper Geyser Hotel, we were assured that a huge cinnamon bear, of not less than eight hundred pounds' weight, and a black bear, have been regular boarders for many months. Every night at dusk they come to the refuse-barrel, which is set out at the back of the hotel, and rummage the scraps for bits of cake and pie.

The big cinnamon is inclined to be agreeable in his manners, and never even growls at persons who happen to be in the neighborhood; but the smaller black bear is less friendly. He took a calf one night—by mistake, perhaps—and occasionally "runs" a man. The four or five soldiers who are stationed there have great fun playing at touch-and-go with him.



With six or seven other guests at this hotel, I went out at dusk to see the bears take their supper. There is an old log barn just across the little brook, among the pine scrub, where the refuse is put. We had scarcely reached the place, when the black bear arrived from the opposite direction and began to ransack the barrel. We approached within twenty yards, when the bear notified us, by an ugly growl, to stop.

We stopped promptly, and the bear proceeded with his supper. Not one of us was armed with so much as a cane. In the party was a lady who had been politely attended by two young gentlemen; and to test their courage and devotion, perhaps, she picked up a stick and threw it quickly at the feeding animal. In an instant it bounded toward us with another growl.

I would rather not relate what followed; but there were wild outcries, and something very much like a panic. Not once dreaming but that the lady would be abundantly protected, I ascended a pine-tree, to break a club.

Sad to say, however, although each of the young gallants appeared to devote his energies to pushing his rival to the rear, it chanced that the lady herself was left behind all the rest.

But the bear, after a vigorous sortie, turned back to the swill-barrel.

No further attempts were made to bait the bear.

The lady was apparently satisfied, although she said but little. Still another inhibitory notice will probably be posted by next year, to wit:

DO NOT SOAP THE GEYSERS.

To "soap" a geyser is a very naughty act; and for that reason, perhaps, many tourists seem strongly tempted to transgress in this manner.

An alkali dropped into the "bowl" of a geyser will frequently cause it, in Park parlance, to "geyse" at once and in a particularly frantic manner; and as certain of the geysers are somewhat tardy in exhibiting their spouting powers, it is a temptation to many young people, and to a few older ones, to drop a cake of soap, covertly, into the steaming bowl. Geysers, like human beings, have a certain quite definitely limited lifetime. They do not go on forever by any means. The pipe, or tube through which the hot water and steam are ejected, the "bowl," the caldron, and the steam chambers deep under ground, have a well-marked period of growth and decline.

The apparatus, by means of deposits from the hot water, first increases in symmetry, form and efficiency as a spouter; then it gradually falls out of order and subsides into an inactive hot spring. It can be said that a geyser is good for only a limited number of sporting performances, through a certain number of years, or decades.

The geysers of the National Park vary much in their hours for spouting. Old Faithful spouts every hour, with great regularity, and will probably be a short-lived geyser compared with the Beehive, which discharges once in twenty-four hours; the Giant, which is in action once in four days; the Giantess, which only favors the public with a performance once a fortnight; the Lion, which rouses into activity and "roars" after long, uncertain intervals; or even the Splendid, which sends up its beautiful column of steaming water and spray to a height of two hundred feet once in three hours.

Manifestly it is in the interest of the general public—of the whole world, indeed—to have these grand and wonderful exhibitions of subterranean energy endure as long as possible. It should not be beneath the dignity of any tourist to wait patiently the normal time of their grand displays. To cause a geyser to burst forth suddenly by artificial means is to shorten its "life," and hence to prevent future tourists from enjoying it.

But many inconsiderate tourists go to the geysers with cakes of soap in their pockets. Hence the government has found it necessary to station a squad of soldiers in close proximity to the geysers, to protect them from the saponaceously inclined sightseers.

It is not well known who was the first to "soap" a geyser; but at the Upper Geyser Basin there is a legend of a Chinaman who, in course of his wanderings in "Melica," arrived in this wonderland and applied for a washee-washee job. John may not have had an appreciative eye for the grand and beautiful in nature, but report says that he was at once and profoundly impressed by the immense natural facilities which the geysers offer for laundry work.

So profoundly was he struck, indeed, that he capered from pure delight, snapped his pigtail, and shouted, "Washee-washee allee do himself! No rubbee, no changee water; allee boilee and ling!"

He spent several hours prospecting the "bowls" of the hundred or more steaming fountains thereabouts, and expressed himself convinced that Melica was the greatest country for the washing business that the sun shone on.

Having selected a quietly boiling pool near the Fire-hole River,—one which had never been known to "geyse,"—he dumped a quantity of soiled linen into it, rigged up a little awning alongside, to protect himself from the hot sun, and lay down to take it easy and let the clothes boil themselves clean.

The sense of comfort and newly discovered ease in business presently lulled him to sleep.

He had put a cake of washing soap into the pool with the clothes, and inadvertently there resulted an unfortunate chemical discovery, namely, that an alkali put into a geyser will cause it to spout incontinently, out of season, and may even induce a boiling pool—which is not ordinarily a geyser—to take up the rôle of a spouter.

For John had no more than fallen peacefully asleep, to dream of future good times in Nankin or Shanghai, when the soapy caldron went off! A jet of scalding water, and with it the entire washing, played up a hundred feet in height. Poor John was shockingly splashed. The hotel people saw him dash out of the steam clouds and take to flight down the valley, uttering wild and pathetic cries of terror and anguish.

What became of him is not well known, but a Chinaman was seen to pass the camp at the Lower Geyser Basin late that afternoon, and it is supposed that John left the Park without loss of time. He left a legacy of evil behind him; for from his chemical experiment has resulted the pernicious trick of "soaping" the Park geysers. Such at least is the legend.

The Beehive Geyser is one of those which appear to be especially sensitive to soap. The rogue who drops soap into the Beehive barely has time to retire to a safe distance before the performance begins, and it really seems as if the spouting, foaming, frothing geyser would turn itself wrong side out in its efforts to be rid of the obnoxious alkali.

Our party of eight was a very law-abiding one. We had often said to one another that it was an exceedingly mean trick to put soap into a geyser, or to attempt, as some previous visitors had evidently done, to stir up the way-down stomachs of the fountains—particularly the old, "retired" ones—with long poles. Such vandalism we all denounced as disgraceful.

Nevertheless a strange thing happened.

On the front seat of our stage-coach rode two youths, fresh from college, who were excessively addicted to singing "Upidee-idee-ida," and "One More River to Cross." They were the same young gentlemen who had made such heroic efforts to induce each other to protect the young lady from the swill-bear.

On our arrival at the Upper Basin we learned that the Beehive—so called from the shape of its cone—would not spout until the following morning, and the Splendid not much before nightfall. But after watching a grand performance by Old Faithful, we all went out to see the "bowls" of the other geysers.

In the course of our walk, we crossed the little Fire-hole River, and after examining the pretty hollow cone of the Beehive, went up to the Lion and Cubs.

Presently, missing our two young friends, we looked back and saw them still hanging over the Beehive cone, apparently gazing into the funnel of the fountain.

Within less than a minute afterwards we heard a shout, and saw our young fellow-tourists running away; and immediately the Beehive went off, favoring us with a tremendous display.

Jets of water played to a height of two hundred and fifty feet. The roaring and frothing were frightful. The earth far around pulsated and trembled.

It seemed to me that the geyser would burst and go to pieces. Its extraordinary upheaval continued for some minutes.

Meantime a considerable crowd collected, and two soldiers came hurrying to the spot. As soon as the eruption had subsided, the soldiers examined the steaming ground about the cone, and picked up several pieces of pink soap. This circumstance, joined with the fact that the Beehive had spouted out of season, aroused the suspicions of the military.

They made inquiries regarding us, and ascertained at the hotel that five or six cakes of pink soap had disappeared from as many rooms since the arrival of our coach.

For a law-abiding party we felt extremely uncomfortable. There was no direct or positive evidence against any of our number, but none the less the sergeant in charge telegraphed the matter back to Mammoth Hot Springs. He appears to have mentioned specially our two friends; for on our return, three days later, they were waited on very early by the young lieutenant in command, who put to them many polite but pointed questions as to their knowledge of the chemical action and reaction of alkalies.

They seemed to be extremely ignorant upon the subject. The lieutenant marvelled, but as there was no positive evidence against the young men, they were advised to read up in chemistry, so as to be able to pass a better examination the next time they came to the Park.

C. A. STEPHENS.

For the Companion.

HALLOWE'EN SPORTS.

The familiar games which are played in English-speaking countries on Hallowe'en, or the eve preceding All Saints' Day, the First of November, have their parallel in all countries. The sports most familiar in England and America are the picking up of a floating apple, with the mouth, from the surface of a tub of water, the person who is engaged in this occupation having his hands tied behind his back, and the capture of an apple in the same way, the fruit being suspended by a string to the lintel of a door.

Less familiar, and even more amusing, is a favorite Cuban sport of the same nature. Some ordinary game is first played, and the winner in this game has the privilege of hiding a bit of fruit or a small round cake in a pan which is filled to a depth of about two inches with wheat flour. The loser in the game, or one who has been adjudged to pay a forfeit, has his hands tied behind him, and must find and take the hidden article out of the pan with his mouth.

After this, the person who has burrowed in the pan is forbidden to brush or wash away the flour, but must spend the remainder of the evening with it on his face.

As the games proceed in a very lively manner, it often happens that almost every one in the company, men and women, boys and girls, is going about with a face plentifully besprinkled with flour, and great merriment is the result.

In Cuba, where a considerable proportion of the population has a sufficiently dark complexion to bring out the flour in vivid relief, the appearance of a company of people decorated in this fashion is exceedingly mirth-provoking.

A very simple sport which is popular in France, is called the *jeu des bougies*, or candle game. A bottle is laid down upon its side on the floor, in such a manner that it will roll easily. A person sits down upon the bottle, maintaining his balance by extending his legs upon the floor; but he must cross one foot over the other, and keep only one heel upon the floor.

Then he is given a lighted candle, which he holds in his left hand, and an unlighted one, which he holds in his right, and is told to light the unlighted candle from the other.

The feat appears easy, but in the attempt to bring the candles together the bottle almost always rolls out from under the performer, bringing him down in anything but a graceful manner.

Another favorite European game, suitable only for men and vigorous boys, is a wrestling contest without arms. The two contestants' hands are tied behind them, and they then engage in a struggle to see which shall "throw" the other. This struggle is always a laughable one to the spectators, and it is almost impossible that it should result in a serious fall. Indeed, it seldom results in any fall at all, but resembles a sort of burlesque cockfight.

Still another amusing sport is managed in this way. Two chairs—square-backed, or with posts at the corners—are placed face to face, far enough apart so that a stout round stick can be stretched from the seat of one to the seat of the other, each end of the stick resting upon one of the chairs.

A person now seats himself astride the stick, holding his feet crossed and clear of the floor, and keeping his balance by the aid of a cane which he holds in one hand, the end of which he may rest upon the floor. Then he is given a cane in the other hand, and four handkerchiefs are produced and held before him. These handkerchiefs he must take one by one, with the tip of his second cane, and hang upon the four corners of the backs of the chairs.

During all this time his feet must not touch the floor. A cushion at each side of the performer, upon the floor, will be an excellent precaution against the bumps which he might get in the almost inevitable fall.

An ingenious person can invent other amusing performances of this sort, which will serve as well for any other winter evening as for Hallowe'en.

But care should be taken that nothing is resorted to which is likely to result in bodily hurts, and that nothing is undertaken which is in the nature of an unexpected "joke" upon another.

All the fun of sports of this kind lies in their being voluntarily entered into, and in a spirit of good-natured merriment.

JACK CREAMER.

A True Story of 1812.

The boarding nettings are triced for fight;
Pike and cutlass are shining bright;
The boatswain's whistle pipes loud and shrill;
Gunner and topman work with a will;
Rough old sailor and reefer trim
Jest as they stand by the cannon grim;
There's a fighting glint in Decatur's eye,
And brave Old Glory floats out on high.

But many a heart beats fast below
The laughing lips as they near the foe;
For the pluckiest knows, though no man quails,
That the breath of death is filling the sails.
Only one little face is wan;
Only one childish mouth is drawn;
One little heart is sad and sore
To the watchful eyes of the Commodore.
Little Jack Creamer, ten years old,
In no purser's book or watch enrolled,
Must mope or skulk while his shipmates fight,—
No wonder his little face is white!

"Why, Jack, old man, so blue and sad?
Afraid of the music?" The face of the lad
With mingled shame and anger burns.
Quick to the Commodore he turns:
"I'm not a coward, but I think if you—
Excuse me, Capt'n, I mean if you knew
(I s'pose it's because I'm young and small)
I'm not on the books! I'm no one at all!
And as soon as this fighting work is done
And we get our prize-money, every one
Has his share of the plunder—*I* get none."

"And you're sure we shall take her?" "Sure? Why, sir,
She's only a blessed Britisher!
We'll take her easy enough, I bet;
But glory's all that I'm going to get!"

"Glory! I doubt if I get more,
If I get so much," said the Commodore;
"But faith goes far in the race for fame,
And down on the books shall go your name."

Bravely the little seaman stood
To his post while the scuppers ran with blood,
While grizzled veterans looked and smiled
And gathered new courage from the child;
Till the foeman, crippled in pride and might,
Struck his haughty flag and gave up the fight.
Then little Jack Creamer stood once more
Face to face with the Commodore.

"You have got your glory," he said, "my lad,
And money to make your sweetheart glad.
Now, who may she be?" "My mother, sir;
I want you to send the half to her."
"And the rest?" Jack blushed and hung his head:
"I'll buy some schoolin' with that," he said.

Decatur laughed; then in graver mood:
"The first is the better, but both are good.
Your mother shall never know want while I
Have a ship to sail or a flag to fly;
And schooling you'll have till all is blue,
But little the lubbers can teach to you."

Midshipman Creamer's story is told—
They did such things in the days of old,
When faith and courage won sure reward,
And the quarter-deck was not triply barred
To the forecastle hero; for men were men,
And the Nation was close to its Maker then.

JAMES JEFFREY ROCHE.

For the Companion.

HOUSE-CLEANING.

A recent French traveller through this country was amazed at the vigor with which the American housekeeper, from bleak New Hampshire to balmy Louisiana, at the first approach of spring proceeded to "clean house."

He describes the tearing out of the contents of drawers and boxes, the gutting of closets, the carrying out of chairs and tables to be sunned, the vehement scrubbing, the sweeping, the opening of the innermost nooks of the house to sun and air, and the final triumph of purity and cleanliness.

The process which to him was an amusing novelty, is to all of us tedious as an oft-told tale. Yet did it never occur to some of us that there is another kind of house-cleaning, in which we seldom or never indulge?

There is that morbid dislike of one of your neighbors, which you have hidden away out of sight for years. Bring the ugly thing to the light, prove how dead and noxious it is, and throw it away.

There is the jealous suspicion which you have long had of your own brother, but which you have never put into words. Go to him, talk the matter over in the sunshine and warmth of your affection for each other, and see how it will shrink and vanish.

Your mind is full, perhaps, of puerile tales of gossip about acquaintances and friends, satirical jokes and whispered stories, which you suspect to be false. Bring them out to the full daylight of common sense, and if they prove rotten and base, never harbor them again.

Your memory, too, like an uncleaned apartment, may be hung and furnished with the foul accumulations of years; chapters from flash novels, songs of rank flavor, anecdotes which you would not repeat to any person whom you sincerely respect.

Out with them! Rid yourself of them as you would banish from your house old garments infected with a fatal disease. There is no taint which spreads contagion so fast, or which is so mortal, as a vile thought lingering and festering in the memory.

Keep no skeletons in the secret places of your mind. Brood no longer over old sins or old griefs; even remorse, if nourished too long, becomes unwholesome. Let the dead days bury their dead.

Open your soul to the fresh, strong air of to-day, to the sunlight of God's presence. You have much work to do here; your time is short. You cannot afford to allow your mind to become a lazar-house of corruption, or a tomb of dead griefs. Fill it with truth and charity and light. Ought it not to be a temple in which God's Spirit shall dwell?

ONE OF THE YANKEES.

American travellers in Switzerland have the pleasure of meeeting an old friend when they ascend Mount Rigi by railroad. The old friend is the railroad itself. They see at a glance that it is the same contrivance as that by which passengers are conveyed so comfortably up Mount Washington. The locomotive pushes, instead of pulling, the passenger-car, and the ascent is made by a cog-wheel that claws hold of a central cogged rail. The story goes that while the road was building a Swiss engineer visited it, inspected it closely, took drawings of the track and engine, and thus learned how to construct the railroad that now climbs several of the Alpine mountains.

Within the last three years a considerable number of these roads have been constructed in various parts of the world. Others are in progress; more are contemplated; and engineers are looking forward to the time when these odd-looking engines will be crawling up and down all the great mountain ranges in Europe, Asia, Africa and America; for they can be made at much less expense than a system of tunnels and excavations.

Sylvester Marsh, the inventor of this plan of ascending mountains, was one of the Yankees who have to improve everything they touch. If a thing works badly, they want to make it work well, and if it works well, they are not satisfied until they have made it work better. In the course of his long life of eighty-one busy years, he revolutionized every branch of business in which he was ever engaged. He did not merely improve it; he made it all over again.

Born in New Hampshire in 1803, he moved to Boston when he was twenty-three years old, and went into business as a provision dealer. But he soon had an advanced idea upon the subject of supplying Boston with provisions.

He removed to Ohio, where he originated the system of killing and packing meat by machinery, a business which has continued to the present day, and has become one of the most extensive and important in the world. It not only supplies the United States with a hundred kinds of packed meats, but other countries as well. In remote English hamlets the people do not know how to pronounce the word *Chicago*, but they buy Chicago meat all the same. They ask for Chi-*cay*-go meat.

It was as early as 1833 that he settled in Chicago, to get nearer the final source of provisions, and there he made a considerable fortune, which he lost in the disastrous revulsion of 1837. But he soon began again, and spent thirty years in developing several branches of the great business of supplying the world with food. At length, in 1864, being the possessor of a good estate, he did what so many successful Yankees do, returned to his native New Hampshire and settled at Concord.

Some years before, while ascending Mount Washington on foot, he lost his way and had a very disagreeable, if not dangerous experience. It was then that he conceived the idea of his mountain railroad.

He once told a journalist, who asked him for information about his road, that for many years he was unable to convince any responsible person of the feasibility of his scheme, and that he was known in the mountains by the name of Crazy Marsh. No capitalists would subscribe to his stock, and he was finally obliged to furnish, not only all the ideas, but nearly all the capital required for the enterprise.

Sixteen years after the conceiving of the scheme, a part of the road was opened to the public. This was in 1868, and it was completed to the summit in the year following. Since that time it has carried up and down the mountain about two hundred thousand passengers without injuring one of them.

Mr. Marsh had had very little schooling, and no training at all as an engineer. He died in 1884.

HOUSE SNAKES.

In certain parts of Brazil, where the climate is intensely hot, and where rats are a great nuisance, the common cat does not thrive, but is replaced by a domestic rat-catcher whose presence causes a decidedly unpleasant sensation to visitors from the north, when they first come in contact with this creature. An American who recently visited Brazil upon a business tour, and who spent a short time at the estate of a well-to-do Brazilian on the San Francisco River, writes this account of his observation of the Brazilian rat-catcher:

"On the morning after my arrival, in descending the staircase from my room to go down to breakfast, I was frightened almost half to death at seeing an enormous snake curled up on the floor exactly at the foot of the stairs.

"The serpent was apparently asleep, but I was not at all sure that he might not be preparing to strike at me. So I ran back up the stairs with all the speed I could manage, and then proceeded to shout for help.

"In two minutes the hall was full of servants, all gazing at me in astonishment; and my host rushed out of his own apartment.

"'What is the matter?' he asked, in his best English.

"'Why,' said I, 'look there! Look at that snake!'

"I pointed at the coiled-up monster at the foot of the staircase, who now had lifted up his head a little, and was sleepily looking about him.

"The servants held their hands to their mouths, and my host laughed outright.

"'Why,' said he, 'that's only Pedro; that's our *giboia*.'

"'Oh,' said I, gasping, 'I thought it was a great snake.'

"'It is a snake,' said my host, 'but it is perfectly harmless, except to rats. You will not find a house in this part of Brazil without one. They keep the premises clear of rats. Pedro won't hurt you.'

"'But how am I going to get down-stairs?' I asked, uneasily.

"'Oh, you can step right over him.'

"I declined, however, to make this attempt; whereupon a servant came forward and, seizing the snake about the neck with both hands, dragged him out into the yard.

"I saw that the creature, as he was extended, was not less than four yards long, and as thick as the arm of the negro who dragged him out.

"Before I left the place I found out a great deal about *giboias*. They are a species of small boa constrictor, and are employed very generally in Brazil to catch rats. They are inoffensive, apparently not at all venomous, and in their domesticated condition, perfectly tame.

"In his habits Pedro was a good example of his race, though he was of considerably larger size than the average.

"All day long he slept somewhere in the house, generally at the foot of the stairs. But when evening approached he began to wake up, and after nightfall he glided swiftly about the premises, looking for rats.

"He even had holes which enabled him to get between the floors and ceilings, and into the space within the partitions.

"Whenever he found a rat he pounced upon him, wrapped him in his folds and carried him out of the house, leaving him dead. The servants told me that the backbone of every rat he caught was broken in at least a dozen places.

"As for me, I preferred the rats to the snake, and took good care that my chamber door was shut at night, and that there were no holes left open in the ceiling or the floor, from which Pedro might emerge into my apartment.

"He never seemed to eat the rats; indeed, I never saw him eat anything at all. The negroes said he killed the rats for the fun of it.

"I afterward saw *giboias* for sale in the markets of Pernambuco and Bahia for prices ranging from a dollar to two dollars. I was told that they easily became domesticated to such an extent that if they were removed from one house to another they invariably returned to the house from which they had been taken.

"In the country, therefore, the rat-snake goes with the house; and if you have occasion to purchase or hire a residence, the proprietor will brag about the virtues and skill of the *giboia*."

WHEN FALSTAFF DIED.

A' made a finer end, and went away an it had been any christom child; a' parted even at the turning o' the tide; a' cried out "God, God, God!" and a' babbled of green fields.—*Henry V. Act ii. Scene* 3.

When Falstaff died his faith was true,
For on God's name three times he cried,—
And close to him his childhood drew
When Falstaff died!

He passed "at turning o' the tide,"
"Of green fields babbled" that he knew
Fragrance and bloom had glorified.

Bardolph, Nym, Pistol—merry crew!
So often jesting by his side,—
Ah, how their eyes were brimmed with dew
When Falstaff died!

WILLIAM H. HAYNE.

AFTER HER BONES.

Up in a little Pennsylvania town perched on the top of the Alleghanies lives a patriarchal negro, known as "Old Booey." On the first day of the week he leads a small flock of his fellow-countrymen in their devotional exercises, expounding to them the Law, with many commentaries strictly his own. The other six days he devotes to gathering bones from far and near, which, after a sufficient quantity has been accumulated, he conveys to a fertilizer factory in a neighboring city, where such wares find a ready market.

So great has been his diligence in this good work that the neighborhood long since became thoroughly picked of its bones; and all sources of possible supply are now watched most narrowly.

It happened that a farmer of the locality, being of a thrifty turn, had himself been saving such bones as came in his way from time to time, thinking that when he had secured a sizable load he would carry them to the factory. But he had at last abandoned the project, and chancing recently to meet the old professional, he said, "Mr. Booey, there is a small pile of bones back of my barn which you can have, if you want them."

"Thank ye, sah, thank ye, sah; I'se mighty glad to get them."

He proved his sincerity by repairing almost immediately to the farmer's house. The farmer had not yet returned, and his wife, a particularly thin and rather acrimonious woman, came to the door.

"Goo' mawnin', ma'am," said Mr. Booey, with great courtesy.

"Well, what do you want?" she replied, a little sharply; for she was a woman who believed in wasting neither manners nor time upon those she thought beneath her.

"I'se come fuh yoh bones."

"My what?"

"Yoh bones."

"How dare you talk to me that way?" she exclaimed, greatly incensed, for her extreme thinness was a very sensitive point with her. "You shall answer for this when my husband comes home."

"Why, ma'am, yoh husban' tole me to come aftah them. He said he got tiahd seein' 'em round, and he be glad if I cart 'em off fur fertilizing."

She stood speechless, for a moment, with amazement and rage.

"My husband sent you?"

"Yas, ma'am."

"Oh, wait till I see that man!" she exclaimed, for she had given that meek and uncomplaining person a sound rating just before he left home that morning, especially charging him with excessive fatness and laziness; and she firmly believed he had taken this way to get his revenge.

"Yas, ma'am," continued the venerable bone collector, greatly nonplussed at this unexpected reception, but still intent upon accomplishing his errand; "he say dey aint many, and dey pooty old; and he reckon dey pooty dry; but if I put 'em 'long with de old hoss down by de crick, he reckon I git a load."

Most opportunely the farmer at that moment drove into the yard; and seeing his visitor, called out, "You'll find those bones down under the big apple-tree the other side of the wall."

It was a week before the farmer's wife recovered her cheerfulness.

DANGEROUS INTRUDER.

Jim Hazzard, a veteran Florida hunter, lives in a rough board cabin on a creek near Lake Crescent. Up to within a few weeks his cabin was a makeshift, tumble-down affair, with a hingeless door loosely propped against the entrance. Since that time a perilous adventure, which came near costing him his life, has caused him to put his dwelling in better repair, with a strong door securely fastened.

One night the hunter was awakened from a sound sleep by a sense that there must be something unusual in his room. There was a heavy jarring of the bed; and a loud *whoof!* brought him to a realization of his danger. The intruder was an alligator!

He sprang up in bed, and reaching a rafter above him, drew himself up. A clashing of jaws just below gave notice how narrowly he had escaped the alligator's teeth.

The moonlight streaming through the small window enabled him to make out the huge saurian, which was crawling on the bed, disgusted, no doubt, at having lost so good a meal. Hazzard felt that he was in a trap, perched upon a narrow rafter, with no arms and very slight hope of outside rescue. After a time the alligator lay still, apparently contented with his quarters and willing to wait for his prey.

Two or three hours passed, and the first streaks of dawn stole into the cabin. Through the open door came swarms of mosquitoes, which made the hunter's constrained position doubly painful. For an hour he fought them and then, worn-out and reckless, resolved to make a dash for liberty.

Gathering all his strength, Hazzard made a jump for the door. He cleared the alligator easily, but his feet slipped and he fell. The alligator instantly swung around. It was a moment of peril, and hardly knowing what he did, the hunter grasped the first thing that came to his hand, which happened to be a great pine knot, and hurled it at the enemy.

It was a lucky throw. The knot entered the saurian's mouth, and as the great jaws closed with a snap, the reptile's teeth were imbedded in the wood. For a moment the alligator was rendered harmless, and in that moment the hunter was on his feet, seized his revolver from the wall, and shot the reptile in the eye.

For the next few minutes there was a lively time in the cabin. The alligator thrashed about, and Hazzard fired shot after shot at him until the brute was dead.

AMAZING.

The ways of English and Americans are still appalling to the more indolent and less cleanly Southern nations, who have had for many decades large opportunities for studying these race peculiarities and yet have never ceased to wonder. When Mr. W. D. Howells was Consul at Venice an attempted burglary in the palace occupied by him gave occasion for the following suggestive incident:

In my account of this affair to the commissary of police, I said that the burglary occurred one morning about daylight, when I saw the head of the burglar peering above the window-sill, and his hand extended to prey upon my wardrobe.

"Excuse me, Signor Console," interrupted the commissary, "how could you see him?"

"Why, there was nothing in the world to prevent me. The window was open."

"The window was open!" gasped the commissary. "Do you mean that you sleep with your windows open?"

"Most certainly."

"Pardon," said the commissary, suspiciously, "do *all* Americans sleep with their windows open?"

"I may venture to say they all do in summer," I answered. "At least, it is the general custom."

Such a thing as this indulgence in fresh air seemed altogether foreign to the commissary's experience, and but for my official dignity I am sure I should have been effectually browbeaten by him. As it was, he threw himself back in his arm-chair and stared at me fixedly for some moments. Then he recovered himself with another "Pardon!" and turning to his clerk, said:

"Write down that, *according to the American custom*, they were sleeping with their windows open."

But I know that for all his politeness, he considered this habit a relic of the time when we Americans abode in wigwams.

OUT OF PLACE.

The commercial room of English hotels is devoted to that species of business man whom we designate as "drummer," and who, in America, fares with the other guests. John Poole, an English humorist of bygone days, once strolled into a hotel at Brighton, and ordered dinner. As he was discussing his savory chop, another man entered, took his stand by the fire, and began whistling. Finally, he spoke.

"Fine day, sir," said he.
"Very fine," answered Poole.
"Business pretty brisk?"
"I believe so."
"Do anything with Jones on the parade?"

Now it so happened that Jones was the grocer from whom Poole occasionally bought a quarter of a pound of tea, and so he answered:

"A little."
"Good man, sir."
"Glad to hear it, sir."
"Do anything with Thompson, in King Street?"
"No, sir."
"Shaky, sir!"
"Sorry to hear it, sir. Recommend a course of salt baths!"

The stranger looked earnestly at Poole, advanced to the table, and said, arms a-kimbo:

"Sir, I begin to think you are a gentleman!"
"I hope so, sir," answered Poole; "and I hope you are the same."
"Nothing of the kind!" exclaimed the stranger. "And if you are a gentleman, what business have you here?"

He rang the bell, and when the waiter entered, exclaimed, indignantly:

"Here's a gentleman! Turn him out!"

Poole had unwittingly settled himself in the commercial room of the hotel.

A PRETTY EXPERIMENT.

A pretty and interesting experiment, which may be new to some readers of *The Companion*, is that by which the growth of an oak plant can be watched, from its earliest stage.

Cut a circular piece of card to fit the top of a hyacinth glass, so as to rest upon the ledge and exclude the air. Pierce a hole through the centre of the card and pass through it a strong thread, having a small piece of wood tied to one end, which, resting transversely on the card, prevents its being drawn through.

To the other end of the thread attach an acorn; and having half-filled the glass with water, suspend the acorn at a short distance from the surface.

The glass must be kept in a warm room. In a few days the steam which has generated in the glass will hang from the acorn in a large drop. Soon the acorn will burst, and the root will protrude and thrust itself into the water; in a few days more a stem will shoot out at the other end, and rising upward, will press against the card, in which a hole must be made to allow it to pass through.

From this stem small leaves will soon sprout, and in the course of a few weeks the experimenter will be rewarded by having a sturdy little oak plant, several inches in height.

SHE REMEMBERED.

A city-bred youth was escorting a pretty little country girl, and was evidently proud of her in spite of a shade of embarrassment which now and then came over him at some slight outbreak of verdancy on her part.

As the car passed the Tombs, she cried out enthusiastically:

"Oh, there is that lovely Museum I read about. So they keep it open on Sundays, do they?"

"Yes," replied the young man, dryly, "they keep it open on Sundays."

"I remember you wrote and told me you were there twice."

The passengers were all well-bred New York people, and of course did not laugh, but some of them smiled.—*New York World.*

CHESTNUTTING.

We all went chestnutting over the hill,
Sam and Jennie, and George and I;
The air was frosty and clear and still,
And the nuts were as thick as they could lie.

At the foot of a tree, half hid by a rail,
The squirrels had heaped such a pretty pile;
But Sam just scooped them into his pail,
Though we begged him not to all the while.

Then Jennie and I heaped up some more
Of the biggest nuts, all fair and fat;
And Sam stole those, the same as before!
Now what would you do with a boy like that?

A LETTER FROM CONNIE.

ONTARIO, CAL., OCTOBER 1.

DEAR COUSIN RUBY.

I was very glad to get your letter. We hope you will be sure to come next winter. The winters are very nice here. We have rains, and the gardens are as full of flowers as they are in the summer, heliotropes and lots of roses and everything. And the hills get green after a while, and wild flowers come.

But all summer there is not one bit of rain, and it is full as hot as Chicago or anywhere.

I am glad you are all well. We are all well now. So is baby. She has got some teeth. She almost got hurt very bad a while ago, but I didn't mean to tell that. She has been well all summer. Mamma says babies do not get sick in the summer here.

She is so cute. She likes to ride in her cab, and I like to wheel her. I am very careful with her.

A while ago mamma was not very strong and had headaches. Sister had to do the work, and I had to tend baby. I used to get tired of it. It is hard to wheel the cab in the dust.

One time I said I almost wished we'd never had a baby. But I was sorry right off, and I was more sorry when—there! I said I wouldn't tell that. Now I will close. Your cousin, CONNIE.

P. S. I guess I will tell that after all. Maybe then I will feel better.

You see, I was going a-visiting that day, and in the morning sister said, "Connie, you'll have to go to-morrow, for mamma's got a headache again, and you must tend baby."

And I snapped right out that it was always that way, and I thought babies were an awful bother. Sister put her into the cab, and told me to wheel her up and down very careful, and not go far from the house. But as soon as she was out of sight I went right off to the avenue.

I don't know what made me feel so ugly. It never seems that way to me about baby now.

I guess I'll wait and tell you the rest when you come next winter. CONNIE.

Oct. 3.—I might as well finish. I'd rather write it than tell it.

There is cement sidewalk on the avenue. It is all down-hill for miles. The crossings are far apart. It is a nice place to run a cab if you are careful. It runs itself one way.

Well, I wheeled her up and down a while, and I kept thinking that if I'd known how much work 'twould be I wouldn't have been so glad to have a baby sister.

And then I let the cab stand at the up-hill crossing. I just put a little round stone under one wheel. I wanted to see if I could get a drink where the water was running close by.

All at once baby saw the water, and began to jump. That started the cab. I ran and tried to catch it, but it went faster and faster.

Oh, it went so fast! I couldn't scream or say a word, but I just kept running. I knew I couldn't catch it. I knew when it struck the crossing it would throw baby out. And then I thought what I'd said about her, and how I'd felt. I saw a Chinaman with a vegetable-wagon coming up the street. He stopped near the crossing and jumped out. I wondered what he stopped for.

And then, first I knew, he caught that cab right in his arms. And I couldn't say one word. I just took baby and sat down and cried and cried. And when I looked up the Chinaman was gone.

Sister got worried and came looking for us. And she thought I was sick, for I couldn't tell about it at first. And I thought they would all hate me when I told. But they seemed to be sorry for me. I shouldn't think they would; but they were.

And that's all, only I hope we can find the Chinaman. Your cousin, CON.

TOMMY'S GREAT INVENTION.

"I've thought of a new way to make money, Uncle Peter," said Tommy, as he came in from the wood-shed with a little box in his hand; "I'm going to invent things and get 'em patented."

"I suppose then you'll invent a jackknife that won't get lost, and a pocket that will never wear out, and a gold watch that can be bought for twenty-five cents."

Tommy didn't half hear, being very busy with his little box.

"Would you like to see my invention, Uncle Peter?" said he at last. "I've got it all fixed but just one little point. It's a mousetrap. See, here he comes, looking for his supper. And here's a sort o' little feed-box full of cake and cheese. And he smells the cheese, and keeps sniffing 'round till he sees it, and then in he goes at this hole, and flop comes the little door, and there's Mr. Mouse! Oh, it's lots better than a cat!"

"Why, of course 'tis," said Uncle Peter. "It'll never scratch the baby, or drink out of the milk-pan, or keep folks awake in the night. I can see it's better than a cat!"

"And I'll make a bigger one for rats and quite a good-sized one for rabbits, and maybe a great, immense one for bears. Wouldn't that be splendid?"

"I should think so!" cried Uncle Peter. "Let's have another look at this great invention of yours. Here he goes into this hole, and flop comes the little door—that's the way, isn't it? But what flops the little door?"

"Well," said Tommy, slowly, "you know I said there was just one thing I hadn't got hold of yet. I've thought, and tried, and I can't seem to find any way to flop that little door when the mouse goes in. But I'm not going to give up on account of a little matter like that, even if I have to sit behind the wood-box and flop it myself!"

ONE day Bell had been visiting one of her playmates, and was given some Siberian crab-apples. On her return home she said, "Mamma, Mr. Stevens has some of the nicest Presbyterian crabs you ever saw."

SOLID COMFORT.

For the Companion.

PUMPKIN-PIE.

Pumpkin-pie is good to eat,
Cold and creamy and rich and sweet,
Good for breakfast and dinner and tea,—
Who will eat pumpkin-pie with me?

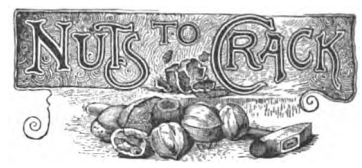
For the Companion.

LITTLE "QUICK'S-A-WINK'S" TOILET.

One morning, early last September, Edna and Jamie and I had settled ourselves on the wall under the old balm-o'-gilead-tree at the top of the hill to rest, for we had been on a long walk far up on "Scrabble Hill" to gather great bunches of fragrant pennyroyal and catnip, which grew there in abundance and was in full flower now, and also for a lookout over the beautiful country.

We had sat there under the balm-o'-gilead some time, chewing bits of pennyroyal, when along came a little chipmunk, that Jamie dubbed "Quick's-a-wink," he was so spry. He was on his way home from the pear-orchard at the foot of the hill, where he had been taking breakfast; and we guessed, and rightly, too, as it proved, that he had his cheeks full of seeds for lunch, they were so plump.

We were sitting directly in his path, for the walls are the squirrels' roadways, and "Quick's-a-wink" did not like it. He danced about on the wall in a great panic, ran in and out between the stones, and scolded and "snickered" and flirted his tail, as though he expected to drive us off.



But we sat as still as mice. By and by, after the little fellow had "freed his mind," he cooled off and sat down on his small haunches, not a yard away from us, to wash his face like a little cat.

How his tongue flew! And his tiny paws scrubbed his small face—now this way, now that—till his soft fur was rumpled all over his bright eyes, like a careless schoolboy's hair, and he looked quite savage.

Then something tickled his ear—a little woodtick, perhaps. Up went the tiny hindfoot—dig—dig—dig! The woodtick's account was settled in a trice, and he went on with his washing with greater speed and earnestness. We could scarcely see his paws, they went so fast, and his head spun around like a top, till the pear-seeds flew out of his cheeks.

It was comical, and Jamie, instead of the chipmunk, "snickered" this time.

"Chickar-chirr-rr-rr!" Down dodged "Quick's-a-wink" into the wall, and we went on and left him to smooth the fur out of his eyes and go home his own way.

Enigmas, Charades, Puzzles, etc.

1.

ANAGRAM.

The first and third lines of each stanza rhyme; also the second and fourth. The omitted words are all formed from the nine letters omitted from the last line.

Dear mamma, I was coming home * * * * *
Last Monday night, through the rain,
When whom should I meet but young Jamie Stone,
Just down by the gate in the * * * *.

Now, Jamie pretends that he loves me * * * *,
But I think he turned quite pale
When he asked why I shun him. I ventured to tell.
"Because you love lager and * * *."

"Will you leave them," I asked, "and cigars and * * *?
Will you give them up for me?
Will you sign the pledge at the temperance * * * *?"
But he would not promise—not * *.

When we met last night to try fortunes * * * *,
In the kitchen of Cousin * * * * *,
Jamie's nut with mine in the fire he threw,
But they popped far asunder, I * * * *.

And when in the glass my ring hung * * *
It jingled at H. * * ! * * !
And H is my brother's initial, you know,
And he never smoked a cigar.

I'd rather be loved by my dear brother * * *,
Than by any one else I've seen;
So I gladly accept the prophetical
Prognostics of this * * * * * * * * *.

2.

AUTUMNAL ACROSTIC.

From one of Longfellow's poems.

Read in the primals the name given by French peasants to the Indian Summer.

1. "The forget-me-nots of the angels."
2. A word superstitious minds have seen written by a comet on the sky.
3. A bird—"wildest of singers."
4. "The bridegroom of snow."
5. A heroine. "When she had passed it seemed like the ceasing of exquisite music."
6. A wild animal of the prairies.
7. "The Beautiful River."
8. An instrument to which the whip-poor will's voice is likened.
9. "A country where all men are equal, and all are brothers and sisters."
10. A water blossom that "lifted her golden crown above the heads of the boatmen."
11. A State called by the early settlers an Eden.
12. An insect, once supposed, in certain conditions, to cure fever.
13. Historical character, to whose sons the Indian tribes are likened.
14. A flower "wet with the dews of nepenthe."
15. That, in which to be efficacious, 12 must be enclosed.
16. A flower that made a ladder of rope hung from a cedar.
17. A tree that (5) stood by a heroine's door. E. L. E.

3.

BEHEADINGS.

1. Behead the opposite of there, and leave the opposite of after.
2. Behead the opposite of never, and leave the opposite of loss.
3. Behead the opposite of to grow strong, and leave the opposite of delight.
4. Behead the opposite of to borrow, and leave the opposite of the beginning.
5. Behead the opposite of informing by writing, and leave the opposite of to throw into disorder.
6. Behead the opposite of indifference, and leave the opposite of being in good health.
7. Behead the opposite of being depressed, and leave the opposite of early.
8. Behead the opposite of to starve, and leave the opposite of denoting distance.
9. Behead the opposite of either, and leave the opposite of neither.

The beheaded letters, in the order here given, spell the close of October.

CYCLONES AND TORNADOES.

There are two terms used by meteorologists, as men who study the weather call themselves, which are often confused in the newspapers. These are "cyclone" and "tornado." It almost always happens that the former word is used where the latter is intended. The terrible whirlwinds that frequently cause so much destruction of life and property in the West and Southwest are really tornadoes, though it is rare to see them described, except in the writings of men of science, by any other word than cyclone.

A cyclone, properly speaking, is a storm covering a vast extent of country—some are one or two thousand miles in diameter—and having a system of winds which really blow spirally round, and gradually in, toward the centre of the storm, although, owing to the great extent of the storm, the wind at any particular place seems to be blowing straight ahead.

Near and around the centre, and especially ahead of it, for the whole storm advances generally toward the east or northeast, rain falls in greater or less quantities. At the centre the air is lightest, or the pressure shown by the barometer is least, and that is the reason the winds are all drawn in that direction. The spiral motion arises from the effects of the rotation of the earth. Almost every storm that we have, except summer thunder-showers, is a cyclonic storm.

A tornado, on the other hand, is a fierce whirlwind whose path is generally only a few rods wide, although it may travel for many miles, destroying everything in its way. A black, funnel-shaped cloud is always a feature of the tornado. This funnel is formed by condensed vapor and clouds of dust and debris in the very core of the whirlwind, and wherever it passes nothing but the solid ground can withstand it.

But while cyclones and tornadoes are different phenomena, the former appear to give rise to the latter. Tornadoes almost always break out, if at all, on the southeasterly outskirts of a cyclone.

Early in July of this year a cyclone swept up from the Gulf of Mexico into the lower part of the Mississippi Valley, and like offshoots from this great storm, a number of tornadoes accompanied or followed it, killing many people and cutting a path three hundred feet wide through a part of the city of Baton Rouge.

The exact nature of the connection between cyclones and tornadoes is not yet understood; but the distinction between them is so clear that nobody should ever bestow upon one the name that belongs to the other.

MOOSE AND LOCOMOTIVE.

On Sunday, July 12th, as a short train of flat cars was running up the Duluth & Winnipeg Road into Itasca County, Minn., for a load of cedar poles, a large moose was discovered near the track. In an instant he fled ahead of the train along the old tote path used by Indians and woodsmen before the railway was built. The path is close to the car-track, and at this point, about fifty miles from Duluth, is parallel with it, passing over the almost dead level divide between the Mississippi River and the Great Lakes.

As there are no regular trains on Sunday, the engineer had a clear field, and determined to show the moose how to run. The iron horse snorted and bounded along over his track of steel, while all on board intently watched the race, cheering alike the engine and the moose. It was a four-mile straight-away run, but in the excitement no one registered the time.

Thrice the moose faltered as the path led over deep ravines spanned only by rude and rickety log bridges, but as the train thundered close upon him, he each time plunged ahead to increase again the distance between himself and his heartless pursuer.

His gait was an indescribable trot, such as only the moose can exhibit; his hind feet fanning his ears, his tongue lolling from his mouth, every muscle in his body moving, while his paces were apparently two rods in length. At first it was only a little jog, but as the engine began to do its best the moose let himself out a knot at a time, and all the mysterious power of steam could not prevail against this monarch of the forest.

Faster and faster sped the engine, but still the frightened moose trotted in the van, letting out his tongue another link, and adding a knot, as it was needed, to his gait. But when four miles had thus been traversed, the contestants came upon a clearing where men were gathered.

Thus driven from his pathway, and forced to abandon what seemed a playful pastime, the moose dashed across the track several rods in front of the engine, and a moment later, without awaiting the award of his well-earned laurels, was lost to sight in the forest.

ALTOGETHER DIFFERENT.

General Thomas was greatly beloved among the private soldiers. As Napoleon became the Little Corporal of his army, so was this man affectionately remembered as "Old Pap Thomas" by the Army of the Cumberland. He was always ready to do the "little kindnesses" which go straight to the popular heart, and once, when he had refused a boon, was reproved in a way which decidedly amused him.

A private soldier who was very homesick went to headquarters to obtain leave of absence. The general asked him why he wanted a furlough, and the poor fellow replied, in the most dejected manner:

"General, I haven't seen my wife for more than three months."

"Why," said the officer, "that's nothing. I haven't seen my wife for over three years."

"Well," said the soldier, "that may be, General, but me and my wife *ain't them kind*."

The furlough was granted.

A BRIGHT RETORT.

It is said of a certain literary woman that she is never at loss for a reply, and never misses an opportunity to say a bright thing.

One day a friend was describing to her a noted artist, about whom her curiosity had been greatly aroused, but whom she had never seen.

"To begin with," remarked the friend, "he has a perfect Niagara of a forehead!"

"What?" said the other. "Do you mean to tell me the poor man has a cataract over both eyes?"

Experts Agree that

PERFECT and uniform success in making finest food is more certain with Royal Baking Powder than with any other. Use it in every receipt calling for baking powder, or for cream of tartar and soda, and the lightest, purest, most wholesome and appetizing food is assured.

MARION HARLAND: "I regard the Royal Baking Powder as the best in the market. Since its introduction into my kitchen I have used no other."

MISS MARIA PARLOA: "It seems to me that Royal Baking Powder is as good as any can be. I have used it a great deal, and always with great satisfaction."

MRS. BAKER, Principal of Washington, D. C., School of Cookery: "I say to you, without hesitation, use the 'Royal.' I have tried all, but the Royal is the most satisfactory."

M. GORJU, late *Chef*, Delmonico's, New-York: "In my use of Royal Baking Powder, I have found it superior to all others."

A. FORTIN, *Chef*, White House, for Presidents Arthur and Cleveland: "I have tested many baking powders, but for finest food can use none but 'Royal.'"

EXPERIENCE MAKES THE CRITIC.

Your physician may have the theory of curing dyspepsia, and have read the works of scientists who treat on dyspepsia, and yet his lack of experience with actual cases may be so defective, that his attempts to cure are useless. My **"Advice to Dyspeptics"** tells how to cure dyspepsia, and gives hundreds of testimonials from grateful persons who have been cured of this disorder. Send for it. **Free** to any address.

JOHN McALVIN, Lowell, Mass.

TORU DUTT.

India has had one real poetess, a young girl, called familiarly Toru Dutt, who had the exceptional advantage of a thorough education. She and her sister Aru not only shared their brother's English lessons, while living in Calcutta, but were given the benefit of travel and extended instruction in France and England. On their return to India, Toru at once began writing for publication, and so skilful was her use of the English language, that it became a general belief that her work was that of some English writer who had chosen to adopt an Indian pseudonym.

In 1876, when she was twenty years old, Mr. Edmund Gosse was reviewing books for an English newspaper, and it is his account of a certain visit paid at the editorial office, in the "dead season" of the year, that he spent it in upbraiding the whole body of publishers for issuing no books worth reviewing.

"At that moment," he says, "the postman brought in a thin, sallow packet with a wonderful Indian postmark on it, and containing a most unattractive orange pamphlet of verse, entitled, 'A Sheaf Gleaned in French Fields.'

"This shabby little book seemed speedily destined to find its way into the waste-paper basket, but the editor thrust it into my unwilling hands, and said: "'There, see whether you can make something of that.'

"A hopeless volume it seemed, with its queer outside and queerer type, but when at last I took it out of my packet, what was my surprise and almost rapture, to open upon real poetry!"

Toru's acquaintance with French and English literature was something remarkable, and her translations were full of grace and spirit. Both she and her sister found time for a great amount of serious study, but they were also enthusiastic novel-readers.

"What are your favorite books?" asked an English gentleman who was paying their father a visit.

"Oh, novels of course," answered Toru, without delay.

"Novels!" exclaimed he. "I am sorry to hear that. You should read history."

"Oh no," was the reply. "History is false, but novels are true."

It was truth of thought, life and character which these Bengali girls sought; they tried to steep themselves in the actual atmosphere breathed by different nations.

Toru Dutt was but twenty-one when she died, and yet she left behind her not only original poems and translations, but the manuscript of a French novel which, amid all its imperfections, still shows remarkable promise.

"It is only physical pain which makes me cry," she said to the doctor, in her last moments. "My spirit is at peace. I know in whom I have believed."

BIGGEST FOR THE DAY.

"'Tis sweet to be remembered," as every one knows. But to be remembered for an act of foolishness? Well, even that is sometimes money in a man's pocket. Said a New York gentleman to a *Herald* reporter:

I went to the post-office the other day to buy a dollar's worth of one-cent stamps, and when I got home, some six miles away, it flashed upon me that I had given the clerk a five-dollar bill and hurried off without my change.

The next morning I went the first thing to the post-office. The stamp clerk was serving a long line of customers, and I took my place at the foot of the string. How unlikely it seemed that he should remember me among the crowds that had been at his window the day before!

As I got near him, however, and began to speak, he took up from the counter before him four one-dollar bills and silently passed them through the window.

"Thank you," said I. "I didn't know but among so many fools you might have forgotten me."

"Yes, I might have," said he, as he reached out toward the man behind me, "but you were the most conspicuous one yesterday. Two's did you say, sir?"

WINTER AND SUMMER.

An Englishman who, after grumbling about his native country for more than half a lifetime, at last made up his mind to emigrate to New Zealand, was asked why he chose that far-away part of the world for a place of residence.

"Why," said he, "it is because nature has made a much better arrangement of the seasons there than it has here."

"What do you mean?"

"What do I mean? Why, it's a great mistake of nature, as any one must see, to have the cold weather come in the winter and hot weather in the summer. How delicious it must be to have it hot in December, now, which is the cold, freezing season, and what a blessing to get bracing cold in July when everybody needs it! Now that's the way they have it in New Zealand, and that's what I call a sensible arrangement of the seasons!"

HE RESENTED IT.

Among the reminiscences of Hannibal Hamlin which have been revived in print since his death, is a characteristic anecdote of his boyhood.

When about ten years old he broke his arm, and upon the splints and bandages being taken off in due course of time, it was found that the bone had slipped out of place.

Another surgeon was summoned, and without giving the boy a hint of what was coming, he broke the bone again, so as to set it properly.

Thereupon the youthful Hannibal, who still had one sound arm, drew off and struck the doctor in the face; a performance which was excused, but with the remark:

"When I operate upon you again, young man, I shall have you strapped down."

REWARD OF BRAVERY.

Patrick McX—— is a great admirer of personal bravery, and never fails to insist that men of intrepidity are entitled to great favors and privileges.

He was told the story of a murderer who had died bravely on the gallows, taking the whole matter with smiles and gay words.

"An' sure," said Patrick, "whin a man has died on the gallows as brave as that, the giver'ment should pardhon him on the shpot for his bravvery!"

FIVE GREAT MUSIC OFFERS

1200 Pages, Containing 1200 Pieces for $2.00.

It has been estimated that there are, in the United States alone, over three million homes that have musical instruments. All these need music. It has been our aim to furnish this in such a shape and at such a price, that we have finally reached a point where we offer music at the rate of six pages for one cent.

In submitting the following great music offers for the approval of the readers of The Companion we deem it unnecessary to take up much space to prove our entire reliability. The fact that during the twenty-five years that we have been in business in Boston we have so largely and repeatedly advertised in its columns is sufficient evidence that we have always done just as we agreed to, and our motto is "Satisfaction guaranteed or money refunded."

OFFER No. 1. 200 VOCAL AND INSTRUMENTAL PIECES COMPLETE and UNABRIDGED 75 cents.

No other Music Book ever published can equal this one. It has 320 pages (each 10x12¼ inches) and colored covers. The plates average larger than those usual for sheet music. The paper is of fine book quality, and the press work the best. Some idea of its size can be formed from its weight—33 ounces. The contents of the book are divided into four parts:—

SONGS WITH ACCOMPANIMENTS.

A B C Duet . . . . . John Parry	Gipsy Countess. Duet . . . . S. Glover	On Venice Waters . . . . . O. Roeder
Across the Bridge . . . . . G. LeBrunn	Juanita . . . . . T. G. May	Out on the Deep . . . . . F. N. Lohr

Sent to any address on receipt of price and postage, 20 cents. Money refunded if not satisfactory.

STREETER BROS.,
State and Madison Streets, CHICAGO.

Your silver is bright the day it is bought and shines each day it is cleaned. Between times it is dull-looking and tarnished. Once a week—on cleaning day—it is bright silver and on the other six days, as far as appearance goes, it may be tin or pewter. Why not have it shine like new silver every day? Provide your maid with Stilboma and she can easily keep the silver bright and shining every day in the year, with little effort.

A large sample of Stilboma will be sent to any one who will mention where this advertisement was seen and enclose six cents in stamps. THE CHANDLER & RUDD CO., Cleveland, Ohio.

Success With Flowers

THE OCTOBER NUMBER

of THE DINGEE & CONARD COMPANY'S NEW FLORAL MONTHLY makes a special feature of seasonable Bulbs for Fall Planting. Describes with directions, and an illustrated diagram showing how to plant the different classes in open ground, distance apart, depth, etc.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THE MICROBE OF MALARIA.

The discovery that most infectious diseases are due to microscopic organisms wrought a revolution in the practice of medicine. Continued investigations by experts in all parts of the world have confirmed the original discovery, and may be said to have placed it among established facts.

It has been further shown that microbic diseases are infectious only because the microbes, or their spores or seeds given off by the patient, find their way into other persons, either as inhaled by the lungs, swallowed with food or drink, or absorbed by some abraded surface. Even consumption has been proved to be a microbic disease, and therefore infectious.

Another important fact has been established, namely, that persons in high health, with the system in a state of vigorous functional activity, are not greatly liable to infection, the microbic invaders being killed by the serum, or by the white corpuscles of the blood.

Most microbes are microscopic *plants*. This is true of those known as bacteria, which are akin to the yeast-plant so valuable to housekeepers. The power of a little leaven to "leaven the whole lump" depends on its unlimited power of multiplication.

But some microbes are animalculæ. A few years ago certain experts thought they had found the cause of intermittent fevers in certain bacteria, and the discovery aroused much enthusiasm. Later investigations, however, led the best authorities to reject the supposed discovery.

In 1884 Laveran published a work on "Paludal [marsh] Fevers," in which he professed to have discovered the cause of these fevers in an animal parasite. Says the *Medical and Surgical Reporter:*

"During the past six years evidence has been accumulating from all parts of the world confirmatory of the results obtained by Laveran, and there is largely the same kind of evidence that the plasmodium discovered by him in 1880 is the infectious agent of intermittent fever, as there is that Koch's bacillus is the cause of tuberculosis."

These parasites are colorless, pear-shaped bodies, about half as large as a red-blood corpuscle, and are furnished with whip-like appendages by which they move. They invade the red-blood corpuscles, and destroy them by feeding on them.

Out of four hundred and eighty cases of intermittent fever, Laveran found these parasites present in four hundred and thirty-two. Another expert found them in every case, and never in healthy subjects, or persons suffering from other diseases. There are different species, corresponding to the different forms of intermittent fevers, and accounting for the regular succession of the ague fits. These intervals are the time necessary for the production of new broods of parasites, and their invasion of fresh blood-corpuscles.

"MADAGASCAR."

He was a big brown dog, the pet of the regiment. Colonel R——, his master, had brought him from Madagascar, hence his name. When he first joined the company he was devoted exclusively to his owner, but in the course of three months he had become everybody's dog; and with good reason, for all the men made much of him.

When we were at Fair Oaks, Va., Madagascar first began to do picket duty. There was one outpost where he always spent the night, no matter what soldier might be on duty there. The various sentinels tried vainly to coax him to other places; he never went.

It gave a fellow a very pleasant sensation to have that big brown dog curled up asleep near him. Madagascar would hear the slightest sound. If a leaf or twig rustled he was on the alert, and would start off to investigate. If he found everything quiet he would return, lie down and go to sleep again. But if it was an enemy or a stranger, he would growl and stand guard until the sentry spoke to him.

One morning in winter, just before dawn, Madagascar suddenly rose and trotted off to a line of oaks. He growled, and the next moment there was a smothered exclamation in a hoarse voice. There followed a burst of flame in front of our picket line, and a shower of bullets whistled by us. One man was shot.

We returned the fire; and then, after a few random shots, silence again reigned. Madagascar had evidently frustrated the enemy's plan of surprising us. For when the relief force came, there was no sign of the attacking party save their tracks in the mud, showing their line of retreat.

But where was Madagascar? Two hours after the little skirmish was over, the noble dog was discovered dragging himself painfully toward the picket post where he had spent the night. He was sorely wounded, and despite all that could be done, he died that day at noon.

Madagascar was buried, wrapped in a tattered flag, and his comrades of the picket-line fired a soldiers' volley over the dog-soldier's grave.

WHO'S GOT THE BUTTON?

A New York boy who keeps his eyes open for curiosities, describes in a letter a queer little establishment which he visited not long ago. He was out shopping with his mother, who was trying to find a dressmaker in a big block down town, when he happened to spy two little signs over a door, which read:

BUTTON-HOLES INSIDE.
ANY BUTTON MATCHED—TEN CENTS ONLY.

"I begged to look in, and mamma said that perhaps I could match the button I had just lost off my jacket. So we went into a queer little room, where a very old man sat behind a counter sorting buttons. A smaller room opened out of this one, and I saw a young girl sewing at a tiny table. Back of the old man were shelves on which were piled boxes of buttons.

"I asked if he had any like those on my jacket. He took down several boxes, and soon found one, and the girl sewed it on my jacket right there.

"We paid him, and mamma asked about the business, for she had never heard of such a shop before. He told us that he and his granddaughter made enough to live on. She makes the button-holes for a cent and a half apiece, and he goes around collecting buttons. Tailors, dressmakers, clothing shops and junk-men save them for him, and he buys them pretty cheap.

"He let me look over his collection, of which he seemed very proud. I never saw such a variety of colors, shapes and sizes. There were buttons of gold, silver, pearl, agate, glass, bone, jet, shell, gilt, nickel, brass, silk, crochet, onyx, ivory, steel, horn, porcelain, and I don't know how many more substances.

"Sometimes he gets a good price for a rare button, but the usual price is ten cents.

"He has regular customers; for all the shops where he buys odd buttons send people to him, and they seldom go away without finding the very thing they are after."

NATURAL INFERENCE.

It was Saturday afternoon, and time that little Mary should begin the preparation of her Sunday-school lesson; but unfortunately, she was deeply engaged in designing a new and especially elaborate tea-gown for her oldest doll, who, so Mary thought, had reached a time of life when a tea-gown could no longer be dispensed with.

Her mother several times called the attention of the busy little dressmaker to the advanced hour of the afternoon; and finally her older sister, taking a Bible from the bureau, said, "Come, Mary, I'll help you learn your lesson, and then you can go back to your play."

Mary came over to her sister's side, ready to begin the lesson, when suddenly she exclaimed, "Sister, let's study it out of grandpa's Bible."

"But what difference can it make?"

"Why, grandpa's Bible is so much more interesting than yours."

"Oh no, Mary, they are just the same exactly."

"Well," replied the observing child, who probably had no thought of rebuking anybody, "I really think grandpa's must be more interesting than yours; he reads it so much more."

OF GOOD QUALITY.

Wit is so often used as a weapon of discourtesy that it is doubly pleasant to meet, as we do now and then, with a case of the opposite kind.

Some of the English nobility were travelling in the west of Ireland, and one of the company, who had been told that the natives would be sure to agree with everything that might be said to them, determined to test the truth of the assertion. Accordingly, in one of the coasting trips with which the tour was diversified, while the wind was blowing half a gale, he shouted to the Irish pilot:

"There's very little wind."

The answer came back at once:

"Thrue for you, sir. But what there is is very strong."

NOT IN THE BOOK.

The idioms of the English language add not a little to its beauty and usefulness; but they are sometimes capable of an interpretation quite different from the one intended.

A lady famed for her skill in cooking was entertaining a number of friends at tea. Everything on the table was much admired; but the excellence of the sponge cake was especially the subject of remark.

"Oh," exclaimed one of the guests, "it is so beautifully soft and light! Do tell me where you got the recipe!"

"I am very glad," replied the hostess, "that you find it so soft and light. I made it out of my own head."

SET BACK.

The misplacing of a single letter seems a trifling thing, but what a revolution of meaning it may produce!

A sign made of cardboard letters, hung on a wire in a furnishing store, announces to the public of Boston that the establishment is Blank's Shirt Store. But the *s* of the final word somehow slipped along toward the preceding word, and the passers-by were surprised to read: Blank's Shirts Tore.

AN astute bachelor declares that he is never going to marry till he can get a wife with money enough so that he can support her handsomely.

"I will never buy a cheap extract again," said a Mrs. Brown, when she found her child's life in danger from eating an ice cream flavored with an extract recommended for its cheapness. Buy Burnett's, and be sure.

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

JORDAN, MARSH & CO., Boston, Mass.

Short-sighted

—the woman who doesn't use *Pearline;* the woman who fails to have her servants use *Pearline.* She fails to see what is good for her; she fails to have what is best for her.
Without *Pearline,* washing and cleaning is drudgery and toil, and wear and tear, and rub, rub, rub. With it, there is no hard work, and no harm to the finest things; there is little or no rubbing. Use *Pearline,* and rest from your labor; the rest of your labor—the hardest part—is done by *Pearline.*

Fore-sight The woman has fore-sight who refuses the imitations of Pearline offered by peddlers and unscrupulous grocers, which they claim to be "same as Pearline," or "as good as Pearline." IT'S FALSE—besides, Pearline is never peddled.

Vol. 64. No. 44.
Premium Number, Forty-Eight Pages.

This is the Regular Issue of The Youth's Companion for October 29, 1891.

$1.75 a Year.
Single Copies, Five Cents.

An Unparalleled Offer!

Seven Thousand Dollars in Cash

To Be Divided Among Our Workers.

In Former Years our Presents of Cash were given to those who secured the **largest lists** of Subscribers to THE COMPANION. This year a different method of award has been adopted, by which Subscribers will share in a **Large Sum** of **Money** for securing **smaller** lists of New Subscribers. The **Extraordinary Offers** named below make it possible for every Persistent Worker to be sure of receiving a handsome Additional Reward.

Four Thousand Dollars

Will be DIVIDED EQUALLY among those of our Subscribers who between November 1, 1891, and July 1, 1892, shall each send us EIGHT NEW SUBSCRIBERS who have each paid $1.75—the full subscription price of THE COMPANION.

This Division of Money will be made in ADDITION to the Premiums given for the Eight New Subscribers, and in ADDITION to the EXTRA Premium given for each list of FIVE New Subscribers.

Three Thousand Dollars

Will be DIVIDED EQUALLY among those of our Subscribers who between November 1, 1891, and July 1, 1892, shall each send us THIRTEEN NEW SUBSCRIBERS who have each paid $1.75—the full subscription price of THE COMPANION.

As only a comparatively few send us Clubs of Thirteen New Subscribers, the proportion of money to be received in this class will be much greater than in that of the **$4,000** OFFER for Eight New Subscribers.

This Division of Money will be made in ADDITION to the Premiums given for the Thirteen New Subscribers, and in ADDITION to the EXTRA Premium given for each list of FIVE New Subscribers.

An Extra Premium for Five New Subscribers.

If, between the dates named above, any Subscriber sends us **Five** New Subscribers to THE COMPANION, he will be entitled to an **Extra** Premium consisting of Goods to the value of $4.00, to be selected from the PREMIUM LIST at the prices there named. This **Extra** Premium will be given in **Addition** to the Regular Premium for each New Subscriber.

Conditions Under Which the Cash is Offered.

ANY SUBSCRIBER COMPETING under the above Offers MUST CONFORM TO ALL the conditions for getting New Subscribers that are named on this and the next page.

WE INSIST AS AN ABSOLUTE condition that every New Subscriber sent us in competition for the extraordinary Gifts offered above, shall be a bona fide Subscriber who has paid $1.75 for the paper. No name of a person to whom the paper is given by the Subscriber competing for the gifts will be allowed to apply on these Offers.

IN COMPETING FOR A PRESENT a Subscriber must act for THE COMPANION alone, and not for any other paper, unless he finds a person who wishes to take, in connection with THE COMPANION, one of the papers we offer on our club list.

IF ANY OF THESE CONDITIONS are violated—even in a SINGLE instance—the Share in the Division of Money will NOT be given to the Subscriber who might, if he had been honest, have been entitled to it.

A SUBSCRIBER will be allowed but one share in EACH of the above Divisions of Money—a list of twenty-one New Subscriptions entitling him to share in both.

Conditions Covering the Extra Premium.

THE FULL VALUE OF THE $4.00 EXTRA PREMIUM must be taken in GOODS from this PREMIUM LIST, and selected all at one time. No part of the value of the Extra Premium can be used to pay the "additionals" required on regular Premiums, or transportation or packing charges on any goods.

THE $4.00 EXTRA PREMIUM must be reckoned at prices named for a single article, and not at prices that may be quoted for goods by the quantity.

SHOULD THE ADDED PRICES of the goods selected as an Extra Premium happen to exceed the $4.00 allowance, the difference in value must be remitted with the order.

THE EXTRA PREMIUM offered for each Club of Five New Subscribers, or multiple thereof, will be forwarded as soon after they are earned as you may notify us to do so. This notification must be accompanied by a list of all the New Subscribers, with addresses, which you have sent us during the season. The competition for these Extra Premiums and Cash Presents begins with November 1, 1891, and closes July 1, 1892. Unless the Extra Premium is selected previous to August 1, 1892, it will not be allowed.

Special Instructions to Our Subscribers.

Special Instructions.

Enclose a two-cent stamp with all letters requiring answers.

Subscriptions to The Youth's Companion can commence with the first of any month during the year.

Send your new names as you get them. Always send the payment for each subscription with the name. We cannot enter a new subscription on our books unless payment is made at the time the new subscriber is sent.

You can send for a Premium for each new subscriber as you send us the names, or you can complete your list and then select your Premiums, as you may prefer.

You must not delay ordering all Premiums due you LONGER THAN A YEAR after the new subscribers are sent. We cannot promise to send the Premiums after this time.

When calling for Premiums on new subscribers which have been placed to your credit, **in every case** we shall require a complete list, with addresses and dates of sending, of all new subscribers forwarded by you since your **Premium Credit** account was last squared.

When you write regarding your subscription, or send us new subscribers, or order Premiums, *be sure* and sign the name that is printed on your COMPANION each week, and also give the name of the post-office from which you take the paper. **This is necessary** for us to find your name on our books.

How to Send Money by Mail.

There are four ways by which money can be sent by mail at our own risk,—by a Post-Office Money Order, Bank Check or Draft, or an Express Money Order, and *when neither of these can be procured,* in a Registered Letter. **If you send your money in any other way, you must do it at your own risk.**

Postal Notes are not Safe. Subscribers who send us Postal Notes must do so at their own risk.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost. Whoever sends silver to us in a letter must do it at his own risk.

Postage Stamps will not be received in payment for your subscription. If sent, they will be returned.

Special Notice.—When you send money to us, include the *entire amount* you wish to send us in the Post-Office Money Order, Express Order, Postal Note or Bank Draft, and thus avoid sending stamps.

Payment of Postage.

Do not forget to send the postage on your Premiums, **Extra** Premiums and Goods purchased. We cannot agree to forward the articles unless the full amount of Postage has been received.

Responsibility for Lost Packages.

We are not responsible for the delivery of packages sent by mail, but, by means of a system at our command, we are able to guarantee the arrival of goods when a person adds **three cents** to his or her order for Premiums or purchases.

The "Additional."

The "additional" money asked for on some Premiums is **not** for Postage, but is for the extra cost of the article. It must be sent in addition to the sum required for Postage.

THE
Companion
SENT FREE.

You can promise New Subscribers that if they subscribe either in November or December, that the publishers will send the paper FREE from the time the subscription is received to January 1, 1892, and will give a year's subscription from that date.

Complaints.

Delays in receiving Premiums.—If the goods which you have ordered are not received by return mail or express, do not feel unduly anxious, or write at once. Allow a reasonable length of time for delays on the road and at our office, and then write us a letter. When you write, follow these rules carefully:

Give as nearly as possible an EXACT COPY of your original order, being sure to give DATE when the letter was mailed.

Did it contain subscriptions?—If so, give names and addresses.

Tell us the amount of money you enclosed, and if it was in a money order, bank draft, or express order. If either of these, give us the date, number and amount of order or draft.

If you registered your letter, give us the date of your receipt. This information is necessary for us to find your order.

Premiums and Goods by Express.—Sometimes we think it best to send goods by prepaid express, rather than by mail, therefore please inquire at both express and post-office before making complaint.

Our Sales Department.

The articles in this PREMIUM LIST can be purchased by any one, whether subscribers or not, at the prices named.

We would suggest that friends and neighbors wishing to purchase goods from our PREMIUM LIST can save the mail charges by clubbing their orders and having the goods forwarded to one address by express. Many have followed this suggestion, with good results.

Suggestions for New Premiums.

Occasionally we are asked to make some change in our Premium offers, or to send some article not offered in our PREMIUM LIST. On account of the magnitude and detail of our business we are obliged to decline all such requests. We will, however, favor our subscribers by allowing them an opportunity to make **suggestions** for such Premiums as they would gladly work for at some future time. The best of the suggestions will be carefully considered when making up our next PREMIUM LIST. Any such suggestions, to receive attention, must be written on a sheet by itself, and not be a part of any other correspondence.

Giving the Paper to a Friend.

When you give a year's subscription of THE YOUTH'S COMPANION to a friend, please *state the fact* when you send us the new name. By so doing, the paper will be stopped by us at the close of the time to which it has been paid. Your friend will thus be saved the annoyance of receiving a bill for the next year's subscription.

Conditions Under Which Premiums are Offered.

1. The Premiums are offered to *subscribers only.* By subscribers we mean persons whose names are on our books, and to *whose addresses* we regularly mail each week a copy of THE COMPANION.

2. No Person can receive a Premium on his own name, or that of any member of his own family; but, if any person will *first* subscribe for the paper, and *then* use his time and influence to obtain new subscribers, he will then be entitled to a Premium for each new subscriber he may solicit and send us.

3. No Premium is given for less than a yearly subscription to THE COMPANION.

4. No Premium is allowed for the renewal of a subscription to THE COMPANION.

5. No Premium will be given to an old subscriber who offers THE COMPANION at a reduced price. The full **$1.75** must be received by you in advance from the new subscriber.

6. You must not offer any Premium you may get, or any abatement in the price of the paper, or any gift of any kind, in order to get persons to subscribe. The only inducement you must offer to secure Subscribers to THE COMPANION must be the merits of the paper alone.

7. Names of New Subscribers on which premiums are expected must be sent to us by the old subscriber direct, in order to obtain a premium. No deviation from this rule can be allowed.

8. No person taking THE COMPANION from a news stand or news agent, and not directly from us, can have Premiums for new subscribers that he may send to us.

9. No old subscriber sending new subscribers through a news agent or postmaster or any other person can obtain Premiums for them. The old subscriber must himself send the names.

10. No Premiums will be allowed to Newsdealers, Publishers, or Newspaper Club Agents.

11. No Premium can be allowed for a subscription that has been obtained by a Newspaper Club Agent, Professional Canvasser, Publisher or Organized Worker, and given to you to help increase your list.

12. No Premium can be allowed for a subscription to THE COMPANION if the paper is for a Reading Room, Club, Association or Public Institution.

13. No Premium can be allowed on the transfer of subscriptions. If a boy or girl in a family has received THE COMPANION this year, and it is decided that the paper shall come next year in the name of a brother or sister or any member of their family, it must be remembered that this is only a transfer, and not a new subscription. We cannot allow a Premium for it. This change of names on our list does not increase the number of our subscribers. Our Premiums are given for work which shall permanently increase our list of subscribers.

Lovell's Diamond Safety $85.00 Bicycles.

For Gentlemen.

A Special Offer.

Last June we made a Special Offer of Lovell's Boys' and Girls' Safety Bicycles. The Offer was an astonishing success. Hundreds of our enterprising subscribers earned a wheel.

We have since received many requests to make a Special Offer of Lovell's Diamond $85.00 Safety Bicycle.

We have decided to make such an Offer. The following describes both the No. 1 and No. 3 machines, with this exception: The No. 3 is for Ladies' use, and has the guard and drop frame—28-inch Wheels.

Diamond frame of steel tubing and steel drop forgings, 30-inch wheels with ⅞ inch endless molded rubber tires, spokes butt-ended, rims crescent pattern, hubs steel drop forged, bearings all ball adjustable, chain, English pattern, adjustable crank driving gear, suspension saddle with combination front and rear spring and arc adjustment, direct plunger brake, detachable mud and chain guards, nickel detachable wire lantern bracket, patent chain adjustment, adjustable coasters, detachable step, pedal rubbers clover-leaf pattern, non-slipping, detachable cranks, detachable hollow handle bars, "L" saddle rod. Finished in three coats of black enamel and handsomely nickel trimmed. Weight complete 49 pounds. Gear 54. Each machine is supplied with tool bag, B. & S. wrench and oil can.

We Propose to Help you get the Bicycle.

We wish to know just how many would like to earn this beautiful Bicycle before April 1, 1892. If you desire to work for it, write and tell us, and we will send you special helps for securing it. These helps will consist of instructions how to work, and also **illustrated Bicycle certificates,** which you will find invaluable. With these, almost any active person can earn the Bicycle before April 1, 1892.

A Costly Offer.

Ordinarily it would be necessary for you to obtain one hundred new subscribers to THE YOUTH'S COMPANION in order to secure this superb Bicycle, but until April, 1892, we will reduce this number one-half, making it just fifty. We thus give you five months to earn this machine. Start out with success as your motto and you will be the owner of this superb Bicycle before April 1st.

Until April 1, 1892, given for fifty new subscribers. Price $85.00. **Must be sent by express and charges paid by receiver,** when sent as a Premium or sale.

Lovell's $35.00 Safety Bicycle.

To favor the boys and girls, we again make the Special Offer of this favorite wheel. Ordinarily it would require fifty new subscribers to obtain this machine, but until April 1st we will give it for only twenty New Subscribers. Send for the Special Helps.

For Ladies.

DESCRIPTION. Drop Frame, Steel Tubing, 26-inch Wheels, Crescent Rim, Molded Rubber Tires, Direct Spokes, Plunger Brake, Adjustable Cone Bearings, Adjustable Suspension Saddle, Frame and Wheels Enameled, all other parts Nickeled. Each machine fitted with Saddle Bag, Wrench and Oil Can. This Wheel is adapted to boys and girls from eight to fourteen years of age.

Given, until April 1, 1892, for twenty new subscribers. Price $35.00. **Must be sent by express and charges paid by receiver,** when sent as a Premium or purchased.

NOTICE.—The above offers are **special,** and are made at a heavy cost to us. Therefore a Subscriber who takes one of these Bicycles cannot be allowed the **Extra** Premiums, but we will allow him to share in the Division of Money offered on the first page of this LIST. We will send descriptive Catalogue of these Wheels on receipt of stamp.

Digitized by Google

Directions to Determined Workers.

How to Get New Subscribers.

If you wish to interest people in THE YOUTH'S COMPANION, and induce them to subscribe for it, First, get them to read it. By so doing they will better appreciate its character, and will more readily subscribe for it.

One of the best conditions of success, in getting new subscribers to the paper, is to send us the names and addresses of FIVE GOOD FAMILIES that you think are able to pay for THE COMPANION and ought to take a good family paper, and that you are willing to call upon and invite to subscribe.

Our Coöperation.

On receipt of this list of names we will mail to each, specimen copies of THE COMPANION, and tell them these are sent by request of one of their neighbors.

We will also send you further hints how to get Subscribers, Order-blanks and Return Envelope.

Experience has shown that the families who receive sample copies of THE YOUTH'S COMPANION become interested in them, so that when you call on them later, to obtain their subscription, you will be kindly received, and in many cases you will be successful. Please give this plan a fair trial.

Black Beauty—New Edition.

For the past three years our subscribers have been greatly assisted in their endeavor to secure new subscribers by sending us lists of families as outlined, to whom we send specimen copies.

In October, we mailed each one of our regular subscribers, with the Announcement, a circular and blank. We trust you have carefully read the circular, and that you will act upon its suggestion.

Each subscriber who fills out the blank according to the conditions therein stated, and sends it to us, will receive free, a copy of *Black Beauty*. Please do this at once. It is the greatest possible help.

A Liberal Offer.

This is a costly Offer for us to make. It is made with the hope that a very large number of our friends will this year work earnestly to secure new subscribers to THE YOUTH'S COMPANION.

Be enterprising and persistent.

In no case can you give THE COMPANION away to increase your list. We are more than generous in these Offers, and we shall insist that every new subscriber shall pay the full subscription price of THE YOUTH'S COMPANION, which is $1.75 a year. Faithfully carry out instructions in all cases.

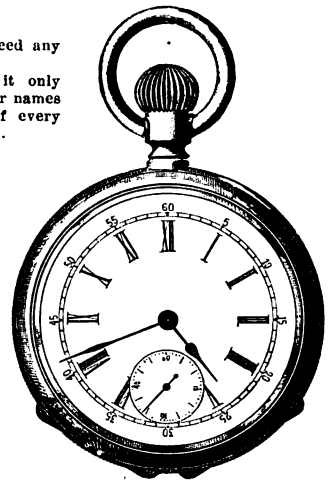
Waltham and Elgin Watches for Ladies and Gentlemen.

A Special Offer. Limited.

Waltham and Elgin

Watches are too well known to need any special description from us.

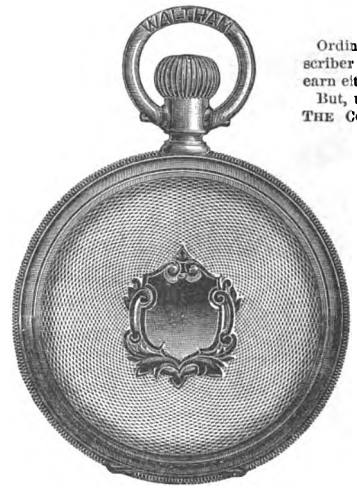
Their reputation is such that it only requires the magic password of their names to admit them into the pockets of every American who seeks the best Watch.



Our Purpose.

Hundreds of thousands of boys are now carrying cheap Watches. We propose to make an offer by which very many of our subscribers may become the owners of a fine Waltham or Elgin—they can have their choice.

Recently both of these companies have made general and liberal reductions in the prices of their movements. This reduction we are sure will be appreciated by all of our subscribers.



Description.

These are the regular Movements encased in Solid Silver Open Face Cases, with Crystals. The Lady's Movement, however, is in a Hunting Case. If preferred we can send the Gentleman's Watch in Hunting Case, although we recommend the Open Face Case.

Lady's Watch.

The Special Offer.

Ordinarily it would require an old subscriber to obtain twenty new subscribers to earn either of these Watches.

But, until April 1, 1892, any subscriber to THE COMPANION who may send ten new subscribers will be entitled to either one of these Watches. In ordering say whether you wish the Elgin or Waltham.

This is a costly offer for us to make. No Extra Premium can be allowed when this Watch is ordered, although we allow a subscriber to share in the Division of Money offered on the first page of this LIST.

A number of boys and girls each obtained twenty new subscribers between June and October—the poorest months to work.

You certainly ought to be able to obtain ten new subscribers, especially when the best months in the year are before you. Make up your mind that you will get a Watch, and our word for it, you will succeed in less time than you think. Send to us for Special Helps for getting the Watch. We will also give free with either of the Watches a beautiful rolled gold-plated Chain, with pretty Charm. **Postage and packing 25 cents.**

Caligraph Special, No. 3. Limited Offer.

This popular Typewriter needs no introduction. It is constructed with interchangeable parts and adjustable bearings, and of the finest materials obtainable.

The Caligraph Special, No. 3, is the latest effort in the manufacture of Writing Machines. In it are combined all the latest improvements for giving speed and perfect alignment. The Machine has seventy-eight characters, giving complete set of capitals and lower-case letters, numerals, and punctuation marks. Business men, teachers, clergymen, and all writers, will find in the Caligraph a machine which will meet their utmost expectations.

SPECIAL OFFER.—For a limited time, until April 1, 1892, we will give this fine Machine for only fifty-five new subscribers. Although the price of the Machine is $100, yet we do not sell it at all. It is offered only as an inducement for obtaining new subscribers to THE COMPANION.

As this offer is a very costly one for us to make, a subscriber who takes a Caligraph cannot be allowed the **Extra** Premiums, although we will allow him to share in the Division of Money.

Revolving Bookcase and Webster's Dictionary.

The Danner Revolving Bookcase is a marvel of simplicity and utility. It is made with a natural finish, and will not only hold the complete Set of Encyclopædia Britannica offered below, but also a dozen other books, and a Webster's International Dictionary besides.

We feel confident that this offer must appeal to every scholar and teacher. There is nothing in this line that could be more useful or convenient. The top of the Bookcase is flat, and large enough to act as a shelf for the Dictionary when spread open. The Shelves are ample for the largest of books. The International Dictionary is fully described on page fifteen of this LIST. It is recognized as the standard authority on the words and usages of the English language.

Until April 1, 1892, we will give the Danner Revolving Bookcase and a copy of Webster's International Dictionary for only **nine** new subscribers to THE COMPANION.

NOTE.—When a subscriber selects these two articles as a Premium, no **Extra** Premium can be allowed. We will, however, allow him to share in the Division of Money offered on the first page.

Our Special "Britannica" Offer. Limited.

What is the Encyclopædia Britannica? The greatest Set of Books in the English language. It is a Set of twenty-five octavo Volumes. It is a Dictionary of Arts, Sciences and General Literature. More than nine hundred authors, each most eminent in his own line, have had to do with its making. The most recent discoveries and conclusions in Science, History, Theology, Art, Music, Biography, are to be found here.

Each Encyclopædia is good for its special purpose. But each has a special purpose. The Britannica has no special purpose except to be scholarly. It is made for no one class. Its sole aim is to find bed-rock in every subject, and to be final authority on that subject.

No other Encyclopædia ever disputed this primacy. The original edition of the Britannica costs, in cloth, $198; in half Russia, $248. Such a luxury is out of the reach of most of us. Yet who of us who knew what an Encyclopædia meant did not long to possess the Britannica?

But now, an **American Edition** has been made; an edition wearing a dress worthy of the character of the work. Observe, this is not a mere "reprint." It is practically a new edition. American articles have been written. Moreover, many articles on other topics, written for the earlier volumes, have been carefully revised to date for this American edition. New maps and cuts have been added.

We will describe this Set: It is in twenty-five Volumes. Size of each Volume is 10½ x 8¼ x 2 inches,—just the same as the original. The paper is not coarse, like some of the cheap editions, but fine and smooth, like the original. The type is clear and distinct. The margins are wide. Number of pages, 20,506; number of illustrations, 10,614.

Observe, we do not sell this Set at all. We give it away. We want the Sets we offer to go into those homes where the necessary price would place the Books out of reach.

We make this very special and limited offer. Ordinarily it would require a list of fifty new subscribers to get this Set. But until April 1, 1892, we will give it to any subscriber to THE COMPANION who will send us only twenty new subscribers. **Must be sent by express and charges paid by receiver. No Extra** Premium given when you order this Set, but we will allow a subscriber to share in the **Division of Money** offered on the first page of this LIST.

Now what home wants this enough to work for it? What teacher wants it enough to induce twenty scholars to take THE COMPANION? What society or club, or set of people, want to give this most acceptable present to Teacher or Pastor? On receipt of $5.00 extra, we will include the Danner Revolving Bookcase. **Must be sent by express and charges paid by receiver.**

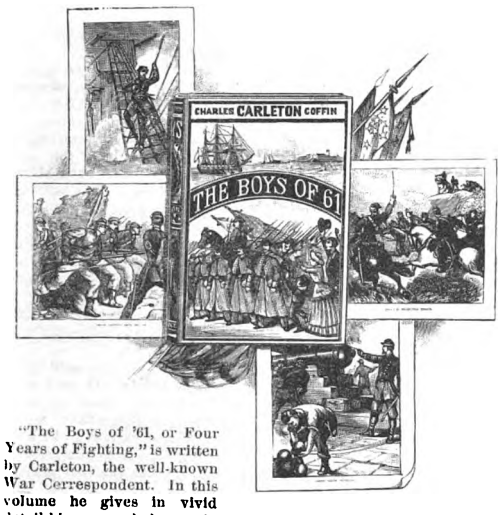
Books of Adventure, History and Biography.

The Cruise of a Land Yacht. By Sylvester Baxter.

Given for one new subscriber and 10 cents additional.

This is a beautiful Book, with rich paper, tasteful binding, and delightfully illustrated. It is another of those charming modern volumes of travel, and not inferior to the best of them. The Land Yacht is a private car, especially made, with remarkable and unprecedented though not impossible conveniences.



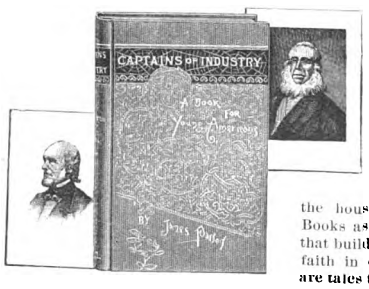
A family party start from Boston across the continent for a tour of Mexico. The story of the adventures in Mexico and of the whole cruise is a captivating one.

Mr. Baxter also weaves into the story a great deal of instructive information not likely to be forgotten, while his well-put comments on political institutions are calculated to make young Americans better citizens. The Book is very appropriate for a handsome gift.

Given for one new subscriber and 10 cents additional. Price $1.25. **Postage and packing 25 cts.,** when sent as a premium or purchased.

The Boys of '61. By "Carleton" (C. C. Coffin).

Given for one new subscriber and 25 cents additional.



"The Boys of '61, or Four Years of Fighting," is written by Carleton, the well-known War Correspondent. In this volume he gives in vivid detail his personal observations, from the first battle of Bull Run to the fall of Richmond. It makes a very large Book, 9 x 7 inches, and contains 558 pages, and 90 original illustrations.

Given for one new subscriber and 25 cents additional. For sale by us for $1.35. **Postage and packing 25 cents,** when sent as a premium or purchased.

Captains of Industry.

Given for one new subscriber and 15 cents additional.

Mr. Parton, the author, is an intensely interesting writer, and his spirit is in sympathy with American ideas. The single biography of Maydole, the hammer-maker, is a lesson to influence a lifetime, as are such wonder-tales as Washburn, the wire-maker, Reynolds, the engine-driver, Jerome, the clock-maker, and Greeley, Cooper and Montefiore.

The boys of the household need such Books as these, with ideas that build life and give one faith in one's self. These are tales to make men.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

History of Scotland: or, Tales of a Grandfather. By Sir Walter Scott. 640 pages. Full-page plates.

Given for one new subscriber and 10 cents additional.

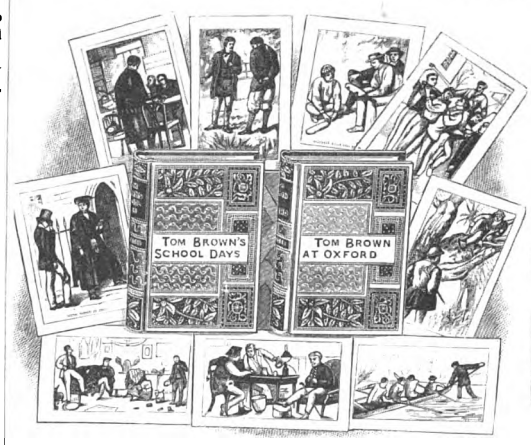
This most excellent Book is a history of Scotland for the young. It is a series of familiar talks by the famous author with his grandson about the history of his native land. The Grandfather recounts in his wonderfully graphic way the stories of Macbeth, Robert The Bruce, Douglass, Queen Mary, Battles of Flodden and Culloden, etc. Handsome cloth binding.

Given for one new subscriber and 10 cents additional. Price $1.10. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Explorations of Livingstone and Stanley in Africa. Complete in one volume, 750 pages. Given for one new subscriber and 25 cents additional.

This valuable Book has been heretofore sold only by subscription, and has been quite expensive.

It is a thrilling narrative in itself, besides being a carefully prepared account from the most authentic source of the adventures, discoveries, experiences and achievements of two of the greatest explorers of the age.



Since the death of Livingstone, the story of his life in the wild and wonderful country of Africa has a fresh interest. Those of our subscribers who read this Book will be delightfully and profitably entertained and instructed. It is a very large Book, 9¼ x 6½, and two inches thick, and will afford occupation for many long evenings. Good paper, large type, numerous full-page illustrations, 750 pages, strongly bound in cloth, ornamented in ink and gold.

Given for only one new subscriber and 25 cents additional. For sale by us for $1.50. **Postage and packing 30 cents,** when sent as a premium or purchased. The regular price of this Book is $3.50.

Two World-Renowned Books. Tom Brown at Oxford; Tom Brown at Rugby. Two Volumes. 780 pages. Given for one new subscriber.

These are such useful and popular Books that we have decided to make an edition, and illustrate it with handsome and stirring engravings, as the cut shows. Such copies are not found in bookstores, except at high prices.

How Tom suffered as a new boy in a large school, endured the rough usage, overcame temptations, advanced from step to step through the school and university, is a fascinating story to any one.

Only a few years ago these Books were sold in four volumes of the same style of binding for $6.00. Now we offer the two for only one new subscriber. Thousands have been used. Two volumes, cloth. 780 pages. Both volumes for sale by us for $1.10. **Postage and packing 25 cents for the Set,** when sent as a premium or purchased. Price for single volume, 60 cents, and 15 cents additional for postage and packing.

Cooper's Leather-Stocking Tales; Cooper's Sea Tales. Ten volumes of Cooper's Works, bound in two volumes. Either volume given for one new subscriber and 20 cents additional.

Leather-Stocking Tales. One volume. Contains—The Deerslayer, 218 pages; The Last of the Mohicans, 178 pages; The Pathfinder, 188 pages; The Pioneers, 181 pages; and The Prairie, 173 pages. 938 double-column pages in all, and 5 full-page cuts.

The Sea Tales. One volume. Contains—The Pilot, 166 pages; The Red Rover, 186 pages; The Water Witch, 184 pages; The Sea Lions, 185 pages; The Two Admirals, 192 pages. 913 double-column pages in all, and 5 full-page cuts.

These Books bound separately cost about $10.00. Either one of these large Books given for one new subscriber and 20 cents additional. For sale by us for $1.35 per volume. **Postage and packing 20 cents per volume,** when sent as a premium or purchased.

Blue-Jackets of '61. By Willis J. Abbot.

This fascinating Book, by Willis J. Abbot, contains over 300 pages, and is profusely illustrated with full-page engravings.

The many thrilling scenes of the "Blue-Jackets," as well as the daring deeds of the opposing naval forces during our late civil war, are here most graphically portrayed. It gives a faithful record of desperate bravery and dash, and wonderful energy and inventive skill, and will be sure to interest both the old and young.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 30 cents.**

Four Volumes of Frontier Stories. Paper Bound.

Planting the Wilderness. Long ago, when the Ohio Valley was a trackless forest, an unfortunate Virginian sought a new home there for his family. The cabin is built, and afterward a log fort. Two of the boys are carried away by Indians; then follows a fierce border war, the siege of the fort, capture of the whites, and afterwards the rescue by the scout, and John's wedding. 256 pages.

The Young Pioneers. The story is written by the author of "Cabin on the Prairie," and some of the same characters appear. Also the "Fairy of the Fort," is stolen by an Indian Chief. A vivid account of her wigwam life is given. She grows up a beautiful Indian girl, and is found by a hunchback boy. 331 pages.

The Cabin on the Prairie. Tom Jones, a brave lad of sixteen, is the hero. His home is on a Minnesota prairie. He and his mother are kind to "Long Hair," who becomes their friend. Then follows the thrilling story of their adventurous life. 300 pages.

Twelve Nights in the Hunter's Camp. A party of fifteen sportsmen camp on the banks of the Mississippi. Game is plenty, and their forest life is full of adventure. Each night, around the camp-fire, "the General," who was a Government surveyor, recounts the exciting story of his Indian adventures in the Far West. 268 pp.

All given for one new subscriber. For sale by us for 85 cents. **Postage and packing 20 cents,** when sent as a premium or purchased. Price per volume, 25 cents post-paid.

The Circuit Rider. By Edward Eggleston.

A better picture of social life in the West at the commencement of the century was never drawn. The author lived there, and wrote out of his experience.

The heroic "circuit rider" is the central figure, and as he goes from place to place in his endeavors to bring the pioneers to a nobler life, we have, brought into sharp contrasts, scores of sketches of corn-shuckings and camp-meetings, wood-choppings, quiltings and "hoe downs." The story is stirring as well as pathetic and inspiring. 332 pages and 30 beautiful illustrations.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Four Popular Books for Boys.

Library of Adventure and Romance. "Guy Harris, the Runaway," by Harry Castlemon. 285 pages. "Joe's Luck; a Boy's Adventure in California," by Horatio Alger, Jr. 223 pages. "Adrift in the Wilds," the adventures of two shipwrecked boys, by Edward S. Ellis. 279 pages. "Ben Burton, the Slate-Picker," by Harry Prentice. 275 pages. Four volumes, paper bound, 1,062 pages.

It is unnecessary to say anything in praise of stories written by these popular authors; their names are a passport, as every boy knows, to hours of the keenest delight and enjoyment in scenes of stirring life and adventure.

We offer the four volumes, bound in handsome paper covers and illustrated, for one new subscriber. Price of the Set, $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

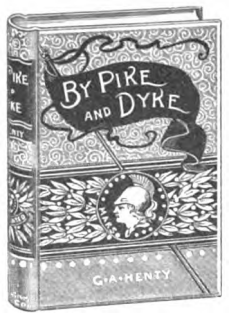
The George Alfred Henty Library of History and Adventure.

Either volume given for one new subscriber.



A Tale of Waterloo.

By England's Aid.

The Lion of St. Mark.

By Pike and Dyke.

The Reign of Terror.

With Clive in India.

There is probably no living English writer of stories for boys so deservedly popular as George Alfred Henty. His are invariably instructive as well as unusually entertaining.

He takes some striking historical fact or episode, as a great battle or a nation's successful struggle for freedom, and upon this as a central point or climax constructs a story in which the ever-living truth of history is skilfully blended with fictitious incidents and characters.

His strong sympathy with boys and earnest desire to inspire them with noble aims are apparent in all he writes.

The Henty Books are all bound, similar to "By Pike and Dyke."

Any volume given for one new subscriber. Price, per volume, $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

A Tale of Waterloo. The thrilling name carries its own interest. The deeds by both English and French on that field make the hearts of both nations beat quicker. And how many of the heroes that day were but boys in years. The palm for heroism in this Book, however, is closely disputed by a girl.

The Lion of St. Mark. A story of Venice, not when she was undisputed Mistress of the Seas, but in the 14th century, in the time of her hardest struggle for existence, when the steadfastness and patriotism of her citizens were most brilliantly shown.

By England's Aid. Without England's Aid the United Netherlands could scarcely have succeeded in freeing themselves from the cruel Spanish invaders. The scene is during the reign of Elizabeth, and the destruction of the Armada is among the daring exploits recorded.

By Pike and Dyke. These words call up the almost superhuman struggle of the brave Netherlanders under William of Orange against the pitiless Alva and his brutal Spanish soldiery. The Book introduces the young reader to the period of which Motley's "Rise of the Dutch Republic" is the romantic history.

The Reign of Terror. In this tale of France in her most terrible period we are introduced to Robespierre, Danton and Marat. Amid the wreck of a civilization and daily scenes of massacre, a brave English boy threads his way.

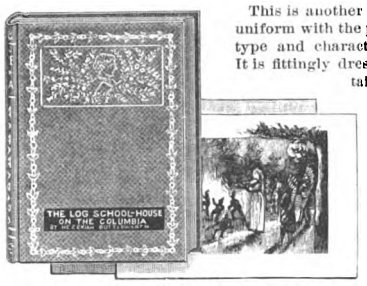
With Clive in India. Lord Clive won the Indian Empire for England. It is a period of English history of which most American boys know little, although Macaulay makes it famous. This enterprise, like so many other world-renowned exploits, was largely accomplished by young men.

Standard Books of History and Adventure.

"Crowded Out o' Crofield."

Given for one new subscriber and 30 cents additional.

The French have taught us how to make handsome Books. This one shows how well we have learned the lesson. Rich paper, broad margins, superb type, exquisite illustrations make it a delight to the book-lover's eye.



It is the story of an energetic boy, crowded out of his native village into New York, where his extraordinary earnestness made him succeed in the face of "a million and a half against him."

It is the story of the miracle daily happening in America, but which only all-consuming energy can any longer achieve.

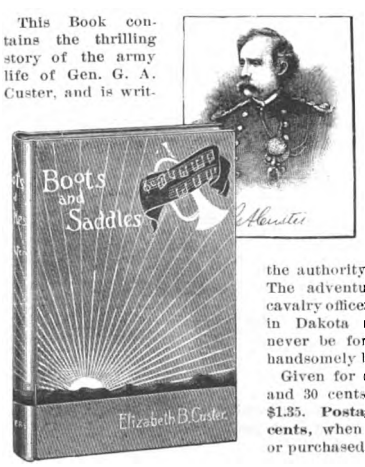
Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Log School-House on the Columbia.

By Hezekiah Butterworth. Given for one new subscriber and 30 cents additional.

This is another handsome volume, uniform with the preceding in paper, type and character of illustration. It is fittingly dressed in dark mountain green and silver.

It is a romantic picture of the early days of Oregon. The Yankee Schoolmaster, the hardy pioneer, the vengeful Indian and the nobler Indian, and above all, the figure of a poetic German girl whose violin and whose interpretation of Schumann could calm the ferocious spirits at the Death Dance,—these all make a wonderful tale.



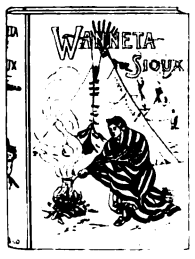
The stupendous scenery of that Northwestern country, the spirit of which has clearly taken possession of the author's soul, stands out as a weird background for the human incidents.

It is a Book full of patriotism, and of appreciation of the heroic period of American pioneering and sacrifice.

Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Boots and Saddles. By Elizabeth B. Custer.

Given for one new subscriber and 30 cents additional.



This Book contains the thrilling story of the army life of Gen. G. A. Custer, and is written by his brave wife, who followed him so faithfully to the end. The account is given with all the vividness and pathos which only a companion could show who flung her life so nobly into his, and at the same time comes to us with the authority of an eye-witness. The adventures of this gallant cavalry officer among the Indians in Dakota and Montana will never be forgotten. 312 pages, handsomely bound.

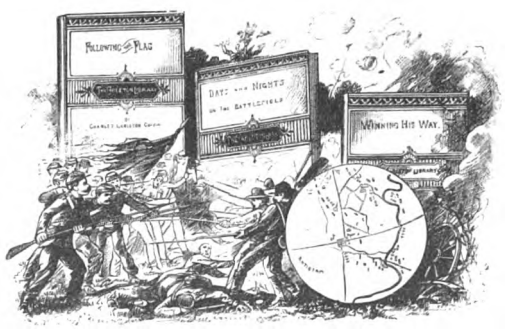
Given for one new subscriber and 30 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

Wanneta, the Sioux.

Given for one new subscriber and 25 cents additional.

This is a new but famous Book. Its heroine is a Sioux maiden, educated in the East, who returns to the wild life of her tribe. The scene is entirely Indian. So are all the personages except Custer and his officers; Sitting Bull, Rain-in-the-Face, Young-Man-Afraid-of-his-Horse being actors.

It is an Indian story from an Indian point of view. Its adventures and battles make it thrilling enough to satisfy anybody. But its main interest is, that it gives the romance and the attractive side of Indian life.



Perhaps some of our readers who have been neighbors to wild Sioux think they have no attractive side. We cannot dispute experience.

But if any such readers chance to select "Wanneta" as a premium, and after reading it, have anything to say why it is not what it purports to be,—a true picture of modern Indian life,—we should be glad to hear from them. The Book is immensely interesting.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 20 cts.,** when sent as a premium or purchased.

My Days and Nights on the Battlefield;

Following the Flag; Winning His Way. Three volumes given for only one new subscriber and 10 cents additional.

The thousands of our readers who are familiar with the "Boys of '61" will be eager to own these Books. They are bound in stiff cloth covers, and ornamented with ink in two colors. Written by "CARLETON."

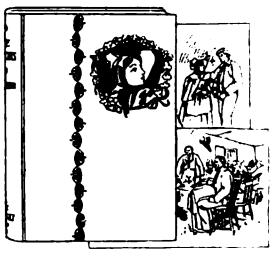
Illustrated; 906 pages of thrilling battle incidents and facts of history.

The three volumes given for one new subscriber and 10 cents additional. For sale by us for $1.10. **Postage and packing 20 cents,** when sent as a premium or purchased. Price for single volume 50 cents, post-paid.

A Thousand Miles Walk. By Nathaniel H. Bishop.

Given for one new subscriber and 15 cents additional.

This is an interesting account of a pedestrian trip across the Pampas and the Andes in South America.



In 1854 a Boston lad of seventeen, having the desire of investigation and adventure, shipped as a sailor for Buenos Ayres. From there with his earnings of $5.00 only, he started on his perilous tramp across the Southern Continent.

He earned a little during his tramp, worked his way home again, and after eighteen months of travel had a $5.00 balance on the right side. The Book has been very popular, and is now in its 11th edition.

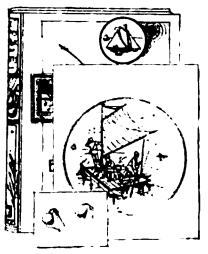
Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Graysons. A Story of Illinois. By Edward Eggleston.

Given for one new subscriber and 25 cents additional.

This is the most recent great story by the author of the "Hoosier Schoolmaster." In plot, in style, in thrilling situations, it is one of his very best.

The story is founded on one of the interesting incidents in Abraham Lincoln's life as an Illinois lawyer. Lincoln accordingly plays a strong part in the Book. His unique personality is set forth with perfect consistency and naturalness.



The folk-lore part of the Book, the dialect of the early Illinois farming community, is all admirably done.

The Century Co. publish the Book, and they have dressed it in their best style. Binding, paper, type and illustrations leave nothing to be asked.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Boy's Book of Sports. By Maurice Thompson.

Given for one new subscriber and 50 cents additional.

Every out-of-door boy will enjoy this Book. Here are the subjects: Hunting, Fishing, Archery, Boating and Boat-Making, Camps and Campers, Swimming and Walking, The Camera, Winter Sports and Base Ball.

These are treated in brisk stories, which contain information—no end of it—most valuable to young sportsmen.

The stories are all based on correct rules for sport; but these are given in the way boys have to get it in real life—that is, as the results of experience. The instruction thus given in a vivid story of the way certain boys did things is remembered when lists of rules are forgotten.

The Book is profusely illustrated with stirring pictures, and also diagrams. It is breezy with out-door achievements; boys will read it and re-read it, and other boys will want it.

Given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Sheridan's Troopers on the Border.

Given for one new subscriber.

The forty-one chapters of this fascinating Book contain a narrative of a six months' campaign of General Sheridan against the refractory Indians of the far West.

Life on the border is strongly pictured, while stirring adventure, information and army experience is graphically written. Sheridan's campaigns against the Comanches, the Kiowas, the Cheyennes and the Arrapahoes have become historic. The old conditions of life on the border are fast passing away. To every American, then, this Book will be of unusual interest. The Book is handsomely bound and illustrated.

Given for one new subscriber. Price 75 cts. **Postage and packing 15 cents,** when sent as a premium or purchased.

Digitized by Google

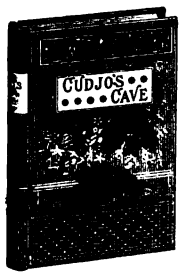
Popular Books of Adventure and History.

The Hoosier Schoolmaster. By Edward Eggleston.

Given for one new subscriber and 15 cents additional.

Probably many of our adult readers recall this story with pleasant recollections. It has been read with the most intense interest, at thousands of firesides.

Given for one new subscriber and 15 cents additional. Price $1.15. **Postage and packing 10 cents,** when sent as a premium or purchased.



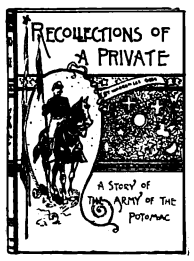
The Drummer Boy and Neighbor Jackwood.

Either given for one new subscriber and 15 cents additional.

These are by J. T. Trowbridge, the boys' favorite author. Handsomely bound, uniform with Cudjo's Cave.

Given for one new subscriber and 15 cents additional. Price $1.25 each. **Postage and packing 15 cents each,** when sent as a premium or purchased.

Cudjo's Cave. By J. T. Trowbridge.



In thrilling narrative, noble lessons, deep pathos and laughable incident, "Cudjo's Cave" undoubtedly ranks next to Mrs. Stowe's "Uncle Tom's Cabin." From the opening chapter to its close you are held spellbound.

It is a Book of wonderful adventure and startling incident. Pomp, the hero, escapes by flight to the mountains of Tennessee. He finds Cudjo, who lives like a wild beast in a cave. They are at last discovered.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Recollections of a Private. A Story of the Army of the Potomac. By Warren Lee Goss. Given for two new subscribers and 65 cents additional.

This valuable Book is an attractive volume of 350 pages. It is amply illustrated, one of the artists, Mr. Chapin, having been the veteran artist of the *Harper's Weekly* Army pictures during the war.

A few of the chapters in this Book appeared among the Century war articles.

Probably none of that celebrated series was read with more general interest than Mr. Goss's "Recollections of a Private." After all, what people like to know most about in war is not its strategy and science so much as what the men who fought did and felt.

This Book is the record of four years among the privates. Here we get the point of view of the common soldier. We hear his humor. We see his rare intelligence — so often superior to that of his officers. We get at the heart of that great, dauntless, long-suffering Army of the Potomac.

Given for two new subscribers and 65 cents additional. Price $3.00. **Postage and packing 25 cts.,** when sent as a premium or purchased.

The Hoosier School-Boy. By Edward Eggleston.

Given for one new subscriber.

Any average boy or girl who wants a bright, sparkling story of school life in the Hoosier State, full of fun and humor, will read this book with delight.

It is very much after the style of the "Hoosier Schoolmaster," although in no way connected. The author accepts the fact that "boys will be boys," and not old men. The influence of the story is for good.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

The Knockabout Club on the Spanish Main.

By Fred. A. Ober. Given for one new subscriber.

This is a delightful Book of stirring out-door adventure. It describes the visit of the Club to Caracas, Lake Maracaybo, etc. Contains stories of the exploits of the pirates of the Spanish Main; and others not perhaps so sensational, but equally interesting. The Book is profusely illustrated.

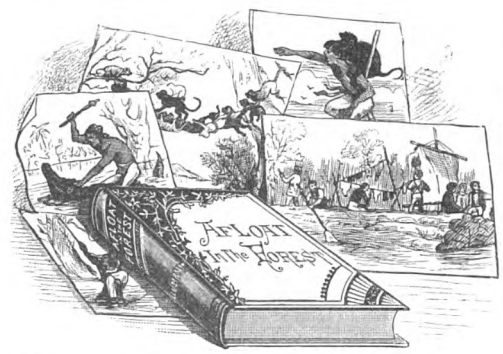
Illuminated board covers. Size 8½ x 6¼ inches. 240 pages. Fully illustrated.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or sale.

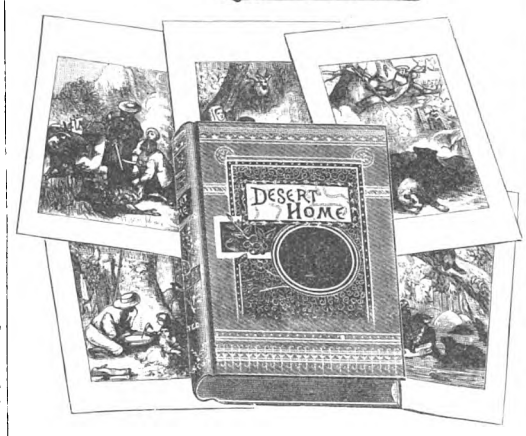
Goods by Express.—Friends wishing to purchase goods from our PREMIUM LIST can save on express or freight charges by clubbing their orders and requesting goods to be forwarded to one address.

Zigzag Journeys in Australia. By Butterworth.

This is one of Butterworth's latest Books. It describes a visit to the Fifth Continent. Gives a glimpse of its peoples, its wonderful resources and strange animals.



Contains stories of the gold discoveries and of other happenings in this fascinating country. The stories are told as only Mr. Butterworth himself can tell them. The Book is crowded with illustrations. Illuminated covers. Size 8¼ x 6¼ inches. 315 pages.

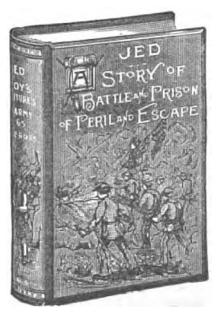


Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Afloat in the Forest. Desert Home.

Both given for one new subscriber and 15 cents additional.

Afloat in the Forest. Few stories have ever more profitably entertained and thrilled a large audience of readers than "Afloat in the Forest," written by Capt. Mayne Reid. An English family was lost on a boat in one of the flooded forests of Brazil during the great overflow of the Amazon. The boat drifts among the tree-tops, where it is finally wrecked. The family take refuge on an immense log, upon which they drift for many weeks. The tree-tops among which they float supply game and the water supplies fish. On this log begins a series of surprising adventures that give a view of the natural history of the Amazon and these tropical forests.



Desert Home is Mayne Reid's great story of American adventure. It gives a most vivid and thrilling account of the wanderings and adventures of a lost family in and about the Great American Desert. This great story-writer spent five years among the Red River Indians, so that we can rely upon the accuracy of the facts. The story itself is instructive, and holds one spellbound. Capt. Mayne Reid has been justly called the "King of Story-Tellers." Over 400 pages. 12 full-page illustrations. Bound in cloth.

Both volumes given for one new subscriber and 15 cents additional. Price reduced to 60 cents per volume, or the two volumes for $1.00. **Postage and packing 15 cents per volume,** when sent as a premium or purchased.

Jed: a Boy's Adventures in the Army.

"Do you know any boys who wish to enlist as drummers?" said a recruiting sergeant to two bootblacks, Jed and Dick.

Their answer to this question is the Story. The incidents in the Book are real ones. Warren Lee Goss is the author, — many will recall his "War Papers."

It is one of the best war stories ever written, and is most thrilling in incident. 404 pages, and beautifully illustrated.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or sale.

The Life of Kit Carson. By J. S. C. Abbott.

Kit Carson was the model American Pioneer, and the story of his life finds hundreds of admirers among the youth of this land. The cut gives you a look at one of the adventures of this brave fellow. His daring deeds in the West among the Indians and Pioneers are well told by the author. The Book is illustrated by full-page engravings, and contains 350 pages. Cloth bound.

Given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Daniel Boone and David Crocket.

Both given for one new subscriber.

This is a special offer. These popular Books combine truthful history and adventure. Every boy wants, at some time of his life, to read them. They are bound in cloth.

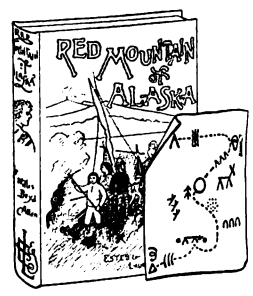
Both given for one new subscriber. Price 50 cents each. **Postage and packing 10 cents each,** when sent as a premium or purchased.

On Honor's Roll. Given for one new subscriber.

This is a collection of tales of heroism in our own times: of men who have regarded honor more than life in time of peril. It contains some sixty or more stories under titles like these: "A Tin Peddler's Adventure with Wolves," "Havelock's March," "The Wreck of the *La Plata*," "Battles with a Shark," etc. Many of these stories are very thrilling; all illustrate courage.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Three Scouts. By J. T. Trowbridge. Given for one new subscriber and 15 cents additional.



The Three Scouts. The scene is laid in Tennessee. It is a startling account of scout life on the Southern frontier. The description of negro life is exceedingly amusing.

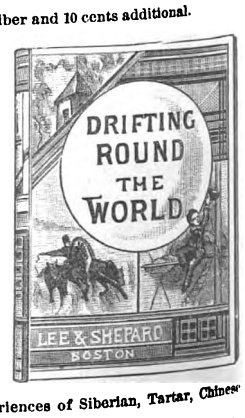
This Book will hold the reader spellbound until finished. It is among our best Books of Adventure. Although written many years ago, it is as popular to-day as when first published. 380 pages.

We offer "The Three Scouts" for one new subscriber and 15 cents additional. For sale by us for $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Red Mountain of Alaska. By W. B. Allen.

Given for one new subscriber and 25 cents additional.

This is a Book of Adventure in Alaska. An Indian claims to have discovered, by means of a mysterious Map, a wonderful Red Mountain.



He produces a red stone as evidence. Analysis shows it to be a valuable ore of mercury. Mr. Dutton, a well-to-do manufacturer, decides to visit the mountain and lay claim to its riches. Takes his entire family with him. This includes his boys, Robert, Hugh and Nat, and their sister Flossie. Their adventures in canoes and on rafts, with cataracts, Indians and wild beasts, and the final discovery of the wonderful Mountain, all form a story of intensest interest.

Board covers, lithographed in colors. Size 8½ x 6 inches. 340 pages. Profusely illustrated.

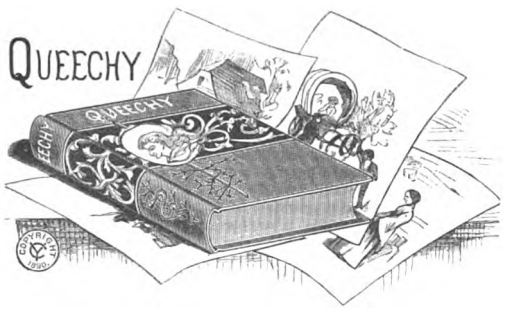
Given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 25 cts.,** when sent as a premium or purchased.

Drifting Round the World.

Given for one new subscriber and 10 cents additional.

This was one of the great Books of last year. Size, 9½ x 6¼ inches. Its covers are elegantly illuminated. Contains 384 pages, two hundred illustrations, and the account of a boy's adventures by sea and land "Around the World."

The hero ships on a Cape Ann schooner bound to Greenland, is shipwrecked on the coast of Labrador, reaches Iceland, then passes through Scotland, England, France, Holland, Russia, Asia, and afterward crosses Siberia, sails for Alaska, and from thence to San Francisco, from there reaching home overland, after many strange experiences of Siberian, Tartar, Chinese and Indian life.



Given for one new subscriber and 10 cents additional. For sale by us for $1.25. **Postage and packing 25 cents,** when sent as a premium or purchased.

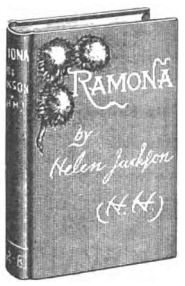
Standard and Miscellaneous Works of Fiction.

Queechy. By Elizabeth Wetherell. Two Volumes in one. 806 pages. New Illustrated Edition.

Given for one new subscriber and 25 cents additional.



How many hearts have been softened and how many lives made more lovable by reading the beautiful story of "Queechy" will never be known in this world. It is just the Book we like to urge upon our subscribers. It will interest you deeply, and is adapted to all ages except the very little folks. About 50,000 copies of the Book have been sold already, and now in this entirely new dress we again send forth another edition, beautifully illustrated, and bound in cloth and gold, uniform with "Wide, Wide World." The editions of these two Books are our own.

Given for one new subscriber and 25 cents additional. **Price $1.35. Postage and packing 15 cts.,** when sent as a premium or purchased.

Ramona. By H. H. (Helen Hunt Jackson.)

Given for one new subscriber and 30 cents additional.

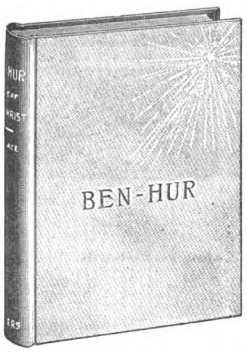
This is the Book that made Mrs. Jackson famous. Since her death it has been read by thousands. The story is laid in Southern California. Ramona, a child of the Santa Barbara Mission, and Alessandro, a native Indian sheep-shearer, are the heroine and hero.

The adventure is very thrilling, the descriptions of scenery graphic and true, and the moral noble and instructive. The Book will interest all ages. Nearly 500 pages. Cloth bound.

Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Waverley Edition of Famous Books.

One volume given for one new subscriber and 20 cents extra.



This is a new and beautiful presentation edition of popular Books. Gilt edges, padded covers, elegantly bound in maroon leather. Each volume complete and unabridged.

Pelham, by Lord Lytton. **Romola; Mill on the Floss,** by George Eliot. **Toilers of the Sea; Ninety-Three; Notre-Dame,** by Victor Hugo. **Lorna Doone,** by Blackmore. **Waverley,** by Walter Scott. **Old Curiosity Shop; Christmas Books, Oliver Twist,** by Dickens. **Sketch Book, Bracebridge Hall,** by Irving.

One volume given for one new subscriber and 20 cents additional. Price $1.35 per volume. **Postage and packing 15 cents,** when sent as a premium or purchased.

Ben-Hur. By General Lew Wallace.

Given for one new subscriber and 30 cents additional.

This is a beautiful Oriental story of the time of Herod. The story in itself is entrancing, and the information found in the Book about the people in Christ's time, and the country in which He lived, is of great value. This is one of the most popular Books now on sale. Cloth bound.

It is seldom that we can offer a Book that will satisfy the lover of romance as well as the Bible Student. Yet this is true of "Ben-Hur." As a story it is a remarkable production, and to the lover of Bible History it is invaluable. It literally sells by the thousands.

Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Library of The World's Best Books. 32 Volumes.

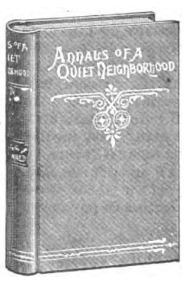
We will send any 10 of these volumes, express not paid, for $7.50.

Five of J. G. Holland's Best Books.

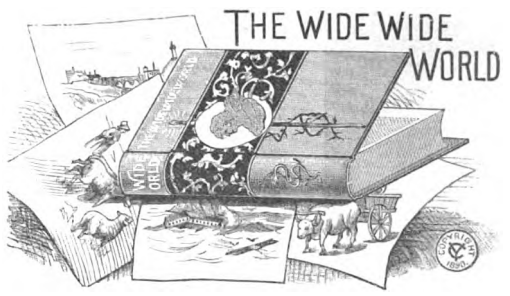


Either volume given for one new subscriber and 15 cents extra.

Arthur Bonnicastle, Bitter Sweet, Seven Oaks, Bay Path, Miss Gilbert's Career. These popular Books by Dr. Holland are noble in sentiment, rich and natural in incident and description. We recommend them.

Either volume given for one new subscriber and 15 cents additional. Price $1.00 each. **Postage and packing 10 cents per volume,** when sent as a premium or purchased.

Annals of a Quiet Neighborhood.



When a person with the gift of narration is favored with a large and varied experience of people just as they are found in a work-a-day world, and writes from the heart with a high and noble resolve to reach the lives of men, he usually produces a Book that lives.

Such a Book is this touching story by an eminently useful minister of the Gospel. It is an old Book, but each new generation bids it welcome. Read it. It will broaden your life as well as engage the passing hour. 590 pages and illustrated.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Wide, Wide World. Two Volumes in one. 700 pages. New Illustrated edition.

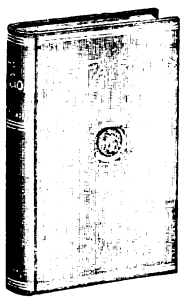
Given for one new subscriber and 25 cents additional.

Some Books never grow old, and this is one of them. Ask your father or mother if they do not remember how they used to read far into the night and cry over this story. You and your children will undoubtedly do the same. Thousands of lives have been inspired, encouraged and lifted a step higher by reading the "Wide, Wide World." We offer a new illustrated edition, beautifully bound in cloth and gold.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Tales from Shakespeare. Given for one new subscriber.

A young person might well begin the study of Shakespeare by reading this fine old Book by those sympathetic but afflicted authors, Charles and Mary Lamb. The Book, as is well known, gives the plots of Shakespeare's plays in the form of stories. It contains 400 pages, and is profusely illustrated. The style is simple and direct, with the attractive qualities of the author of "Elia," and his poetic sister. It should have a place in every young people's library, and is an excellent companion for the winter evenings, and as an introduction to the study of the great master.



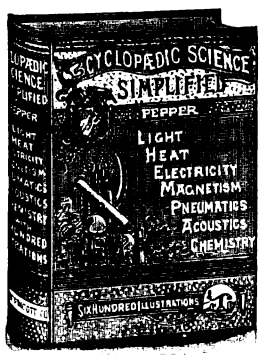
Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Scarlet Letter. Given for one new subscriber.

This is Hawthorne's masterpiece. This touching story of colonial times will never lose its charm. A romance of deeper pathos was never written. The demand for this Book is constantly increasing, and we expect to use a large number the present season.

Given for one new subscriber. **Price $1.00. Postage and packing 15 cents,** when sent as a premium or purchased.

The Fair God. By General Lew Wallace.



"The Fair God, or the Last of the 'Tzins," is a romance founded on the Conquest of Mexico, and is written by the author of "Ben-Hur." We think it the most meritorious Book the author has given the public. It stands above criticism. In style it is a classic; in facts, reliably historic; as a romance, ingenious, thrilling and entrancing. It is a Book for the scholar and critic, as well as the careful reader of general literature. A large Book, 586 pages, cloth bound, which will be read with interest.

Given for one new subscriber and 30 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

Cyclopaedia of Science Simplified. By Pepper.

It is written by Prof. J. H. Pepper, of the Royal Polytechnic Institution, and treats of Light, Air, Electricity, Magnetism, Pneumatics, Acoustics, Chemistry. A large Book of 740 pages, with over 600 illustrations. It is just the Book for a young man to own who is interested in Science, because it treats the different subjects in an exhaustive way, and yet the language used is free from technical terms, and is easily understood.

The Book is very interesting, and will be a great help to any one with a taste for scientific subjects. Cloth bound. It is a useful Book for any one.

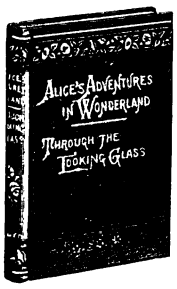
Given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 25 cents,** when sent as a premium or purchased.

Les Miserables. Complete. New Illustrated Edition. Five Volumes in one. 1,310 pages.

Given for one new subscriber and 10 cents extra.

This is our **Great Book Offer** of the year. The Book is printed from new plates just finished.

It contains the complete and unabridged text of the five Books, which no other translation has. 1,310 pages in all. Five volumes in one, as follows: Fantine, 286 pages; Cossette, 254 pages; Marius, 228 pages; St. Denis, 286 pages; Jean Valjean, 256 pages. Les Misérables was Victor Hugo's great masterpiece, and by some good critics is called the Masterpiece of the Ages. Certainly, its equal in many respects was never written. The story is intensely thrilling; the characters strongly drawn, and teach moral lessons of great value, and the dramatic action is marvellous. The descriptive parts of this wonderful work are very valuable. It contains the best description of the Sewers of Paris and Battle of Waterloo that was ever written. This work was formerly published in five expensive volumes. Every good library should contain this Book. Beautifully bound in cloth, and printed on good paper. Size 7¾ x 5¼ inches.



Given for one new subscriber and 10 cents additional. Price $1.15. **Postage and packing 20 cents,** when sent as a premium or purchased.

Popular and Favorite Books for Young People.

Alice's Adventures in Wonderland; Through the Looking-Glass.

Two volumes in one. 416 pages. 92 Illustrations. Given for one new subscriber.

We know there are hundreds of fathers and mothers who will thank us for putting "Alice in Wonderland," by Lewis Carroll, among our Books for the young. Many of us have pleasant childhood recollections of this story. Children will read it and ask many questions; your answers will cultivate their imagination, teach them sound moral lessons, and, at the same time, under the subtle influence of the atmosphere of the Book, you find yourself philosophizing to your own profit.

92 illustrations by Tenniel, cloth bound in one volume, and at half the price you would pay if bought singly.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Little Ones' Annual.

Given for one new subscriber.

One of the choicest Books for children between five and twelve. Full of beautiful engravings, just the kind little children like to look at, fascinating stories, nursery rhymes and music.

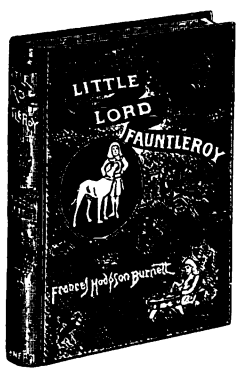
Elegant chromo cover. Over 300 original woodcuts. Our Little Ones cannot fail to delight and amuse the children and prove a source of constant delight.

Given for only one new subscriber. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Sara Crewe. By Mrs. Frances H. Burnett.

Given for one new subscriber.

The author of "Little Lord Fauntleroy" has written this Book with a girl heroine. The many admirers of Mrs. Burnett's first Book for the young will not be disappointed in this one.



We recommend the Book to parents for their children as one that will cultivate the better qualities of young lives, and have a deep and lasting impression on their minds.

Beautifully illustrated, and printed on heavy paper. Cloth bound. handsomely ornamented.

This popular Book is given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Little Lord Fauntleroy. By Mrs. Frances H. Burnett.

Given for one new subscriber and 50 cents additional.

This Book, by Frances H. Burnett, is probably so familiar to our readers that our simple offer of this charming story on such easy terms will induce hundreds to own it. The Book has had a well-deserved sale, which is enormous. It takes first rank among children's classics, and parents cannot buy a better holiday or birthday Book for their children than this.

We offer a beautiful edition on heavy paper, with 25 elegant illustrations by Birch. Nicely bound in cloth; 8½ x 7 inches. Owing to its entire novelty, we think the story has a peculiar charm and relish to American children which is not shared by the boys and girls in Old England.

Given for one new subscriber and 50 cents additional. Price $1.50. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Cats' Arabian Nights. By Abbie Morton Diaz.

Given for one new subscriber.

This is a genuinely interesting Book of stories for children. To be read or told them as night comes on.

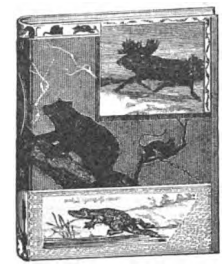
King Grimalkum orders the death of all White Cats. The beautiful Pussyanita is found to be white, and is brought before the King for execution.

She tells him these strange stories, and so saves her own life and that of all other White Cats.

Board covers handsomely lithographed. Book 7 x 8½ inches. 227 pages. Profusely illustrated.

Given for only one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Wood's Illustrated Natural History.



For the Young. Colored Plates. 130 Illustrations.

We cannot say too much in praise of this excellent Book. Both the young and adult readers will enjoy it. Everybody is interested to know the life and habits of domestic and wild animals, fish, reptiles and birds. It is all told in this Book, and in such a fascinating way that you are as interested as if you were reading a book of adventure. Many colored plates have been added this year.

Many wonderful stories are told which will fix in the memory animal traits worth remembering. The Book contains 230 pages,

FRONT VIEW.

BACK VIEW.

and 130 beautiful illustrations; 22 of them are full-page. It is printed on very heavy paper and is handsomely bound in boards.

Given for only one new subscriber. For sale by us for $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

The Sunday. 250 Illustrations. 400 pages.

Given for one new subscriber.

A much better name for this Book would be, "The Sunday Chatterbox," as this Book is from the same press as the original "Chatterbox" which is shown below.

It is full of new and original stories, and contains original pictures in profusion. Careful parents can put the Book with confidence into the hands of their children for Sunday entertainment, and at the same time the Book affords all the pleasure of "Chatterbox" for other days. Remember, it is not a "made-up" Book, but every story and picture is new, and made for this volume.

This beautiful Book is given for one new subscriber. Price $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Chatterbox for 1891.

Everybody knows about the Chatterbox Books. They have furnished entertainment in thousands of homes. This new volume is more beautiful with pictures and more interesting in reading matter this year than ever before.

It contains several hundred wood engravings. Over 400 pages, with beautiful colored frontispiece.

The standard of this Book is higher each year. The demand is constantly increasing, and this season we expect to use a large number. Given for one new subscriber. For sale by us for $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Riverdale Stories. Twelve Beautiful Books. 1111 pages.

There are twelve Books in this Set. The covers are handsomely lithographed. Each Book contains nearly 100 pages and many full-page cuts. The type is large and words easy. The stories are exceedingly interesting, and are written by "Oliver Optic." The following are the titles:

Little Merchant. Young Voyagers. Christmas Gift. Dolly and I. Uncle Ben. Birthday Party. Proud and Lazy. Careless Kate. Robinson Crusoe, Jr. The Picnic Party. The Gold Thimble. The Do-Somethings. These Books are specially fitted for Sunday School, Day School, Birthday, Christmas, and other Gift occasions to the Little People.

All given for one new subscriber and 25 cents additional. For sale by us for $1.50. **Postage and packing 35 cents,** when sent as a premium or purchased.

Nights with Uncle Remus.

This is the second volume of myths and legends of the old plantation, collected by Joel Chandler Harris, and it contains more than seventy stories, nearly all of them stories told of "Brer Rabbit" by Uncle Remus, to "the little boy."

The quality of negro humor is fully maintained by Uncle Remus in this volume, and so inexhaustible are the tricks and expedients of Brer Rabbit, and they are told with such infinite gusto by Uncle Remus, that the stories interest those of all ages.

Joel Chandler Harris has established the true form of the idiom and dialect of the old plantation through Uncle Remus's stories, and these stories are the accepted standard of its expression.

Given for one new subscriber and 40 cents additional. Price $1.50. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Two Books for Boys. By Juliana H. Ewing.

We and the World. 310 pages. Jan of the Windmill. 310 pages. Both given for one new subscriber.

The boys and girls lost one of their choice story-tellers when Mrs. Ewing's pen was silent. Since her death her works have an increased value, because we can look no longer for something new from her. She has a close hold on many hearts, and thousands in adult life will tell you they cannot help reading her books.

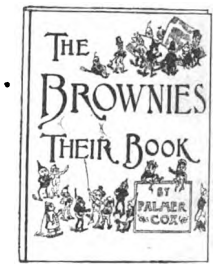
These two stories are heart-educators. Last year they constituted one of our most attractive premium offers. This year we expect a largely increasing demand. Illustrated and handsomely bound in cloth.

Both of these popular and interesting Books are given for one new subscriber. Price of both volumes $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

First Lessons in Earth Lore. By Charles Kingsley.

Given for one new subscriber.

Boys and girls of this generation are fortunate in many things, none more so than in that of Books.



When Mr. Kingsley became a man he was able to appreciate this need of Books for children that should instruct and entertain.

He wrote one for them. Here it is. Let the children read it. It will set them to thinking along new lines, concerning things they see about them.

This Book is given for only one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or sale.

The Brownies: Their Book. By Palmer Cox.

Given for one new subscriber and 25 cents additional.

Have you ever read any of the Brownie Stories? Mr. Cox has been telling about Brownies in *St. Nicholas* for years. Now he has got them into a Book. It fascinates older folks quite as much as children; its fun does not stale by repetition.

The verse flows so easily it goes of itself. The pictures of these little masculine sprites are irresistible in their funny ugliness.

The pigmy crowds are as alike as peas, except the Brownie dude, policeman, German and Irishman, who can always be discovered in some laughable position that is sure to delight both the old and young.

Who are the "Brownies?" They are sprites who, the Scotch say, are either in mischief, or else helping somebody. They are agile as the wind; they never get hurt, although half the time coming to grief in their pranks. They work and sport at night, and never let themselves be seen by mortal eyes.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Five Little Peppers. By Margaret Sidney.

Given for one new subscriber and 25 cents additional.

The Five Little Peppers are five small children living in a small brown house. The Book tells how they grow and thrive in spite of measles and a lack of money. Is full of well-told home-adventure and entertaining scenes.

The story is one in which every healthy child will take delight. It is one of the most popular books recently printed. Handsomely bound in cloth. Embossed in gold. Fine paper. 410 pages. Profusely illustrated. Size of page, 7 x 5 inches.

This beautiful Book is given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 15 cents.**

Queen Hilde-Garde. By Laura E. Richards.

Given for one new subscriber.

She is a city girl, so haughty and imperious that her companions call her Queen.

The story shows how a stay in the country among different surroundings so brought her to her better self that she finally became a Queen indeed.

While good in its influences, the Book is of absorbing interest, and will hold its reader to the end. It is just the Book for young ladies. Its influence for good cannot but be experienced by all who read the story. We hope the demand for this Book will be large.

Board covers, handsomely lithographed on cream-tinted paper. Size 6½ x 8½ inches. 174 pages. Elegantly printed on best of paper. 20 full-page illustrations.

Given for only one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Digitized by Google

Popular Books for the Young People—Continued.

Baby World, or Stories, Rhymes and Pictures

for Little Folks. Compiled by Mary Mapes Dodge. Given for one new subscriber.

This is a dainty Gift Book for one's little friends. It is prepared by the queen of writers for small folks, and she had all the charming things from *St. Nicholas Magazine* to draw from.

It has stories in prose, and stories in rhyme, and short jingles that will run alone. It has pictures—no end of them, and they are all of the high artistic quality we have a right to expect from the Century Co., who publish the Book.

Although dainty, it is not small,—300 pages,—and strongly bound, which is a great deal when we want a Book for young children.

Given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Mrs. Ewing's Stories for Children. Two volumes.

Both given for one new subscriber.

A lady once said, since she could not have written the New Testament, she would next have preferred to have been the author of "Story of a Short Life," by Mrs. Ewing. Opinions may differ in this matter, but certainly stinted praise cannot be given to such Books.

These two volumes contain "Brothers of Pity," "Melchior's Dream," "Jackanapes," "Daddy Darwin's Dovecote," "Story of a Short Life," and ten of her other stories. Beautifully illustrated, and bound in cloth. 700 pages. These are stories that make character.

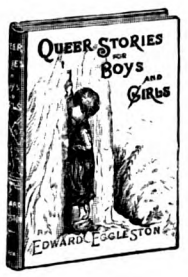
Both given for one new subscriber. Price of both volumes $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Home Lessons, and Painters' Book.

Both given for one new subscriber and 10 cents additional.

These are two separate Books.

It is frequently hard to know just what to give to a little child for Christmas. If our readers could see this pair of Books many would say, "Just the right thing."



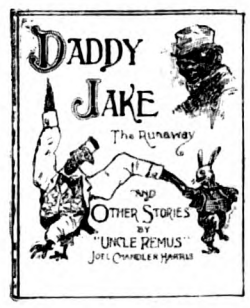
Home Lessons is a profusely illustrated Book of 220 pages, in which many of the things we want to teach little children at home are made pleasant and easy by pictures and stories. Thus, here are easy drawing lessons, descriptions of common trees and plants, talks about common chemistry and astronomy, talks about the child's own body and its wonders, funny beginnings in grammar, etc.

The Painting Book contains 32 outline pictures for water-color painting, with fully colored copy for each one on the opposite page, and also directions for mixing paints and using them.

Both given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Queer Stories for Boys and Girls.

By Edward Eggleston. Given for one new subscriber.



Here is a good Book for the little folks. The picture on the cover illustrates the first of these tales, "Bobby and the Key-Hole." There are twenty others; we cannot name them. They just suit the child's imagination, and set the mind to work for a worthy end. The Book makes an excellent collection of "bedtime" stories for children. They are humorous and instructive. Nearly 200 pages. Cloth bound.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Daddy Jake the Runaway, and Other Stories.

By "Uncle Remus." Joel Chandler Harris.

This is an edition of the famous Uncle Remus stories—the best of them—in a Gift Book, attractive enough for everybody. The illustrations on the heavy paper are superb, and everything is in good taste.

The Uncle Remus stories never grow old in print any more than on the old plantation. The adventures of Brer Rabbit with Brer Fox and Brer Wolf is the Negro's natural epic of the war between shrewdness and strength.

Mr. Rabbit's cunning is that of the Southern Negro himself, driven and hopelessly overmatched, yet insuppressible, and always in good spirits. No one but Mr. Harris can repeat and interpret this old plantation lore.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Little Saint Elizabeth. By Mrs. Frances H. Burnett.

Books of short stories are very popular now, and this is a Book of short stories that is a delight at any season, but that is especially adapted to the holidays. Little Saint Elizabeth is a kind of Little Lord Fauntleroy for girls. It has the spirit and charm of the latter famous story. The Book contains four stories, viz: "Little Saint Elizabeth," "The Story of Prince Fairyfoot," "The Proud Little Grain of Wheat," and "Behind the White Brick." These charming stories will be sure to interest the girls. 146 pages; beautifully printed and illustrated.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Miscellaneous Books, Music and Pocket Helps.

The Family Horse. By George H. Martin. 152 pages.

Given for one new subscriber and 10 cents additional.

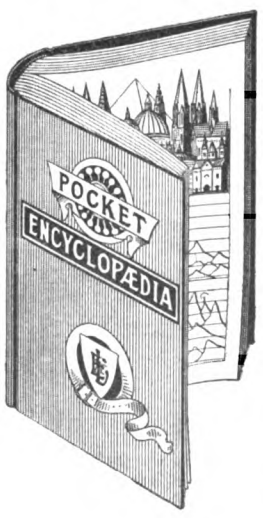
This is a most useful Manual for horse-keepers. It treats of the stabling, care and feeding of the family horse. It is written, not for those who are in the horse-breeding business, but for the multitudes of people who simply own horses and are deeply interested in their care and management after they are bought.

Every horse-owner ought to understand horse-science. No other domestic animal is subject to so great and varied an amount of suffering and disability. Yet the horse well merits the most careful and judicious treatment. Moreover, veterinary science has made great strides, and it is possible to give horses now more discriminating care than formerly.

This is a popular Book which every one interested in a horse will be interested in reading; while horse-owners who know but little of horse-science ought to possess some such hand-book for constant reference. Profusely illustrated.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 10 cts.,** when sent as a premium or purchased.

Boy Life in the U. S. Navy. By H. H. Clark, U. S. N.



Given for one new subscriber and 25 cents additional.

This is the story of a young boy from Maine who shipped in the U. S. Navy. While telling his adventures, the Book gives an account of our modern naval system. We find here information regarding wages, services required, mode of enlisting, studies, and the entire life aboard the U. S. training ship "Minnesota."

The Book is interesting and instructive, and stimulating to patriotism. It is a faithful picture of a healthy, attractive life that is little known to the general public, and full enough of adventures to please all boy readers.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Pocket Encyclopaedia. Given for one new subscriber.

This is a marvellous little volume. Is 4 inches wide, 5½ long and 1¼ thick, yet contains everything you want to know, from Ali Pasha to Zuyder Zee.

Over 600 pages. Matter concisely written. 32 pages of illustrations.

Just the Book to have handy in school, at home, in the shop, or when travelling. Neatly bound in cloth, red, embossed in black.

Of the many pocket Encyclopædias on the market this one stands at the head of the list, both as to convenience and the information it gives.

As a school companion, home companion or pocket companion it is always ready for duty.

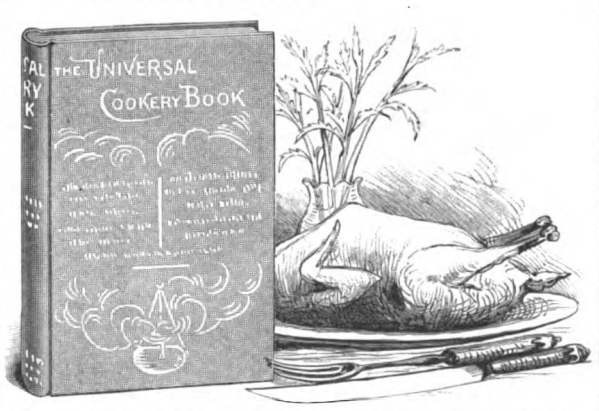
Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Trifet's Budget of Music.

All three given for one new subscriber.

In these three volumes can be found the best loved music of many lands, and many generations.

No. 1 contains 36 pieces of instrumental Music.



No. 2 contains 39 songs, both Solo and Duet, with piano accompaniment.

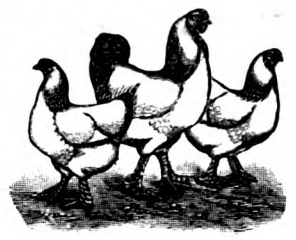
No. 3 contains the words and music of Six Hundred Songs, grave and gay, English, Irish, Scotch and American.

All three given for one new subscriber. Price 90 cents. **Postage paid by us,** when sent as a premium or purchased.

The Universal Cookery Book.

Given for one new subscriber.

This excellent Cook Book, compiled by Gertrude Strohm, has already passed its fifth edition.



It is crowded with practical receipts for household use that have been selected with great care from many eminent authorities. Among these are Marion Harland, Miss Parloa, Mrs. Washington, Miss Corson, Thomas J. Murrey, and the Boston, Virginia, Presbyterian, American Home and Every-Day Cook Books.

The numerous receipts given in this Book comprise a selection of the best only from each of the authors and Books named above. We believe that this is a most sensible system, and that the Book is destined to meet with a large demand. Bound in water-proof cover. Over 250 pages.

Given for only one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Poultry Culture. By I. K. Felch.

Given for one new subscriber.

When well managed, poultry-raising means money. But the "know how" is just where the trouble begins. Such knowledge is all given in this Book. It contains over 400 pages, carefully written and profusely illustrated.

The author is an expert poultry-keeper, and an acknowledged authority in such matters. Those interested in hens should not fail to get this Book. It will soon pay for itself. Board covers, printed in black and gold.

Given for one new subscriber. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

First Steps in Scientific Knowledge.

375 pages, 570 illustrations. Two volumes in one. Is the best Science Book for children that is made. 500,000 copies are sold in France alone. Recommended by all teachers. It treats of Animals, Plants, Stones and Soil, Physics, Chemistry, Animal and Vegetable Physiology. It is written in a simple and attractive manner.

Given for one new subscriber. Price 75 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Experimental Electricity. Given for one new subscriber.

This valuable Book contains 164 pages, and is profusely illustrated. It will be a great assistance to those wishing to acquire a limited knowledge of Electricity. The following is the table of contents:

1. Easy Experiments in Electricity and Magnetism. 2. How to Make Electric Batteries. 3. How to make a Galvanometer. 4. How to Make an Induction Coil. 5. How to Make an Electric Bell. 6. How to Make a Magneto Machine. 7. How to Make a Telegraph Instrument. 8. How to Make an Electric Motor. 9. How to Make a Dynamo. 10. Electric Gas Lighting and Bell Fitting. 11. Electric Lamps. 12. Glossary of Electric Terms.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Combination Pocket Book and Diary for 1892.

Given for one new subscriber.

An eminently useful and appropriate article for everybody. It is made especially for us by the Cambridgeport Diary Co., Cambridgeport, Mass., who can supply you a new inside diary to insert for 1893.

It is made of morocco and lined with leather, and has pockets for cards, bills and stamps. Ladies need it for shopping. Boys and girls ought early to learn to keep a diary.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Digitized by Google

Popular and Attractive Books for Girls and the Family.

Life, Letters and Journals of Miss Alcott.

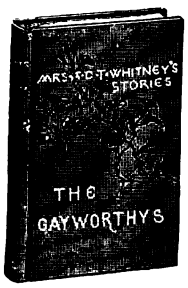
Given for one new subscriber and 25 cents additional.

Since the death of Miss Alcott kind hands have gathered materials for this interesting tribute to her memory. The book is hard to describe. You might think from the title that it was a dry record of facts. On the contrary, we are quite sure the young will find in this Book the same "subtle something" that makes this author so much beloved. Her diary, commenced when she was twelve years old, is full of the fun and pathos that marked the woman. Her first childhood poem is charming. The simple record of her life will win the hearts of her admirers.

Given for one new subscriber and 25 cents additional. Price $1.10. **Postage and packing 15 cents,** when sent as a premium or purchased.

Faith Gartney's Girlhood. By Mrs. Whitney.

Given for one new subscriber and 20 cents additional.



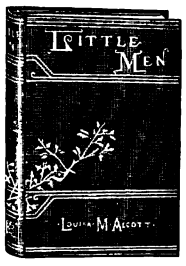
This story of a beautiful maidenhood, by the author of "The Gayworthys," will ever be a welcome guest in the Christian home. It is a sweet record of something of the thought and life, the wishing, striving and erring that lie between the ages of fourteen and twenty.

It is the author's greatest triumph; every page is intensely interesting. The story is natural, shrewd, pathetic and humorous in turn, but best of all is its uplifting influence in the life of every girl who reads it. 350 pages, cloth bound; full-page illustrations.

Given for one new subscriber and 20 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Gayworthys. By Mrs. A. D. T. Whitney.

We have no American writer who so thoroughly understands girls as Mrs. Whitney. This is a girl's Book; to be read, reread, and loaned, as long as the leaves and cover will hold together. This Book has a mission to every girl's home.



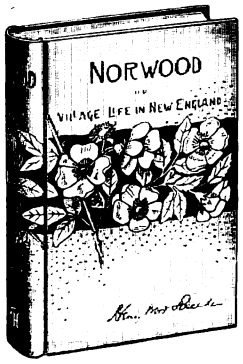
"The Gayworthys" is an intensely interesting story, and at the same time is full of purity, sweetness, humor and homely Christian faith. Every home will be made the better by the presence of this book. 400 pages. Cloth bound.

Given by kindness of the publishers for only one new subscriber, and 20 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Little Men: or Life at Plumfield with Jo's Boys. By Louisa M. Alcott.

Given for one new subscriber and 25 cents additional.

"What a charming story!" So everybody says who reads "Little Men: or Life at Plumfield with Jo's Boys." A book by this author needs no commendation. Those who have read "Little Women" will be eager to possess "Little Men."



Nat, the Orphan Fiddler; Demi, his chum; and ten other rollicking boys are the heroes. This model family school is under the charge of Uncle Fritz and Aunt Jo, who devote their lives to developing "their boys" in body, mind and soul. You will be deeply interested in this natural and vivid description of boy-life. Many scenes are exceedingly touching.

Fathers and mothers will find many things to think about in this book. Uncle Fritz's and Aunt Jo's methods are worth imitating. A description cannot do justice to this excellent Book. It must be read.

Given for one new subscriber and 25 cents additional. For sale by us for $1.10. **Postage and packing 15 cents,** when sent as a premium or purchased.

Norwood: an American Romance. By Henry Ward Beecher.

Given for one new subscriber and 10 cents additional.

This charming Romance of life in New England is the only work of fiction ever written by this distinguished preacher.

The reader at once recognizes the family gift for romancing. Every chapter is bright with "Beecherisms." No one can write more charming and breezy descriptions of nature. His pathos awakens your deepest emotions, he is bubbling over with humor.

The plot of the Book is highly dramatic and thrilling, and the moral tone pure and positive.

It is a Book of permanent worth, and, like Uncle Tom's Cabin, will be read and reread. 550 pages, fine cloth binding.

This delightful Book is given for one new subscriber and 10 cents additional. Former price $2.00. Our price now $1.10. **Postage and packing 15 cents,** when sent as a premium or purchased.

Jo's Boys. By Louisa M. Alcott.

Given for one new subscriber and 25 cents additional.

"Jo's Boys, and How they Turned Out," is a sequel to "Little Men." In it she bids "good-by" to all Jo's boys that so filled the heart and life of Mrs. Jo. The Book is as charming and interesting as either "Little Men" or "Little Women." It is needless to describe the story.

The Book has 365 pages, bound uniform with "Little Men," and has a frontispiece portrait of Miss Alcott.

Given for one new subscriber and 25 cents additional. Price $1.10. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Little Women. By Louisa M. Alcott. 2 volumes in one, with illustrations.

"Little Women!" Who has not read about them? Who does not want to read about them again? Let us recall their names, — Meg, Jo, Beth and Amy. The story and its author need no further introduction.

We now give these two volumes in one for one new subscriber and 25 cents additional. Price $1.10. Former price, $3.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Rose in Bloom, and Eight Cousins. Two Books by Louisa M. Alcott.

"Rose in Bloom" is a sequel to Miss Alcott's "Eight Cousins." The readers who have made the acquaintance of the "Eight Cousins" will want to know Rose, and follow her character until she becomes

a "Rose in Bloom." The Book will interest and benefit all those who read it, both old and young.

"Eight Cousins" is one of Miss Alcott's most fascinating Books. It is a charming story of home life; the attractive characters and thrilling incidents will interest the reader. The heroine, Rose, will be a favorite with the boys as well as the girls.

Either volume given for one new subscriber and 25 cents additional. For sale by us for $1.10 per volume. **Postage and packing 15 cents,** when sent as a premium or purchased.

Dred: a Tale of the Great Dismal Swamp.

By Harriet Beecher Stowe. 2 volumes in one. 700 pages.

It is a story of thrilling power, and abounds in humorous delineations of negro character. This wonderful Book is fully as pathetic and tragic as "Uncle Tom's Cabin."

Formerly published in two volumes. By special arrangement with publishers, we can offer both volumes complete, bound in one, for only one new subscriber and 30 cents additional. 700 pages, strongly bound in cloth, with gold decorations. For sale by us for $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

Under the Lilacs. By Louisa M. Alcott.

Louisa M. Alcott's famous Books always appeal to our subscribers, and they never fail to satisfy. "Under the Lilacs" is one of her best. The author has put her whole heart into this Book, and the story will be read by our subscribers with the intensest interest. An attempt to give a description of this Book would destroy the story. You must read it. 305 pages, with illustrations. Bound in cloth and gold. Uniform with "Little Women."

Given for one new subscriber and 25 cents additional. Price $1.10. **Postage and packing 15 cts.,** when sent as a premium or purchased.

An Old-Fashioned Girl. By Louisa M. Alcott. Illustrated Edition.

Given for one new subscriber and 25 cents additional.

We have sent our subscribers thousands of Miss Alcott's Books. "An Old-Fashioned Girl" is one of her best.

Our little men and little women who so much enjoy the author will want this Book.

Polly, the old-fashioned girl from a true country home, spends a time with her city cousins, who just a little ape the "girl of the period." She teaches them noble lessons of true womanly beauty, modesty and worth. The Book gives an account of her adventures in a city home. It is full of interest.

378 pages, illustrated, bound in cloth, with ink, red and gold ornaments. Uniform with "Little Men" and "Little Women."

This Book is given for one new subscriber and 25 cents additional. For sale by us for $1.10. **Postage and packing 15 cents,** when sent as a premium or purchased.

Jack and Gill. By Louisa M. Alcott.

Given for one new subscriber and 25 cents additional.

Jack and Gill is the last of Miss Alcott's Books that we have not, until now, placed upon our List. Every person who loves her charming stories will read "Jack and Gill" with keen delight.

It is beautifully illustrated and is bound in cloth uniform with the rest of Miss Alcott's Books described on this page.

Given for one new subscriber and 25 cents additional. Price $1.10. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The Schonberg-Cotta Family.

Given for one new subscriber.

This is another old Book, but it is none the worse for that. We desire to offer Books that are useful and improving to the reading taste, and at the same time interesting in plot and narrative. You will find this such a story. The plot is historic, the Reformation being the central event, and Martin Luther the hero.

The Cotta Family were his early friends, and this Book, in the form of a diary, is the story of their life during the thrilling times of the Reformation. 550 pages, and well bound in cloth.

This fine Book is given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Six to Sixteen. A Great Emergency.

And Other Tales. Two Volumes.

Mrs. Ewing has been called the "Louisa Alcott of England." These are her two most popular Books for girls in their teens. Nobility and genius characterize these stories, and we do not hesitate to recommend them to careful parents for the family to read.

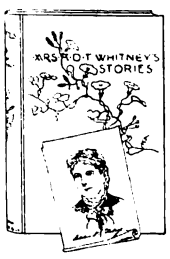
The offer is generous. Formerly we gave them each for one new subscriber; now we offer the two volumes for one new subscriber. 580 pp. nicely illustrated, and bound in cloth.

Price of the two volumes $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Uncle Tom's Cabin. Illustrated. "Youth's Companion" Edition. Given for one new subscriber.

We have sent about 15,000 copies of this Book to our subscribers. The demand seems to increase. We now offer our own edition, with illustrations, which is an entirely new feature. The face shown in the cut is the portrait of Father Henson (who died some years ago), the counterpart of the hero, Uncle Tom. 500 pages, and new cover designs, cloth bound.

This wonderful Book has been translated into nineteen different languages. Although first published nearly thirty-five years ago, the demand for it is still enormous. Formerly this book was printed in two large volumes, at $3.75.



This edition contains the unabridged story of Uncle Tom's Cabin, also an interesting introduction giving the history of the Book. No such Book was ever written before, in any age or tongue.

Given for one new subscriber. For sale by us for $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

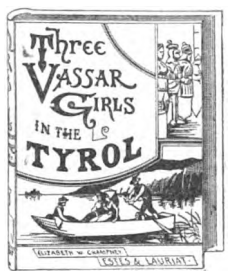
Popular Books for Girls and the Family—Continued.

"We Girls." By Mrs. A. D. T. Whitney.



This is a Book which is as popular now as when it first came out 20 years ago. It is a story of home-life, perfectly told. The hardest kind of a novel to write is that which deals with the every-day occurrences which may happen to anybody.

The romance which deals with the unusual and the exciting takes care of its own interest. But the author who determines to write about the common life of ordinary people has to depend on art and literary genius to glorify these common things and sayings into fascinating romance.

Mrs. Whitney was one of the first who dared attempt this style which is now so popular. No one has surpassed her in it.

Given for one new subscriber and 20 cents additional. Price $1.25. **Postage and packing 15 cts.**, when sent as a premium or purchased.

Three Vassar Girls in the Tyrol.

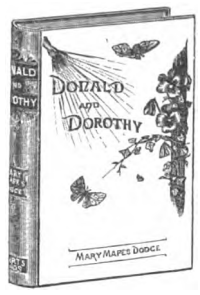
This is a most entertaining book of adventure among the Alps. A Vassar girl is seeking her unknown relatives in the Tyrol. Is joined by two other Vassar girls. Together they see the grand sights of the Alpine Mountains, and encounter many interesting adventures.

Board covers, lithographed in colors, 8½ x 7 inches. 239 pages. 74 illustrations. Heavy calendered paper.

Given for one new subscriber. Price $1.00. **Postage and packing 20 cents.**

Stepping Heavenward. By Mrs. Prentiss.

Given for one new subscriber and 15 cents additional.



Good Books never die. 75,000 copies of this Book have found homes in this country alone. It is translated into every Christian language. "Stepping Heavenward" has been a comfort and an inspiration to many hearts.

At the age of sixteen Mrs. Prentiss began to write for THE COMPANION. Some of our readers remember the articles. "Stepping Heavenward" is the record of a beautiful life of faith in the form of "Katharine's Diary," commenced at sixteen. Every girl should read it. 426 pages, cloth bound.

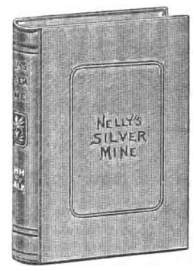
Given for one new subscriber and 15 cents additional. Price $1.35. **Postage and packing 15 cents**, when sent as a premium or purchased.

Donald and Dorothy. By Mary Mapes Dodge.

This is a capital boys' and girls' Book. It is a bright, fresh, wide-awake story of country and city adventure, and a trip to Europe, with a romantic ending.

Commence the Book, and you will not put it aside unless compelled to do so. 28 beautiful original illustrations.

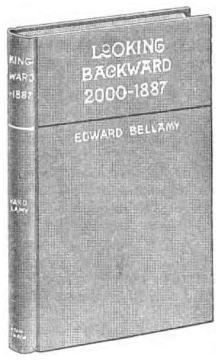
The Book contains more than 350 pages.



Given for one new subscriber and 30 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

Nelly's Silver Mine. By H. H. (Helen Hunt Jackson.)

Given for one new subscriber and 25 cents additional.



This is a story of Colorado life, and is one of the sweetest Books for girls you ever read. Anything that came from the pen of H. H. was almost above criticism; she certainly knew the way to a girl's heart.

You will enjoy following Nelly and Rob from their Eastern home to Colorado, their finding and working the "Good Luck" Silver Mine to such a success—but we must not tell you the story first. The Book is handsomely illustrated. 379 pages.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 15 cents.**

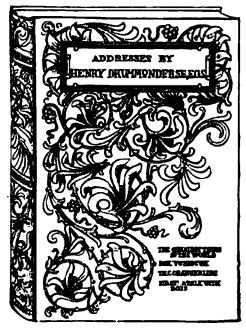
Looking Backward. Cloth Bound. Latest Edition.

It has been said that this remarkable Book has excited a popular interest greater than any other American story since "Uncle Tom's Cabin" appeared.

The hero of the story is represented as existing in some occult cataleptic sleep until the year 2000. He then awakes to be amazed at the universal attractiveness of life in that age, and to realize the unnecessary poverty of the many and the superabundant wealth of the few, in our own century. In addition to this interesting food for thought, a romance of absorbing interest holds the reader's closest attention to the end.

This remarkable Book is given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Last Words. By Juliana Horatia Ewing.

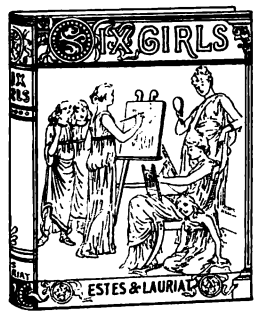


This is a collection of short stories by the author of "Jackanapes" and "Six to Sixteen." Mrs. Ewing wrote a style powerful in its tender simplicity. There is also an air of quaintness about the stories. It is a Book girls are most likely to enjoy.

We have many good Books on our LIST for the young people. None are more popular than are Mrs. Ewing's, and none more profitable for them to read.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Greatest Thing in the World. Gift Edition.



The name of Professor Drummond is a household word. His "Greatest Thing in the World" is a revelation to every reader. It is a masterpiece of genius that every one should read.

This edition also contains "Pax Vobiscum," "The Changed Life" and "First."

Bound in the most superb style; white and silver, and silver edges. It will make a rare Gift Book for any thoughtful person.

Given for one new subscriber. Price **$1.00. Postage and packing 10 cents,** when sent as a premium or purchased.

Six Girls. A Home Story.

This Book gives the home life of six girls; the oldest of them—Beatrice—is a favorite; the next girl pretty as a picture, with a fine voice for singing; another is an artist; then come the twins, Kitty and Kat, who are very natural girls; and lastly, little Jean, with her flower-like face and poor crooked back.

To help and guide these young lives was the dear loving mother, who called them her steps, and the strong, helpful father, who romped and played, or read and studied, with them; and called Kitty and Kat "his boys." Having introduced our friends, we are sure you will enjoy a further acquaintance with them. 445 pages, 8 illustrations.

Given for one new subscriber and 10 cents additional. For sale by us for $1.00. **Postage and packing 20 cents.**

Charles Dickens, Thackeray and George Eliot.

George Eliot, Thackeray, Dickens:

in which order would **you** place them?

George Eliot, the analyst of human nature. the revealer of the human heart, the keen philosopher of human life.

Thackeray, the satirist, the exposer of shams, whose wonderful powers of humor, sternness and pathos are all devoted to branding social wrongs.

Dickens, who learned in the school of hard knocks how to feel with those at the bottom of English life, and who has peopled the world's imagination with a host of Squeerses and Wellers and Little Nells, who are as real as any people we know.

This is the Triumvirate of modern English Fiction. Who shall come after the King?

George Eliot. Six Volumes.

And What Beauties They Are.

You find no blurred pages; no corners of letters worn off by years of presswork. The type is large, distinct, black. It was made for poor eyes, evidently.

The paper does not distress you by its thinness and coarseness. While not of course the richest, it is fair, firm and strong.

The pictures are fresh reproductions of the famous original woodcuts.

The binding harmonizes with the interior. Without being showy, it is in good taste, attractive and substantial.

The Books are pleasant to handle. They are expansive without being bulky, and will readily lie open where they are placed. In short, they are remarkably fine Books for the prices below.

Why have these Royal Novelists

been omitted from the PREMIUM LIST for the last two years?

An interesting story of a great monopoly contains the answer to this question:—a question which many of our readers have asked.

About three years ago a syndicate of capitalists **bought up all the plates** in the United States from which the works of these novelists were printed.

The result was, this syndicate alone could print these popular novels. The syndicate immediately raised the price. Therefore, for two years we have been unable to procure these novels at the moderate cost for which we could offer them as Premiums.

But now this monopoly is thwarted. An entirely **new set of plates** has been made from new type and new cuts.

From these new plates, superior in some respects to the old plates, are printed the Books we here offer, and at prices lower than ever before quoted.

Thackeray. Ten Volumes.

This is our Offer.

GEORGE ELIOT, complete and unabridged. **Six octavo volumes.** 400 and 500 pages each, with 25 illustrations. Given for one new subscriber and 75 cents additional. Price $2.00 per Set.

THACKERAY, complete and unabridged. **Ten octavo volumes.** 400 and 500 pages each, with 177 illustrations. Given for two new subscribers and $1.00 additional. Price $3.00 per Set.

DICKENS, complete and unabridged. **Fifteen octavo volumes.** 400 and 500 pages each, with 237 illustrations. Given for two new subscribers and $2.00 additional. Price $4.00 per Set.

The above Sets must be sent by express and charges paid by receiver, when sent as a premium or purchased.

SPECIAL. For twelve new subscribers we will give all Three Sets. Thirty-one volumes in all. **Think!** Is not this worth trying hard for? We will also add free with this special offer the Library Bookcase described on the following page.

Complete Works of Washington Irving.

We regret we have no room here for a cut of this fine Set. Never before have we been so crowded. But publishers have flooded us with their most attractive Books at amazingly low prices, so eager have they been for our sales, as well as for the introduction which this prodigious Premium edition of THE COMPANION gives them.

Thus, here in this corner, without a picture, is one of our best offers. But the true Book-lover will find it out, and will appreciate what it is to possess **Washington Irving,** the great pioneer of American literature.

Let us give a word-picture of the Set. 1st, Eight volumes. 2d, Size of each, 7¾ x 5¼ x 1½ inches. 3d, Exceedingly tasteful brown cloth binding. 4th, Type of the clearest. 5th, Paper smooth, fine, a real delight.

The works of Washington Irving given for three new subscribers and $2.50 additional. Price $6.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Charles Dickens. Fifteen Volumes.

The Waverley Novels. Twelve Volumes.

Do you own Sir Walter Scott's Novels? You have read some of them, of course. But there are 26 of them altogether. If you are like ourselves, there are some of Scott's Novels you like to read over and over again. That is one test of the Novel—does it bear re-reading?

The fact is, Scott never grows old. Fashions change in fiction as in dress. But old-fashioned Sir Walter Scott is no more to be outgrown than horseback riding, which is also old-fashioned. That is another test of the novel—does it last, generation after generation?

Dear old Sir Walter stands all the tests. You would think it strange if he were not here too, in this corner. So here we offer all his twenty-six Novels, in twelve Volumes.

The Set is attractive and firmly bound in brown cloth.

The Set of Waverley Novels, complete, given for three new subscribers and $2.50 additional. Price $5.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

"The Lyceum League of America."

Our New Proposal.

A great factor in making the men of the last generation intelligent citizens and lovers of their country, besides developing so many great leaders, was the old Lyceum, or debating club.

The fathers of many of our readers could tell interesting stories of the sharp encounters in these youthful debates, while burning questions were decided over and over again.

These debates were especially valuable in awaking an interest in public matters which nothing else could have done.

THE COMPANION thinks a reviving of the Lyceum would prove a decided benefit, both to our country and to the youth who are soon to be citizens. Our coming voters must be intelligent and broad on the great questions, as well as full of patriotic feelings.

Other Advantages.

Besides, debate is a thing young men enjoy. Who does not like to have the right of an argument? Who does not wish to learn how "to think on his feet?"

It is also of great and life-long value for men to understand Parliamentary Usage. The training from conducting Lyceum meetings strictly according to Cushing makes young men masters of the art of presiding, and is also useful discipline in power of leadership.

In 1888 THE COMPANION started the School House Flag idea; to-day thousands of Schools fly the Old Flag. We now propose a great League Lyceum movement.

The Flag awoke a new ardor for Country. The Lyceum League will direct that generous enthusiasm into practical lines, and with rich results.

How to Form a Lyceum Club.

Interest other young men in the advantages of such an organization. Consult with your teachers or parents. Then write us that you wish to form a Lyceum Club. We will send you a printed blank form, and Special Instructions about forming the Club. Organize at once.

Our Plan For It.

1. Its name is to be The Lyceum League of America; or as it will be known, "L. L. A." The local Lyceums will be known to us by their numbers, given in the order of their formation, as "L. L. A. No. 946."

2. This League of Lyceums will be connected with each other through us. Membership in such a National League of Clubs, all devoted to the cultivation of American citizenship, will be more inspiring than in a purely local Club.

3. This League is to be under the auspices of THE COMPANION. We furnish a model constitution, subject of course to local changes. We furnish lists of subjects for discussion, carefully worded and timely. We also furnish direct suggestions as to Books, subjects and debates.

Our Free Equipment.

To mark our sincere interest in the fitting of young men for public duties, we make this offer: To every Club of 10 or more young men who organize under this plan, we will furnish a full Equipment **FREE.** This consists of a Secretary's Book, a President's Gavel, and Cushing's Manual, all packed in a neat box. The Secretary's Book contains Model Constitution, condensed Rules of Order, Subjects and Rules for Debate, and blank pages for the record of 80 meetings.

Moreover, we will present to the **first ten** clubs which notify us of their organization, according to our Instructions, a **Library,** consisting of all the Books named on this page (except American Statesmen Series), with the Bookcase.

Besides, to the Club having the honor to be First of these first Ten Clubs, we will also present a superb (15 x 9) United States Flag.

For Young Americans—Books for Reference and Study.

If young men wish to understand their country, its politics and its problems, they need Books, both for reference and study. We assume it as our duty, having originated the **Lyceum League,** to supply its needs. We therefore present a carefully selected list of Books, popular, of small cost, bearing upon political science and history, and covering the range of topics likely to be debated.

These Books, and others which we will gladly name and procure upon correspondence, would make a capital Political Library for any Lyceum, or young man, to possess. If he cannot get all at once, let him keep them in mind, and get one at a time, as the Lyceum subjects bring up special Books. These Books are for **any one** interested in American questions, whether he belongs to a Lyceum or not.

The American Commonwealth. By James Bryce.

Two volumes. 725 and 750 pages.

This is the monumental work of which so much has been said since its publication two years ago. It is the original London edition, the price of which ($6.00) has hitherto confined it to the few.

What is the Book? It is not a history, but it is an immense photograph of all our modern American institutions. Here is what it discusses at length: 1st, The National Government. 2d, The State Governments. 3d, The Party System. 4th, Public Opinion. 5th, Illustrations and Reflections. 6th, Social Institutions.

This information is given, however, not in dull encyclopædia form, but with keenly interesting comments and opinions.

The Book, written by a fair-minded Englishman, is "ourselves as others see us." It is also ourselves as we actually are. It is a standard Book. It will be authority on America as Gibbon is authority on Rome.

Given for one new subscriber and 75 cents additional. Our price only $2.50 per Set. **Postage and packing 35 cents,** when sent as a premium or purchased.

Our Country. By Josiah Strong. 275 pages.

This important Book was published in 1886. It created a profound impression, and reached 130,000. It is now carefully revised to date, enlarged and republished.

This is its scope: National Resources and National Perils. It discusses: Immigration, Romanism, Public Schools, Mormonism, Intemperance, Socialism, Wealth, The City, The Exhaustion of Public Lands, The Anglo-Saxon and the World's Future.

It does not cross the lines of Bryce's American Commonwealth.

Given for one new subscriber. Price 60 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Which? Protection or Free Trade? 550 pages.

A peculiarly valuable Book, in which **both sides** are presented. The best things that have been said are fairly given.

Here are some of the prominent men who speak in this Book: Henry Clay, Daniel Webster, Horace Greeley, Sam'l Randall, Jas. G. Blaine, Wm. McKinley, Grover Cleveland, Thos. G. Shearman, etc. Also such writers on economics as: Adam Smith, Richard Cobden, John S. Mill, Prof. Sumner, Prof. Perry, etc.

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.

History of American Politics. By Alex. Johnston.

This is one of the most valuable Books on the LIST for one who wishes to understand the course of political movements and struggles in our country.

It is not a history of wars, nor of people. It is wholly a history of the political questions which America has had to decide from the beginning. We find here also the story of the rise and fall of all the various political parties. Careful accounts of each national election are given, with results and statistics.

It is a Book to read, and a Book to keep for reference. Of this Book, like "Our Country," we would say, "Get it, anyway."

Given for one new subscriber. Price 80 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

The Labor Movement in America. By Prof. Ely.

Nearly every one at present appreciates the important place the Labor Movement occupies in American political science. Yet its history is very little known and its purposes are often misunderstood.

Prof. Ely treats the subject with great all-around fairness, with deep human sympathy, and with a clear head for economics and justice. The Book is authority on the subject.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

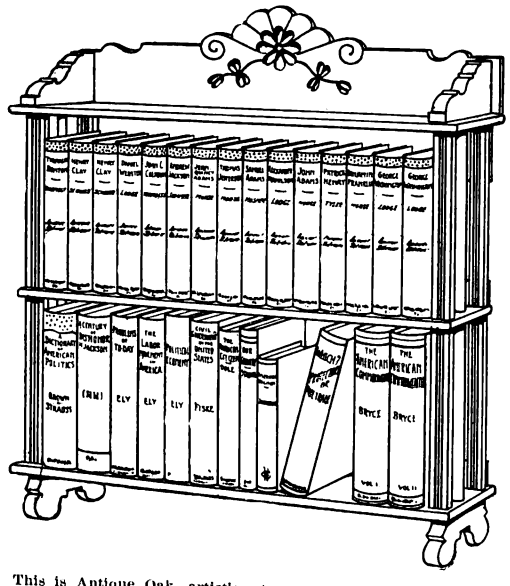
Problems of To-day. By Prof. Richard T. Ely.

Prof. Ely, of Johns Hopkins University, is doing more than any other man to familiarize the people with economic problems. This Book discusses Taxation, direct and indirect; Protection, and its relation to Commerce and Labor; Natural Monopolies, and what to do with them (water supply, light supply, rapid transit, etc.); Municipal Government, etc.

The Book is very interesting and fair. It will be a great help in studying up debates along these lines. All Prof. Ely's Books ought to be in the Lyceum Library.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Political Economy. By Prof. Richard T. Ely.



The young man who wishes to understand modern political problems must know the principles of Political Economy.

No writer is better able to give a popular and clear idea of the science than Prof. Ely. He calls this Book an *Introduction* to the study. He says he aims to make the reader say, when he closes the Book: "I now see what Political Economy is about, and having surveyed the field, I propose to take up special questions, like taxation or the labor movement, and study them carefully."

This Book was written for the Chautauqua Circles. It is also used in Colleges. It is the most popular Political Economy obtainable.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Lyceum Library Bookcase.

This is Antique Oak, artistic, strong, and ready either for the table, or to be screwed to the wall. It can be taken apart and packed for express in a small bundle. This cut gives a truthful idea of its proportion and its tastefulness. Its two lower Shelves will hold thirty ordinary Books.

Given for one new subscriber and 20 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Civil Government in the United States.

By John Fiske. 350 pages.

This new Book, by a masterly author, is very important to the study of American Citizenship. It is suggestive. It is all about Government. It touches social and economic problems entirely in their relation to Government.

It strikes in a new line by treating the features of Government historically and comparatively. Thus, a third is given to the Township and County, which are traced back to their ancient English origin, and are the starting points in American politics. Peculiarities of Government in different sections of our Country are considered, with their bearing on the Nation. Constant comparisons are made with European features of Government.

Each chapter is followed by questions suggested for further investigation, and Books for further study. The articles of Confederation, the Constitution, the Magna Charta, are given; also description of the Australian Ballot.

We urge every student to get it and keep it. It is the kind of Book to form a high purpose in a young man. It ought to be read and re-read. It is so interesting a boy can understand it; but so scientific that a man will not outgrow it. It is arranged also for Class Study.

Given for one new subscriber and 25 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The American Citizen. By Chas. F. Dole.

This is a splendid Book for a boy to own. It is a vivid description of what it is to be an American citizen. The author shows how citizenship begins in the home, is shaped on the play-ground and in the school. He shows what are the Natural Rights of every citizen, and also his Duties to Government and to his Fellow-citizens.

He describes Local, City, State and National Government. He talks on Taxes, School System, Civil Service, Political Parties, and all our modern problems. He discusses the Rights and Duties of Business and Money, the Questions of Crime, Intemperance and Pauperism, and the inter-relations of Nations.

It is a wise Book, a good Book, one of the few we would recommend every boy to own and read often. If any boy thinks he is too young for Fiske's "Civil Government in the United States," this Book will hit him just right.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

The American Statesmen Series.

These are a valuable and important series of biographies of the famous American Statesmen. They are written by men who can speak with authority.

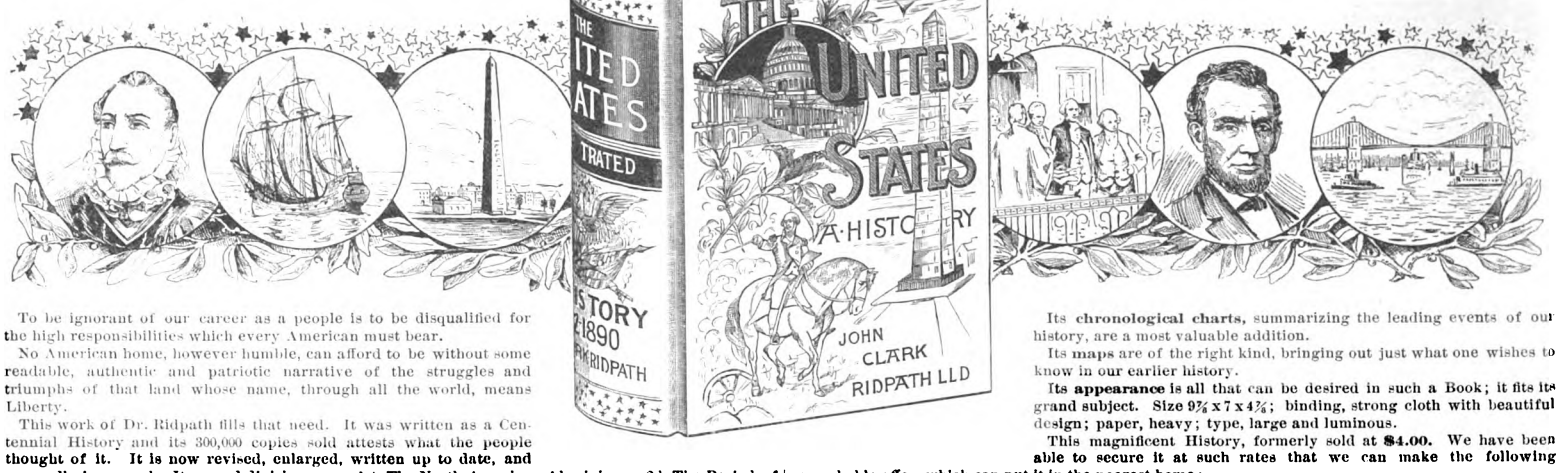
In "studying up" the character or the work of any of these great leaders, the biography here mentioned is indispensable. All together would make a splendid library for a young man.

George Washington, Benjamin Franklin, Samuel Adams, John Adams, Patrick Henry, Thomas Jefferson, Alexander Hamilton, John Quincy Adams, Daniel Webster, Henry Clay, Andrew Jackson, John C. Calhoun, Thomas H. Benton.

400 to 500 pages each. Strongly bound, gilt top.

Any one of these volumes given for one new subscriber and 15 cents additional. Regular price, $1.25 each. Our price, $1.00. **Postage and packing 10 cts.,** when sent as a premium or purchased.

Dictionary of American Politics. 560 pages.



A very helpful Book for any one interested in American public life, or who reads the newspapers. Here is given, alphabetically, about all the information in political matters which the average person wants. It comprises accounts of Parties, Measures and Men; explanations of the Constitution and practical workings of the Government; together with political phrases, familiar names of persons and places, noteworthy sayings, etc., etc.

Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Ridpath's Illustrated History of the United States.

The History of Our Country has been said to be the Bible of American citizenship. Certainly, a knowledge of our past is well-nigh indispensable to the proper discharge of the duties imposed by our republican form of government.

To be ignorant of our career as a people is to be disqualified for the high responsibilities which every American must bear.

No American home, however humble, can afford to be without some readable, authentic and patriotic narrative of the struggles and triumphs of that land whose name, through all the world, means Liberty.

This work of Dr. Ridpath fills that need. It was written as a Centennial History and its 300,000 copies sold attests what the people thought of it. It is now revised, enlarged, written up to date, and generally improved. Its grand divisions are: 1st, The North American Aborigines. 2d, The Period of Discovery from 986 to 1607. 3d, The Period of Colonization, down to 1775. 4th, The Revolution and the Confederation, to 1789. 5th, The National Period, to the present Administration. In all this no salient point is neglected. Our history is all here. Every patriotic youth in the land should read it.

The style is fascinating as a romance. Though written for popular use, it is strictly trustworthy. It is alive with patriotism.

Its **illustrations** are a striking feature from their artistic merit and their suggestive power.

Its **chronological charts**, summarizing the leading events of our history, are a most valuable addition.

Its **maps** are of the right kind, bringing out just what one wishes to know in our earlier history.

Its **appearance** is all that can be desired in such a Book; it fits its grand subject. Size 9⅞ x 7 x 4⅞; binding, strong cloth with beautiful design; paper, heavy; type, large and luminous.

This magnificent History, formerly sold at **$4.00.** We have been able to secure it at such rates that we can make the following remarkable offer, which can put it in the poorest home:

We will give Ridpath's History of the United States for one new subscriber and 75 cents additional. Our price when purchased is only $2.25. Must be sent by express and charges paid by receiver, when sent as a premium or purchased. No Book offer in our LIST can compare in value to this.

Plutarch's Lives. Four volumes. 325 pages each.

Plutarch's Lives of the eminent men of Greece and Rome is the best foundation for a knowledge of History.

Students of History have pored over these fascinating volumes for 1800 years. They are more popular now than ever before.

The volumes are handsomely bound in brown seal cloth, with red leather backs and gilt tops; and printed on heavy paper. They will make a beautiful addition to any library.

The Set given for two new subscribers and 90 cents additional. Price of the Set, $3.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

History of the Reformation. By D'Aubigne.

This magnificent work is too well known to need much description. It is the story of the religious Revolution of Europe in the Sixteenth Century. Its thrilling interest makes it always popular.

We have no doubt it will be a favorite premium.

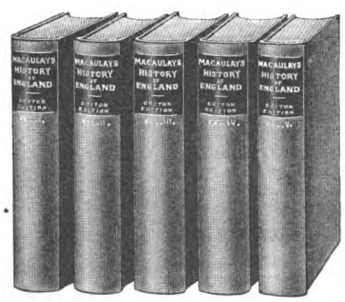
It will be a beautiful and standard addition to any library; or a substantial beginning for a library.

Handsome binding and paper.

Given for two new subscribers and $1.25 additional. Price $4.00. **Postage and packing 50 cts.,** when sent as a premium or purchased.

Chambers's Cyclopedia of English Literature.

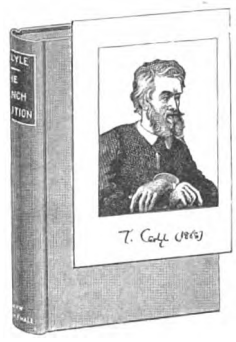
8 volumes bound in four. 3,247 pages. Given for two new subscribers and 85 cents additional.



This Set of Books contains a concentration of the best productions of the English and American mind, from the earliest to recent times, and so arranged that with the help of the valuable index you can find at once just what you want.

They furnish the key to all the good Books in the language. It will gladden the scholar's heart to find this admirable work brought within the reach of shallow pockets.

Premium offer above. Price $3.00. **Postage and packing 50 cents,** when sent as a premium or purchased.



Macaulay's England. Illus. Five vols. 2,900 pages.

This edition is handsomely bound in cloth, well printed, and is indexed. This edition is illustrated, and is to be had only from us. Few persons can own the complete works of several hundred great authors; but every one may own these Books, and experience the pleasure of reading them.

Given for one new subscriber and 75 cents additional. Price $2.25, **express paid by receiver, or it will be sent by mail on receipt of 60 cents.**

Carlyle's French Revolution. Complete.

To make the generous offer of this complete history we have imported the work from London. It is the well-known Chapman & Hall edition, bound in full cloth, 1 volume, 753 pages, with portrait of author, valuable chronological summary, and complete reference index, uncut edges, good paper and clear type.

No history can be more startling or tragic. The Book contains full accounts of the bloody and heroic scenes connected with the Bastile, Insurrection of the Women, the Guillotine, the Girondins, and the Great Reign of Terror. A valuable Book, and within the reach of every pocket-book.

This popular and interesting Book is given for one new subscriber. Price 75 cents. **Postage and packing 15 cents.**

Young Folks' History of America. By Hezekiah Butterworth. 343 pages. 150 Illustrations.

BATTLE OF LEXINGTON.

Thrilling incidents and daring adventure fill every page. The author combines historic facts and patriotic teachings.

The Book is full of engravings. From the story of the Mound Builders, through the Revolution, down to the sad death of President Garfield, there is not an uninteresting page. 543 pages, 150 elegant illustrations.

Given for one new subscriber. For sale by us for $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Flags for Our Public Schools.

In 1888 THE YOUTH'S COMPANION inaugurated the general Public Schoolhouse Flag movement.

Since that time the raising of the Flag over the Public School has become a National custom.

Could the Stars and Stripes be hung upon the the walls of every home, and float over every public school in the land, how grandly might patriotism and love of liberty be unceasingly taught.

In many localities it is difficult to obtain good Flags. We have arranged to supply the best quality of Flags at very low prices.

United States Bunting Flag. Regulation sizes.

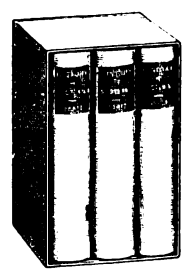
6 x 4 ft.	$3.30.	Given for two subscribers and $1.80 additional.
9 x 6 ft.	5.00.	Given for four subscribers and $2.25 additional.
12 x 7½ ft.	6.60.	Given for six subscribers and $2.60 additional.
20 x 10 ft.	13.00.	Given for ten subscribers and $6.00 additional.

All the Flags have 44 stars. With the two largest Flags we will include a Canvas Bag for keeping the Flag when not in use. We will also letter this Bag free—after this arrangement: "Lincoln School—Presented by Henry Smith." **They must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Middle Ages. By Henry Hallam. Two volumes.

Given for two new subscribers and 80 cents additional.

This standard History makes a superb premium. It is the History of the period of Europe but little known, yet of great importance and absorbing interest. It reads like romance.



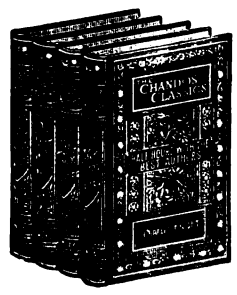
It is the tale of Knighthood and Chivalry, of beleaguered cities and daring deeds. It also describes feudal institutions minutely. As authority on those ages it has no equal.

It is illustrated profusely with reproductions of ancient and quaint pictures made during those ages. Beautifully bound, heavy paper.

Given for two new subscribers and 80 cents additional. Price $3.00. **Postage and packing 40 cents,** when sent as a premium or purchased.

Conquest of Mexico. Prescott. Three volumes.

The Set given for one new subscriber and 50 cents additional.



Prescott's Conquest of Mexico holds a high place among the histories of the world.

At this time there is wide-spread interest in matters pertaining to Mexico.. Every American ought to be familiar with the history of this neighbor of ours. This Set is substantially bound in cloth. It is a bargain.

The Set given for one new subscriber and 50 cents additional. Price of the Set reduced to $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Poetry, Bibles and Religious Historical Works.

One Thousand and One Gems.

Given for one new subscriber.

This is a collection of the best Poems of the English tongue. They are chronologically arranged, from Chaucer in the fourteenth century, to Longfellow in our own.

No home is complete without such a volume of Poetry.

Bound in cloth, blue and gold. Size 7½ x 5 inches. 399 pages. Borders red lined. Gilt edges.

This volume of Poems will make a pretty and acceptable gift for any person.

Given for one new subscriber. Price 75 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

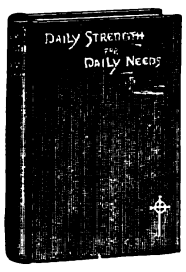
Imitation of Christ. By Thomas à Kempis.

In offering this little Book to our subscribers we are quite sure it will find a generous audience. We have selected a fine presentation edition, bound in full seal, with limp covers and gold edges with round corners. The text is unabridged, comprising the four complete Books.

We hardly need say that this Imitation of Christ occupies a place in the front rank of Books of pious precept. It is a choice Book to give any one.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

The Pilgrim's Progress. Illustrated.



Apart from the Bible, this is doubtless the most extraordinary Book in the English language. It should be in every home. This edition is illustrated.

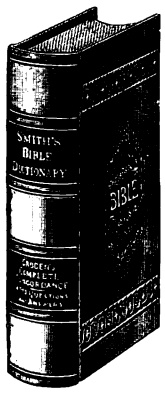
We have waited a number of years for such a copy as this. Quarto size, 9½ x 8 inches, cloth bound, cover design in colors, gilt edges, super-calendered paper, excellent type. 266 pages. 100 elegant illustrations, by famous artists.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Daily Strength for Daily Needs.

Given for one new subscriber.

Many thousands of this little Book have been distributed; the good they have done and the comfort they have brought to troubled hearts can never be told.



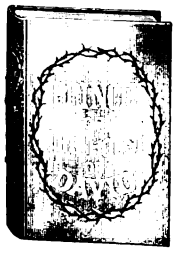
It contains 380 pages, and has a Scripture selection for every day in the year, together with very useful prose and verse selections for each day. Cloth bound and red edges.

As a Gift Book we know of nothing more suitable or appropriate. It will be highly prized by the receiver.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cts.,** when sent as a premium or purchased.

Smith's Bible Dictionary.

Given for one new subscriber and 25 cents additional.

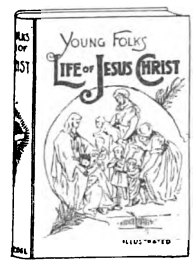


Such a mass of valuable information for Bible scholars was never before bound between covers for so reasonable a price. The Book is almost a library in itself. Every lover of the Bible will appreciate this Book at once.

Cloth binding, marble edges, gold and black cover designs, making a large and imposing volume, 7 x 10 inches. Good paper, large type, with 500 illustrations, and many of them full-page on tinted paper. Besides the Concordance, Dictionary and Atlas, the Book also contains 4,000 Questions and Answers on the Bible, a History of the Books of the Bible, and a mass of other valuable aids and helps to the Bible student and Sunday School teacher.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 35 cents,** when sent as a premium or purchased.

The Prince of the House of David.



Next to Pilgrim's Progress, and Uncle Tom's Cabin, this Book has had the largest sale. "The Prince of the House of David; or, Three Years in the Holy City," consists of a series of letters of Adina, a Jewess of Alexandria, supposed to be sojourning in Jerusalem in the days of Herod, addressed to her father, a wealthy Jew in Egypt. These letters relate, as if by an eye-witness, all the scenes and wonderful incidents in the life of Jesus of Nazareth. No work of fiction can be half so fascinating.

Given for one new subscriber and 30 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

Young Folks' Life of Jesus Christ.

By Josephine Pollard. Given for one new subscriber.

This Life of Christ by Miss Pollard is uniform in style with her Bible and its Story. It is beautifully illustrated.

The story is told in so simple and fascinating a manner that the Book will be hailed with gladness by every interested mother.

We know of no other Book of the kind which will be read with such profit and interest as Miss Pollard's Young Folks' Life of Jesus Christ.

Given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Whittier's Poems. Complete Cabinet Edition.

This is a new edition of Whittier. It is handsomely bound in cloth, with back and side stamped in black and gold, uniform with Longfellow's.

The volume is complete, and contains the author's poems in full, and has over 500 pages. Size 4½ x 6¼ inches.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

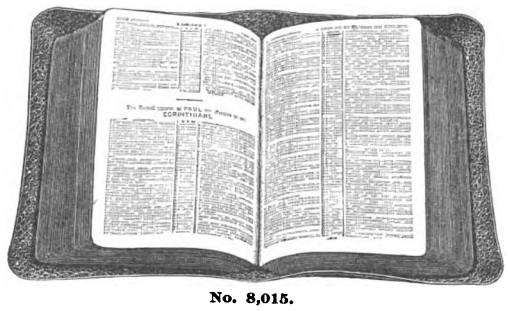
Longfellow's Poems. Complete Cabinet Edition.

Given for one new subscriber.

This is a new edition of Longfellow. It is handsomely bound in cloth, with back and side stamped in black and gold.

The volume is complete, and contains the author's poems in full, and has over 500 pages. Size 4½ x 6¼ inches.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.



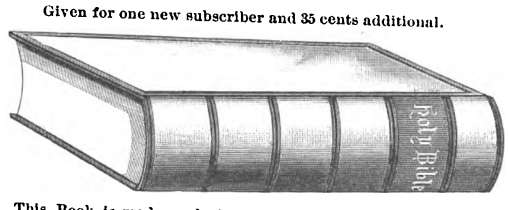
Caution. There are many advertised "Longfellow's Poems" which only contain his earlier works. This edition is complete.

Bagster's Comprehensive Teacher's Bibles.

We offer our subscribers, this year, the famous Bagster Bibles, recommended and endorsed by Mr. Moody and Rev. J. H. Vincent.

The great value of these Teacher's Bibles is found in the marginal references of the Bagster editions. These Bibles are bound in French Morocco, round corners and gilt edges, full circuit binding, protecting entire edges of the Book. They contain all the Teacher's Helps found in the most costly editions of Teacher's Bibles,—extra matter alone filling about 500 pages. Entire Books containing more than 1,200 pages. Full set Maps go with each Bible.

Bagster's Teacher's Bible. No. 8,015. Given for one new subscriber and 40 cents additional. Size of Book, 6 x 4 inches. 16mo pages, pearl type, small but clear. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased.



No. 8,015.

Bagster's Teacher's Bible. No. 8,115. Given for two new subscribers and 35 cents additional, or one new subscriber and 85 cents additional. Size of Book, 6¼ x 4¼. Ruby type, clear and easy to read. A very convenient size to carry. Price $2.25. **Postage and packing 20 cents,** when sent as a premium or purchased.

Bagster's Teacher's Bible. No. 8,317. Given for three new subscribers and 90 cents additional. Size of Book, 8½ x 5½. 8vo pages, emerald type, large and clear, red under gold edges, and leather lined. A good Bible for class use. Price $3.75. **Postage and packing 25 cents,** when sent as a premium or purchased.

Family Reference Bible.

Given for one new subscriber and 35 cents additional.

This Book is made exclusively for us. 1,248 pages. Size, 7 x 10 inches, cloth-bound, red edge. Complete Marginal References, devotions, chapel use, and for elderly people to hold in the lap—type large and clear, and easy to read.

Given for one new subscriber and 35 cents additional. Price $1.50. **Postage and packing 40 cts.,** when sent as a premium or purchased.

Quarto Family and Pulpit Bible.

We have no room for the cut of this large Book. 13 inches high, 11 inches wide, and 5 inches thick. Bound in full morocco. Gilt edges. Over 3,000 illustrations. Concordance, etc.

Given for three new subscribers and $3.50 additional. Price $9.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Longfellow's Birthday Book.

Given for one new subscriber.

One of the pleasant customs which does not wear out is the keeping of a Birthday Book, in which we can record the birthdays of our friends opposite to a passage from some favorite author.

There is no doubt that Longfellow is the most favorite poet of America. In this little Book, opposite to the 365 days are some 1000 choice passages from our poet.

This Book is given for only one new subscriber. Price 90 cents. **Postage and packing 10 cts.,** when sent as a premium or purchased.

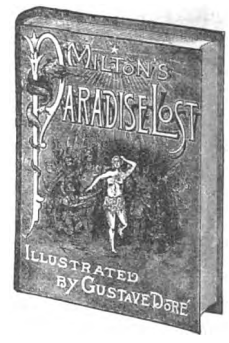
Woodbine Edition of the Poets.

Either volume given for one new subscriber and 20 cents additional.

Milton, Byron, Scott, Moore, Burns, Tennyson, Wordsworth, Hemans, Mrs. Browning, Goldsmith, Ingelow, Hood, Eliot, Shelley, Bryant, "Lucile," "Lalla Rookh," Dante and Robert Browning.

This is an elegant edition of the popular Poets. Gilt edges and elegantly bound in morocco, padded covers, new design decorations, unabridged editions. Each volume contains several hundred pages.

Either volume given for one new subscriber and 20 cents additional. Price $1.25 per volume. **Postage and packing 15 cents** per volume additional, when sent as a premium or purchased.



Special Offer for Presentation Purposes. We will send five or more volumes at one time for $1.00 per volume. Express not paid.

Masterpieces of Poetry and Art.

Doré's Bible Gallery. 100 Illustrations. Given for one new subscriber and 30 cents additional.

Milton's Paradise Lost. 50 Superb Engravings. Given for one new subscriber and 30 cents additional.

Dante's Inferno. 75 Full-page Illustrations. Given for one new subscriber and 30 cents additional.

Beautiful and appropriate gift or table Books are plenty, but among the really choice ones these Books take the lead.

The Books are each quarto size, 9½ x 12 inches. English cloth binding, emblematic designs in full gilt, gold edges, and printed on super-calendered paper.

About ten years ago editions of these Books, printed from the same plates, sold at $10.00 each.

The illustrations are all by the master-hand of Gustave Doré, the greatest of modern artists.

Premium offers above. Price $1.50 per volume. **Postage and packing 45 cents** per volume, when sent as a premium or purchased.

The Bible and its Story. By Josephine Pollard.

Given for one new subscriber.

There will always be a place in the home for a book of Bible Stories. Such a Book should be full of illustrations, to fix the attention and cultivate the imagination of the little folks. The Book we offer is full of pictures.

The stories should be selected with care and told in a simple, thrilling manner. Who can do this better than Miss Pollard? This is a large Book, with illustrated cloth covers. It is a prize for tired mothers. It will make a most valuable holiday gift.

Given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Life of Christ. Complete. By Geikie.

Given for one new subscriber and 10 cents additional.

This is another invaluable help to the understanding of the New Testament. Among the numerous Lives of Christ that are published, this great work by Dr. Cunningham Geikie is the standard and best; this is the testimony of the best Bible students. While this volume is beyond compare as a Book of reference, it is also exceedingly interesting to read in course.

For the style and quality of the binding, this is the cheapest Book on our LIST.

Tastefully and substantially bound in best English Cloth. Gilt top. One of these Books ought to be placed in every family.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Dictionaries, Photograph Albums, Binder, Etc.

The Domestic Cyclopedia.

Given for one new subscriber.

The American Domestic Cyclopedia, a volume of universal ready reference for American women in American homes, contains a large fund of useful information, facts, hints and suggestions upon the various topics pertaining to home life.

It includes home decoration, household management, domestic affairs, cookery, ladies' fancy work, medical matters, floriculture, etiquette, home amusements, the nursery, artistic embroidery, decorative painting, lace-making, the toilet, the laundry, etc.

189 illustrations. 540 pages. Bound in cloth, and embossed in black and gold.

Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Worcester's Unabridged Dictionary.

Given for two new subscribers and $4.00 additional.

This is a massive quarto volume, 11¼ x 9 inches, bound in full sheep, with marble edges. It is a new edition, illustrated and unabridged, containing more than 115,000 words in its vocabulary; with their pronunciation, definition and etymology.

Given for two new subscribers and $4.00 additional. Price $8.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. We will supply the Dictionary with the **Patent Reference Index** for only 50 cents additional.

The Elite Autograph Album.

Given for one new subscriber.

You will be hard to please if this Album does not delight you.

Small quarto size, fine silk plush, embossed; color, changeable drake-neck green, gold inscription. The envelope and quill design is in celluloid, dull green coloring, and red broken seal.

It is the handsomest Autograph Album we have ever seen for the money.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Wood's Household Practice of Medicine.

Two large volumes. 1,800 pages. Over 700 engravings.

Given for two new subscribers and $1.50 additional.

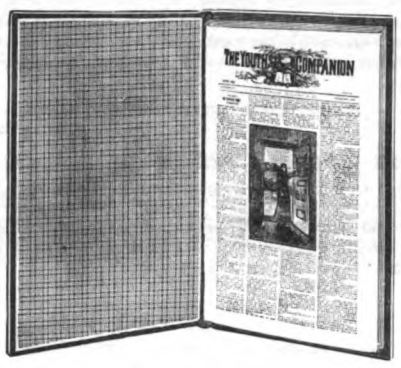
The name is all the guarantee this work needs for utility and reliability. Ask your physician about it. Each department, and there are forty of them, is written by a medical expert of recognized authority in his specialty, and his name is attached. It is the most valuable medical work for the family in America. It is exhaustive, and easily understood. The work sells by subscription for $10.

Price $5.00, only, for the two volumes.

Given for two new subscribers and $1.50 additional. Size of Book 7 x 10. The set weighs nearly 13 lbs. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Plush Quarto Photograph Album.

Given for one new subscriber and 50 cents additional.



It has been made from our specifications. The leaves have tinted centres, with alternate apple, blackberry and clover blossom designs executed entirely in gold outline tracing.

The Book is covered with fine Silk Plush, of a rich garnet color, and blackberry embossing, padded sides, gold edges, strong extension nickel clasp. Size of Book, 11 x 8½ inches. The Book contains 32 pages, and openings for cabinet and *carte de visite* sizes.

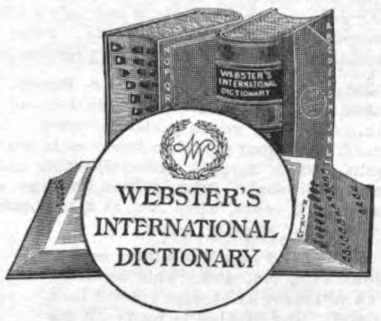
Given for one new subscriber and 50 cents additional. Price only $1.75. The Book is too heavy to go by mail. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Youth's Companion Binder.

A good Binder is a great economizer of time, because you always know just where to find your COMPANION. When your paper is first received insert it in your Binder, and your papers are always clean and fresh-looking. This is the most simple, durable and practical Binder that is made. It will hold fifty-two numbers of THE COMPANION. Each issue can be easily inserted. Stiff cloth covers and gilt embossed title. Size 12 x 17¼ inches.

Two Binders given for one new subscriber and 10 cents additional. **Postage and packing 30 cents,** when sent as a premium. For sale by us for 50 cents each. Postage and packing 20 cents each, when purchased.

What Every One Should Know. 510 pages.



This is a handy "gather-all" of practical information. It contains complete directions for making and doing over 5,000 things necessary in business, the trades, the shop, the home, the farm, and the kitchen.

Here are literally all sorts of recipes. Many people habitually make clippings from newspapers and paste them into some clumsy scrap-book; and after years have not one-fiftieth part as much reliable information in the practical recipe line as is contained here.

Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Webster's International Dictionary.

Given for three new subscribers and $4.75 additional.

The "International" is, in fact, the popular "Unabridged," enriched and re-edited to meet the severer requirements of the present day. This work of preparation has been in progress for over ten years. No less than one hundred editors have been engaged upon it, with an expenditure of more than three hundred thousand dollars before it was ready for the printers.

It is the latest standard authority on the words and usages of the English language. No library can be considered complete without this valuable work. Bound in rich and substantial sheep.

Given for three new subscribers and $4.75 additional. Price $9.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

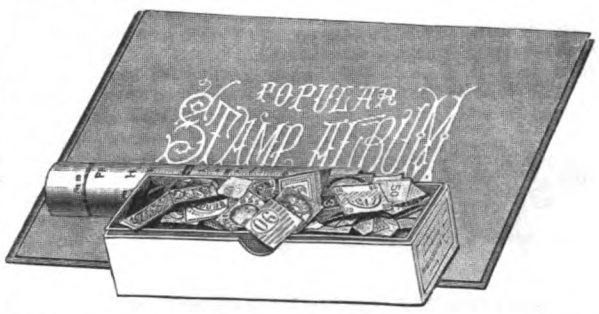
We will supply the International Dictionary with the Complete Patent Reference Index as seen in the cut, for 75 cts. additional.

Law Without Lawyers. 400 pages.

This Book answers a long-felt want. It is a compendium of Business and Domestic Law for popular use, compiled by a member of the New York Bar. It should be in every family, and may save you yearly many times its cost. The Book gives in a clear manner the legal information one needs to know for ordinary affairs, and a copy of all legal forms and dictionary of legal terms. Cloth bound.

Given for one new subscriber. Price 65 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

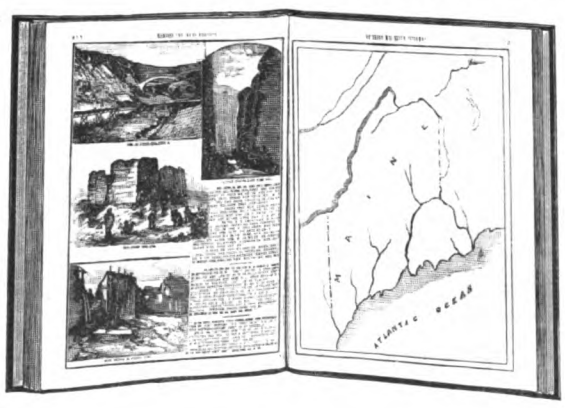
"Prang's Babies'" Scrap Book.



You are doubtless familiar with the beautiful Chromo published by Prang, called "The Babies." We have had one of these original copies mounted on the cover of this Book, with bas-relief and gold border, and elegant gold figure work. Cloth binding. Size of Book, 13½ x 11 in. Heavy leaves and red edges. This is a very choice Scrap Book.

Given for one new subscriber. Price 80 cents, which is hardly the value of the picture alone. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Popular Stamp Album and 200 Stamps.

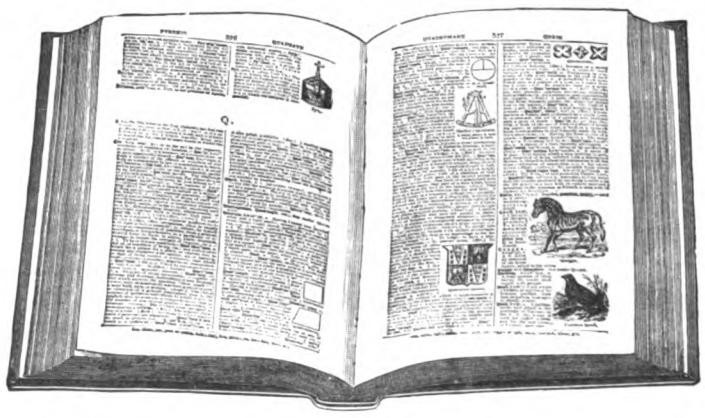


This Stamp Album is printed on heavy paper, is profusely illustrated, is nicely bound in cloth and gilt, and has places for 3,000 Stamps. We also include a collection of 200 valuable Stamps, and a complete descriptive catalogue illustrated.

The descriptive matter is brought up to date, and includes all countries in the world.

We give all the above for one new subscriber. Our price only $1.00. **Postage and packing 12 cents,** when sent as a premium or purchased.

The Standard Atlas of the World.



The Standard Atlas of the World, by Rand, McNally & Co., is a reliable work. By special arrangement with the publishers we are able to give the complete work for one new subscriber and 75 cents additional, which is a liberal offer.

The work contains 68 full and double-page Maps of every State in the Union, and every country on the globe, including Alaska, and its recent discoveries.

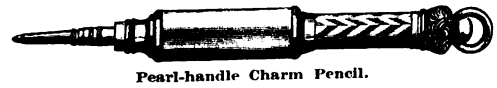
These Maps are on plate-paper—counties and provinces in different colors; rivers, mountains, lakes, cities, railroads, etc., in fullest detail.

The Standard Atlas contains 80 engravings and 34 diagrams, 200 pages, large quarto size, 14½ x 11 inches. The latest edition. Cloth-bound. Given for only one new subscriber and 75 cents additional. Price $2.60. **Postage and packing 40 cents,** when sent as a premium or purchased.

Webster's Practical Dictionary. Illustrated.

This Dictionary is familiar to all students. The purpose of this edition is to supply in a compact form the orthography, pronunciation, meaning and etymology of all English words which are likely to be encountered by the general reader or student. This edition contains **630 pages, 1,400 illustrations.**

It is 7½ x 5⅛ inches in size, bound in cloth.



The type is clear and distinct.

Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased. This Dictionary is a ready companion for school or home use.

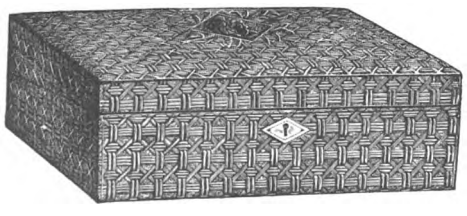
The Case given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Silver-Plated Inkstand and Antique Paper Cutter.

Both given for one new subscriber.

It is difficult to know, sometimes, just what to select for a present. We think this premium would please any one in such a perplexity. It is made of bronze metal, and beautifully finished in oxidized silver. It has two ground-glass ink wells, and is as appropriate for a lady as a gentleman. It is large and heavy, being 10½ inches long and 5½ inches wide, and weighs about 3 pounds. We also include the Paper Cutter shown in the cut.



Both given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver.**

Solid Leather Writing-Desk, No. 803.

Given for two new subscribers and 35 cents additional.

This beautiful Desk is made of solid leather, and is beautifully embossed with a newer pattern than is shown in the cut. Size of the Desk when closed, 10½ x 8, and 3½ inches deep, and when opened is 16 inches long.

There are compartments for envelopes, pencils, paper, and other fittings, and it has lock, and inkstand with screw-cap cover. This is the best Desk we ever offered.

Desk given for two new subscribers and 35 cents additional. For sale by us for $2.50. **Postage and packing 55 cents,** when sent as a premium or purchased.

Engraved Copper Card Plate, and 50 Printed Cards.

Given for one new subscriber and 30 cents additional.

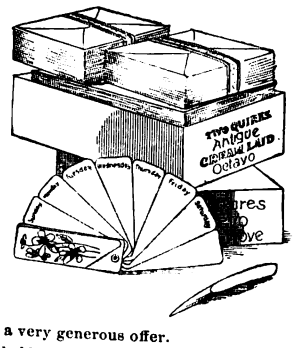
Our lady and gentleman friends, unless they live in cities, find it difficult to obtain Engraved Card Plates, and if they do, it is not always certain to get first-class work.

1 *Mrs. Paul Henderson*

2 *Mr. Frank Macomber*

3 *Miss Hunter*

We have employed as fine a workman as can be had to do the engraving. We have reproduced above his three leading styles.



We use the best cream bristol cardboard in the latest sizes. No lady or gentleman can afford to be without their private card plate. Write copy plain, and state by number which style you want.

Given for one new subscriber and 30 cents additional. Price of Engraved Copper Plate, and 50 Printed Addressed Cards, $1.50. **Postage and packing 10 cents,** when sent as a premium or purchased. Additional lines on plate, 50 cents each. You can return your plate to us by mail and we will print additional cards and supply stock at $1.00 per hundred. **Postage 15 cents** additional.

Fine Stationery in Boxes. Offer Nos. 1 and 2.

It is an excusable pride which every true lady shows when she insists upon using only the best of paper and envelopes in her private correspondence. It always marks her intelligence and good breeding.

The "Old Berkshire Mills" have been noted for years, and stand at the head as producers of the finest writing papers in America. We offer their goods in this premium. Every sheet of paper is water-lined with the mill imprint. The paper is octavo size, and Baronial-shaped envelopes to match.

Offer No. 1. We give four quires of paper, and 100 envelopes to match, enclosed in a nice box, for one new subscriber. Price 90 cents. **Postage and packing 35 cents,** when sent as a premium or purchased. This is a very generous offer.

Offer No. 2. We give one-half the quantity of stationery in a box, and a hand-painted celluloid erasable Tablet for each day of the week, also an imitation old ivory tusk Paper-cutter, for one new subscriber. Price for the combination, $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

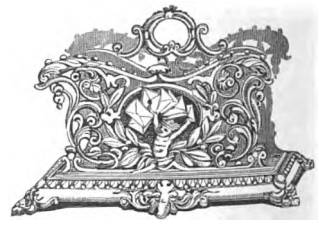
Plush Sealing-Wax Casket.

The Case is covered with fine plush, and it has a satin lining to match. Bevel projecting bottom; size 8 x 3 inches. The case contains 3 Sticks of Wax, assorted colors, 2 Colored Wax Candles, full size Nickel Seal (Old English initial). State the initial you wish.

All given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Solid Leather Writing Tablet.

Given for one new subscriber and 35 cents additional.



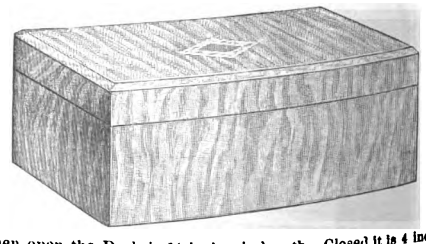
We now offer a Tablet made of real leather, beautifully embossed, for only one new subscriber and 35 cents additional. Cover stuffed and hinged, fine black sateen compartment for holding stationery and letters, and a Blotting Pad with leather corners. It also contains a receptacle for holding Pens and other small articles, and a Patent Safety Inkstand. Size 7½ x 12 inches.

Given for one new subscriber and 35 cents additional. Price $1.50. **Postage and packing 30 cts.,** when sent as a premium or purchased.

Silver-Plated Letter, Card and Paper Rack.

Given for one new subscriber and 85 cents additional.

This is artistic in design and is a most useful article.



It is 8 x 5 inches in size. For an ornament for a centre-table or desk, it is very appropriate.

Given for one new subscriber and 85 cents additional. Price $2.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Lady's Writing Desk.

Given for one new subscriber and 15 cents additional.

This Desk is a beauty. We have arranged with a manufacturer in New Hampshire, where lumber is cheap and work is honest, to make a large number of these Desks.

When open the Desk is 14 inches in length. Closed it is 4 inches deep and 10 wide. The finish is walnut, with inlaid mahogany corners. It has a Lock and Key, and the usual compartments inside.

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 40 cts.,** when sent as a premium or purchased.

The Home Ideal Magic Lantern.

Given for one new subscriber and 45 cents additional.

Our Magic Lantern.

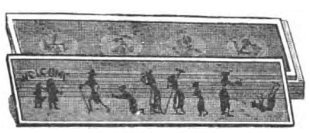
The charm surrounding this magic "Home Entertainer" never grows dim.

Each year its magic rays brighten new faces, and add new attractions to the home circle.

Many years ago THE YOUTH'S COMPANION made its first Magic Lantern. Since then it has been improved and perfected.

To-day it is the prince of Home Entertainers, **brilliant, safe** and **durable,** always ready for pleasure or business.

Money-Making.



To assist the young people in making money with the Magic Lantern, we give with it a large Poster and 72 Tickets.

The Poster can be hung in the Post-Office to advertise the exhibition. The Admission Tickets, sold at ten cents apiece, will give you a neat little sum.

Many young people have earned money in this way.

The Polyopticon.

For 25 cents additional we will send with the Magic Lantern a Polyopticon Attachment. This will enable you to cast on the screen the reflection of any photograph, small engraving, or some natural object. These are quite interesting, but of course not so brilliant as the direct light slides.

A Suggestion.

Boys and girls have not only been amused and instructed, but many have made money as well, with this Magic Lantern. "What others have done, you can do." We suggest that Christmas and New Year's evenings will be appropriate and convenient dates for profitable Magic Lantern exhibitions. On these evenings a large audience can easily be obtained.

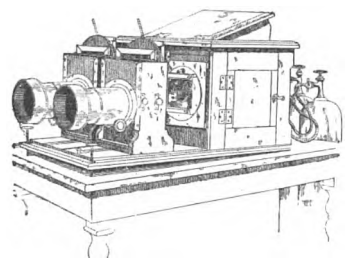
The Outfit.

First, The Magic Lantern. This is the outgrowth of our "Experimental Department." We import the best of French Lenses, and manufacture the Lanterns by the thousand.

We make many of our own Slides, and we furnish a better Outfit for $2.00 than can be purchased at the stores for $3.00.

Besides the Lantern, the new Ideal Magic Lantern Outfit contains 5 Comic Views, drawn for us by Thos. Nast, Jr., and about 25 exceedingly choice Colored Views. Also, a Lecture Book, giving full description of each View, 1 large Show Bill and 72 Exhibition Tickets.

The Outfit given complete for one new subscriber and 45 cents additional. Price $2.00. **Postage and packing 45 cents,** when sent as a premium or purchased, or it can be sent by express and charges paid by receiver.



The possession of this Magic Lantern in the home will prove a delightful means of recreation and amusement. Views of foreign lands, educational slides, portraits of eminent people, and comic and laughable scenes, suggest the pleasant evenings in store for the boys and girls who may obtain THE YOUTH'S COMPANION Ideal Magic Lantern.

Every home will be made brighter to the young people by the advent of a good Magic Lantern.

A Card. Many of the premiums on the List have been arranged with the idea in view of **Popular Home Entertainments.** A bright boy or girl will soon pick them out. Many boys and girls made considerable money last year by giving a course of entertainments. Thousands of boys who have given successful home entertainments with these Lanterns will wish to arrange for a course of entertainments by which pleasure and profit will be combined. **The Magic Lantern is the Prince of Entertainers.**

Stereopticons for Exhibition Purposes.

For the benefit of our patrons we have just completed arrangements so we can supply at specially low rates the best Stereopticon for churches, schools, associations, and private exhibitions, that is made in this country.

To all inquiries from intending purchasers we shall be most happy to send our little book, "A Word about the Stereopticon," on receipt of 6 cents in stamps. It is a valuable work in itself, and fully describes our large Stereopticons.

Magic Lantern Slides. Painted.

Colored Lantern Slides. Upon Glass. We have an assortment of 24 Colored German Slides. Some of the Views are very comical and laughable, while others represent scenes in foreign life. They are all highly-colored, and are very interesting. We cannot catalogue these Slides, as the subjects vary. 24 given for one new subscriber. Price of 24 Slides, $1.50. **Postage and packing 40 cents,** when sent as a premium or purchased. 12 Colored Slides, ordered at one time, in Case, 75 cents. **Postage and packing 20 cents.**

A Set of Five Punch and Judy Figures.

Given for one new subscriber and 65 cents additional.

What child has not been filled with wonder and delight as Mr. Punch and his wife Judy appeared on the mimic stage? The crowds that assemble whenever these quaint characters appear in public, attest to the universal interest in which they are held by the little people.

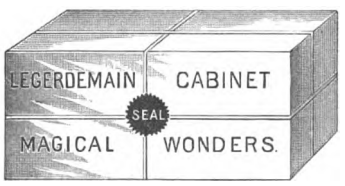
We have recently imported these figures from Germany. They are all carved from solid wood, are nicely painted, and all dressed handsomely, as seen in the cut. A book of lessons accompanies each Set. The framework of this popular show can be easily made by any boy. We send directions for making it.

The Set of five given for one new subscriber and 65 cents additional. Price of the Set of five is only $2.00. **Postage and packing 30 cents,** when sent as a premium or purchased.

Magic Lantern Slides. Photographed.

We manufacture a series of Slides, six slides of 24 Views to each Set. A descriptive lecture goes with each Set. They will be sold in Sets only. Set No. 1, Ten Nights in a Bar-Room, and Uncle Tom's Cabin; No. 2, Microscopic Objects Revealed, and Wonders of the Human Body; No. 3, Bible Views; No. 4, Wonders of the Heavens, and Manners and Customs of the Indians; No. 5, Across the Continent, and Important Events in U. S. History; No. 6, Views of Comic Life; No. 7, Zig-zag Views Around the World. Any two Sets given for one new subscriber and 15 cents additional. **Postage and packing 25 cents,** when sent as a premium or purchased.

Price per Set (6 Slides, 24 Views), 50 cents. **Postage and packing 15 cents,** when sent by mail.



Oriental Magic Cabinet.

Given for one new subscriber and 15 cents additional.

The apparatus contained in our Magic Cabinet provides many most startling surprises. The cut illustrates one of them.

The operator borrows a handkerchief at random from any person in the audience. **One, Two, Three, Presto!** Before their very eyes a shower of candy pours forth. How is it done? Let the audience tell if they can. Any boy or girl can perform with the Outfit nine other feats in legerdemain equally pleasing and startling. Among them we mention the Magical Blocks, Phantom Ring, Wizard's Furnace, Transformation of a Vase of Ink to Clear Water in which a live Gold-Fish can be seen, the Floating Wand, and the Magic Fire-Eater. One large Poster and 72 Exhibition Tickets are also enclosed.

The complete Outfit given for one new subscriber and 15 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Outfit for Evening Entertainments.

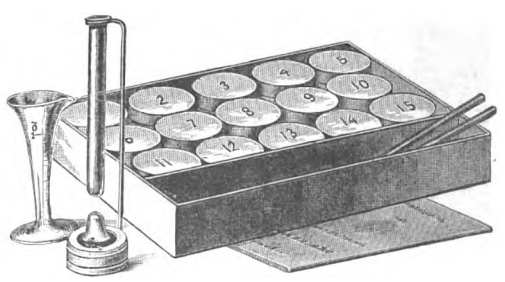
The Outfit given for one new subscriber.

We are asked so often to suggest something new for evening entertainment that we arrange this combination.

Twenty-four new Tableaux, by Josephine Pollard, with full description of costumes, etc. Illustrated with picturesque diagrams by Satterlee.

Also, our new "Artists' Make-up Set," consisting of harmless Cocoa-Butter Paints in 7 colors, Flesh Powder and Chamois Skin, all inclosed in a neat Case, and full directions for "making up."

Boys can have lots of fun with the "Make-up" Box, in getting up negro and Buffalo Bill entertainments.



Premium offer above. Price of Outfit complete, $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Outfit of Chemical Wonders.

Given for one new subscriber and 10 cents additional.

This Outfit is entirely free from danger, and will be found perfectly safe in the hands of the young. While it will afford a large amount of innocent amusement, it will also help to cultivate a spirit of research and investigation.

It contains fifteen boxes of chemicals, the necessary apparatus, and a Manual giving complete instructions for performing many brilliant experiments. The following are some of the most interesting: **Artificial Thunder, Miniature Lightning, Japanese Stars, Wizard's Fire, Crimson Fire, Luminous Stars, Floating Flame, Artificial Ice, Intense Cold, Sympathetic Ink.**

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 35 cts.,** when sent as a premium or purchased.

The Complete Harvard Photograph Outfit.

Given for one new subscriber and 50 cents additional.

Amateur

Photography is a success. THE YOUTH'S COMPANION has spent time and money to invent and perfect the best and most practical Camera that could be made at a low price.

"The proof of the pudding is in the eating." The proof of the Harvard Camera's success is in its work.

An Opportunity

is offered for all to see a photograph made with it by an Amateur. Send us 4 cents in stamps and we will mail you one. This will tell the story better than anything we can say.

How Can We

sell the Harvard Outfit for $1.75? Because there are no middlemen to add to its cost with their percentages. The Camera is manufactured for us, and for us alone, thousands being ordered at a time. Were this Camera to go through the regular channels of trade, it could not be sold for less than $3.00.

The Illustration.

The illustration here shown is a picture made from a number of Photographs that have been taken by young people with the Harvard Camera. Each section or figure will be instantly recognized by its taker.

Camera Clubs. Upon the receipt of an application signed by at least three persons agreeing to form an Amateur Camera Club, there will be sent **free**, a Camera Club Constitution, Application Blanks for Membership, and General Aids showing how to organize such Clubs. Each application for Blanks must enclose a two-cent stamp for postage, and should be sent directly to the publishers of THE COMPANION.

Rebate Ticket.

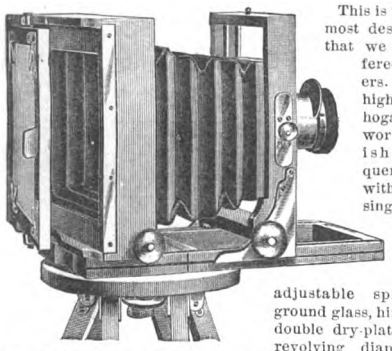
Some may say, "I prefer to wait until I can buy a large Camera." To these we reply: As artistic a picture can be made with the dainty Harvard as with a large Camera costing many dollars. Begin with the Harvard, become expert in its use, and then, if you want a larger Camera, you can purchase it at a discount by means of a Rebate Ticket which we give with every Harvard Outfit. The

Harvard Camera

is made of metal. Handsome in appearance. Takes a picture 4 inches long and 2½ wide. Has a fine French wide-angle lens. Is provided with a Tripod, and also a Finder for locating the picture.

With the Camera, we give sufficient apparatus, chemicals and materials for enabling pictures to be taken, developed, printed and mounted. The

Harvard Outfit



consists of the Camera, Tripod Head, Finder, Developing Tray, Printing Frame, Glass Graduate, Ruby Fabric (for ruby light), and Dry Plates, Sensitized Paper, Card Mounts, Chemicals and Toning-gold sufficient for six negatives, and prints from the same. **The Complete Outfit given for one new subscriber and 50 cents additional. Price $1.75. Postage and packing 50 cents,** when sent as a premium or purchased. For short distances express is cheaper than mail.

REBATE CARD. With each Harvard Outfit we send a Rebate Card. If at any time you wish to buy a $10.00 or $15.00 Camera, we will accept this Card as $1.75 in part payment thereon.

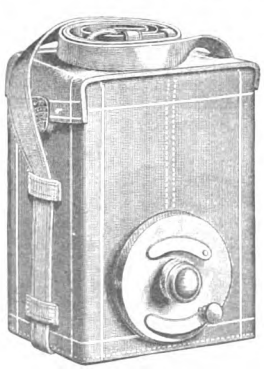
Remember that on receipt of **4 cts.** in stamps we will send you a Photograph taken with the Harvard.

"Companion" Camera, with Special Outfit.

Given for five new subscribers and $8.00 additional.

This is the neatest and most desirable Camera that we have ever offered our subscribers. It is made of highly-polished mahogany, with metal work, finely finished and lacquered. Is provided with a rising front, single swing, front focus, double rack and pinion movement, patent adjustable spring-actuated ground glass, hinged front bed, double dry-plate holder, fixed revolving diaphragm and a fine single achromatic lens. Size of plate used, 4¼ x 6½.

With this Camera we give a complete Outfit, consisting of a Canvas Carrying Case, Folding Tripod, Dry Plates, Sensitized Paper, Trays, Printing Frame, Card Mounts, Focusing Cloth, Graduate, Ruby Lantern, Book of Instructions, and all the Chemicals necessary for developing and fixing the plates, and toning and fixing the prints. Given for five new subscribers and $8.00 additional. Price $15.00. **Must be sent by express and charges paid by receiver.** In ordering Camera, be sure and give the name.



SPECIAL. We offer Camera and Tripod described above, 5 x 8 size, with complete Outfit, for five new subscribers and $10.00 additional. Price $18.00. We recommend this Camera as being particularly adapted for fine landscapes and architectural work.

Must be sent by express and charges paid by receiver, when sent as a premium or purchased.

The Argus 12-Shot Magazine Camera.

Given for four new subscribers and $5.00 additional.

Detective Cameras are very popular. To snatch a view of a runaway horse, a flying express train, a great yacht race, is fascinating indeed.

The Argus is the best low-priced Magazine Camera ever made. It is enclosed in a handsome russet leather Case. The lens-tube and other exposed parts are of brass, burnished and lacquered.

Height of the Camera is seven inches, width five, and depth three and one-half. The picture taken by it is circular, and three inches in diameter.

The Argus Camera is remarkably simple in construction. It holds twelve dry-plates, and by a simple turn of the lens-tube they can be brought one by one into the field of the lens, and a picture taken.

The Shutter is adapted for either "Snap Shots," or Time exposures. No focusing is necessary. We furnish free, with the Camera, one dozen dry plates.

Given for four new subscribers and $5.00 additional. Price $8.00. **Must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

The Duplex Ruby Lantern.

Given for one new subscriber.

It is well-known that all work with Dry Plates must be done under the rays of the Ruby Light.

Our expert has invented and perfected for us the most convenient Light we have yet seen. The glass is "copper flashed," to prevent fogging. The interior is arranged for use of candle.

Its two Ruby Glasses face two ways. By so doing, the entire surface of your work-bench is flooded with Ruby Light. It is made in the best possible manner. Size, 4¼ x 6½ inches.

Given for one new subscriber. Price 75 cents. **Postage and packing, 20 cents** additional.

Portable Changing Bag, and One Dozen Dry Plates,

Size, 2½ x 4. All given for one new subscriber.

This valuable apparatus will be keenly appreciated by all who own a Harvard or Gem Camera. By means of it a person can remove and insert plates in a Camera, although the brightest of sunlight is all about; thus being independent of a dark room.

By having two boxes in the Bag, one of unexposed plates and the other for exposed plates, any desired number of pictures can be taken on a single trip.

The Portable Changing Bag is made of an impervious and light-tight material, can be rolled up and carried in the pocket, and is very simple in construction.

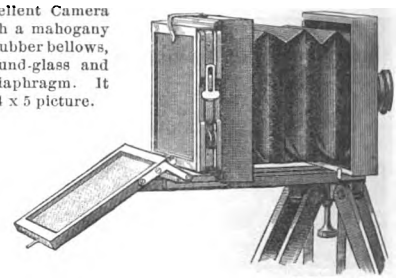
Premium offer above. Price 85 cents. **Postage and packing 25 cents,** when sent as a premium or purchased. Price of Bag alone 50 cents, postage 10 cents additional. Send stamp for a Catalogue of Photographic Supplies.

Omega Sensitized Paper, and Combined Toning and Fixing Solution.

Given for one new subscriber and 10 cents additional.

The material here offered is the latest discovery in the photographic field. It consists of three dozen sheets of 2½ x 4 Omega Sensitized Paper and one large bottle of Solution for Toning and Fixing the Prints.

These Prints can be toned and fixed in one Solution, and when finished possess a most beautiful enamel finish. Burnishing is not required.



A single trial of this Paper will convince the most sceptical that it possesses many advantages over ordinary albumen sensitized paper.

Three dozen sheets, 2½ x 4, Omega Sensitized Paper and one large bottle Combined Toning and Fixing Solution given for one new subscriber and 10 cents additional. Price 90 cents. **Must be sent by express and charges paid by receiver.**

"Companion" 4x5 Camera, with Special Outfit.

Given for four new subscribers and $5.00 additional.

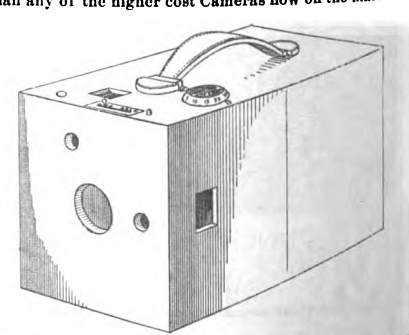
This excellent Camera is made with a mahogany finish, fine rubber bellows, hinged ground-glass and revolving diaphragm. It will take a 4 x 5 picture.

The Complete Outfit includes the above Camera, together with a fine Achromatic Lens, Folding Tripod, Double Dry-Plate Holder, Dry Plates, Sensitized Paper, Trays, Printing Frame, Card Mounts, Focusing Cloth, Glass Graduate, Ruby Lantern, Carrying Case, Book of Instructions and complete set of Chemicals.

Given for four new subscribers and $5.00 additional. Price $10.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Photographic Dry Plates.

These plates have been sold by us for a number of years, and have given good satisfaction. We give two dozen 2½ x 4 plates for one new subscriber. Price of two dozen plates 70 cents. **Postage and packing 40 cents,** when sent as a premium or purchased.



Sensitized Paper.

We give 72 sheets of the best quality of Sensitized Paper, of the required size for the Harvard Camera, for one new subscriber and 10 cents additional. Price for 72 sheets, 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

The Hawk-Eye Camera.

Given for five new subscribers and $8.00 additional.

This Camera is so well-known that a full description at this time is not necessary. It combines more advantages and desirable qualities than any of the higher cost Cameras now on the market.

It has a key for regulating the speed of the Shutter, vertical and horizontal Finders, interior Ground Glass Screen, and is now furnished without a single attachment extending beyond the Case. Will take a 4 x 5 picture. Natural-wood finish, with leather handle.

Given for five new subscribers and $8.00 additional. Price $8.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Gem Tin-Type Camera and Outfit.

Given for one new subscriber and $1.00 additional.

A New Industry.

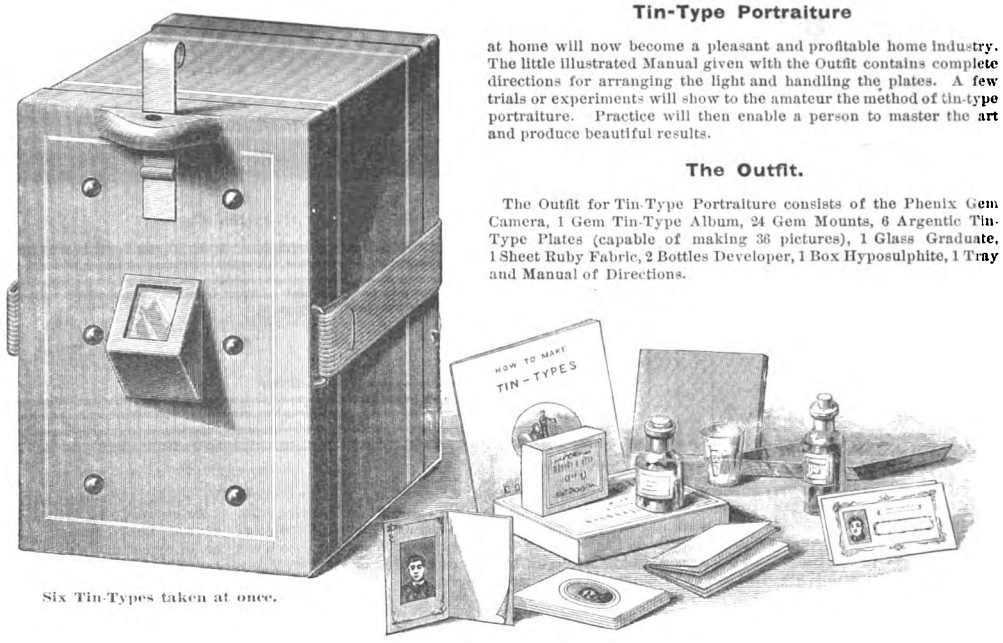
The Youth's Companion family is a large one. Its bright boys and girls are numbered by the hundreds of thousands.

THE COMPANION believes not only in providing its family with the best of reading, but it seeks to encourage and develop a mechanical taste among its young readers. To this end THE COMPANION employs mechanical experts whose entire time is given to the work of experiment and of developing amateur industries.

A Difficult Task.

A year ago our experimental department took in hand a difficult task. The successful result of the effort is here illustrated.

No wonder you are surprised at this mysterious-looking **six-eyed** Camera. Listen, and we will tell you all about it.



It's the **first** Tin-Type Camera ever made for the use of boys and girls. The cut illustrates the Camera at two-thirds its actual size. It is made in the best and most thorough manner, and ought to last a lifetime.

Exchanging Tin-Types.

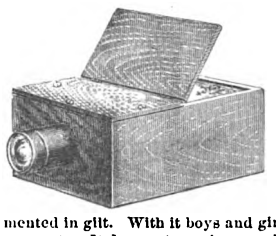
There is hardly a crowd of school-children to be seen where an exchanging of tin-types is not going on. Especially so as vacation approaches. Professional photographers are pressed with work. Why not have a Camera of your own, and earn some money for yourself?

Our Tin-Type Camera takes six pictures at a time, all on a single plate. This plate can be developed and fixed, the six portraits cut apart with scissors and delivered to the sitter in less than ten minutes. As the plates and chemicals are cheap, your profits can be large.

The Tin-Type Camera is really six small Cameras in one. It has six chambers and six lenses. A single Argentic Plate is placed in the Camera, and six portraits taken on it at once. The Plates are 2½ x 4 inches, and the six portraits are each 1¼ x 1½ inches. The Outfit we give with the Camera includes everything needed for taking and finishing 36 Portraits. THE COMPANION first offered this Outfit to its subscribers last April. It is proving a remarkable success in every respect. It gives great satisfaction.

Six Tin-Types taken at once.

Tin-Type Portraiture



at home will now become a pleasant and profitable home industry. The little illustrated Manual given with the Outfit contains complete directions for arranging the light and handling the plates. A few trials or experiments will show to the amateur the method of tin-type portraiture. Practice will then enable a person to master the art and produce beautiful results.

The Outfit.

The Outfit for Tin-Type Portraiture consists of the Phenix Gem Camera, 1 Gem Tin-Type Album, 24 Gem Mounts, 6 Argentic Tin-Type Plates (capable of making 36 pictures), 1 Glass Graduate, 1 Sheet Ruby Fabric, 2 Bottles Developer, 1 Box Hyposulphite, 1 Tray and Manual of Directions.

Given for one new subscriber and $1.00 additional. Price $2.75. **Postage and packing 50 cents,** when sent as a premium or purchased. Express may be cheaper. Ask your local express agent.

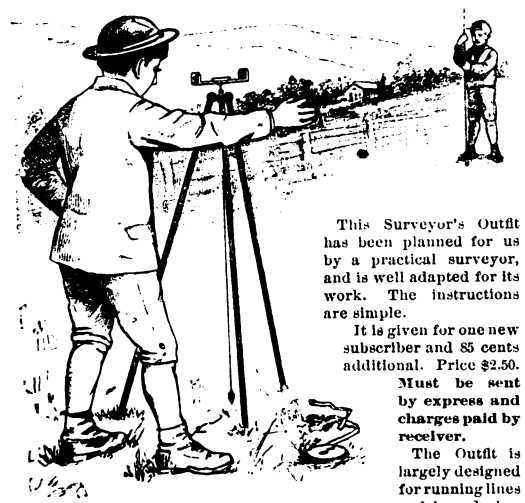
Sketching Camera, No. 1.

This Camera is one of our most popular premiums, and during the past few years many thousands have been used. This year we expect the demand will be greater than ever. Its construction is simple, and its use easily understood.

The one we now use is greatly improved, being made of tin, japanned, and ornamented in gilt. With it boys and girls can sketch an object in a few moments. It does not require previous practice. The Camera is 8 inches long, 5 inches wide, and 3 inches high.

Given for one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Mechanical Plantation Savings Bank.



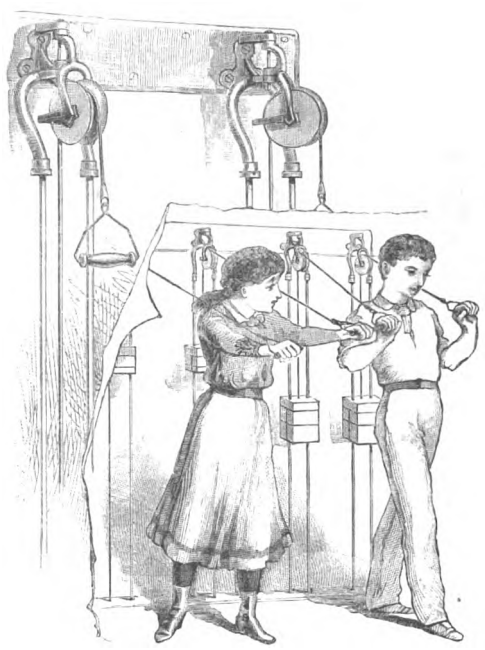
This Bank is a most amusing mechanical Toy, besides being a safe Bank for holding the deposits of the young.

It is made of sheet metal, handsomely painted, and contains a clock-work and fan regulator. The instant a penny or nickel is pushed through the opening of the Bank the clock-work brings into action a most comical scene. It causes the banjo-player to "pick on de ole banjo," while the other figure dances a real "break-down" in perfect time and life-like steps.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

The Companion Surveyor's Outfit.

This Surveyor's Outfit has been planned for us by a practical surveyor, and is well adapted for its work. The instructions are simple.



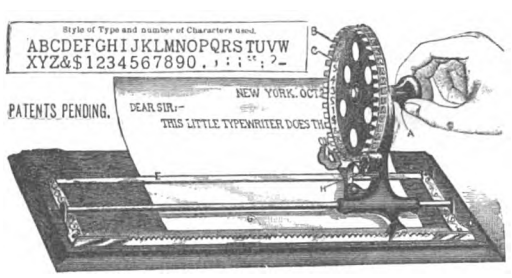
It is given for one new subscriber and 85 cents additional. Price $2.50. **Must be sent by express and charges paid by receiver.**

The Outfit is largely designed for running lines and boundaries.

Should the young surveyor wish to find the contents of a certain lot of land, he must use a Tape and Protractor. These are not included in the Outfit. A 50-foot Tape and a Protractor can be sent for 75 cents additional.

Improved Health-lift for Physical Culture.

Given for one new subscriber and $1.60 additional.

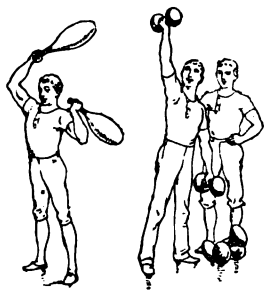


Physical culture, by which a vigorous and healthy body is developed, is now commanding universal attention.

The Apparatus we offer is the latest and best for this purpose, and should be in every household. It can be used by children as well as adults. Many gymnasiums and schools have adopted our apparatus. The pulley-wheel hangers are made with a wide swivel motion, the handles are solid rosewood, oil polished, the drab cord is full regulation weight and size, the wall and floor blocks stained cherry and shellacked. Either 3 or 5 pound weights can be used.

Given for one new subscriber and $1.60 additional. Price $3.50. This is less than half its value. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Automatic Toy Type-Writer.



This Type-writer has an automatic feed and a self-inking type wheel, uses copying ink, will accommodate the largest-sized letter paper, and possesses some of the features of a higher cost machine.

There is a great fascination among the young in sending or receiving a type-written letter. To such a class this Type-writer will afford delight and amusement, and also become an educator in teaching the art of spelling, punctuation and composition.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Indian Clubs, Wood Dumb-Bells, and Complete Manual.

A pair of either 1 or 2 lb. Dumb-Bells, or a pair of either 2 or 3 lb. Indian Clubs, given for one new name. These are first-quality goods, made from selected maple, and finely polished. Wright & Ditson model. We shall include Bornstein's Manual on Calisthenics, bound in paper, with each premium offered, except 3-lb Clubs. On these we require 15 cents additional to send the book.

Price of Wood Dumb-Bells, per pair, 1 lb., 45 cents; 2 lb., 60 cents. Indian Clubs, per pair, 2 lb., 60 cents; 3 lb., 75 cents. **Must be sent by express, and charges paid by the receiver,** when sent as a premium or purchased.

Bornstein's Manual on Dumb-Bells and Indian Clubs, paper bound, 25 cents, post-paid.

Tin-Type Outfit for the Harvard Camera.

Given for one new subscriber.

Many inquiries have come to us for **Tin-Type Plates** suitable for the Harvard Camera. We have therefore prepared a Tin-Type Outfit for use with the Harvard Camera.

The Outfit consists of 18 Argentic Plates, 2¼ x 4 inches, Developer for the same, and Manual of Directions. This will enable you to take and finish a picture within ten minutes.

Given for one new subscriber. Price 70 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

Acoustic Telephone Outfit.

Given for one new subscriber.

House and office connected by the Telephone. Listen! Three raps on the diaphragm button.

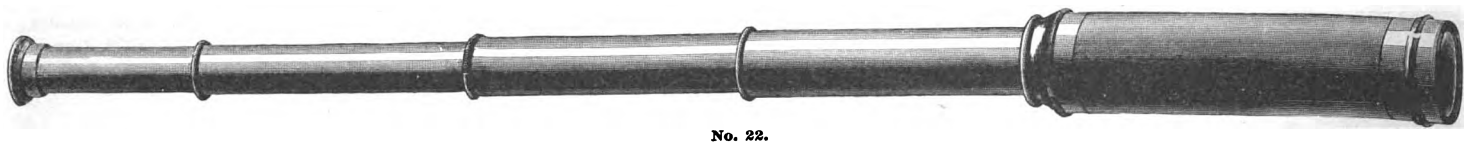
HUSBAND — Yes, I'm here. What's wanted?

WIFE — Did you post my letter this morning?

HONEST HUSBAND — No, dear. It's in my coat pocket yet.

WIFE — So I expected, but what a convenience this Telephone is.

What the Telephone Outfit contains. Two perfection Transmitters—one for each end of the line; Material for Cords, Loops and supports for putting up the Wire, and three hundred feet of Wire. Full instructions.

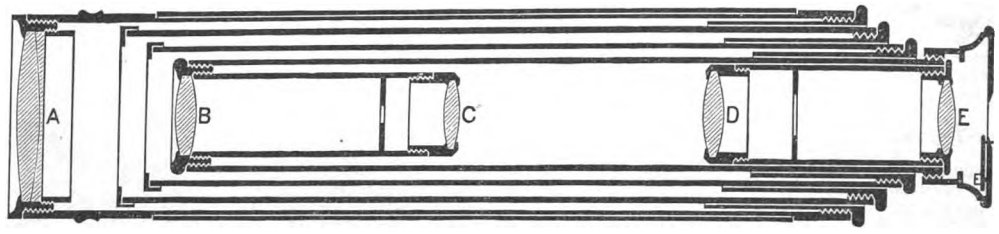


Given for one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased. Additional Wire furnished at 25 cents per 100 feet, postage paid by us.

Digitized by Google

Our French Achromatic Telescopes.

No. 12.



No. 22.

Two Telescopes may look alike on the outside—they may both be called "Achromatic," but it's the inside that tells the story.

The Inside of our Telescopes is here illustrated closed. You can see that lenses are located at A B C D E—five lenses in all.

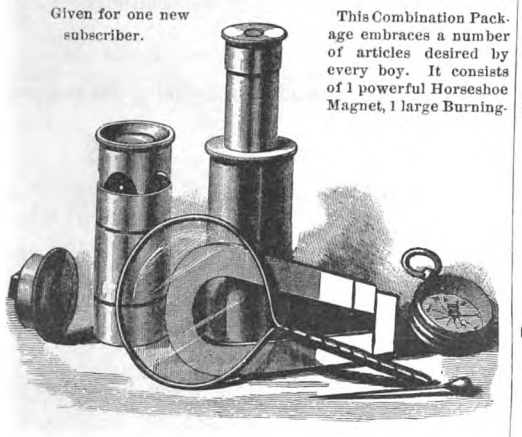
The lens A is achromatic. It is composed of two lenses in one—one made from flint, and the other from crown glass, so ground and fitted as to make **one** lens.

Many of the so-called Achromatic Telescopes so extensively advertised have but two plain lenses, one located at A and the other at E. We hope that this explanation will be clear to all. Our Telescopes are made to our special order by one of the best Paris makers. We guarantee each instrument to be absolutely faultless. Both of the Telescopes are encased in French Morocco, and have strong brass caps to protect the lenses when not in use. **A Special Notice.** We frequently have letters of inquiry concerning costly Telescopes adapted for Astronomical purposes. We can supply them at special prices.

Telescope, No. 12. The first is our No. 12. The diagram illustrates it at its exact size when closed. When open, it is sixteen inches long.

The tubes are made from brass, polished and lacquered, while the body is covered with French Morocco.

We give with each Telescope our Prize Essay on the Achromatic Lens.



Given for only one new subscriber and 75 cents additional. Price $3.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Telescope, No. 22. Given for five new subscribers and $2.50 additional. This Telescope has four draws. Length, when extended, 36 inches. Closed 11 inches. Diameter 2 inches. Power 35 times, or an object one mile away will appear to be only about 10 rods away. This fine Achromatic Telescope is given for five new subscribers, and $2.50 additional. Price $9.00. **Postage and packing 60 cents,** when sent as a premium or purchased.

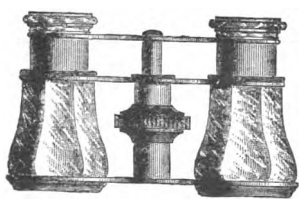
Optical and Magnetic Package.

Given for one new subscriber.

This Combination Package embraces a number of articles desired by every boy. It consists of 1 powerful Horseshoe Magnet, 1 large Burning-Glass, 1 Compass, 1 Spy-Glass, and 1 Imported Brass Microscope. This Microscope can be used for examining insects, seeds and other objects.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Mounted Microscopic Objects.



Some of them are very rare and instructive. We will include with every Microscope that we send out a Set of 12 Mounted Objects, assorted, on receipt of 50 cents additional.

We will give the Set for one new subscriber. Price $1.00 per Set. **Postage and packing 6 cents additional.**

Fine Opera Glasses.

We have facilities for supplying Opera Glasses of a superior quality, and at any price desired up to $25.00. The one illustrated has a pearl body and is gold-plated.

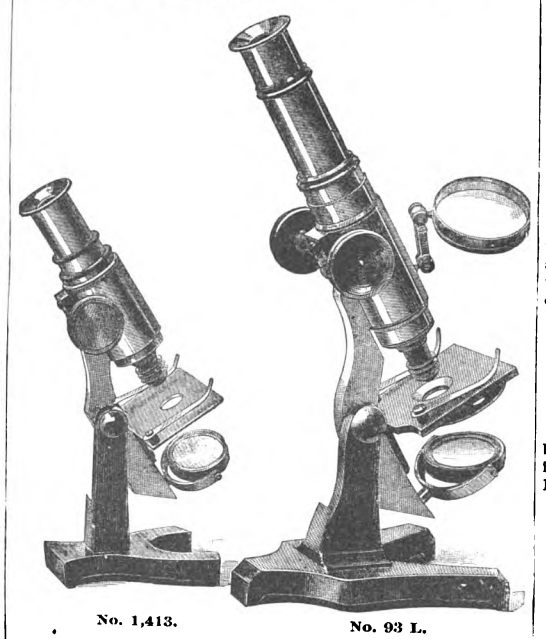
Given for ten new subscribers. Price $8.00. **Postage 8 cents.**

French Reading Glass, No. 3,304-42 C.

Given for one new subscriber and 20 cents additional.

A Reading Glass makes reading less burdensome to old eyes. Every member of the family will find it a source of enjoyment in examining photographs and engravings.

We adopt this square shape, as it is more convenient to the eyes. We import the Glass direct.



Given for one new subscriber and 20 cents additional. Price $1.35. **Postage and packing 15 cents,** when sent as a premium or purchased.

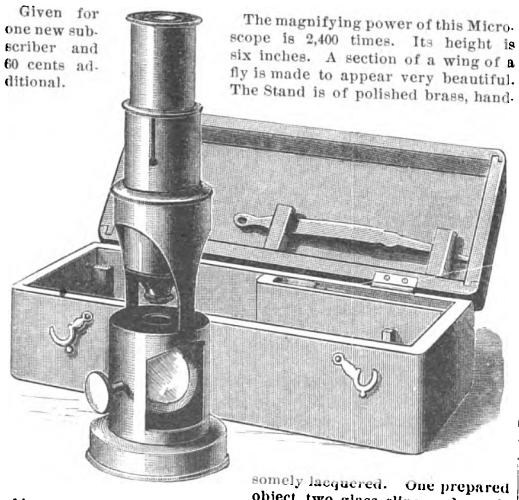
Fine French Microscopes.

French Naturalist Microscope, No. 1,413. This Microscope stands 6½ inches high, jointed centre, iron base, patent focus adjustments, reflecting mirror, three lenses of different powers.

This Microscope has a power of 5,000 times.

Given for three new subscribers and $2.15 additional. Price $5.50. **Postage and packing 35 cents.**

No. 1,413. No. 93 L.



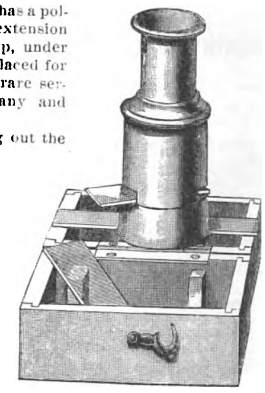
Harvard Compound Microscope, No. 93 L. This instrument is 10 inches high, made of lacquered brass and iron, concave mirror, rack and pinion adjustment, condenser and diaphragm. It has three object lenses of different powers.

It has a magnifying power of 15,400 times. Enclosed in a polished Box, with handle and key. Forceps, glass slips and mounted objects go with this instrument. Given for five new subscribers and $5.25 additional. Price $12.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Compound Microscope, No. 7,741.

Given for one new subscriber and 60 cents additional.

The magnifying power of this Microscope is 2,400 times. Its height is six inches. A section of a wing of a fly is made to appear very beautiful. The Stand is of polished brass, handsomely lacquered. One prepared object, two glass slips, and a pair of brass forceps, are given with the Microscope. The whole packed in a polished mahogany Case, as seen in the cut.



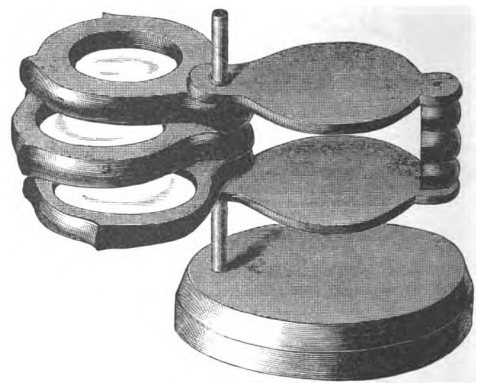
Given for one new subscriber and 60 cents additional. For sale by us for $2.25. **Postage and packing 15 cents.**

Convenient Microscope in a Case.

Given for one new subscriber and 15 cents additional.

This beautiful instrument has a polished brass cyclinder and extension tube, also an adjustable cap, under which live objects can be placed for examination. It will be of rare service to the student of botany and natural history.

It magnifies so as to bring out the hidden beauties and wonders of tiny objects that we see every day, but that to the naked eye seem beneath our notice. Enclosed in a polished mahogany box.



Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 10 cents,** when sent as a premium or purchased.

Pocket Microscope, No. 497, with Stand.

Given for one new subscriber and 10 cents additional.

This Microscope has three lenses of different powers, which can be combined into one of great power. The body of this Microscope is made from rubber. It can be used both as a Stand or Pocket Microscope.

For studying the arrangement of flowers, minerals, seeds, insects, etc., we know of nothing better.

Given for one new subscriber and 10 cents additional. For sale by us for $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Opera Glasses and Case, No. 606-15.

Given for one new subscriber and 50 cents additional.

As a rule we have refused to use low-priced Opera Glasses; most of them are worthless. But we have at last found a medium-priced Glass which is very good. The Glass is clear, and will give satisfactory results. Morocco-covered, well-finished frame in black enamel, and enclosed in a fair leather Box. Given for only one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 15 cents,** when sent as a premium or purchased.

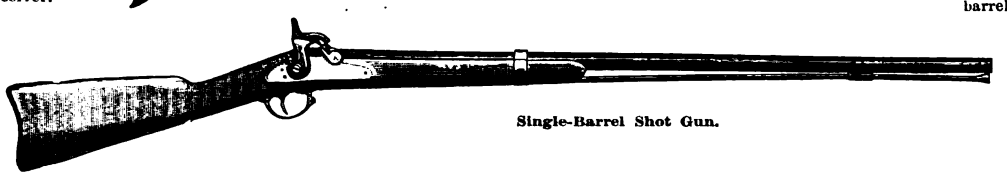
Guns, Sporting Goods, and Miscellaneous Articles.

Winchester Rifle.

The reputation of the Winchester Rifle is world-wide. We offer the celebrated 1873 model, 15-shot, sporting Rifle—round 24-inch barrel, 8¾ lbs. weight. We can supply in 32, 38 or 44 calibre.

Given for six new subscribers and $8.00 additional. Price $13.50. **Must be sent by express, and charges paid by receiver.**



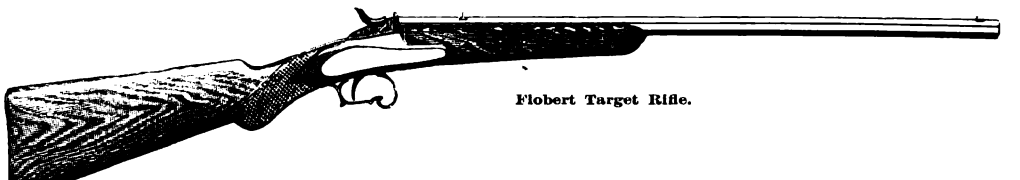
Winchester Rifle.

Single Gun.

This Single-Barrel Muzzle-Loading Shot Gun is well adapted for use on the farm, for shooting hawks, crows, woodchucks, etc. Originally this Gun was a Springfield Rifle, made for the army. The barrel has been chambered for shooting shot. Length of barrel, about 30 inches; weight, about 7½ pounds.

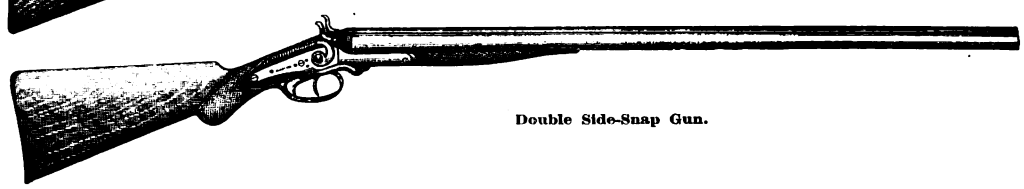
Given for three new subscribers and 75 cents additional; or for one new subscriber and $1.75 additional. For sale by us for only $4.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. Boxing 20 cents extra.

Single-Barrel Shot Gun.



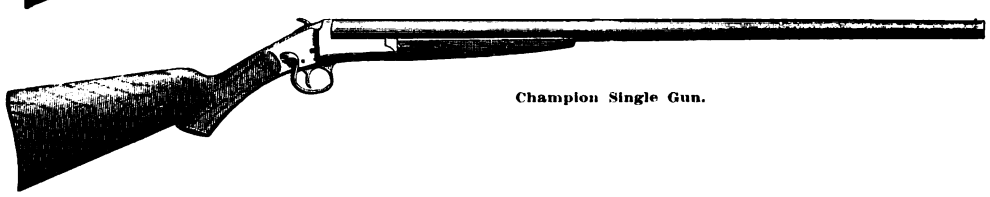
Flobert Rifle.

This is a genuine Belgian Flobert Rifle, with improved action. It has polished black walnut stock, with checked pistol-grip, nickel mountings.



The Rifle weighs 4½ lbs., is 37 inches in length, and is rifled. It is breech-loading, and has a side shell-extractor. The Rifle will shoot the No. 22 cartridge. The barrel is finely blued.

Given for six new subscribers; or for four new subscribers and 75 cts. additional; or for two new subscribers and $1.75 additional. We offer them for sale at $5.00 each. On receipt of 50 cents extra we will include 200 of the Cartridges described below. The Rifle will be sent boxed, by express, and charges paid by receiver, when sent as a premium or purchased. Boxing 20 cents extra.



The Conical Swaged Bullet Breech Caps are the best to use with this Rifle. Price $2.50 per thousand. Not less than 500 sold at a time. Sent by express and charges paid by receiver.

Flobert Target Rifle.

Double Side-Snap Gun.

Champion Single Gun.

Side-Snap Double Gun.

This Gun is imported by us direct from Belgium. It is a better Gun for the money than any we have heretofore been able to obtain. It has a pair of fine steel barrels, 12-gauge. Side-snap, pistol-grip, snap fore-end, and rebounding back-action locks. It is a powerful, safe and close shooter. 30-inch barrels. Weight, 7½ to 8 lbs. Fine walnut stock.

Our premium offer is generous, and will be appreciated.

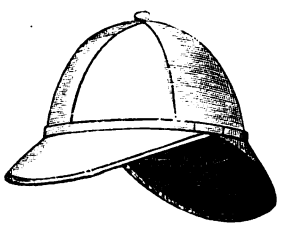
Given for six new subscribers and $7.25 additional. Price $14.00, which is cheap for such a Gun. See cut opposite. Boxing 20 cents extra. **Must be sent by express and charges paid by receiver.**

English Gun.

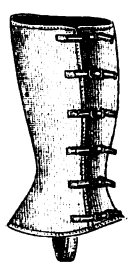
This is a superb gun in every respect, fine twist barrels, bored for close and hard shooting—of good balance and proportion, with wide breech ends, and all improvements.

Description.—Top Snap, Extension Rib, Pistol Stock, Rubber Butt Plate, Scott Style Low Circular Hammers, Snap Forestock, Matted Rib, Left Barrel Choke-Bored, Right Barrel Cylinder-Bored. 30-inch Barrels. Weight, 7¼ to 8¼ lbs.

Given for 10 new subscribers and $12.50 additional. Price $25.00. **All Guns must be sent by express and charges paid by receiver,** when sent as a premium or sale. Boxing 20 cents extra.



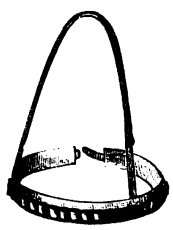
Champion Gun.



This Single-Barrel Breech-Loading Gun is made by the John P. Lovell Arms Co., and is fully warranted by them. *Description.*—Plain Steel Barrels, Double Bolt, Rebounding Lock, Pistol-Grip, Patent Fore-end Fastening, and Rubber Butt Plate. For durability and finish it will be found in all respects equal to high-cost guns. 12-gauge.

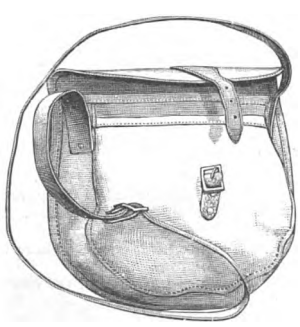
Given for five new names and $4.00 additional. Price $10.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. Boxing 20 cents extra.

Duck Hunting Hat, and Knee Leggins.



Canvas Knee Leggins. These Leggins are a necessity to huntsmen and others who are obliged to tramp through rough undergrowth or wet grass. They are made of heavy brown duck, bound with leather. When ordering state size of boot worn. One pair given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 20 cents,** when sent as a premium or purchased.

Duck Hunting Hat. This Hat is made of Brown Duck, and has a double visor, to shield the face and back of the neck from sunshine, rain or snow. It also makes a splendid Hat for every-day wear. When ordering, send size of Hat usually worn. Price 50 cents. **Postage and packing 15 cents.**

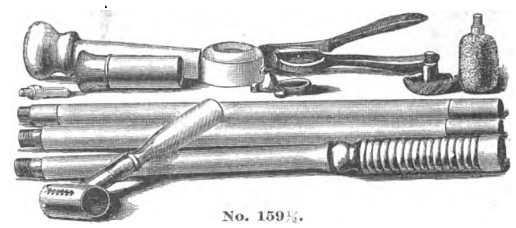


We offer the Hat and the Bag, mentioned below, for one new subscriber and 10 cents additional. **Postage and packing 30 cents,** when sent as a premium or purchased.

No. 10.

Leather Shell Belt, No. 10. This Belt is strongly made, will hold 25 Shells, and will be found a great convenience. Given for one new subscriber. Price 75 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Huntsman's Knife, with Leather Case and Belt, No. 5. The Knife is of the best Sheffield make, and has a stag handle. The Case and Belt are made from russet-colored leather, hand-sewed. Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.



No. 5.

Game Bag. Used as a Game, or Lunch Bag. Made of Canvas, with a Leather Strap. A useful article. Price 60 cents. **Postage and packing 15 cents.**

We offer the Bag and the Hat mentioned above for one new subscriber and 10 cents additional. **Postage and packing 30 cents,** when sent as a premium or purchased.

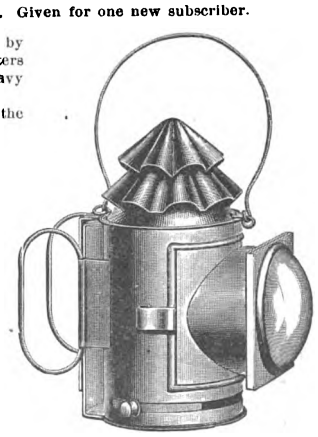
This Gun Case is made of Brown Canvas, and is trimmed with leather throughout. Given for one new subscriber. Price 75 cents. **Postage and packing 20 cents.**

New Bull's Eye or Dark Lantern, including a Ruby Light and Green Light Attachment, with Detachable Bail Handle.

Given for one new subscriber.

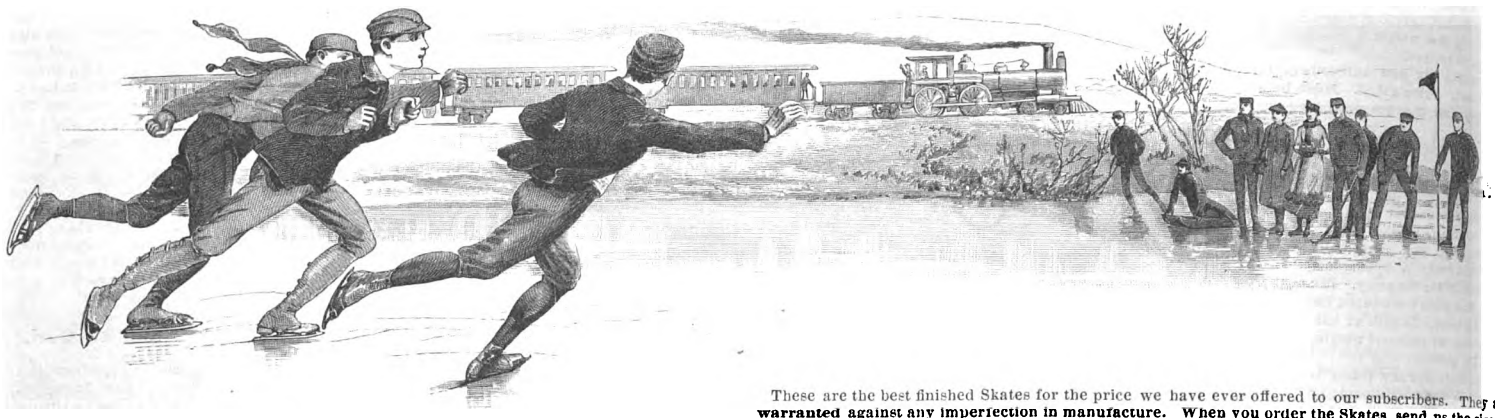


This Lantern is used by night-watchmen, hunters and farmers. It has a heavy convex glass lens.

It can be carried in the hand or adjusted to a belt, and can be used also as a Dark Lantern.

Used with the Ruby or Green Light Attachment, you have a superior **Signal Lantern.**

For a general utility Lantern we know of nothing better.



Given for one new subscriber. Price $1. **Postage and packing 35 cents,** when sent as a premium or purchased.

Digitized by Google

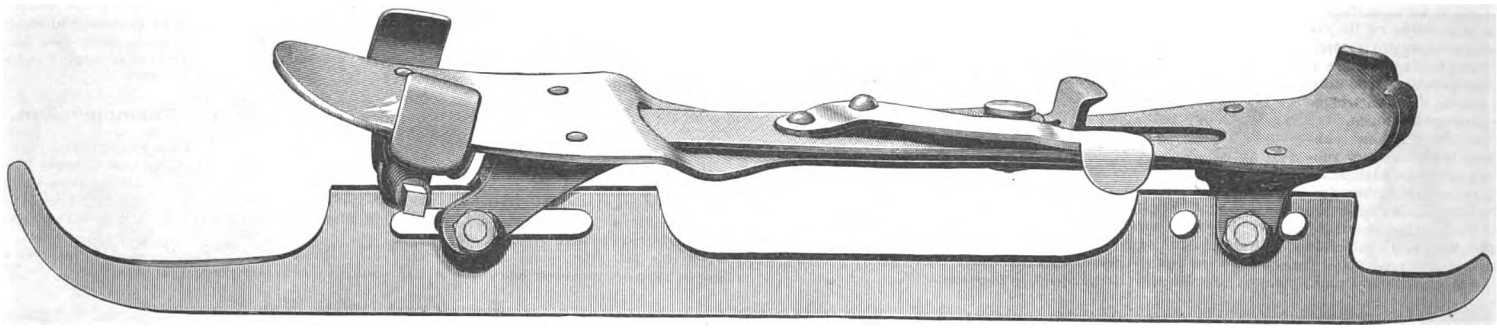
The Raymond Extension Speed Skate.

A pair given for one new subscriber and 10 cents additional.

Two years ago we first introduced the Raymond Extension Speed Skates. They have proved to be the most satisfactory Skates we have ever offered. As a Speed Skate they are remarkable.

From several thousand pairs we sent out not a single pair was broken. For strength, speed and beauty of finish these Skates are all that can be desired.

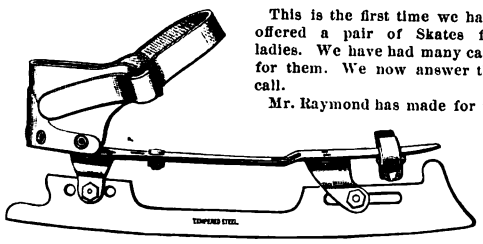
Boys' feet will grow. So will Raymond's Extension Speed Skates. We will explain. Suppose George, at nine years of age, buys any of the old-style Skates. At twelve years he has outgrown them, and must obtain a larger pair. Not so with the **Raymond Extension.** As the boy's feet grow he lets out a notch in the Extension Foot-Plate. Thus, year by year, while growing, his Skates can be adjusted to fit. He will thus be saved the cost of buying a larger pair.



As these Raymond Skates are remarkably strong, they will outwear the average boy's skating years.

These are the best finished Skates for the price we have ever offered to our subscribers. They are **warranted** against any imperfection in manufacture. When you order the Skates, send us the size in inches, according to the following table, and we will send them to you already adjusted to fit your boot.

How to Order. Measure the sole of your boot, from extreme end of heel to extreme end of toe, and send us the length in inches, as below, adding postage, according to the size of the Skate you order, as indicated. Boys clubbing together, and ordering Skates sent by express to one address, can save about one-half the expressage.



Size in Inches,	8	8½	9	9½	10	10½	11	11½
Postage and Packing,	50 cts.	50 cts.	50 cts.	50 cts.	50 cts.	50 cts.	55 cts.	55 cts.

A pair given for one new subscriber and 10 cents additional. Our price, only $1.00 per pair. If you wish them sent by mail, you must add the postage as indicated above, or they can be sent by express, and charges paid by receiver, which in many cases will be much cheaper.

Lady's Extension Safety Skates.

Given for one new subscriber and 15 cents additional.

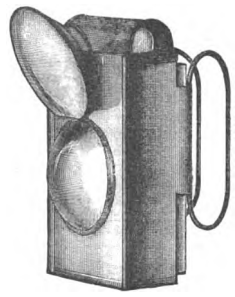
This is the first time we have offered a pair of Skates for ladies. We have had many calls for them. We now answer the call.

Mr. Raymond has made for us a special Skate, planned especially for the comfort and pleasure of the young ladies. It is thoroughly made, and has the well-known extension feature on the foot-plate.

How to Order. Measure the sole of your boot, from extreme end of heel to extreme end of toe, and send us the length in inches. Girls clubbing together, and ordering Skates sent by express to one address, can save about one-half the expressage.

A pair given for one new subscriber and 15 cents additional. Our price, only $1.25 per pair. If you wish them sent by mail, you must add 50 cents for the postage, or they can be sent by express, and charges paid by receiver, which in many cases will be much cheaper.

Sketching Camera, No. 2.



It consists of a tripod Table, over which is adjusted a black, tent-like covering. At the top of the tent is arranged a mirror, at an angle of 45 degrees; also, a large Lens. The operator sits in a chair, with his head and shoulders covered with the black cloth, and draws the landscape.

Given for two new subscribers and 50 cents additional. Price $1.75. **Must be sent by express and charges paid by receiver.**

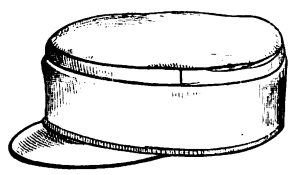
A CARD. Many of the articles on our PREMIUM LIST are heavy, and can be transported by express quite cheaply — much cheaper than by mail. We would suggest that friends and neighbors wishing to purchase goods from our PREMIUM LIST can save the mail charges by clubbing their orders and having the goods forwarded to one address by express. Many of our subscribers and friends have followed this suggestion, with good results.

Skating Lantern, with Colored Lights, and Gem Whistle.

All given for one new subscriber.

The Bicycle and Signal Whistle is full nickel-plated, very powerful, and is the discord Whistle used in bicycling, hunting and boating. It has nickel chain to attach to coat.

The Pocket Lantern is just the thing for skating. It gives a clear, bright light, has a strong lens, and can be carried by a strap. All given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.



"Boy's Own" Toboggan.

This is the strongest and best Toboggan made for the price. Well finished, four feet long.

Given for one new subscriber and 40 cents additional. Price $1.50. Our "Boy's Own" is thoroughly made. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Arctic Storm Cap. Given for one new subscriber.

We have contracted with one of the best manufacturers to make for us a very large number of Storm Caps, as seen illustrated in the cuts.

Cut No. 1 illustrates the Cap as worn in ordinary weather. Cut No. 2 as worn in very cold weather. As will be noticed, it forms a perfect protection for the ears and back part of the head.

The Cap is well made from fine navy blue wool cloth, lined with red felt.

It is the best style of a Cap for cold weather we have yet been able to find. It is stylish and neat in appearance, yet it is made for hard service. It is just the Cap for school-boys or for farmers, or for any person liable to be exposed to cold weather. Sizes from 6½ to 7¾.

Given for one new subscriber. Price 85 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The White Eagle Skate Sail.

Given for one new subscriber and 35 cents additional.

This Sail consists of more than thirty square feet of strong cotton cloth stretched upon a Frame. This Frame is formed of a tough ash mast and spars, which are held together by cast metal sockets.

The Frame can be easily put together and separated, and the Sail as easily attached to and removed from the Frame. When folded, the Sail and Frame make a light roll four feet long and two or three inches thick.

This beautiful Skate Sail given for one new subscriber and 35 cents additional. Price $1.50 each. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The King Pneumatic Rifle. Pistol-Grip. Nickel-Plated.

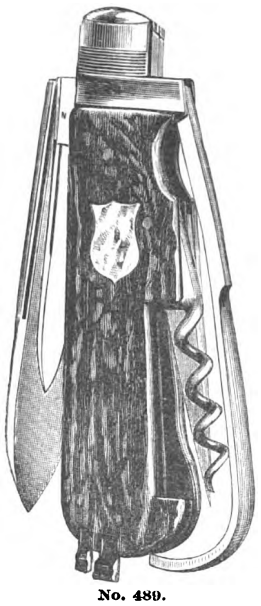
Given for one new subscriber and 15 cents additional.

Our Pneumatic Rifle is a mine of sport. If the weather is rainy, the piazza can be made a shooting-gallery, and a whole company entertained with trials of marksmanship. If the sun shines, out-of-door shooting-matches can be held, and keen eyes and healthy complexions secured.

For the past few years we have been using the Chicago Air Rifle. This has given good satisfaction, and many thousands have been ordered. Its manufacturers have recently, however, produced a much finer Gun. This new Gun we have named the King Pneumatic Rifle. Though so much superior to the Chicago Air Rifle, and in fact any other similar gun, we are able to offer it at but a slight advance over the Chicago. For an accurate long-distance Target Gun, we cannot too highly recommend it.

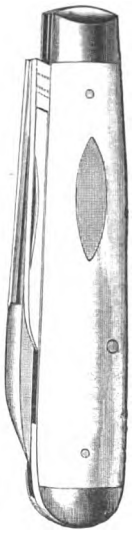
A Beautiful Rifle.

This is the handsomest Air Rifle we have ever seen. Its polished barrel shines like silver. Its curves are graceful, and its proportions perfect. It is a Gun any boy would be proud to carry, and prouder still to own. Yet, with all its beauty, its shooting qualities do not suffer in comparison. It shoots with precision, and carries a shot for a long distance.



The great advantage of an Air Gun is that it uses no powder. It is hence inexpensive. There is scarcely any noise. No danger of explosions. No possibility of fires.

The King Pneumatic Rifle is made entirely of brass, iron and steel, with the exception of the stock. This is of wood, stained and polished to represent mahogany, and has a **pistol-grip.** The [illegible] other exposed parts are nickel-plated. Its length is 33 inches. It is designed entirely for shot. Common BB shot are used. These can be bought for a few cents a pound at any local store.



Given for one new subscriber and 15 cents additional. Price, $1.25. We send with the Rifle a small quantity of Shot and a Target. **Postage and packing 50 cents,** when sent as a premium or purchased.

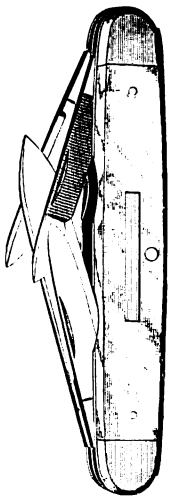
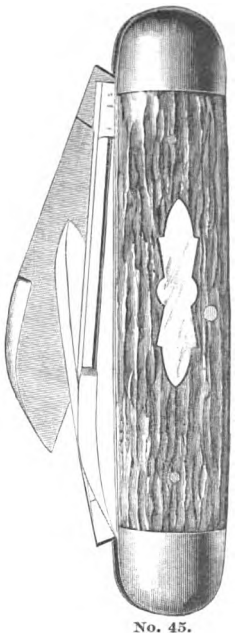
Fine English, American and German Pocket Cutlery.



No. 489.



No. 40.

No. 520.

No. 620.

No. 45.

Farmer's English Knife, No. 489. This Knife comprises nine distinct tools,—two Blades, a Lancet, Corkscrew, Reamer, Tweezers, Pick, Screw Driver, and a Hook for cleaning a horse's hoof. It is of special service to the farmer.

Given for one new subscriber and 10 cents additional. For sale by us for $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased. This fine Knife is one of our most popular premiums.

Boy's Own Knife, Pearl Handle, No. 40. The Boy's Own Knife is a beauty, but it's more; it's made to cut and to keep its edge. No better-cutting Knife to be had at any price. German Silver Bolster, Rivets and Shield, and best of Pearl Handle.

Given for one new subscriber and 10 cents additional. Price $1.25. **Postage and packing 5 cents,** when sent as a premium or purchased.

Lady's Pearl Handle Knife, No. 520. The cut illustrates how our Lady's Knife looks. We gave the plan of this Knife to our manufacturer, and this is the result. Fine English Steel, faultless Pearl and perfect finish are embodied in the Knife. For convenience for a lady nothing could be better; gentlemen, too, will find it a most useful vest-pocket companion. Large blade, nail blade and file, glove and boot-buttoner.

Given for one new subscriber. **Price $1.00. Postage and packing 5 cents,** when sent as a premium or purchased.

Four-Blade Pearl Knife, No. 620. This is a fine Knife—a Wostenholm pattern. It is made only to our order, and expressly for our subscribers. By controlling this special Knife ourselves we are able to offer a rare Premium at a low price. The cut will show you just how the Knife looks, and its exact size. It is made from the best English Steel, the Pearl is the first quality, and the handle is brass-lined. The tips are German Silver.

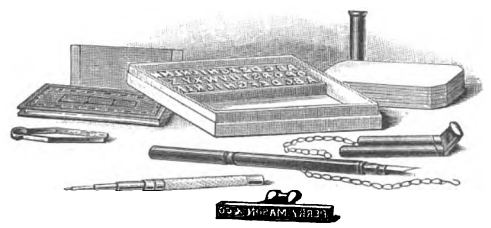
Given for one new subscriber and 10 cents additional. Price $1.25. **Postage and packing 5 cents,** when sent as a premium or purchased.

Granger's Knife, No. 45. The Blades of this fine Knife are the best English cast crucible steel, and will cut like a razor. Stag-Handle, double German Silver Bolsters, Rivets and Shield, brass-lined.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Outfit for the Young Modeller in Clay.

Given for one new subscriber.

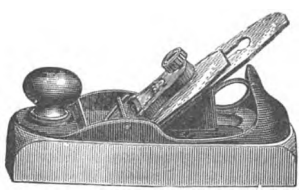


This art is supposed by many to be a difficult and uninteresting one. Most pupils, however, not only acquire the art easily, but also grow more and more fascinated as their work progresses. Our Outfit for Young Modellers is very complete. It consists of a "Guide on Modelling in Clay," an assortment of Boxwood Tools, an imported French Medallion Model, and five pounds of Prepared Modelling Clay, which can be used over again many times.

Given for one new subscriber. Price complete, $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Combination Premium Package, No. 1.

Given for one new subscriber.



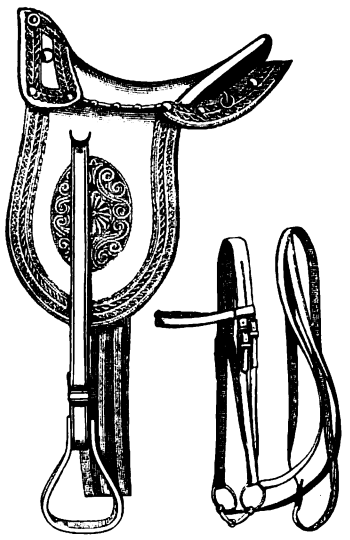
This package contains a most valuable assortment of articles for young folks.

1st, a Rubber Printing Outfit, consisting of a 3A font of Type, Type Holder, Ink Pad, Tweezer, and Directions. Just the thing for marking clothing or printing cards. 2d, a Duplex Call Whistle, having two cylinders of different lengths, and capable of producing a most powerful sound. 3d, a practical Fountain Pen, which is easily filled and kept in order. 4th, a package of Calling Cards. 5th, a fine 6-paged Ivorine Pocket Memorandum Book. 6th, a beautiful Gold-plated Pocket Pencil.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Stanley's Smoothing Plane. 1¾ inch Cutter.

This is the favorite Stanley adjustable Smoothing Plane. It is one of the most popular styles used for this purpose among carpenters.



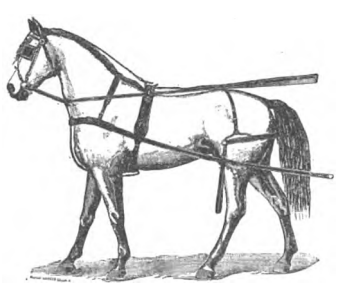
Given for one new subscriber and 30 cents additional. Price $1.50. **Postage and packing 40 cts.**

A Beautiful Riding Saddle.

Given for four new subscribers and $2.00 additional.

We have selected this Saddle as the most popular and serviceable style in use. Made of good quality leather, good strong Tree, well ironed, full Pad, 4-inch Cotton Girth, Wood Stirrups.

Given for four new subscribers and $2.00 additional. Price $5.50. **Must be sent by express and charges paid by receiver.**



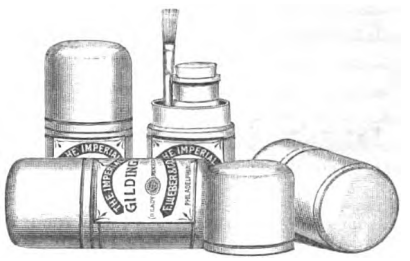
A Fine Riding Bridle.

This Bridle is made of Oak-Tanned Leather, substantially put together, with Curb Bit. The Curb is not shown in this cut.

Given for one new subscriber and 40 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver.**

Single Buggy Harness.

Given for seven new subscribers and $5.00 additional.



This Harness is made by one of our largest manufacturers. The material is selected No. 1 Oak-Tanned Leather, nicely finished throughout.

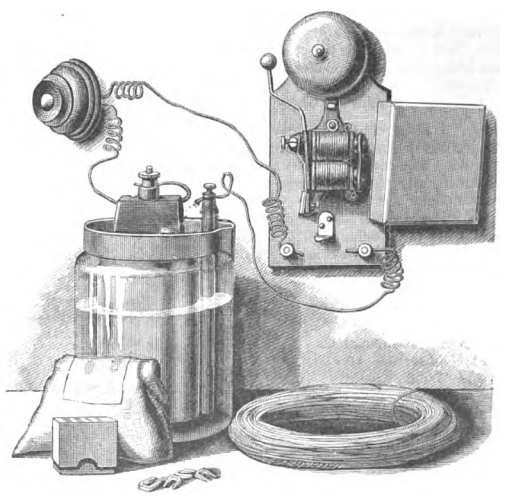
Description: Bridle ⅝ inch wide; Fancy front, patent Leather Blinds, round Side Rein or Over-check, Lines flat, fair or black, fancy Creased Breast Collar, with 1⅛ inch Single Strap Traces, 3-inch Saddle, patent leather Skirts, full padded, Fancy Box Loop, Shaft Tugs and Belly Bands, Fancy Creased Single Strap Breeching, round Crupper.

Weight of harness boxed, 18 pounds. When ordering state size and weight of horse, whether side or over-check is wanted.

Given for seven new subscribers and $5.00 additional. Price $13.00. **Must be sent by express and charges paid by receiver.**

The New Imperial Gilding Outfit.

Gildings are employed for decorating Household Ornaments, Candelabra, Gas Fixtures, Baskets, Mantel and Etagere objects, Frames, Cornices, Furniture and Artistic Ornamentation of all kinds. They may be used on Metal, Wood, Paper, Silk, Plaster, Leather, and many other substances, with equally brilliant effect.



The Outfit consists of four bottles Imperial Gold Paint, with Brushes and directions for use. They are ready for instant use, and may be applied by the most inexperienced amateur.

Given for one new subscriber. Price of four bottles, 90 cents. **Postage and packing 30 cts.,** when sent as a premium or purchased.

The Leclanché Electric Bell Outfit.

The cut illustrates the Leclanché Electric Bell Outfit complete. It consists of a large Leclanché Battery with Chemicals, fifty feet of Insulated Copper Wire, a paper of Clamp Tacks for putting it up, one Push Button with Porcelain Knob, and an elegant Nickel-Plated Electric Bell mounted on a black-walnut base. It has a black-walnut cover. Any young man can easily put up this Electric Bell. For door-bells, for servants' call-bells, etc., there is nothing quite so handy and reliable as this Outfit.

Some parties are doing quite a business by purchasing these Outfits by the dozen, and putting them into houses at reasonable rates.

Given, complete, for two new subscribers and 35 cents additional. **Price $2.00. Must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

On receipt of 30 cents additional, we will include in the Outfit a Spring Burglar Alarm Attachment, for either a door or window, with complete diagram and instructions for putting it up.

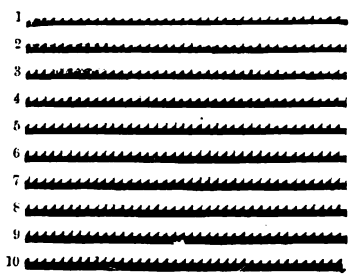
Useful Mechanical Tools and Valuable Outfits.

Improved Nickel Bracket Saw Outfit.

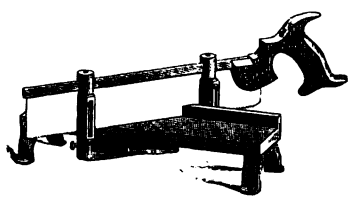


This Outfit now consists of **1 Nickel-Plated Bracket Saw Frame, 5 x 12 inches; 24 Saw Blades; 1 sheet Impression Paper; 1 Manual of Sawing and Wood-Carving; Designs for Brackets, etc., full size; 1 Brad Awl and 1 Marquetry Table Clamp.**

Below is a list of some of the articles which any boy can make.

We give over 70 original and choice designs with the Saw, but as our space is limited, we number but twenty-four: **Match Safes, Toilet Racks, Card Receivers, Picture Rests, Photograph Frames** (Cabinet Size), **Wall Brackets, Paper Knives, Hanging Baskets, Stereoscopic View Holders, Pen Racks, Watch Stands, Glove Boxes, Beautiful Work Boxes, Handkerchief Boxes, Pretty Easels, Wall Pockets, Fancy Ornamental Designs, Letter Boxes, Book Covers, Table Mats, Yarn Winders.**

Given for one new subscriber. Price **$1.00. Postage and packing 25 cents,** when sent as a premium or purchased.

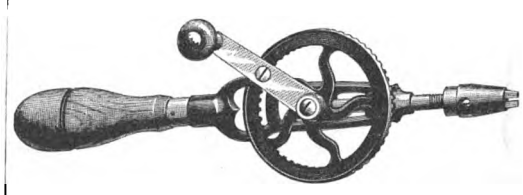


Bracket Saw Blades.

We cannot recommend these fine American Blades too highly. They cut faster and are also much stronger than the French or German Blades. We believe that these Blades are the best in the world. We give fifteen dozen for one new subscriber. **Postage and packing 10 cents,** when sent as a premium or purchased.

Prices as follows: Sizes, from Nos. 0 to 4 inclusive, 15 cents per dozen, or $1.00 for 12 dozen; Nos. 5 to 10 inclusive, 15 cents per dozen, or $1.25 for 12 dozen. Postage paid by us.

Adjustable Iron Mitre-Box and Saw.



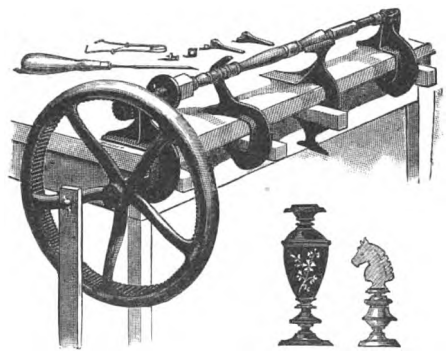
It is 12 inches long, and will saw moulding 2 x 3¼ inches. It has a sanded floor, adjustable spring and gauge. The blade of the Mitre-Saw is 12 inches long, filed and set ready for use.

Given for two new subscribers and 50 cents additional. Packed in wooden box. Price $3. **Must be sent by express and charges paid by receiver.**

Hand Drill, No. 3.

Given for one new subscriber and 30 cents additional.

This Hand Drill is nearly twelve inches long, has Cut Gears, Steel Spindles, Rosewood Head and Handle, Forged Steel Chucks, which will hold 3-16 inch and smaller drills, and is heavily nickel-plated and finely polished. We give with this Hand Drill oil-tempered Drill Points, assorted sizes. The handle of this Tool is hollow, and has a screw cap. The handle contains the Drills when not in use.



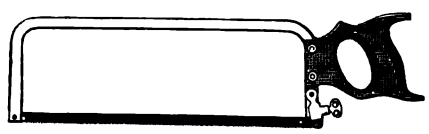
Given for one new subscriber and 30 cents additional. Price **$1.50. Postage and packing 25 cts.,** when sent as a premium or purchased.

The Columbia Foot-Power Lathe.

Given for one new subscriber and $1.00 additional.

One of the most fascinating of employments is that of Turning. Since this cut was made we have changed the model, using a Belt instead of gearing.

This Lathe is a recent patented invention of one of our experts, and is made for us alone. It is wonderfully simple in construction, and while the cheapest Lathe ever put upon the market, it will yet



do the best of work. It can be clamped to any table, is provided with a convenient foot-power, and can turn an article fully four feet in length. The castings are of the best gray iron, the spindles of steel, and the face-plate of turned brass. We furnish free with the lathe, 1 Turning Chisel, 2 Boring Tools, Calipers, Directions, and a Sheet of full-sized Patterns for a number of beautiful and valuable articles.

Given for one new subscriber and $1.00 additional. Price **$2.50. Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Each Lathe is packed in a strong box, and weighs about 10 pounds.

Star Kitchen Saw. Given for one new subscriber.

The frame of this useful saw is made of steel, polished and nickel-plated. It has a Buck handle, and an arrangement for straining up the saw blade. It is 14 inches long.

Given for one new subscriber. Price 75 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

Six Carving Tools and Instruction Book.

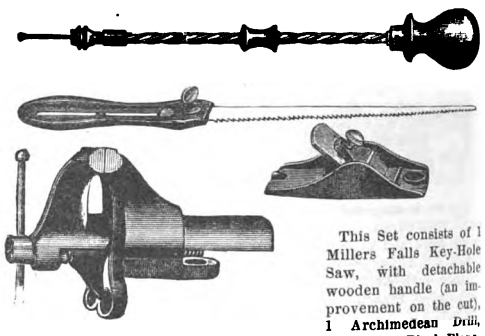
In Black Walnut Case. Given for one new subscriber.

One of the most delightful of Arts is that of wood-carving. For generations, the Swiss Mountaineers have produced perfect "dreams in wood." Before these, the Yankee boy, with his jackknife, stood defeated. He had neither the tools nor the knowledge for such work.

We still believed in the ability of the Yankee boy, and several years ago brought out a set of Carving Tools, both low in price and of a good quality. The results have shown our faith to have been well grounded. Boys and girls in every part of the United States have secured these Tools and learned to do most excellent work.

There are Six Tools in the Set. They have rosewood handles, and are sharpened ready for use. With the Tools we give a Book of Instructions, 12 designs and 15 reproductions from artistic carvings.

Given for one new subscriber. Price **$1.00. Postage and packing 10 cents,** when sent as a premium or purchased.



Outfit of Wood for Scroll Sawing.

This wood is ⅛ inch thick, two feet long, and comes in assorted widths, and is put up in 25-cent packages. Our Premium Offer consists of one package each of Black Walnut, White Holly and Cherry.

The three packages given for one new subscriber and 10 cents additional. Price 75 cents. **Must be sent by express and charges paid by receiver.** Price of single package, 25 cents.

Outfit of Tools, No. 60. Given for one new subscriber.

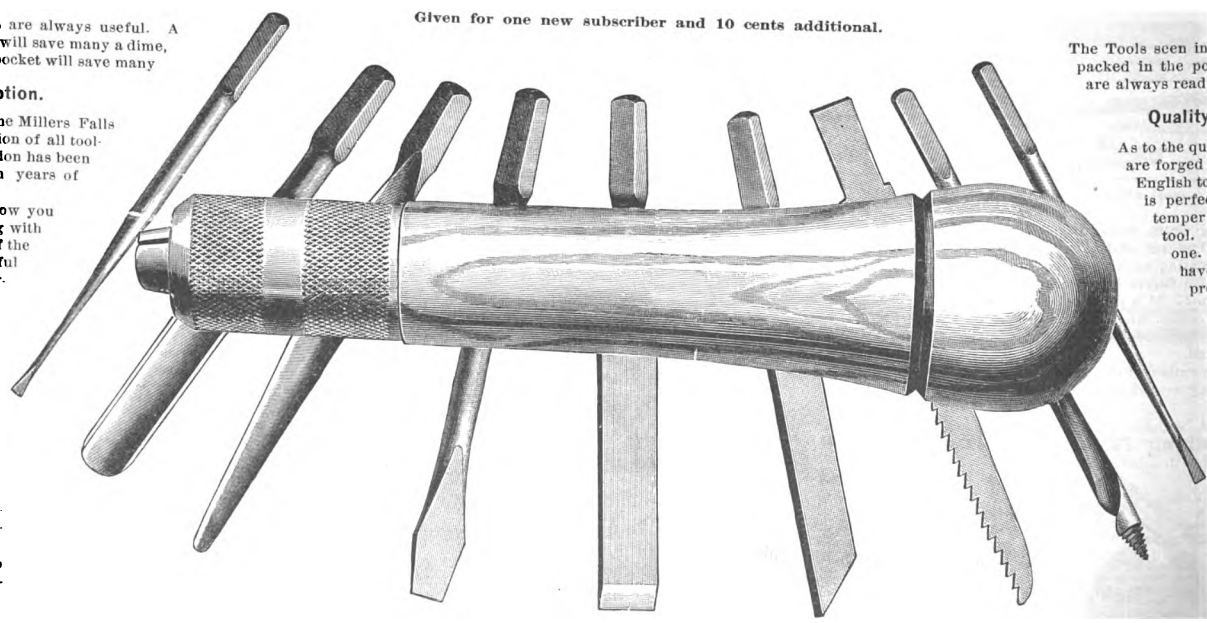
This Set consists of 1 Millers Falls Key-Hole Saw, with detachable wooden handle (an improvement on the cut), 1 Archimedean Drill, with chuck and six drills, 1 small Bench Vise, 1 small Block Plane. These Tools are all made in the best manner from good materials. This combination will be found very valuable to every one of a mechanical turn of mind.

Given for one new subscriber. For sale by us for $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Pocket Companion Tool-Holder, No. 5.

Given for one new subscriber and 10 cents additional.

Good practical tools are always useful. A tool-chest in the house will save many a dime, but a tool-chest in the pocket will save many a dollar.



Description.

1st. It is made by the Millers Falls Co., and is the perfection of all tool-holders. This perfection has been reached only through years of experience.

2d. The cut will show you just what tools belong with the set. The quality of the steel used, the beautiful finish and fine tempering, are of course not shown in the cut.

3d. The handle of this Tool-Holder is made from rosewood, while the Patent Chuck, which will hold anything, from a pin to a large file, is nickel-plated. The tools are carried in the handle, which is arranged for that purpose.

4th. The Screw Cap is made from Rosewood.

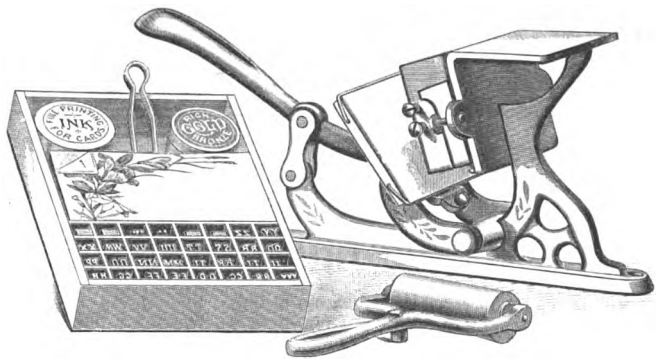
The Tools seen in the cut can be snugly packed in the pocket of the Holder, and are always ready for instant use.

Quality of the Tools.

As to the quality of the Tools. They are forged from the finest quality of English tool steel. The tempering is perfect; nothing finer as to temper is to be found in any tool. Every boy should have one. Every family should have one. This is a special premium offer.

Size of the Tools.

The cut does not show the full size of either the Holder or Tools. The Holder is 7¼ inches long, and the Tools (nine in number) are each four inches long. They consist of **2 Brad Awls, 1 Gimlet, 1 Saw, 2 Chisels, 1 Screw-Driver, 1 Gouge, 1 Reamer.**



Given for one new subscriber and 10 cents additional. Price **$1.50. Postage 20 cents.**

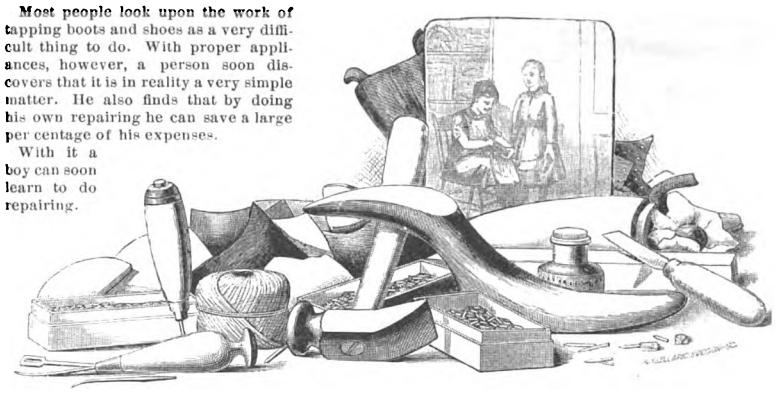
Printing Press and Mechanical Tools.

The Daisy Printing Press Outfit.

Given for one new subscriber.

This Press and Outfit is a new one, and is offered as a special inducement. Formerly an Outfit like this sold at the stores at $2.00 each. In their journey from boyhood to manhood most boys pass through the amateur-printing age; to those we offer this practical Outfit.

It consists of 1 Daisy Printing Press, size of Chase 1⅝ x 2¾ inches, 1 Fine Composition Roller, 1 Can of the best Ink, 1 Composing Pallet (2 lines), 1 Full Font of Type, including Quads, Spaces and Periods, 1 Pack Floral Cards, full Instructions, 1 Box Bronze.



Given for one new subscriber. We offer it for sale for only $1.00. **Postage and packing 65 cents,** when sent as a premium or purchased. Or we will send it by express, charges not paid.

Outfit for Tapping Boots and Shoes.

Given for one new subscriber and 40 cents additional.

Most people look upon the work of tapping boots and shoes as a very difficult thing to do. With proper appliances, however, a person soon discovers that it is in reality a very simple matter. He also finds that by doing his own repairing he can save a large per centage of his expenses.

With it a boy can soon learn to do repairing.

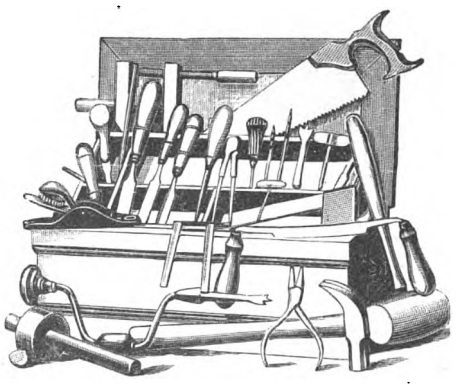
Our Outfit is complete. It contains a large assortment of appliances for tapping boots or shoes, together with a pair of Taps and Heel-lifts, all cut and shaped, ready for nailing to the shoe. Full directions are given with each Outfit. The Awl and Twine are not given with the Outfit.

Given for one new subscriber and 40 cents additional. Price of complete Outfit, $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Outfit for Making French Confectionery.

The Outfit consists of a Nickel-Plated Dropping Wire, packages of Vegetable Coloring Compounds, Flavoring Acids, Waxed Paper, 2 lbs. Confectioners' Sugar, and Lessons in French Candy-Making.

The Outfit given for one new subscriber, and 15 cents additional. Price $1.00. **Must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.



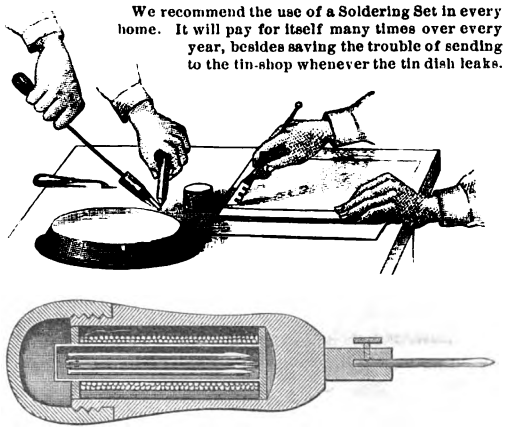
Blow Pipe, Alcohol Lamp and Microscope.

This Outfit is for soldering and brazing metals. With it Glass can be blown or formed into shape. The Microscope has a strong magnifying power. All given for one new subscriber. Price 90 cents. **Postage and packing 10 cts.,** when sent as a premium or purchased.

Improved Youth's Tool Chest.

Given for three new subscribers and $2.00 additional.

This Chest cannot be purchased at the stores for less than $7.50. These Tools in the hands of a boy prove an educator, and are a great convenience to all members of the family for the many odd jobs that are found about the house. The Chest is made from chestnut, trimmed in black walnut. Size of Chest 18 x 9½, and 6 inches deep.



The Chest contains the following Tools:—**12-inch Hand-Saw, Block Plane, Bit Brace, 3 Bits, Screwdriver, Draw Knife, Hammer, Compasses, Chisel (¼-inch), Chisel (½-inch), Scratch Awl, Pliers, Two-Foot Rule, Try Square, Gauge, 2 Gimlets, Awl, Mallet, File, Plumb-Bob, Chalk Line, Nail Set, Monkey Wrench, Spirit Level, Screwdriver for Bit Brace, 2 Hand Clamps, Bottle LePage's Glue,** making thirty Tools.

The Chest of Tools, with Book, given for three new subscribers and $2.00 additional. Price $5.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Soldering Casket, Glass Cutter, and Crispin's Pocket Companion.

Given for one new subscriber.

We recommend the use of a Soldering Set in every home. It will pay for itself many times over every year, besides saving the trouble of sending to the tin-shop whenever the tin dish leaks.

The Set consists of a fine adjustable Soldering Iron, with solid copper ends, one Bar of Solder, one Scraper and a box of Resin, and Directions. We also give a Glass Cutter and a Crispin's Companion.

All given for one new subscriber. Price 80 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

A Suggestion. It will be a good plan for several persons to club together and order a selection of these articles sent in one package by express. By acting on this suggestion several articles can be sent to one address by express about as cheaply as one article sent singly. This idea can be profitably adopted.

The Companion Foot-Power Lathe and Scroll Saw.

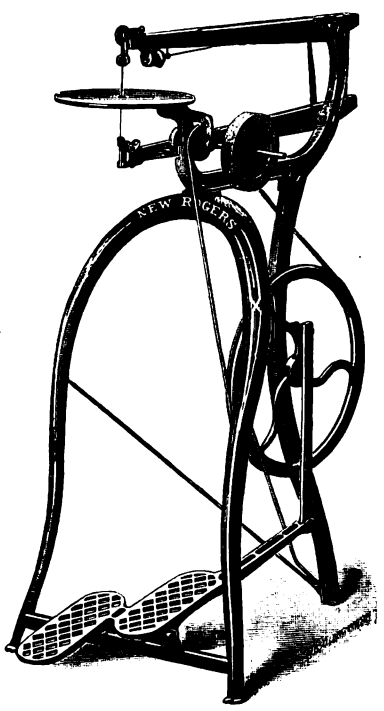
Remarkable History.

In 1875 THE YOUTH'S COMPANION brought out the first low-priced practical Foot-Power Scroll Saw ever made. THE COMPANION has ordered manufactured at one time 10,000 machines.

These machines are the result of many years of experience to produce the best possible Scroll Saw at a low price.

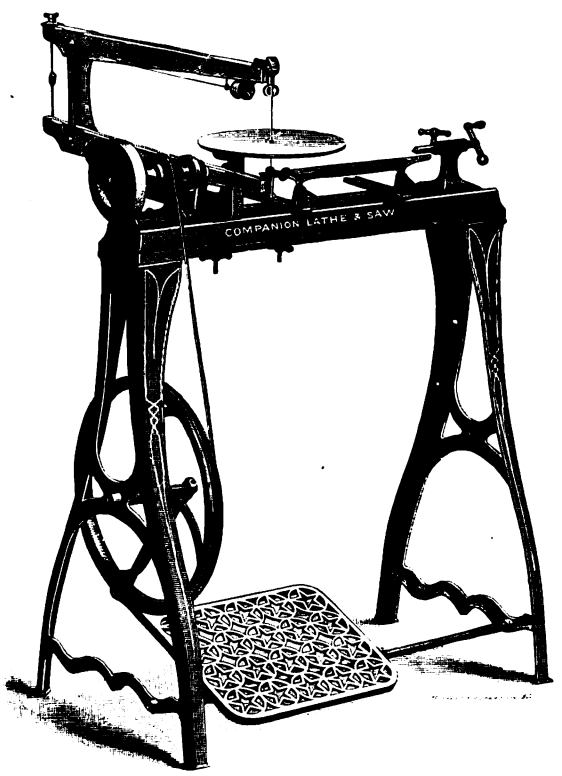
Rogers Scroll Saw. This is the delight of the amateur worker at Scroll Sawing.

The Balance Wheel is 4½ inches in diameter, and has a rim of solid Emery for grinding and polishing.



Each machine is set up, run and carefully inspected before leaving the factory; it is then taken down and shipped in a box.

The machine is provided with a Dust Blower and with a Tilting Table for inlaying. With each machine we give **24 Saw Blades, Screwdriver, Belt Hooks, Direction Sheet, Wrench, 70 Designs, and 6 Drill Points.**



The Saw alone weighs 25 lbs., Saw and Box together, 45 lbs. Price of this fine machine, with extras, $3.50. This machine is the most satisfactory working amateur Scroll Saw that has yet been made.

Given for three new subscribers and 35 cents additional; or two new subscribers and 85 cents additional; or one new subscriber and $1.35 additional.

It is just the thing for a boy of a mechanical turn of mind. It will keep him out of mischief, and also prove a source of profitable employment.

New Rogers Scroll Saw.

Companion Lathe and Scroll Saw.

Companion Lathe.

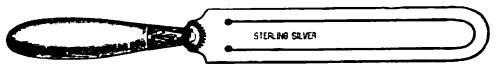
The Lathe and Saw is the best combination Lathe and Jig Saw now made. Its superior points are: 1, Strong and heavy castings and extra finish. 2, Large Treadle. 3, Automatic Dust Blower. 4, Anti-friction Blade Wheel. 5, Large Emery Wheel. 6, Rigid Head and Tail Stocks. 7, Improved Saw Clamps. 8, New Straining Rod. 9, High Speed. 10, Tilting Table. Lathe will turn wood 16 inches in length. Swing of Lathe, 3¼ inches.

We send with each machine **3 Turning Tools, Screwdriver, Belt Hooks, Direction Sheet, Wrench, 24 Saw Blades, 6 Drill Points, 71 Designs.**

In addition to the 71 Designs mentioned above we also give with both the Companion Scroll Saw and Lathe, or the New Rogers Scroll Saw, a small bric-à-brac design not shown in cut. This bric-à-brac, when well made, makes a most beautiful article for the parlor or sitting-room.

Weight of machine 50 lbs. Boxed, all ready for shipping, about 75 lbs.

Given for nine new subscribers, or for six new subscribers and $1.50 additional; or three new subscribers and $3.00 additional. Price of machine, $8.50 complete.



How We Ship.—Each of these Machines is carefully packed in a wooden case, and sent by fast freight or express, as you prefer. Transportation charges are paid by receiver, when sent as a premium or purchased. We ship Western orders from the factory in Western Massachusetts direct.

Useful School Articles and Drawing Set.

Solid Silver Book-Mark.

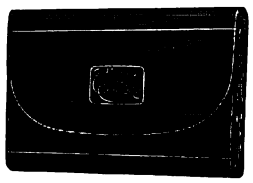
Given for one new subscriber and 15 cents additional.

The blade is made of sterling silver and mounted in a pearl handle. It can be used not only as its name indicates, but also as a paper-cutter.

Given for one new subscriber, and 15 cents additional. Price $1.00. **Postage and packing 6 cts.,** when sent as a premium or purchased.

"Lamp of Learning" School Pin.

Given for one new subscriber.

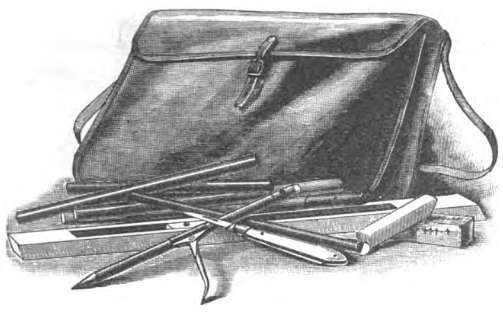


We have quite an inquiry from our subscribers in schools and colleges for Class Pins. We select this emblem as most appropriate. Cut is actual size. Solid gold, fine hand-engraved.

Price 75 cents each. **Postage and packing 6 cents,** when sent as a premium or purchased. $7.50 per dozen, post-paid, in lots of 12 or more. No discount on less quantity.

Ropp's Combined Calculator & Pocket-Book.

Given for one new subscriber.



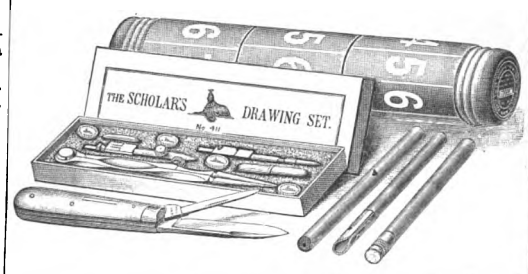
This article is invaluable to every farmer, tradesman or mechanic. Its 128 pages are crowded with rules and tables. It will show at a glance, without using paper or pencil, the correct amount required by any business transaction. Over 20 years have been spent upon this Calculator. Its possession may save large sums of money. It contains a renewable account book, silica slate and money compartment, and is covered with American Russia leather.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Improved Eagle School Outfit.

Given for one new subscriber.

This excellent School Package contains a large assortment of articles which every scholar should possess. The complete Outfit consists of 1 Waterproof School Bag, with strap, 1 Sterling Ruler,

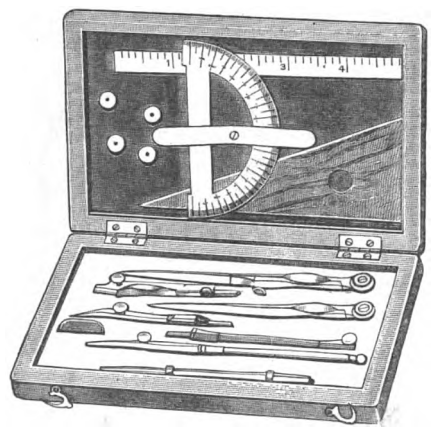


with Pencil, 1 fine Nickel-Plated Pencil Compass, with Pencil, 1 Eagle Bevel Eraser, 1 Penknife, 1 Dozen Assorted Pens, 1 Cedar Penholder, 4 Eagle Colored Slate Crayons, 3 Eagle Slate Pencils encased in wood, 1 Improved Eagle nickel-tipped Drawing Pencil, and 1 Slate Eraser.

All given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

The Champion School Outfit.

This fine Outfit consists of 1 Imported Nickel-Plated Drawing Set,—an instrument of unusual good quality and value,—1 two-bladed Pocket Knife, with Metal Shield in Handle, 1 Rubber-Tipped Pencil, 1 Wood-Covered Slate Pencil, 1 Penholder, 6 Pens, and 1 Scholar's Companion with Patented Combination Lock.

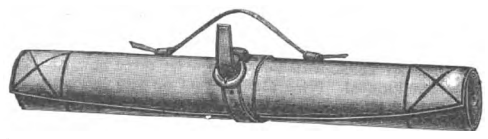


This last article is designed for holding Pens, Pencils and Holders. By a simple movement of the hand the combination is turned, securely locking these articles in the Holder. It can then only be opened by the person who knows the combination.

The complete Outfit given for one new subscriber. Price 90 cents. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Nickel Drawing Instruments.

We have arranged with the maker of these Drawing Instruments to have them nickel-plated.

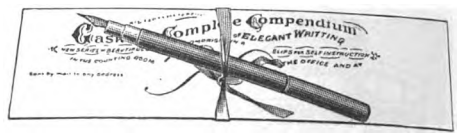


Our cut gives in outline the number of instruments that make up this Set. It contains 15 pieces, among which are the following:

Compasses, a Compass Extension, a Drawing or Ruling Pen, an Arm Extension, a Crayon Holder, a Metal Protractor, a Wood Rule, etc. We have imported direct from France a very large number of these Drawing Sets for the special use of our subscribers.

Given for only one new subscriber. For sale by us for $1.00. **Postage and packing 10 cts.,** when sent as a premium or purchased.

English Leather Music Roll.

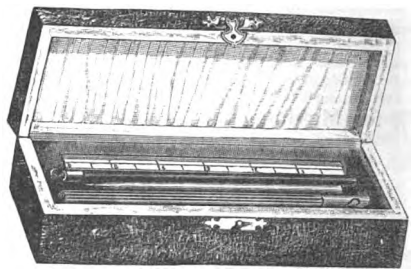


Made of solid leather, one piece, russet color, with handle, and Strap with oxidized Clasp. Full size, 15 x 16 inches. Very handsome, and will wear a lifetime.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Gaskell's Compendium, and Fountain Pen.

Both given for one new subscriber.



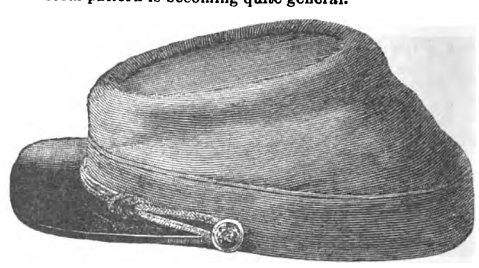
Gaskell's Compendium is too well known for us to give an extended description. The Compendium gives a full self-teaching course in penmanship, consisting of Instruction Book and over 20 Copy Plates of plain and ornamental writing. Hundreds of young men and ladies now hold good positions who used this Compendium to perfect themselves in Penmanship.

The Fountain Pen is practical, durable, cheap. The Case is made in imitation of rubber. It is simple in construction, easily filled and adjusted, and being lined throughout with nickel and furnished with a non-corrosive pen, it is always cleanly.

Both given for one new subscriber. Price of both, $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Scholar's Plush Companion.

We have had this Scholar's Companion made expressly for our subscribers. The Case itself is very strong, and ought to last for many years. It is covered with a fine quality of garnet plush, while



the inside of the cover is lined with satin. The Companion is furnished with Pencils, Holder, Rubber, Ruler, and a pretty Ivory Handle Penknife.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Boy's School and Drill Cap.

Given for one new subscriber and 10 cents additional.

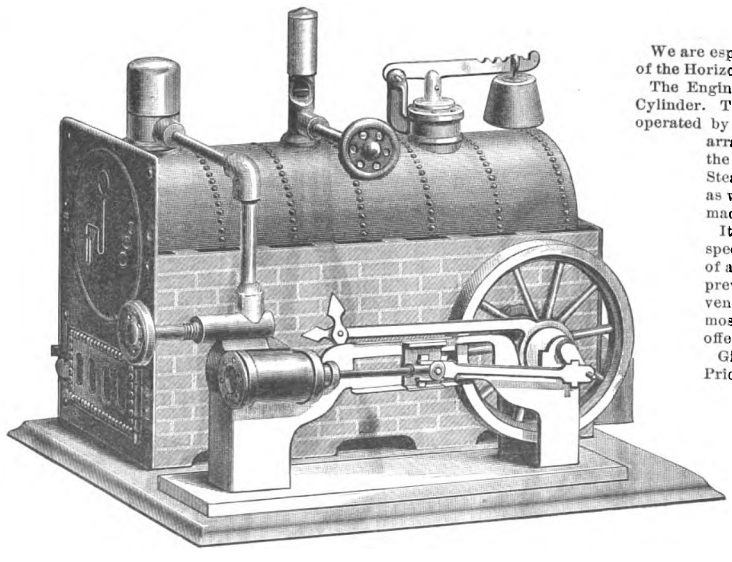
A uniform School Cap is a good thing all around—good for the boy and good for the school. The custom of wearing School Caps of uniform pattern is becoming quite general.

The Cap we offer is made from standard dark-blue wool cloth. The cut illustrates the Cap. In ordering, state the size wanted. German Silver Initials can be furnished at 5 cents each, extra.

Given for one new subscriber and 10 cents additional. Price $1.00 each. **Postage and packing 15 cents,** when sent as a premium or purchased. A company of boys ordering a dozen or more at one time can have them at the rate of $10.00 per dozen, all to be sent to one address by express not paid. Not less than 12 sold at this rate.

Weeden's Improved Horizontal Steam Engine.

Given for one new subscriber and 15 cents additional.



A Fine Engine.

Six years ago we introduced to the public the upright Steam Engine, of which over 100,000 have since been made. The Engine was a beauty, surpassing any other Toy Engine.

We take pleasure in introducing our new Horizontal Steam Engine, which is a great improvement over the upright.

The cut shows its exact appearance, but not its beauty, or its size. It is painted and decorated in gold, black and vermilion. It is especially designed to illustrate in a practical way the principle of the Steam Engines so generally used in our manufacturing establishments.

We would say that it was through the efforts of THE YOUTH'S COMPANION that this beautiful line of Steam Engines was invented and manufactured. We think it is true that Mr. Weeden is the only man in the United States who could have successfully carried out our ideas in producing Steam Toy Engines, of so perfect construction, at a low price.

Description.

We are especially pleased with the perfect construction and beauty of the Horizontal.

The Engine is made with a Stationary, instead of an Oscillating, Cylinder. The Steam Chest is provided with a Slide Valve that is operated by means of an Eccentric on the Fly-wheel Shaft. This arrangement adds greatly to the appearance and power of the Engine. There is also a Steam Whistle, Steam Pipe, Steam Dome, Throttle Valve, Connecting Rod, Belt Pulley, as well as other important parts. All parts are accurately made, and fitted most carefully by experienced workmen.

It is capable of running toy machinery at a high rate of speed, and will prove a valuable object teacher to any boy of a mechanical turn of mind. An improved Safety Valve prevents all danger of explosion. Our limited space prevents a further description. We can only say that it is the most powerful and beautiful Engine that we have ever offered our subscribers.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 35 cents,** when sent as a premium or purchased. Or, sent by express, charges not prepaid.

Weeden's Double Mill Engine.

NOT ILLUSTRATED.

This Engine has two complete Boilers, two Lamps, two Safety Valves, Steam Dome, and Whistle. A Steam Pipe conveys the steam from both Boilers through the Throttle Valves to the Steam Chest.

The Double Engine is made up of two complete Engines, with their respective Cylinders, Pistons, Cross Heads, and Connecting Rods. This Engine is finished in Bronze, Scarlet, Gilt, and Black.

Given for two new subscribers and $1.00 additional. Price $3.00. **Must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

Cornish Beam Engine.

NOT ILLUSTRATED.

The Boiler is mounted in imitation of the usual brick setting, including stays and working furnace door for management of fires.

The top of Boiler is provided with Manhole, Gallows Frame with Walking Beam, and Filler with Safety Valve. Instead of an Oscillating Cylinder, we have arranged as a special feature a new device for the introduction of steam into a stationary, vertical Cylinder, consisting of Rocking Valve with Valve Rod, worked by an eccentric.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 30 cents,** when sent as a premium or purchased.

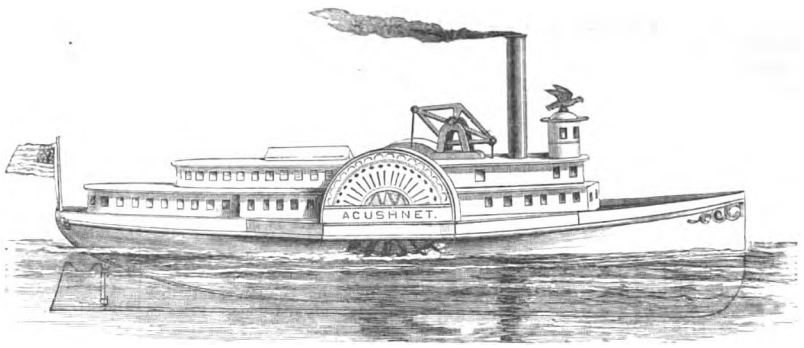
American Steam Toys and Electrical Apparatus.



Steamboat "Acushnet."

Given for one new subscriber and 75 cents additional.

This beautiful Side-Wheel Steamer, built expressly for our use, is modelled after the famous steamers that once sailed between New Bedford and Martha's Vineyard.

Before the manufacturer was able to offer these boats for sale it necessitated the expenditure of a large amount of money.

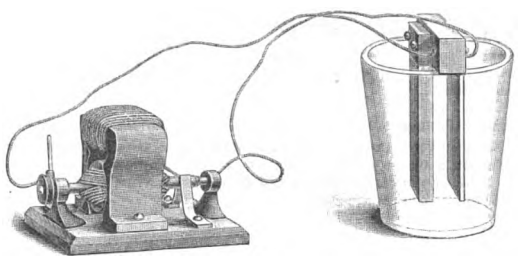
We now offer it to our subscribers for the third year. The Steamers are twelve inches in length, are painted with a bronze bottom, white side and yellow top, with stripings of red and gilt, have a rocking-beam motion, and a tight fuel-compartment, which leads from the bow to the reservoir.

Perfectly Safe.

It cannot explode, is perfectly safe, and will steam on a smooth body of water for half an hour with one filling of the boiler.

The boiler has a large steam-power reserve.

Scientific Toys.



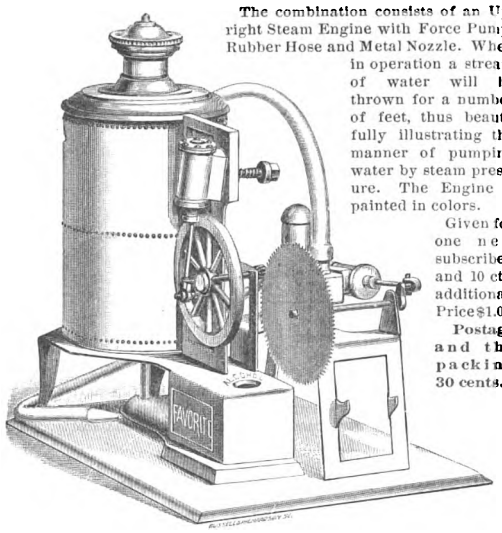
This Steamboat adds one more to the list of Scientific Toys brought out by THE YOUTH'S COMPANION. We believe, as far as it is possible, that it is wise to combine instruction with amusement.

Each one of these Steamers is tested before packing, and leaves our office in perfect order.

Given for only one new subscriber and 75 cents additional. Price $2.50. **Postage and packing 40 cents.**

Electric Motor and Battery Outfit.

Given for one new subscriber and 65 cents additional.



This fine Motor is just the thing for making experiments or for running light toy machinery. It develops a high rate of speed and is made in a thorough manner. We give with the Motor a Battery, Solution and full directions for running it. We do not include the Glass Jar as shown in the cut. Any tumbler can be used.

Given for one new subscriber and 65 cents additional. Price $1.90. **Postage and packing 30 cts.,** when sent as a premium or purchased.

Steam Engine and Force Pump.

Given for one new subscriber and 10 cents additional.

The combination consists of an Upright Steam Engine with Force Pump, Rubber Hose and Metal Nozzle. When in operation a stream of water will be thrown for a number of feet, thus beautifully illustrating the manner of pumping water by steam pressure. The Engine is painted in colors.

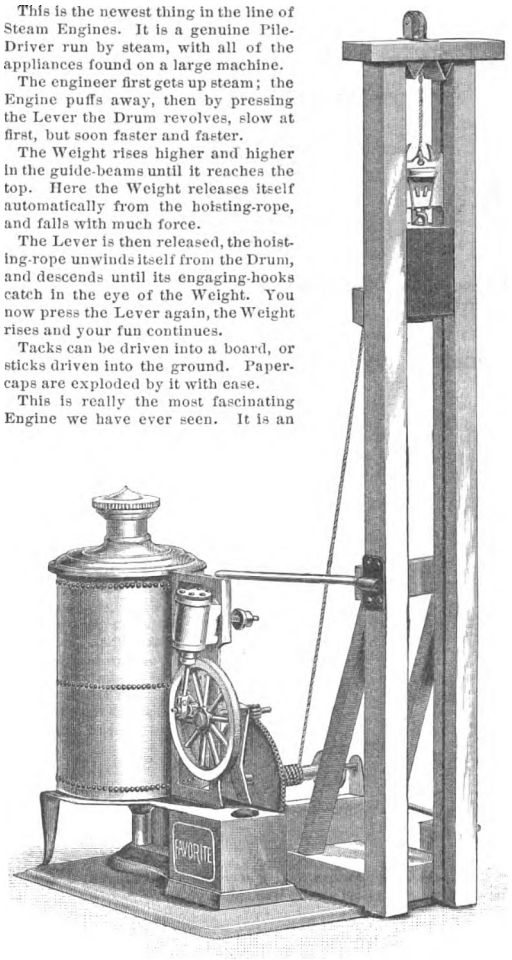
Given for one new subscriber and 10 cts. additional. Price $1.00. **Postage and the packing 30 cents.**

Goods by Express. Friends wishing to purchase goods from our PREMIUM LIST can save on express charges. How? By clubbing their orders and requesting that the goods be forwarded to one address by express.

American Steam Pile-Driver.

Given for one new subscriber and 15 cents additional.

This is the newest thing in the line of Steam Engines. It is a genuine Pile-Driver run by steam, with all of the appliances found on a large machine.



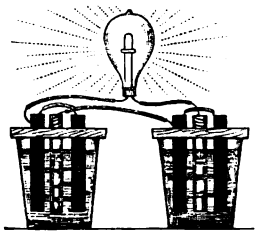
The engineer first gets up steam; the Engine puffs away, then by pressing the Lever the Drum revolves, slow at first, but soon faster and faster.

The Weight rises higher and higher in the guide-beams until it reaches the top. Here the Weight releases itself automatically from the hoisting-rope, and falls with much force.

The Lever is then released, the hoisting-rope unwinds itself from the Drum, and descends until its engaging-hooks catch in the eye of the Weight. You now press the Lever again, the Weight rises and your fun continues.

Tacks can be driven into a board, or sticks driven into the ground. Paper-caps are exploded by it with ease.

This is really the most fascinating Engine we have ever seen. It is an



Engine that does something. Old as well as young are never tired of seeing it work. The Pile-Driver is painted red and is 12 inches in height, and the Engine 5½ inches high and is painted in black, red, gold and green. The demand for this fascinating toy will be very great.

Given for one new subscriber and 15 cents additional. Price $1.25. **Postage and packing 40 cts.,** when sent as a premium or purchased.

Edison's Electric Lamp Outfit.

Given for one new subscriber and 50 cents additional.

This Outfit has been designed for experimental and educational purposes. It consists of an Edison one-candle-power Lamp, with Carbons, Zinc, Wire and Solution. Ordinary glass goblets can be used for Jars. It illustrates in a beautiful manner the wonders of Edison's Incandescent Electric Lamp.

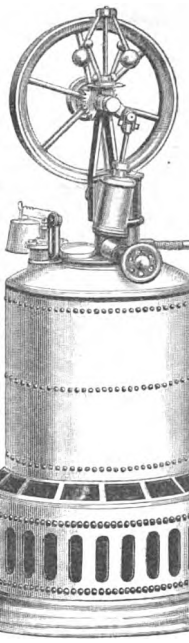
Given for one new subscriber and 50 cents additional. Price $1.50. **Postage and packing 20 cents additional.**

Weeden's New Model Upright Engine.

Given for one new subscriber and 20 cents additional.

More than 125,000 of Weeden's Upright Engines have been sold. We now offer it in improved form, as will be noticed in the cut. It is 9 inches in height. It is a beautiful Engine.

The Governor at the top of the Engine is a new feature. Its motion as it rapidly revolves is a pleasing novelty.



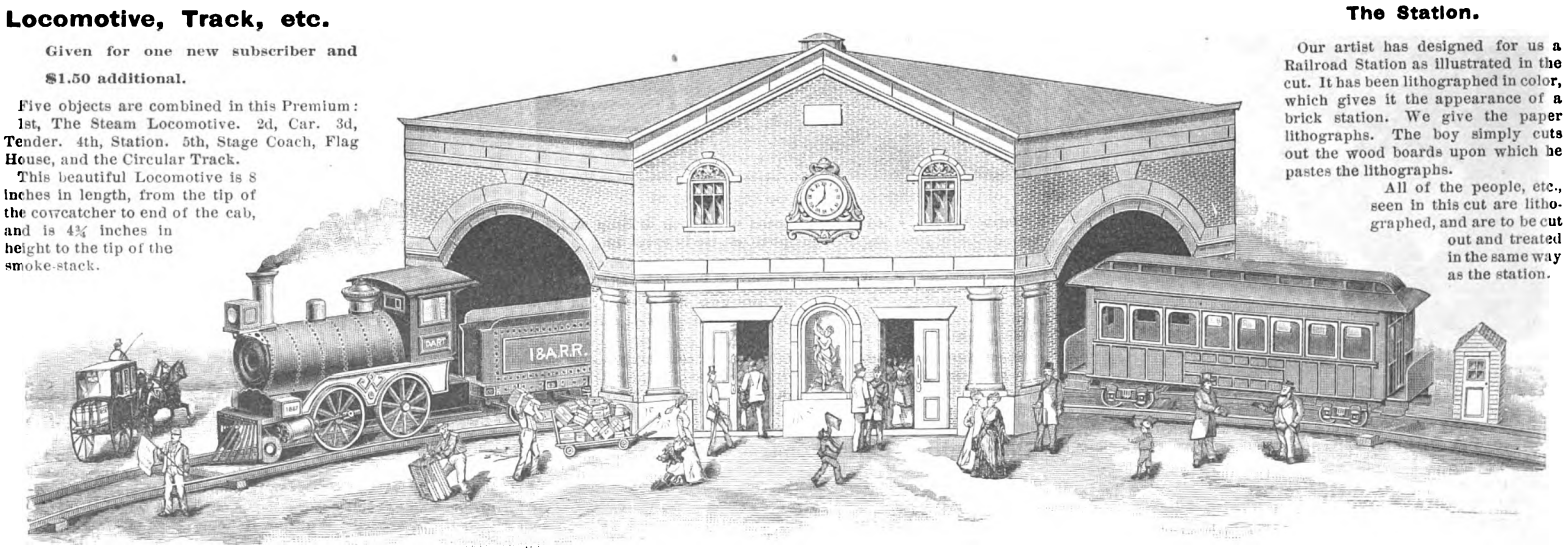
Safety-Valve. The Engine has a perfect-working Safety-Valve, which makes it impossible for the boiler to explode.

Steam Whistle. By referring to the cut, you will notice the location of the Steam Whistle. You will also see the Valve by which the Whistle is operated.

The Throttle Valve. An important feature of this Engine is its Throttle Valve.

The Power of the Engine. The Engine has sufficient power for running toy-machinery.

So perfectly and so accurately is this Engine made, that the screw-nuts on the cylinder-head, and the rivet-heads on the boiler and fire box are imitated (see cut).



Given for one new subscriber and 20 cents additional. Price $1.25. **Postage and packing 35 cents,** when sent as a premium or purchased. The Engine is a beauty.

Locomotive, Track, etc.

Given for one new subscriber and $1.50 additional.

Five objects are combined in this Premium: 1st, The Steam Locomotive. 2d, Car. 3d, Tender. 4th, Station. 5th, Stage Coach, Flag House, and the Circular Track.

This beautiful Locomotive is 8 inches in length, from the tip of the cowcatcher to end of the cab, and is 4¼ inches in height to the tip of the smoke-stack.

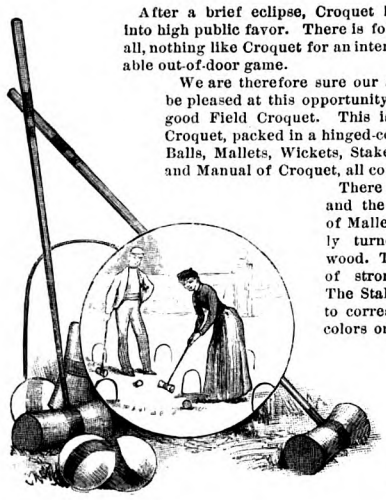
The Station.

Our artist has designed for us a Railroad Station as illustrated in the cut. It has been lithographed in color, which gives it the appearance of a brick station. We give the paper lithographs. The boy simply cuts out the wood boards upon which he pastes the lithographs.

All of the people, etc., seen in this cut are lithographed, and are to be cut out and treated in the same way as the station.

It has a safety-valve, which ensures perfect safety. By means of a new invention the steam is superheated at a point just before it enters the steam-chest. This adds greater power to the Locomotive.

The Steam Locomotive illustrated in the cut is the result of our efforts. It is a great success in every way. The Engine is a beauty. Fill the boiler about two-thirds full of water, light the wicks under the boiler, and in a few minutes **"steam is up,"** and the Locomotive is ready for a spin on the Track,—for a Track about 12 feet in circumference is included with each Engine.



We give the Locomotive, with Track, Tender and Car and Station, for one new subscriber and $1.50 additional. Price complete, $3.00. **Must be sent by express and charges paid by receiver.**

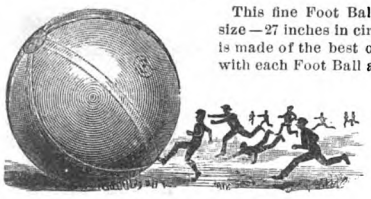
Fine Sporting and Outing Articles.

A Fine Set of Field Croquet.

Given for one new subscriber and 50 cents additional.

After a brief eclipse, Croquet has again come into high public favor. There is found to be, after all, nothing like Croquet for an interesting, comfortable out-of-door game.

We are therefore sure our subscribers will be pleased at this opportunity for securing a good Field Croquet. This is an Eight-Ball Croquet, packed in a hinged-cover Box; with Balls, Mallets, Wickets, Stakes, Wicket-pegs, and Manual of Croquet, all complete.

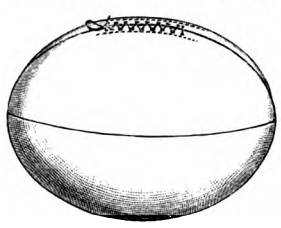


There are eight Balls and the same number of Mallets, all accurately turned from hard wood. The Wickets are of strong iron wire. The Stakes are striped to correspond with the colors on the balls and mallets.

Croquet and all similar games should be strongly encouraged.

Given for one new subscriber and 50 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Regulation Foot Ball, No. 5, with Manual.



Given for one new subscriber and 25 cents additional.

This fine Foot Ball is the regulation size—27 inches in circumference—and is made of the best of stock. We give with each Foot Ball an Official Manual, containing Referee's Duties, Score Sheet, Field Chart and Foot Ball Rules, as authorized and adopted by the American Intercollegiate Association. The Foot Ball and Manual given for one new subscriber and 25 cents additional. The regular price of the Ball and Manual is $2.00. Our price is only $1.50. **Postage and packing 20 cents,** when sent as a premium or purchased.

Although the cost of rubber has considerably advanced during the past few months, we shall not for the present increase the price of our Foot Balls.

Imported English Rugby Foot Ball.

This Ball has been adopted by most of the leading professional players. The material is English grain leather, strongly sewed, and warranted first-class. The Bladders are made of heavy Para rubber.

Given for two new subscribers and $1.25 additional. Price $3.50. **Postage and packing 25 cents,** when sent as a premium or purchased.

The Hand-Woven Hammock.

A good Hammock is a luxury which every home should possess. For this purpose we recommend the Hand-Woven Hammock. A better Hammock has never been made. It is woven with a close, firm mesh, easy to lie upon, and not liable to catch the buttons.

Hammock No. 1. This Hammock is made with 18 suspension cords at each end, is 10 feet 6 inches in length, and warranted to sustain a steady pressure of 400 pounds. The bed is closely woven in a handsome style, and has a colored border.

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Hammock No. 2. This fine Hammock is made from heavy 60-thread prize cotton cord, with 22 suspension cords at each end. Extreme length of Hammock 12 feet. The bed is closely woven, and has a colored border. It will sustain 1,000 pounds' steady pressure.

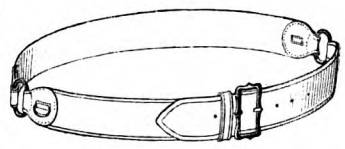
Given for one new subscriber and 60 cents additional. Price $1.75. **Postage and packing 45 cents,** when sent as a premium or purchased, or it can be sent by express, charges not prepaid.

We have yet to know of a single case where these Hammocks have failed to give satisfaction.

Flannel Outing and Tennis Shirt.

Flannel Outing Shirts are coming to be worn more and more. For street and office, as well as vacations, during hot weather, nothing adds more to one's comfort and diminishes one's laundry bills.

This Outing Shirt is made to our order, and is neat, stylish and comfortable. Is good value for a medium-priced Shirt. Sizes from 13½ to 16½. When ordering state size of neck-band.



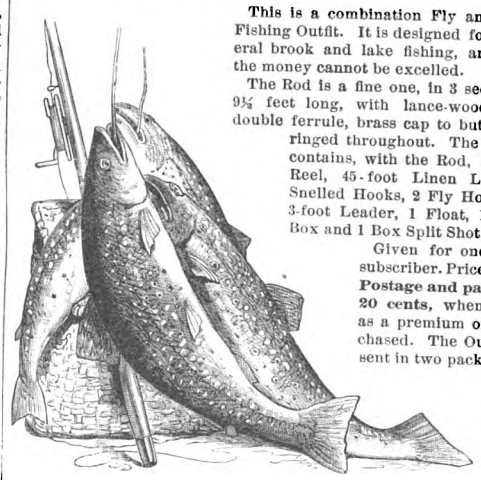
Given for one new subscriber and 10 cents additional. Price 85 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The "Four-in-hand" Tie is not included with the Shirt, but will be sent for 25 cents additional.

Windsor Ties are in great demand at the present time. We can furnish Plaid Windsor Ties in handsome patterns and colors at a special price. One Windsor Tie sent post-paid to any address on receipt of 25 cents.

Fine Russet Leather Belt.

Given for one new subscriber.



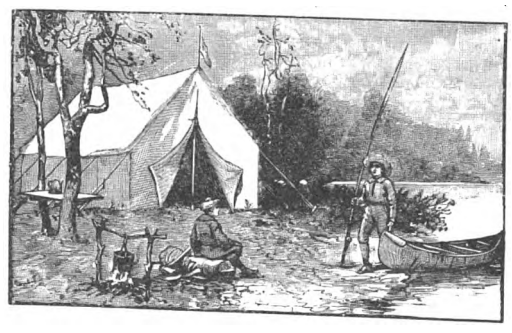
This style of Belt is worn largely.

It is made of fine Russet Leather, with nickel-plated rings, buckle and support.

Given for one new subscriber. Price 80 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Complete Fly and Bait Fishing Outfit.

This is a combination Fly and Bait Fishing Outfit. It is designed for general brook and lake fishing, and for the money cannot be excelled.



The Rod is a fine one, in 3 sections, 9½ feet long, with lance-wood tip, double ferrule, brass cap to butt, and ringed throughout. The Outfit contains, with the Rod, 1 Pat. Reel, 45-foot Linen Line, 6 Snelled Hooks, 2 Fly Hooks, 1 3-foot Leader, 1 Float, 1 Bait Box and 1 Box Split Shot.

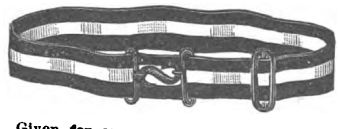
Given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased. The Outfit is sent in two packages.

The cut shows the Patent Reel given with the Outfit. It is simple, but effective, and takes up the line rapidly.

Camping-Out or Wall Tent.

This camping scene requires no explanation. Its suggestions of comfort, health and recreation must be evident to all.

These Tents are made from strong white tent drilling, and are supplied with poles and pins complete, all ready to set up.



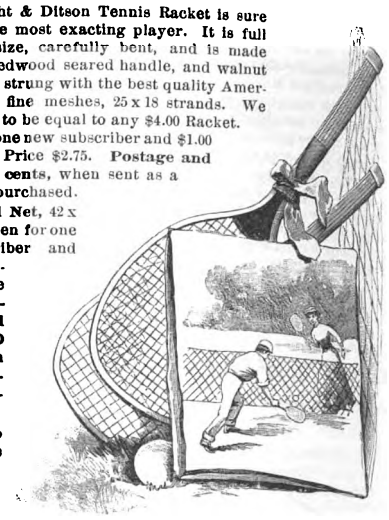
Wall Tent, complete, size 6 x 6 feet, is given for only one new subscriber and $3.25. Weight, with poles, 25 lbs. Price $5.00.

Wall Tent, 7 x 9½ feet, given for two new subscribers and $4.75 additional. Price $8.00. Weight, with poles, 40 lbs. If a Fly is wanted, $3.00 additional.

Wall Tent, complete, size 10 x 12 feet. Given for five new subscribers, and $6.10 additional. Weight 85 lbs. Price $11.00. Fly, $4.00 additional. **Sent by express, and charges paid by receiver.**

Silk Outing Belts.

Given for one new subscriber.



These Belts are made of the best English silk web, with hand-burnished silver-plated trimmings. Width 2½ inches.

Given for one new subscriber. Price 75 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Fine Racket, and Other Tennis Goods.

Racket given for one new subscriber and $1.00 additional.

The Wright & Ditson Tennis Racket is sure to please the most exacting player. It is full regulation size, carefully bent, and is made with hard redwood seared handle, and walnut throat. It is strung with the best quality American gut, in fine meshes, 25 x 18 strands. We guarantee it to be equal to any $4.00 Racket.

Given for one new subscriber and $1.00 additional. Price $2.75. **Postage and packing 20 cents,** when sent as a premium or purchased.

12-Thread Net, 42 x 2½ feet. Given for one new subscriber and 45 cents additional. Price $1.75. **Postage and packing 40 cents, when** sent as a premium or purchased.

Handicap Balls. Three given for one new subscriber. Price 75 cents. **Postage 10 cents,** when sent as a premium or purchased.

Sectional Net Poles, Guy Ropes, and Pegs. Given for one new subscriber and 35 cents additional. Price complete, $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Wright & Ditson's Regulation League Base Ball.

Given for one new subscriber.

A young man's education is now considered incomplete without at least a thorough technical knowledge of the rules of Base Ball. An acquaintance with the game, acquired by practical contest on the "diamond," is of far more value.

To afford our subscribers an opportunity to enjoy or perfect themselves in this truly great game, we offer Wright & Ditson's Regulation League Ball. This is one of the leading Balls, and is used by professionals.

If you intend to use a Ball, get the best. Moulded rubber centre, double cover. Weight 5 oz. Size 9 inches. Horse-hide cover.

This fine Ball is given for one new subscriber. Price 90 cents **Postage and packing 10 cts.,** when sent as a premium or purchased.

Tennis and Outing Caps.

Given for one new subscriber.

The Caps we offer are just the thing for summer outings. They are made of striped English Cricket Flannel, lined with satine, and are very cool and comfortable. The style we offer is the very latest. When ordering be sure and state the size of hat usually worn, as we have them in all sizes.

Given for one new subscriber. Price 75 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Heliograph, or Sunlight Telegraph.

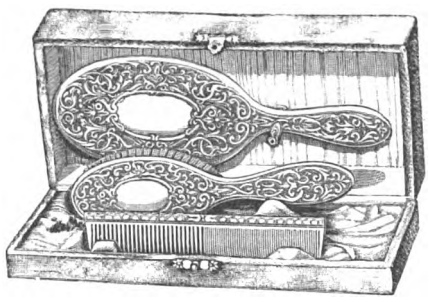
Given for one new subscriber.

A Heliograph is an instrument for signalling by means of the sun's rays. Government Surveyors have telegraphed by means of it between points a hundred miles apart.

We know our young friends will be delighted to possess such an instrument, and be enabled to communicate with distant neighbors.

Our Heliograph consists of a cherry-wood Base, mounted upon a Tripod, and supporting an adjustable Mirror and a hinged Screen. The Mirror is of copper, nickel-plated and highly polished. Will reflect sunlight three miles.

The Heliograph is first aimed, and the mirror turned to reflect the sun's rays in the same direction. By moving the screen, the reflected light is made to flash the dots and dashes of the Morse Alphabet, and so spell out the message. Knowledge of the Morse Alphabet not needed. With the Heliograph young folks can plan for parties and picnics; school questions can be asked; the latest news told; messages sent for friends.



One Heliograph, with Directions and Morse Alphabet, given for one new subscriber. Two for one subscriber and 75 cents. Price $1.00 each. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

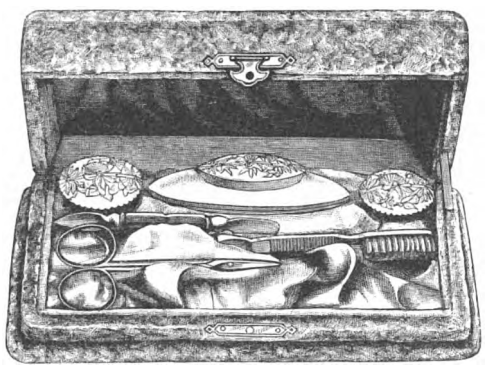
Useful Toilet Articles and Dressing Cases.

Silver-Plated Toilet Set, in Plush Case.

Given for one new subscriber and $1.00 additional.



This Toilet Set consists of a Mirror, Brush and Comb, with Oxidized Silver-plated back and handle. The Mirror has a beveled glass, and is very clear. The Case is lined with Sateen, and is covered with a rich Orange-colored Plush.

The Case and Set are both given for one new subscriber and $1.00 additional. Price $2.75. **Postage and packing 35 cents,** when sent as a premium or purchased.

We give the Toilet Set without the Case for one new subscriber and 50 cents additional. Price of Toilet Set alone, $1.75. **Postage and packing on Toilet Set alone, 15 cents,** when sent as a premium or purchased.

Celluloid Manicure Set, Plush Case.

Given for one new subscriber and 50 cents additional.

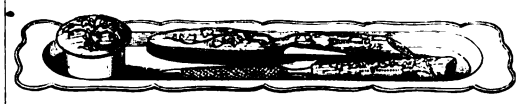
The Set consists of a superior pair of imported Damascus Scissors, with long handles and curved blades, a Polisher covered with Chamois leather, Nail Cleaner and Opener, Nail Brush and File, two boxes of perfumed Polishing Powder and Salve, and instructions. Fittings are white celluloid, highly finished and carved. The Box is covered with a rich silk plush, and lined with satin to match.

The Manicure Scissors are of an extra quality, and are made to cut. We import them expressly for this Outfit.

The complete Set given for one new subscriber and 50 cents additional. Price $2.00 **Postage and packing 15 cents,** when sent as a premium or purchased.

A Valuable Toilet Package.

Given for one new subscriber.

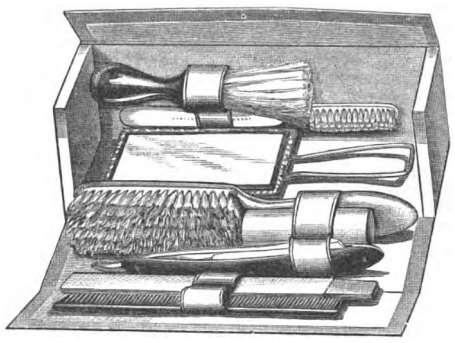


The articles contained in this package consist of one Jar Vaseline Cold Cream, a most excellent preparation for the complexion; 1 Jar Vaseline Camphor Ice, an exquisite toilet article for chapped and rough skin; 1 two-ounce bottle Pure Vaseline, an invaluable external remedy for burns, wounds, sprains and skin diseases; 1 Cake Vaseline Toilet Soap; 1 two-ounce Bottle Superfine White Vaseline, a remedy for Croup, Cough, Colds, Sore Throat, etc.; 1 Cake Vaseline Toilet Soap, scented; 1 two-ounce Bottle Pomade Vaseline, a perfect and healthful Pomade for promoting the growth of the hair and preserving its vitality.

These valuable articles should be in every household. The entire Outfit given free for only one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Celluloid Manicure Set and Tray.

Given for one new subscriber.



This Set consists of a Celluloid Tray, together with 1 Chamois Polisher, 1 Improved Nail Cleaner and File, 1 Box Perfumed Polishing Powder, and full directions for use. These fittings are all white celluloid, handsomely carved and finished.

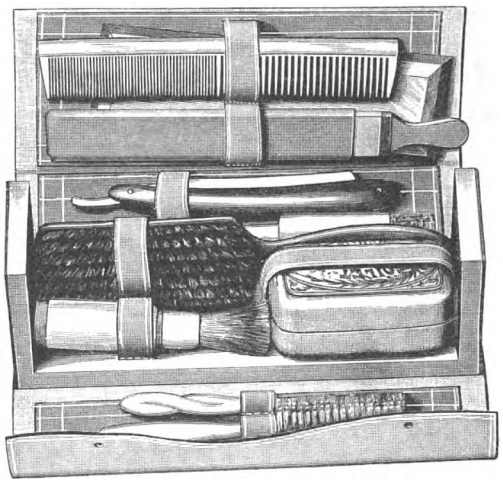
At the present time no lady's boudoir is considered complete without a Manicure Outfit. For general use this Set possesses a practical value.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Gentleman's Dressing Case, No. 1.

Given for two new subscribers and 45 cents additional.

This Case and fittings we have had made specially for our subscribers. The Case is made of wood covered with fine leather, handsomely finished. It is neat and durable, and made for real service.



The fittings consist of the J. R. Torrey Razor, No. 843, described below. Sells alone for $1.75. A roll of the best "Balm of Gilead" Shaving Soap; a Lather Brush with enamelled handle; a 6-inch Comb with coarse and fine teeth; a Hair Brush with stiff bristles; a Razor Strop; a good Tooth Brush; a square Hand-Mirror with back support.

This Dressing Case, with all its fittings, makes a fine Present to give to a friend, or to purchase for one's own use.

Given for two new subscribers and 45 cents additional. Price $2.25. **Postage and packing 25 cts.,** when sent as a premium or purchased.

Gentleman's New Dressing Case, No. 175.

Given for three new subscribers and $1.20 additional.

Every essential article is contained within this convenient and durable leather Case. The Brushes, the Comb, the Plate Mirror, the Soap Box, the Strop, and all articles, are as fine as those contained in the most costly styles. The Razor is one of Torrey's, and sells singly for $1.75. The Case is heavy Russet Leather, handsewed, and has nickel clasps. This Dressing Case will prove a desirable presentation gift from a lady to a gentleman.

Given for three new subscribers and $1.20 additional. Price $4.00. **Postage and packing 40 cts.,** when sent as a premium or purchased.

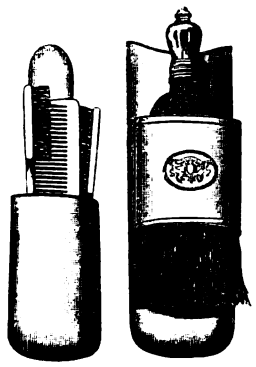
Plush Toilet Set, No. 147.

This is a beauty. Size 7 x 12 inches. It is covered with rich plush and lined with delicate tinted satin.

The Brush and other articles are beautifully embossed and silver-plated. The Manicure Set it contains is a fine one.

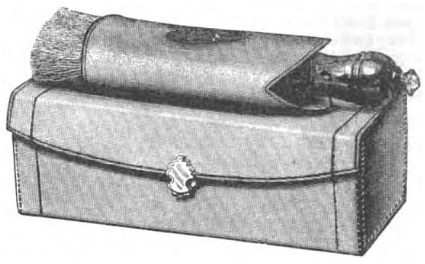
Given for six new subscribers. Price $5.00. **Must be sent by express and charges paid by receiver.**

Gentleman's Pocket Toilet Case.



This Case is made of orange leather, hand-stitched.

It contains a good Brush having an Olive Wood Back, one imported Nail Brush, one imported Tooth Brush, one Celluloid Comb and one broom Clothes Brush.



The leather pocket containing the smaller articles slips inside of the outer case, thus occupying but little space.

It is just the thing for the tourist or others obliged to economize the weight or space of their baggage.

Given for one new subscriber and 30 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased.

Gentleman's Blacking Case.

The Case is made of orange leather, hand-stitched. Size, 7 x 3 x 2½ inches. It contains Blacking Brush, Dauber, a box of Jacquot & Co.'s French Blacking, and on the top a nice Whisk Broom in holder, as seen in the cut.

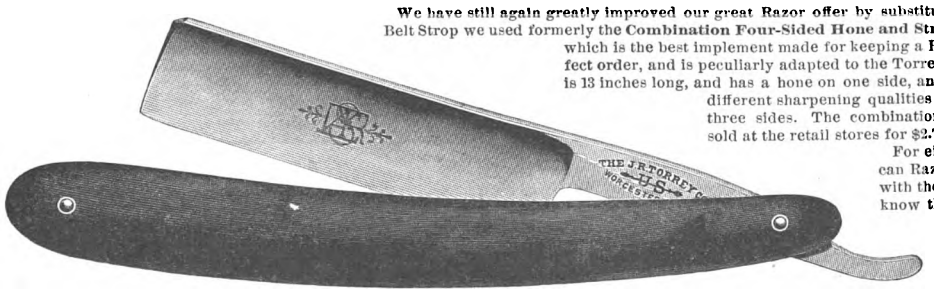
Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Baby's Toilet Set.

This Set consists of articles required for an infant's use.

First, a Fine Brush with bone back and handle, a White Bone Comb, a Teething Bone Ring and Metal Puff Box, with Puff.

The whole is enclosed in a Plush Case lined with sateen.



Given for one new subscriber and 60 cents additional. Price $1.75. **Postage and packing 20 cents,** when sent as a premium or purchased.

J. R. Torrey Hollow-Ground Razor, No. 843, and Combination Hone and Belt Strop, No. 230.

All given for one new subscriber and 10 cents additional.

We have still again greatly improved our great Razor offer by substituting for the Belt Strop we used formerly the **Combination Four-Sided Hone and Strop, No. 230,** which is the best implement made for keeping a Razor in perfect order, and is peculiarly adapted to the Torrey Razor. It is 13 inches long, and has a hone on one side, and leather of different sharpening qualities on the other three sides. The combination is usually sold at the retail stores for $2.75.

For eight years we have used this Razor and Strop. We are pleased to state that American Razors can now be manufactured to successfully compete, both as to price and quality, with the English. All honor to the American who can organize an industry like this. We know that a Torrey Razor will cut as well as any Razor made in the world. A Torrey Razor is famous for its cutting qualities, and although made in Massachusetts, is exported in great quantities to Europe. We are sure we cannot do our readers a greater kindness than to place this Razor within their reach.

SPECIAL OFFER. We warrant every Razor. By special arrangements with the manufacturers, we can give this Razor and Strop for only one new subscriber and 10 cents additional. Price of Razor and Strop, $2.35. **Postage and packing 20 cents,** when sent as a premium or purchased. Price of Razor alone, $1.75. Strop alone, 75 cents. Postage paid by us. We feel sure that our subscribers will appreciate this offer. **A CARD.**—In past years we have used Razors made by some of the most famous makers of Europe. None have surpassed the Torrey.

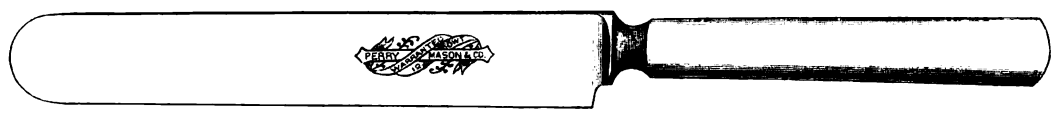
Warranted Extra Silver-Plated Spoons and Forks.

"Beauty is skin-deep;" so it is with a silver Spoon. The Spoon may look beautiful on the outside, but to prove its durability go beneath, prove the thickness of the silver coat and the quality of the under metal.

To the Seeker

of a good Spoon this is a difficult task. Five years ago we contracted with one of the Silversmiths to make us a special Spoon and Fork on which are deposited the standard weight of pure silver.



Description.

These goods are all stamped "Perry Mason & Co. A 1." They are made of 18 per cent. Nickel Silver, and we guarantee that the actual amount of pure Sterling Silver as given below is deposited on each dozen by weight. We also guarantee that this is the largest quantity deposited on A 1 plate goods by any manufacturer:

Tea Spoons, 48 dwt. per gross.
Table " 96 " " "
Dessert " 72 " " "
Sugar " 72 " " "
Med. Forks, 96 " " "
Butter K'ves, 72 " " "

During past years we have used many thousand dozen of these goods.

Housekeeper's Outfit.

Complete Outfit, No. 1, for a Housekeeper or Wedding Present. 12 Tea Spoons, 6 Dessert Spoons, 6 Table Spoons, 6 Table Knives, 6 Medium Forks, 1 Sugar Spoon, 1 Butter Knife. The manufacturer's list price for this Outfit is $20.80. **Our price to our readers, only $9.00,** with our guarantee for quality. This is a very special offer. **Postage and packing $1.00,** when sent as a premium or purchased; or sent by express, and charges paid by receiver. This Outfit given for twelve new subscribers and 25 cents additional.

Medium Forks.

Six given for one new subscriber and 65 cents additional. Price per Set of six, $2.50. **Postage and packing 25 cents,** when sent as a premium or purchased.

Table Spoons.

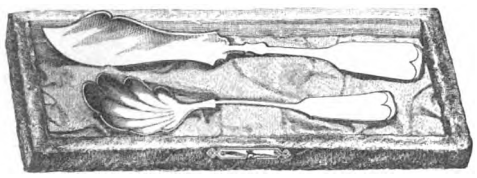
Three given for one new subscriber and 10 cents additional; or six for one new subscriber and 65 cents additional. Price per Set of three, $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased.

Tea Spoons.

Six given for only one new subscriber and 10 cents additional. Price per Set of six, $1.25. **Postage and packing 15 cents,** when sent as a premium or purchased. This offer of Tea Spoons is very liberal. We will engrave them at the rate of three cents per letter.

Medium Knives.

These Knives are medium size, used either for tea, breakfast or dinner. They are best quality. We guarantee them. Six given for one new subscriber and 70 cents additional. Price $2.00. **Postage and packing 30 cents,** when sent as a premium or purchased.



Dessert Spoons.

Six given for one new subscriber and 50 cents additional. Price per Set of six, $2.00. **Postage and packing 20 cents,** when sent as a premium or purchased. A necessity in every household.

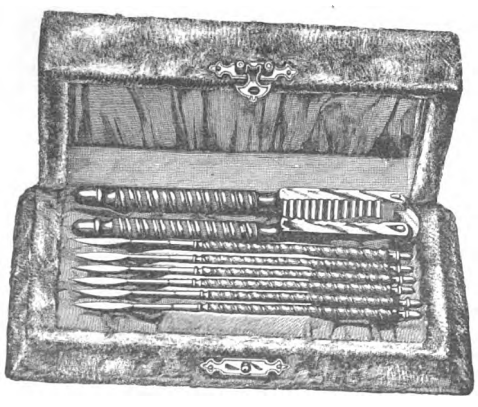
We engrave Spoons and Forks at the rate of three cents per letter.

Plated Butter Knife and Sugar Shell.

Given for one new subscriber and 25 cents additional.

Size of Case, 3¼ x 8¼ inches. The Butter Knife, Sugar Shell, and Plush Case, given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased. Butter Knife and Sugar Shell only, given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

German Call-Bell. Given for one new subscriber.



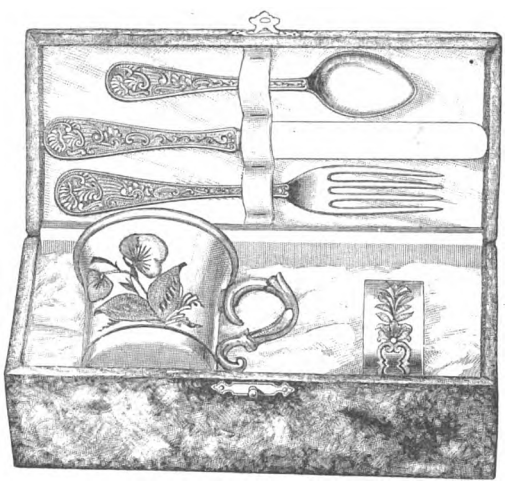
This is a useful article for the table, school-room and sick-room.

The cut does not illustrate the exact style, as the one we offer has a clock escapement for producing a sound similar to an electric bell.

We give a Call-Bell for one new subscriber. Price 85 cents. **Postage and packing 15 cents.**

Nickel-Plated Nut Picks and Cracker, Plush Case. Given for one new subscriber and 25 cents additional.

It consists of a hinged nickel-plated Nut Cracker, and six nickel-plated Nut Picks, all engraved and polished, made by H. M. Quackenbush. The Cracker and Picks are contained in a Blue Silk Plush Case, 6½ x 4 inches, and lined throughout to match.



We give this elegant Set complete for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 20 cents,** when sent as a premium or purchased; or Cracker and Picks alone for one new name. Price $1.00 per Set. **Postage and packing 10 cents,** when sent as a premium or purchased.

Purchasing Department. We are able to purchase for our subscribers and their friends any articles desired by them. All orders are filled promptly.

Silver-Ware by Express. In many cases neighbors club together and order goods in quantities to be sent to one address by express. This is a good plan, as it saves the postage as well as on express charges—each receiver paying a share of the express.

Child's Silver-Plated Set.

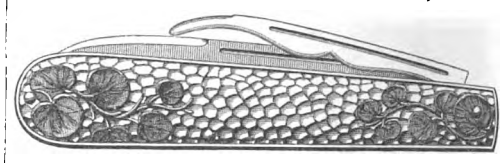
Given for one new subscriber and 35 cents additional.

Knife, Fork, Spoon, Cup, Napkin Ring—all **Silver-plated,** beautiful, durable, useful.

These will make a most acceptable present for a child. We enclose them in a velveteen-covered box with sateen lining.

The Set given for one new subscriber and 35 cents additional. Price $1.50. **Postage and packing 25 cents,** when sent as a premium or purchased.

Quadruple Plate Dinner Caster, No. 502.



Given for two new subscribers and 80 cents additional.

This is a full-size Dinner Caster, with five cut-glass Bottles. The stand is 15½ inches high, with chased band. Price $3.00. **Must be sent by express and charges paid by receiver.**

Silver-Plated Pickle Jar, No. 444. The panel-work and supports of the Pickle Jar are made of white metal and silver-plated. The Glass Jar has a plated cover. We include a pair of Pickle Tongs. All given for one new subscriber, and 40 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Silver-Plated Fruit Knife, with Pick, No. 5.

The cut gives no idea of the beauty of this Fruit Knife. The blade is neatly engraved as well as the handle. We were obliged to buy the entire stock of the manufacturer to so secure this premium that we could offer it for one new subscriber. The Knife is extra heavy plated on white metal,—not steel,—which makes it much more valuable and serviceable than the ordinary Fruit Knife.

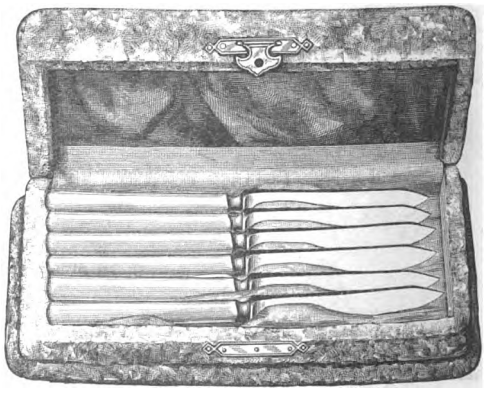
Given for one new subscriber. Price $1.00. **Postage and packing 6 cents,** when sent as a premium or purchased.

Silver-Plated Cream Ladle.

This beautiful Cream Ladle is made of standard white metal, silver-plated in the best manner. We have recently purchased a special quantity. The price of this Ladle is 75 cents each. We offer them in this way only. When you order any other Silver-plated goods and enclose 50 cents for the Ladle, we will send you one as long as the supply lasts.

Silver-Plated Ice Cream Knife.

Given for one new subscriber and 30 cents additional.



This is a bargain in Silver-Ware. For serving ice cream as well as for other table delicacies, it is especially convenient.

It is 11 inches long, is triple silver-plated, hand engraved. The designs are assorted.

Given for one new subscriber and 30 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased.

Six Silver-Plated Fruit Knives.

Six given for one new subscriber and 10 cents additional.

These Knives are first-class. They are six inches long, with thin blades. Six given for one new subscriber and 10 cents additional. Price of six Knives, $1.10. **Postage and packing 15 cents,** when sent as a premium or purchased. Price, singly, 20 cents. Postage 5 cents additional.

The Plush Case. This is made from the best quality of light blue silk plush, lined with light pink satin. The price of this Case is $1.25. We will include the Case when you order the Knives, either as a premium or purchased, on receipt of 65 cents additional, and 10 cents additional for postage.

Repoussé Silver-Plated Tea Service, No. 99.

Spoon Holder, No. 99.

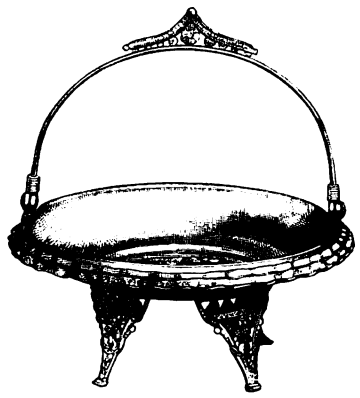
Tea Pot, No. 99.

Sugar Bowl, No. 99.

Cream Pitcher, No. 99.

Silver-Plated Tea Service, No. 99. 4 Pieces. Given for two new subscribers and $2.50 additional. This Set is triple plate, satin finish and bright cut hand engraving; it consists of Sugar Bowl, Spoon Holder, Cream Pitcher and Tea Pot. Price of the Set, $6.50. **Sent by express not paid, and charges paid by receiver,** when sent as a premium or purchased. We offer the pieces singly as follows:

Sugar Bowl, No. 99. This beautiful premium is given for one new subscriber and 35 cents additional. Price $1.75. **Postage and packing 25 cents additional,** when sent as a premium or purchased.



Spoon Holder, No. 99. Given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased.

Cream Pitcher, No. 99. Given for one new subscriber and 25 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased.

Tea Pot, No. 99. Given for two new subscribers and 25 cents additional. Price $2.50. **Postage and packing 30 cents,** when sent as a premium or purchased.

Silver-Plated Cake Basket.

Given for one new subscriber and 60 cents additional.

For a Cake Basket we have selected an entirely new pattern. It is silver-plated, and is made heavy and strong. The Bowl is engraved, 8¾ inches in diameter. It stands 9 inches high when handle is raised.

Given for one new subscriber and 60 cents additional. Price $2.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Gold-Lined Silver-Plated Mug.

Given for one new subscriber and 30 cents additional.

We offer this year a very beautiful Mug. It is triple silver-plated on white metal, gold-lined, and is engraved in a very attractive manner. No more useful and beautiful present can be made to a child than one of these Cups. It is made strong, and will wear well.

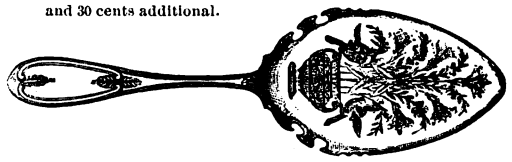
Given for one new subscriber and 30 cents additional. Price $1.50. **Postage and packing 15 cents,** when sent as a premium or purchased. You will pay $2.00 to $2.25 for similar Cups at your jeweller's.

Beautiful Silver-Plated Butter Dish. No. 1,848.

Given for one new subscriber and 35 cents additional.

This is a most beautiful and convenient Butter Dish. It is made from hard white metal, and is silver-plated and nicely chased. Size, 6 inches in diameter, and 6 inches high. The inside Butter-Plate is also silver-plated and detachable.

Given for only one new subscriber and 35 cents additional. Price $1.60. **Postage and packing 40 cents,** when sent as a premium or purchased, or sent express not paid. A Butter Dish has become such a household necessity that we have done some close figuring with our manufacturer to offer you a full-plate and solid metal Dish on such favorable terms. You have full value in this article, and it is free from the objectionable feature of being part glass.

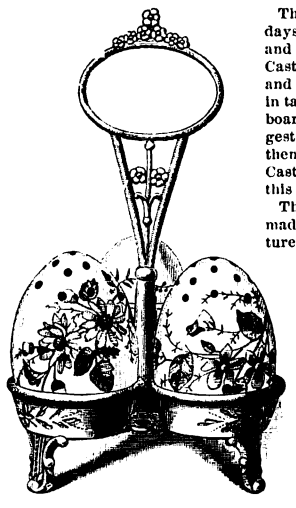


Silver-Plated Knife Rests.

A pair given for one new subscriber.

A pair of Knife Rests of artistic design and well silver-plated are very useful as well as decorative. Novelties in this line of table ware are constantly coming out. We shall always select the latest and best for the price given.

A pair given for one new subscriber. Price $1.00 per pair. **Postage and packing 10 cents,** when sent as a premium or purchased.



Silver-Plated Pie Knife. Given for one new subscriber and 30 cents additional.

This is a fine Pie Knife. It is standard silver-plate on first quality German silver. The shape is beautiful, and the ornamenting very artistic. It is full size, 9 inches long and 3 inches wide. This handsome Pie Knife, by special arrangement, we can offer for one new subscriber and 30 cents additional. Price $1.50. **Postage and packing 10 cents,** when sent as a premium or purchased. The Knife would be cheap at $2.00.

Breakfast or Tea Caster.

Given for one new subscriber and 25 cents additional.

The wide-awake lady nowadays never uses her dignified and stately five-bottle Dinner Caster, except for dinner parties and the like,—then it seems to be in taste; but around the family board everything should suggest freedom and sociability,—then she will use a tête-à-tête Caster, such as we illustrate in this premium, and it is a beauty.

The silver-plated frame is made by a reliable manufacturer from our suggestions, and is well plated and hand engraved.

The bottles, one each for pepper, salt and mustard, we import from Carlsbad; they are real china, with delicately tinted ground and beautiful floral decorations, hand applied, in color and gold.

We have tried to produce a really choice affair, and are perfectly willing to leave the verdict with you. Our only apprehension is that we have not imported nearly enough. Premium offer above. Price $1.50. **Postage and packing 35 cents additional,** when sent as a premium or purchased.

Silver-Plated Syrup Pitcher.

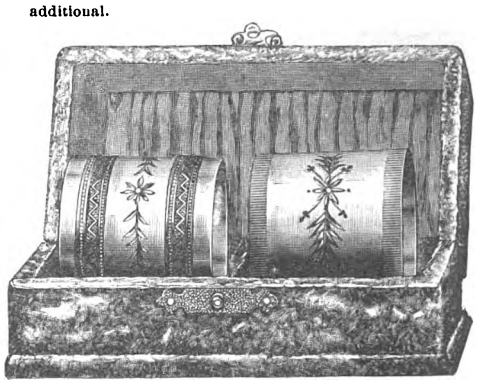
Given for one new subscriber and 35 cents additional.

This receptacle for the golden syrup is silver-plated and hand engraved, and has an attached plated Dripping Saucer.

Given for one new subscriber and 35 cents additional. Price $1.40. **Postage and packing 25 cents,** when sent as a premium or purchased.

Do not forget that many articles can be packed together in one box, and this be sent by express to one address. Many of our subscribers do this each year.

Beautiful Berry Dish.

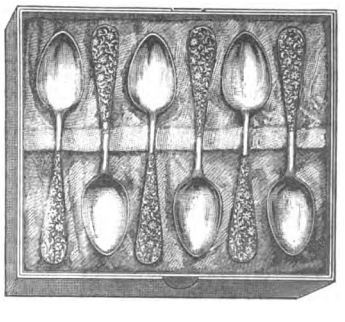


Given for one new subscriber and 40 cents additional.

Beauty and utility form a pleasing combination in the dish. The supporting part is made from white metal, silver-plated, while the dish itself is glass.

Given for one new subscriber and 40 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

A Pair of Silver-Plated Napkin Rings. Jeweller's Plush Case. All given for one new subscriber and 20 cents additional.



The Rings are made of solid white metal, beautifully chased and heavily silver-plated. The Case is made of fine plush of extra lustre, royal purple color, and satin-lined to match.

The Pair of Silver-Plated Napkin Rings, with Plush Case, given for one new subscriber and 20 cents additional. Price $1.30. **Postage and packing 15 cents,** when sent as a premium or purchased; or two Napkin Rings alone given for one new subscriber. Price 80 cents. **Postage and packing 10 cents additional,** when sent as a premium or purchased.

Oxidized Silver-Plated Coffee Spoons.

A Set of 6, in Satin-lined Case, given for two new subscribers.

Wonderfully cheap! is what all our friends say who have seen this Set of after-dinner Coffee Spoons. They are certainly very handsome. The handles are silver-plated, etched and oxidized finish. The bowls are gold-plated, and the set is enclosed in a satin-lined case.

Given for two new subscribers. Price $2.00. **Postage and packing 10 cents.**

Gold-Lined Silver-Plated Cake Basket. No. 605.

Given for one new subscriber and $1.00 additional.

The Bowl is deep, with beautiful hand engraving. 8¾ inches in diameter. It stands 12 inches high when handle is raised. Satin and bright finish rim and stand, with fine chasing.

Given for one new subscriber and $1.00 additional. Price $2.75. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

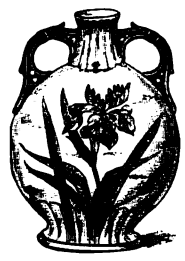
Crockery and Useful Household Articles.

Imitation Royal Worcester Sugar Shaker.

Given for one new subscriber.

A Sugar Shaker is a new article of table furniture.

For sugaring cakes, pies, berries and sauces a Sugar Shaker is just the thing.



It stands 4¼ inches high and is egg-shaped.

It is decorated exactly like the vases described in this LIST.

Given for one new subscriber. Price 85 cents. **Postage and packing 20 cents,** when sent as a premium or purchased.

A Pair of Handsome Vases.

Given for one new subscriber and 20 cents additional.

These China Vases are so graceful in shape and rich in coloring that we have not hesitated again to import a large quantity from Europe. It is an exact copy of a Royal Worcester Vase.

It is 5¾ inches high—flat oval in shape, and cream-colored ground; the design of decoration is the "German Iris" in natural colors and gold lines. A beautiful art ornament.

Given for one new subscriber and 20 cents additional. Price $1.25 per pair. **Postage and packing 35 cents,** when sent as a premium or purchased.

Real Japanese Rose Jar and Pot Pourri.

All given for one new subscriber.

It is real Japanese ware, most artistically decorated; 6 inches high, outside and inside covers.

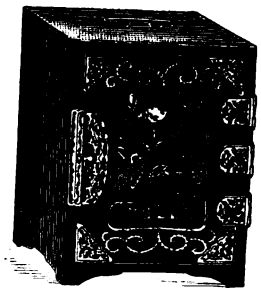
We also include a large can of fragrant Japanese Pot Pourri, which is a collection of fragrant blossoms, such as roses, violets, etc., so prepared that these retain their refreshing odor for years. Open the Rose Jar in a closed room and the air fills at once with perfume.

These goods vary somewhat in shape and decoration, but all cost alike. We can only show cut of one pattern.

All given for one new subscriber. Price for the combination, $1.00. **Postage and packing 50 cts.,** when sent as a premium or purchased.

Child's Bread and Milk Set.

The three pieces—Plate, Bowl and Milk Pitcher—are made of china, beautifully decorated in colors. We import this Set from Bohemia. The combination makes an appropriate holiday gift. The Set is packed in a wooden box.



Given for one new subscriber. Price 90 cents. **Must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

Berry and Ice Cream Spoon.

This is an article for serving fruits, sauces, ices, vegetables, etc. It is 9 inches long, oxidized, silver-plated, elaborately etched, and gold-plated bowl. It is enclosed in a satin-lined Case.

Given for one new subscriber and 25 cents additional. Price $1.35. **Postage and packing 10 cts.,** when sent as a premium or purchased.

Japanese Jewel Casket.

A collector of Japanese curios would not hesitate to give four or five dollars for this specimen. The front door of the Casket opens on bright engraved hinges, and displays 3 drawers for valuables.

It is elegantly ornamented in gold and color and real pearl raised-work, and thoroughly finished throughout in best black enamel. Size 5 x 5 x 6¾ inches high. An elegant gift to a lady; one that will attract attention in any home. It also has lock and key.

Given for one new subscriber and 70 cents additional. Price $2.25. **Postage and packing 35 cents,** when sent as a premium or purchased.

English Decorated Tea Set, 56 Pieces.

Given for five new subscribers and $1.00 additional.

The body of this Tea Set is English Stone China, with beautiful decorations. Assortment: Tea Pot, Sugar Bowl, Creamer, 12 Cups, 12 Saucers, 12 Tea Plates, 2 Cake Plates, Slop Bowl, 12 Sauce Plates.

This is the third year we have used this make of goods, and they have given good satisfaction. The demand was so great last year that we re-ordered several times.

The Set given for five new subscribers and $1.00 additional. Price $5.00 per Set. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

English Decorated Dinner Set, 106 Pieces.

Given for eight new subscribers and $4.50 additional.

English ware is warranted not to crack in the glazing. This is the "Minerva" shape, with white body. The design is very chaste. Assortment: 12 Dinner Plates, 12 Tea Plates, 12 Individual Butter Plates, 12 Sauce Plates, 12 Individual Vegetable Dishes, 6 Soup Plates, 12 Cups, 12 Saucers, 1 Covered Dish, 2 Platters, 1 Butter Dish, 1 Soup Tureen, 1 Baker, 1 Large Pitcher, 1 Creamer, 1 Gravy Boat, 1 Pickle Dish, 1 Sugar Bowl.

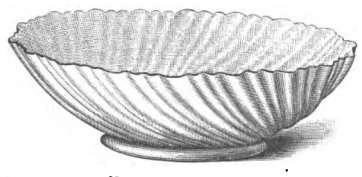
The Set given for eight new subscribers and $4.50 additional. Price $12.00 per Set. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Japanese Tea Pot, Creamer and Sugar Bowl.

The Set given for one new subscriber and 15 cents additional.

It gives an air of genuine romance to the Tea-Table to think that not alone the tea we drink, but also the dainty dishes in which it is served are both the real products of our curious brothers in the antipodes.

This Tea Set is made of real Japanese China, and ornamented



with Cobalt Blue designs. It is large enough for all ordinary family uses. We import the goods from Tokio, and our offer is very liberal. The pieces are real Japanese curios.

The Set given for one new subscriber and 15 cents additional. Price for the Set $1.00. **Packed in a wooden case, and sent by express, charges paid by receiver,** when sent as a premium or purchased.

Ice Cream, Salad or Berry Set.

Bowl and Six Saucers given for one new subscriber and 45 cents additional.

It would hardly seem possible that we could make such a liberal premium offer in foreign china, considering the high rate of duty that these goods pay.

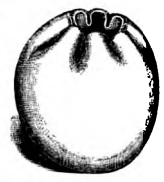
Yet these pieces are real Carlsbad China, received by us in original packages. They are delicately decorated in colors and gold.

If you are selecting a present for wife or mother, do not forget to consider this combination.

Bowl and Six Saucers given for one new subscriber and 45 cents additional. Price for Bowl and Six Saucers $1.75. **They must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

Japanese Butter Plates.

Twelve given for one new subscriber.



Each Plate is a study in itself, a distinct creation of the artist's mind. Artistic, useful, decorative.

These dainty little dishes suggest the rapid advancement in household convenience. Individual Butter Plates are now articles of necessity in every house. These are imported by us direct. Real Tokio Ware, beautifully decorated. A generous offer. We give a very choice collection in this Set.

Twelve given for one new subscriber. Price of the twelve, 85 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

Two Beautiful Rose Bowls.

Given for one new subscriber.

These Rose Bowls are made of Bohemian Glass, delicate in coloring and beautiful in shape. As an ornament or for a gift they are useful and very appropriate. They stand four inches high—color, a beautiful peach-blow. There is no article in our LIST that will please our subscribers more than this.

A pair given for one new subscriber. Price 75 cents a pair. **Postage and packing 35 cents,** when sent as a premium or purchased.

Real Tokio Cracker Jar.

Given for one new subscriber.

The Japanese excel all others in novel decoration of China Ware. We think their ornamentation known as "Tokio" is one of the handsomest.

Certainly we here offer you a real article of Japanese make.

It is 5½ inches high, and is made of china. It will be an addition to the tea-table in itself—and at the same time is the proper receptacle for crackers and hard cakes, if you wish them to be always crisp.

Given for one new subscriber. Price $1.00. **Postage and packing 45 cents,** when sent as a premium or purchased.

Gentleman's Mustache Cup and Saucer.

There is combined in this premium—1st, An appropriate gift to a gentleman, that is always acceptable. 2d, A handsome piece for the Bric-à-Brac Shelf. 3d, An elegant article in china for the Dining-room.

We import it. The material is real Carlsbad China, ornamented by hand with colored leaves, and delicate blossoms with gold tracings.

Given for one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased

Engagement Cup and Saucer.

It is now highly popular to present to a young lady just engaged a handsome Cup and Saucer. This gift symbolizes the wish that her cup of happiness may be always full.

The Engagement Cups and Saucers we offer are exquisite in design and decoration, and are of Haviland, Dresden and other fine makes.

One Cup and Saucer given for one new subscriber. Price 80 cents. **Postage and packing 30 cts.,** when sent as a premium or purchased.

Decorated China Fruit Plates.

Six given for one new subscriber and 35 cents additional.

We have selected an elaborate pattern, with open-work or "embroidery" edge, lined with gold; the centres are hand-painted flower designs in natural colors. Many uses suggest themselves at once to the orderly housewife for such china, such as serving the fruit and dessert course at dinner, lunch or reception; they make handsome cake plates also.

Six given for one new subscriber and 35 cents additional. Price $1.50 for 6 plates. **They must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

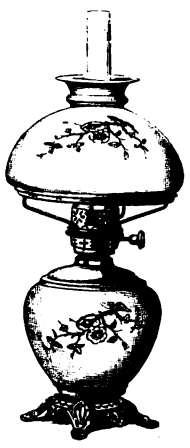
Useful and Ornamental Household Articles—Continued.

Swiss Carved Bread-Plate, No. 24, and Knife,

No. 995. Given for one new subscriber.



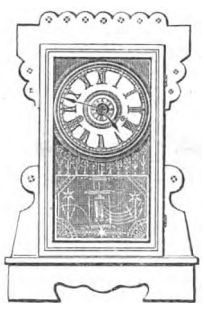
This Bread Board is not only useful, but it is exceedingly ornamental, as well. It ought to last a lifetime. They are both hand-carved.

Children are frequently at a loss to know what present to select for their parents, or for some housekeeping friend. This beautiful Bread Board is especially appropriate. The demand for it is increasing with us each year.

The Knife and Plate given for one new subscriber. Price $1.00. **Postage and packing 40 cts.,** when sent as a premium or purchased.

Duplex Parlor Art Lamp.

Given for one new subscriber and 85 cents additional.



In few directions does there seem, of late years, to have been a greater advance than in the means for producing light. This fact is well illustrated by the Lamp we now offer. It is a decided improvement over the Lamp offered by us two years ago, and at a less price, too.

The Lamp body and Shade are of porcelain, tinted a delicate color, and exquisitely hand-painted flower decorations, the colors being burnt in to insure permanence. The base and top of the Lamp are bronzed. The Lamp is supplied with a Patent Extinguisher.

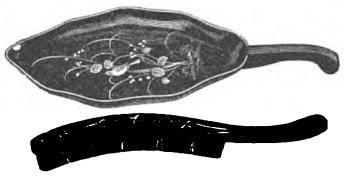
Given for one new subscriber and 85 cents additional. Price $2.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Black Walnut House Clock. Alarm and Strike.

Given for two new subscribers and 80 cents additional.

The Case to this Clock is made of Black Walnut, and is well finished and polished.

It is a one-day Striking Alarm, stands nearly 18 inches high, has a six-inch dial and a visible pendulum.



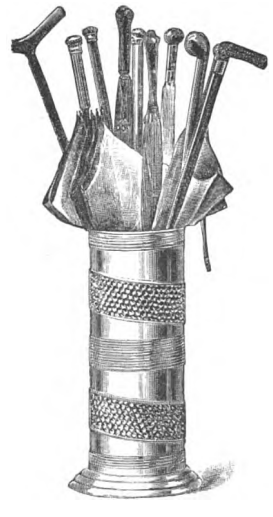
The hinged door in front is set with an ornamented glass front.

This Clock is handsome enough to be used in any room in the house. It is easily regulated, and is warranted to keep good time.

Given for two new subscribers and 80 cents additional. Price $3.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Oriental Crumb Pan and Brush.

Given for one new subscriber.



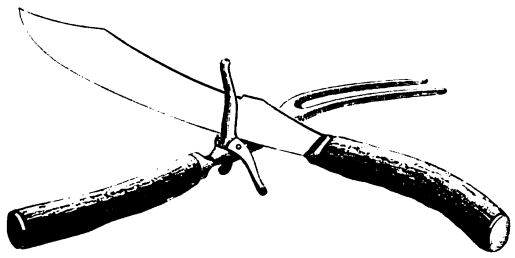
You will say we have consulted your best interest when you receive this article. It is far better and handsomer than the metal ones, unless you expend several dollars for a better Set. The Pan and Brush are lacquered, and have a high polish. The ornamentation is shaded work in gold and silver, and the material is unbreakable.

It is the most common-sense Crumb Pan and Brush we know about at a low price.

Crumb Pan and Brush given for one new subscriber. Price 75 cents. **Postage and packing 15 cts.,** when sent as a premium or purchased.

"Gloria" Silk Umbrella.

These umbrellas are well known throughout the country as being the most reliable manufactured. Made for service as well as looks. Paragon Frame, Natural Wood Handle, Silk Case and Tassels.



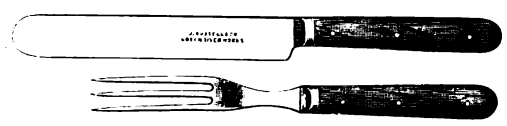
Given for two new subscribers and 35 cents additional. Price $2.25. **Sent by express and charges paid by receiver,** when sent as a premium or purchased.

The above is a 26-inch Frame. If you want a 28-inch, please send 15 cents more, when sent as a premium or purchased.

"Fast Black" Umbrella. This is a good, serviceable Umbrella, 28-inch. The material is Fast Black Gingham, Steel Frame and Natural Wood Handle. A serviceable Umbrella at a low price.

Given for one new subscriber and 10 cents additional. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

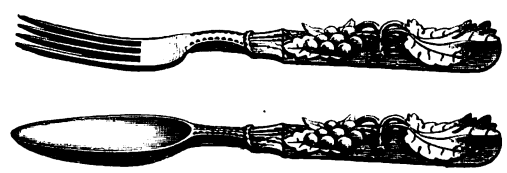
Russell's Carver and Fork. Real Stag Handles.



J. Russell & Co. probably make the finest goods of this kind in America. The Carver is made of shear steel, hand-forged. Patent safety-guard on Fork, which also acts as a rest. Carver is 13 inches long, fine quality, stag handles.

The pair given for one new subscriber and 20 cents additional. Price $1.15. **Postage and packing 20 cents,** when sent as a premium or purchased.

Six Knives and Forks.



Given for one new subscriber and 30 cents additional.

These Knives and Forks are made by the well-known cutlers, J. Russell & Co. Made of the best Steel, Cocoa Handles, with Bolster.

Six Knives and Six Forks given for one new subscriber and 30 cents additional. Price $1.20. **Postage and packing 30 cents,** when sent as a premium or purchased.

Swiss Carved Salad Set. Given for one new subscriber.

The cut tells the story. The Fork and Spoon are elaborately carved, and are fine specimens of the handiwork of the Swiss peasants. Every lady who desires to serve salad daintily should own one of these Sets.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Swiss Carved Butter Plate, Butter Press, and

Silver-plated Butter Knife. Given for one new subscriber.

This premium suggests at once the art of serving butter at the table. Use the butter press for forming and stamping the butter pat, then slip the butter into the glass plate (it will just fit in size), drop the plate into the handsomely carven wooden board, and you have a neat and ornamental pat of butter all ready to serve with the Silver Knife.

All given for one new subscriber. Price of the combination, $1.00. **Postage and packing 20 cents,** when sent as a premium or sale.

The Set is very cheap, and we do not sell single piece.

The Grand Rapids Carpet Sweeper.

Given for one new subscriber and 85 cents additional.

Few people realize how much labor, annoyance and dust the Grand Rapids Carpet Sweeper will save. Its use will do away with the hardships of sweeping-day. This Sweeper is the best made, and will do the most effective work of any now on the market. It rolls upon four wheels, and is so easy to handle that a child can use it.

This model contains all the latest improvements. It is so thoroughly and honestly made that it can be used for years without the need of repairs.

Given for one new subscriber and 85 cents additional. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. Price $3.00, and sent by express, not paid; but if you will send us the express receipt, we will return the amount paid, if less than 50 cents; if over that amount, we will return 50 cents of the same, when sent as a sale.

The Standard Thermometer.

Given for one new subscriber and 50 cents additional.

This is a Dial Thermometer of great accuracy, and is guaranteed correct Fahrenheit scale. It has a 4-inch dial. The same instrument is used at Harvard Observatory and in the Pullman cars. Each instrument is packed in a wooden case. We have used a large number of these instruments with perfect satisfaction, and the demand is constantly increasing. Every family ought to have one.

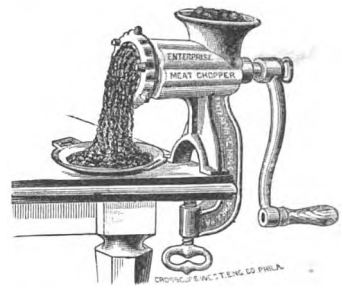
Given for one new subscriber and 50 cents additional. **Postage and packing 25 cents,** when sent as a premium. Price, $2.50 delivered when sent as a sale.

Silver-Plated Banquet Lamp Complete.

Given for two new subscribers and 90 cents additional.

This form of a Lamp is popular because it was born from a genuine necessity. Its name, "Banquet," suggests its utility, as well as grace, for the centre-piece to the dining-table; at the same time it is just as well adapted to the evening study or work-table. The light is always above the eyes, which is a great relief, and with the aid of the linen shade a subdued light is pleasantly diffused.

The ornamental work differs somewhat from that shown in the cut.

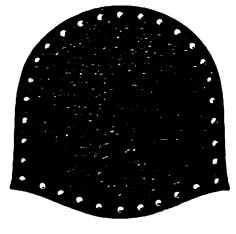


Lamp and Stand are silver-plated. 2½ feet high to top of Chimney. The linen fringed Shade is included.

Given for two new subscribers and 90 cents additional. Price $3.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Enterprise Meat Chopper, No. 5.

Given for one new subscriber and 50 cents additional.



This fine machine cannot be excelled for chopping meat or fish, for cakes, sausage, mince, hash, salad, etc.; cocoanut, peppers, scrapple, suet, can also be equally well treated.

The Enterprise does not grind or tear the meat, but chops it, precisely like the snipping process of a pair of scissors. It is impossible for any sinews, fibres, or gristle to pass through without being chopped fine and even. Will mash vegetables also.

Given for one new subscriber and 50 cents additional. Price $1.75. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Leather-Board Chair Seats.

These Chair Seats are finished with a pebbled surface in handsome maroon color, and will wear for years.

To reseat a Chair, simply remove the old cane or other covering, cut the Seat to the proper shape or size, nail it on with the French brass-head nails, and the work is done. In every household may be found Chairs which need reseating. With these Chair Seats repairing can be done.

Four Leather-Board Chair Seats and 200 French brass-head Nails given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Special Offer. We will sell six Chair Seats and 300 Nails for $1.25.

Hill's Champion Steam Cooker.

Given for one new subscriber and 80 cents additional.

Steam Cookers are a kitchen necessity and luxury. Mrs. Henry Ward Beecher writes:

"I have had the steamless and odorless Cooker in use some weeks. It is destined to make house duties, especially those belonging to the kitchen, much less oppressive, besides giving facilities for preparing food more properly than any contrivance I have yet seen."

Over 70,000 of these Steam Cookers are in use. With these Cookers no steam or odors of any kind can be detected, as they all pass into the stove and go up the chimney.

Given for one new subscriber and 80 cents additional. Price $2.50. **Must be sent by express and charges paid by receiver.**

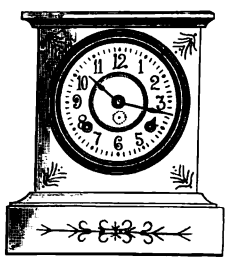
Useful and Ornamental Household Articles—Continued.

Beautiful Glass Odor Bottle.

Given for one new subscriber and 15 cents additional.

This Odor Bottle stands 7½ inches high, is mounted in a handsome silver-plated base, has a fine Glass Stopper, and is tied with a Ribbon.



The design shown on the silver-plated base is a reproduction of one of the famous "Derby" models, which is now so popular and fashionable.

This Bottle will make a handsome ornament, and is suitable to stand upon any table or bureau.

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 30 cents,** when sent as a premium or purchased.

Parlor Clock. French Dial Pattern.

Given for two new subscribers and $2.75 additional.

This beautiful Clock stands about 10 inches high, with a base 5 x 9 inches.

The dial is of brass, satin finish, with the hours and minutes pencilled in black.

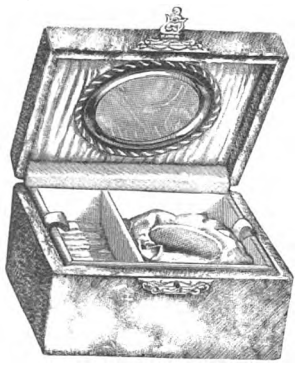
The case is made of iron, with elegant black enamel and gold finish.

This Clock will keep excellent time, and will make an ornament for any parlor.

Given for two new subscribers and $2.75 additional. Price $5.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Plush Collar and Cuff Box.

Given for one new subscriber.



The ladies all say it is a great puzzle to know just what to give a gentleman for a present that is sure to please him. Here is what you want. Size, 7½ x 6, and 5½ inches high. Covered with fine golden-brown plush, lined to match. Centre partition, and ample space for Collars and Cuffs.

We feel sure that there will be a large demand for this beautiful article. It is an ornament as well as a convenience.

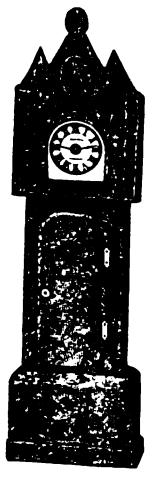
Given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Beautiful Plush Jewel Case, with Silver-Plated Shield.

Given for one new subscriber and 10 cents additional.

We expect a large demand for this attractive premium.

It is made of silk plush, has a round Bevelled French Plate Mirror on the inside of the cover, as shown in the cut, and has a compartment below the tray for the larger articles of jewelry usually worn.



The Metal Catch and Hinges are nickel-plated. The top of the Cover has a handsome silver-plated shield, not shown in the cut.

It is the handsomest Jewel Case we have ever offered our subscribers.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Grandfather's Clock, in Plush Case.

Given for one new subscriber and 25 cents additional.

We know an old Grandfather's Clock that, on the hall staircase, has ticked away the time and struck off the hours for four generations of happy children. On its face is this legend:

"Master, behold me; here I stand,
To tell the hours at thy command.
What is thy will? 'Tis my delight
To serve thee both by day and night.
Master, be wise, and learn from me
To serve thy God as I serve thee."

We do not wish you to think that we offer that kind of a clock. We would not recommend this one to keep good time 200 years, but it has a marine movement made for us in Connecticut, runs 24 hours with one winding, and will not stop if turned in any position.

We shall sell this Clock for $1.25, or give it for one new subscriber and 25 cents additional. **Postage and packing 20 cents,** when sent as a premium or purchased.

It stands 11 inches high. The frame is a perfect imitation of a Grandfather's Clock, and is covered with beautiful mahogany silk plush.

Handsome Bisque Vases.

One pair given for one new subscriber.

These Vases are made of real Bisque. The design represents two children in the act of supporting an opening lily.

The Vases stand six inches high, and are ornamented in blue and gilt.

As ornaments or for holding flowers these Vases are just the thing.

One pair of Vases given for one new subscriber. Price 80 cents per pair. **Postage and packing 30 cents,** when sent as a premium or purchased.

Silver-Plated Sconce Mirror.

Given for two new subscribers and 50 cents additional, or one new subscriber and $1.00 additional.

This is a gift always acceptable to every one, and is a thing of beauty in itself. It is made of bronze metal, and is silver-plated, 15 inches high, and spreads 16 inches.

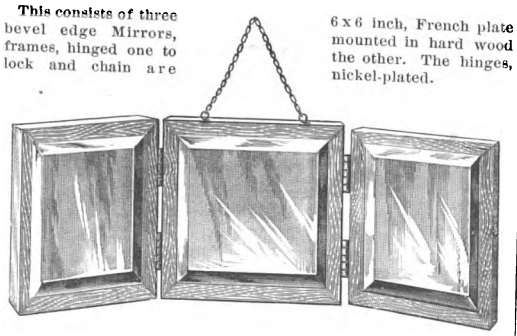
Best French Bevel Mirror, 5 x 7½ inches. It has a metal back brace, and can be used as a Stand or Wall Mirror, as you prefer. It is as useful for a gentleman as a lady, and will ornament any home. It weighs 5 pounds.

Premium offer above. Price $2.75. **Must be sent by express and charges paid by receiver.**

Solid Brass Candlesticks, with Hand-Painted Candles.

Given for one new subscriber and 25 cents additional.

This makes an elegant bric-a-brac ornament. The Stand is made of solid brass, and finely polished.



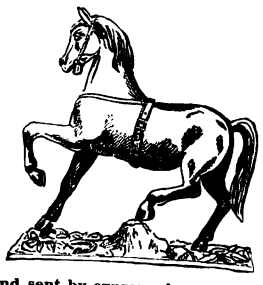
The Stand is 6 inches high, and with the Candles, 10 inches high. The prisms, 5 to each Candlestick, are white glass, finely cut and very brilliant. Candles are colored and hand-painted. Please note the very liberal premium offer above.

Price, per pair, including Candles, $1.30. **Postage and packing 35 cents,** when sent as a premium or purchased. Price without Candles, 25 cents less.

The Triplex Bevelled French-Plate Mirror.

Given for one new subscriber and 50 cents additional.

This consists of three bevel edge Mirrors, frames, hinged one to lock and chain are 6 x 6 inch, French plate mounted in hard wood the other. The hinges, nickel-plated.



The Triplex Mirror can be hung upon the wall, or arranged upon a mantel or dresser. It enables a lady to observe, with ease, her back hair, and is a great comfort to gentlemen for use in shaving.

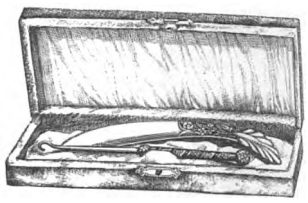
Last year a large number of our Triplex Mirrors were ordered. This year the frame work has been improved in several essential features, and we expect to use a very large number.

Given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 50 cents,** when sent as a premium or purchased.

Bronze Horse, Mantel or Clock Ornament.

Given for one new subscriber and 35 cents additional.

The figure stands over eight inches high. Size of base, 9 x 3½ inches.



It makes a choice ornament for the mantel or clock.

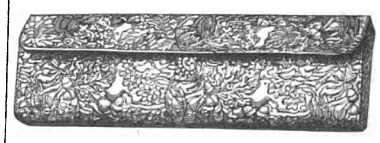
While it can be used as an ornament for any mantel, yet it is too large to be placed upon the Parlor Clock offered on another part of this page.

Given for only one new subscriber and 35 cents additional. Price $1.25. **Packed in a wooden box and sent by express, charges paid by receiver,** when sent as a premium or purchased.

Nickel-Plated Shoe-Horn and Button-Hook, in Plush Case.

Both given for one new subscriber and 20 cents.

This makes an attractive gift for a lady.



It consists of a handsome Shoe-Horn and Boot-Buttoner, nickel-plated and oxidized. Both enclosed in a Plush Case.

These two articles are a great necessity in every household. Perhaps more so than any other combination we might mention. It is a very special premium offer.

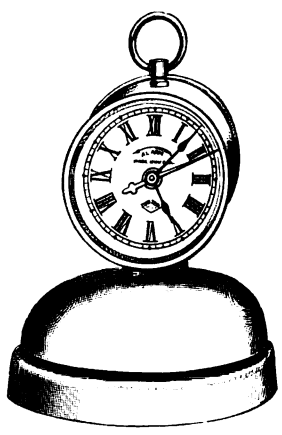
We give the entire combination for one new subscriber and 30 cents additional. Price $1.15. **Postage and packing 15 cents,** when sent as a premium or purchased.

Embossed Leather Glove and Handkerchief Boxes.

Both given for one new subscriber and 30 cents.

Leather goods are once more becoming very popular.

These two articles are made of embossed leather, have oxidized silver clasps, and are lined with sateen.



It is the latest thing in this line, and is a very special premium offer. We expect a large demand.

The Embossed Leather Glove and Handkerchief Boxes are both given for only one new subscriber and 30 cents additional. Price $1.30. **Postage and packing 20 cents,** when sent as a premium or purchased.

Improved Alarm Clock, Celluloid Dial.

Given for one new subscriber and 50 cents additional.

This fine Clock is probably the most popular time-piece now on the market. It is handsomely plated in gilt, has a Celluloid Dial, and an alarm movement which is constructed with an improved escapement.

It is the handsomest Clock we have ever offered our subscribers.

We offer it at a low price, and expect that a very large number will be ordered.

While this Clock will keep excellent time, it will also make a most beautiful ornament.

This fine Clock given for one new subscriber and 50 cents additional. Price $1.50. **Postage and packing 25 cents,** when sent as a premium or purchased.

Beautiful Two-Bottle Plush Odor Stand.

Given for one new subscriber and 10 cents additional.

This beautiful Odor Stand will make a useful ornament for the dressing case or table. The Stand is made of Plush, with an oval bevelled-plate Mirror across the face of the back.

The Bottles are handsomely fluted and have ground-glass stoppers to match.

The Stand and Bottles make a combination which will be sure to please our subscribers. It is the handsomest Odor Stand that we have ever offered our readers.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 30 cts.,** when sent as a premium or purchased.

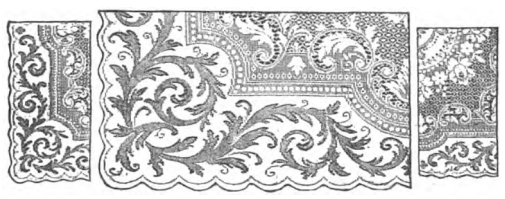
Useful and Ornamental Household Articles—Continued.

Elegant Turcoman Portière Curtains.

There is hardly any article which adds more to the artistic adornment of a room than a beautiful pair of Portière Curtains.



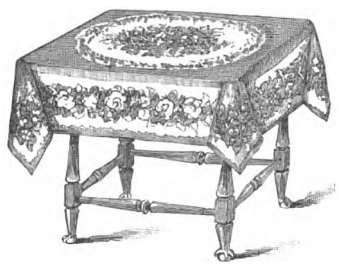
The Curtains we offer are made of heavy chenille, with handsome dado and tasselled fringed border, top and bottom. The rich elegance of these Curtains cannot be shown in the cut or described in words. We are confident that they will more than please our subscribers.

They can be supplied either in Camel, Terra-cotta, Old Gold, Mahogany, Steel Blue, and Peach Body Colors. Each Curtain is 46 inches wide and 3 yards long.

One pair given for two new subscribers and $3.25 additional. They are sold in the leading Boston stores at $7.00 per pair. We offer them for sale for only $5.75 per pair. We will break sets, and therefore offer one curtain for one new subscriber and $1.60 additional. Price of one Curtain, $2.90. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Lace Bed Spread and Pillow Shams.

The Set given for one new subscriber and 85 cents additional.



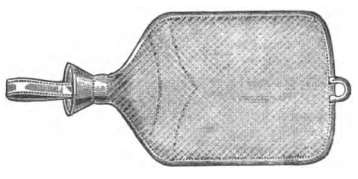
Lace Bed Spreads and Pillow Shams are once more becoming very popular. They give to a room an air of comfort and refinement, and are also very handsome.

The Set we offer is made of Nottingham Lace, with beautiful design centres and borders. They are full-sized, and are taped all around. The engraving shows only a small section of the Bed Spread and Shams.

We give the complete Set, consisting of the Lace Bed Spread and Pillow Shams, for only one new subscriber and 85 cents additional. Price of the complete Set, $2.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Elegant Chenille Table Cover.

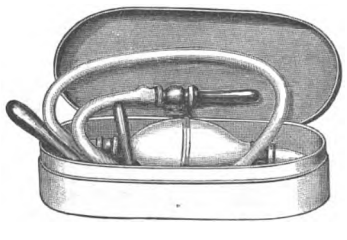
Given for one new subscriber and $1.00 additional.



For beauty and richness nothing more could be desired than the colors and tones with which these Table Covers are woven.

They are made of fine Chenille, four feet square, are woven in the body tones which are now so popular, with beautiful border and centre designs. These Covers must be seen to be appreciated.

One Cover given for one new subscriber and $1.00 additional. Price $2.25. **Postage and packing 25 cents,** when sent as a premium or purchased.

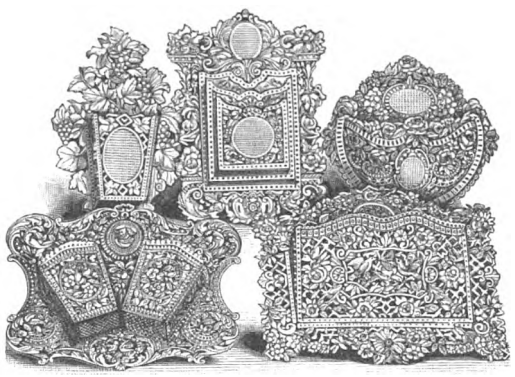


Hot-Water Rubber Bag. Two Quarts.

Every family ought to own one of these Hot-Water Bags. It is made of a superior quality of rubber, and is the best we can purchase. Fill the Bag with hot water and place it against the body in localities where there is pain, and great relief is often experienced. It would be well if people generally understood this fact. Every Bag warranted perfect.

Given for one new subscriber and 35 cents additional. We offer it for sale for $1.50. **Postage and packing 20 cents,** when sent as a premium or purchased.

Family Syringe, No. 1. Given for one new subscriber.



This Syringe is made of fine white rubber, is enclosed in a neat pocket case, and contains the usual fittings.

Every one is fully warranted by the manufacturer. In procuring an article of this kind it is not good economy to use one of cheap material.

Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Vienna Leatherette Articles.

Given for one new subscriber.

The collection contains the following articles: Wall Paper Holder, Slipper Case, Stationery Pocket, Corner Bracket, Whisk Broom Holder, Toilet Wall Pocket, Lamp Mat and 3 Toilet Mats—10 articles in all; only a part of them are shown in the cut.

These articles are made of Leatherette, and can be made quite ornamental by bronzing and tying with colored ribbons.

The collection given for one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

The GILDING OUTFIT, offered on page 23, can be used to excellent effect in the decoration of these articles.

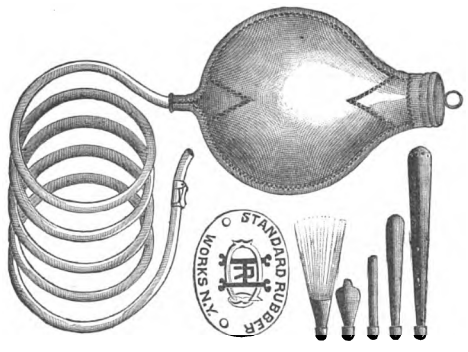
Nottingham Lace Curtains.

Lace Curtains always give a most pleasing effect, not only to the furnishings of a room, but also to the house itself as seen from the outside.

Every good housewife knows the value of Nottingham Lace Curtains. We purchase them by the case directly from the factory. The styles are the latest and most attractive. The patterns are assorted. The one illustrated in the cut was taken at random from a case.

The cut, being a greatly reduced photo-engraving of the lower end of the curtain, does not give exactly the same effect as the Curtain itself.

Nottingham Lace Curtains, No. 1. These Curtains are **nine** feet long, forty inches wide, and are all bound with tape.



A pair (two Curtains) given for one new subscriber and 25 cents additional. Our price only $1.25 for the pair. **Postage and packing 25 cents,** when sent as a premium or purchased.

Nottingham Lace Curtains, No. 2. These Curtains are three and one-half yards long, fifty-two inches wide, and bound with tape.

A pair (two Curtains) given for two new subscribers and 25 cents additional. Our price only $2.50 for the pair. **Postage and packing 35 cents,** when sent as a premium or purchased.

The Family Fountain Syringe, No 2.

Given for one new subscriber and 40 cents additional.

An invaluable article, which no family can safely be without. It may save life. In procuring an article of this kind one should accept only the best. We therefore attach to our cut the manufacturer's trade-mark.

Every one is fully warranted. The Fountain is made of best white rubber, and holds full two quarts. A full set of hard rubber fittings, with Screw Couplers. All enclosed in a hinged and clasped polished Box, with separate compartment for fittings, and full directions for use.

Given for one new subscriber and 40 cents additional. Price $1.75. **Postage and packing 25 cts.,** when sent as a premium or purchased.

Turkey-Red Fine Table Linen.

Fine Linen always gives a peculiar charm and grace to a dining-table. The goods we offer are full size and of excellent quality.

Turkey-Red Table Cloth. This Spread is 2¼ yards long and 69 inches wide, and comes in handsome assorted patterns, with fringed edges.

Given for one new subscriber and 60 cents additional. Price $1.50. **Postage and packing 30 cents,** when sent as a premium or purchased.

Turkey-Red Napkins and Doilies. These Napkins are of excellent quality. Fringed edges, assorted patterns, and 15 inches square.

One dozen given for one new subscriber and 10 cents additional. Price per dozen, 85 cents. **Postage and packing 20 cents,** when sent as a premium or purchased.

John Bromley & Sons' Smyrna Rugs.

The reputation which these Rugs have acquired is world-wide. For quality and beauty of design they are all that could be desired.

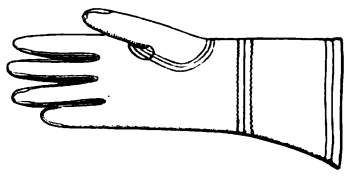
Single Door Rug. 18 x 34 inches. Fringed ends. Very handsome and durable. Given for one new subscriber and 50 cents additional. Price $1.40.

Bureau Rug. 21 x 45 inches. Same quality and finish as the Door Rug, but suitable for placing before a Bureau, Bed or Fireplace. Given for one new subscriber and $1.00 additional. Price $2.10.

Sofa and Hall Rug. 30 x 60 inches. This magnificent Rug is large enough for laying in the hall or before a large sofa. Given for two new subscribers and $1.40 additional. Price $3.50. **All these Rugs must be sent by express, and charges paid by receiver,** when sent as a premium or purchased.

Imported Wolf-Skin Rug.

Given for two new subscribers and $1.00 additional.



These Rugs are imported from China. They are about 28 x 64 inches, and are adapted for either the hall, parlor or sitting-room.

They give a pleasing effect to a room that is not easily secured by any other article.

Given for two new subscribers and $1.00 additional. Price $2.75. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Lady's Fine Rubber Gloves.

A pair given for one new subscriber and 30 cents additional.

These Gloves are in great demand by the ladies for house or gardening purposes. They protect the hands when engaged in rough work, keeping them soft and smooth.

The Gloves we offer are made of fine tan rubber. A pair given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 10 cents,** when sent as a premium or purchased.

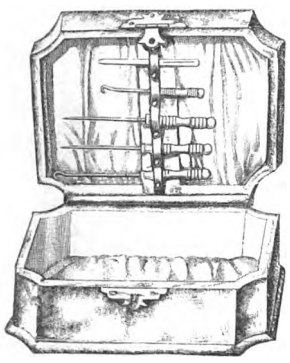
Family Homoeopathic Medicine Chests.

No. 1 given for one new subscriber and 65 cents additional.

Medicine Chest No. 1. This Chest contains 12 large one-half ounce vials of the remedies most commonly used.

Each vial is sealed, and contains 125 doses. These reliable remedies are prepared at the well-known Homœopathic Pharmacy of Otis Clapp & Son. A Manual of Homœopathic Treatment is given with each Chest.

No. 1 given for one new subscriber and 65 cents additional. Price $2.25. **Postage and packing 35 cents,** when sent as a premium or purchased.



Medicine Chest, No. 2. Same style and quality as Chest No. 1, with 24 principal remedies. Price $4.25. **It must be sent by express and charges paid by receiver when purchased.**

Digitized by Google

Sewing-Room Articles, Pocket-Books and Bags.

Handsome Plush Work-Box.

Given for one new subscriber and 25 cents additional.

This Box is 7 x 8 inches, and contains the articles shown in the cut.

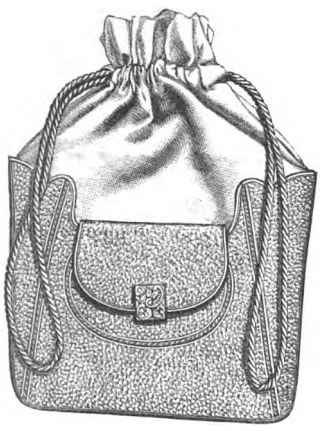
The case is covered with silk plush and lined with satin to match. Has nickel-plated catch and hinges, and molded corners and top.

It makes an excellent Work-Box, and is handsome in appearance.

We feel sure that it will more than please our subscribers.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Griffin's Automatic Rug Machine.



Unusual interest is being taken in Rug-making. Handsome Rugs not only make a room more attractive, but are also a great comfort. The Automatic Feed Rug Machine is twelve inches in length, and is

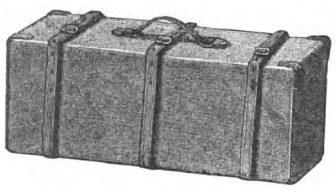
handsomely finished and nickel-plated, and will do its work in a rapid and reliable manner. Rugs made with this machine are not only very beautiful and durable, but are also more regular and even than when made by the old method.

By very special arrangement with the manufacturer we give this **Rug Machine** for one new subscriber. We feel sure that our lady subscribers will appreciate this liberal offer. The Rug Machine will do the best of work. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Princess Street Bag.

This Bag is made of black Leather and black Cashmere. Has a black silk draw-cord and a portemonnaie with patent clasp.

This style of Bag is very popular and fashionable at the present time.



It can be used either as a shopping or street Bag. By means of the corded silk draw-string, the Bag can be enlarged or contracted, to meet the requirements of the owner.

This feature must commend itself to every person who requires a Bag for shopping or street use.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Canvas Travelling Case. 18 inches.

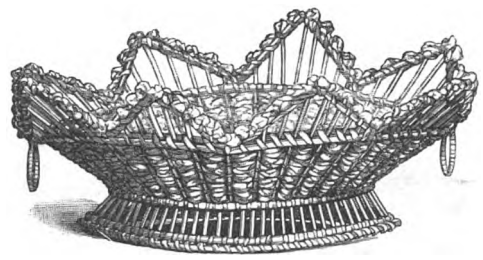
Given for one new subscriber and 30 cents additional.

A good name for this article would be "A Common-Sense Travelling Companion." Size 18 x 7 x 10 inches. Double cased, so it can be extended twice its size. Made of strong canvas lined with cloth, stitched and riveted leather corners and handle, and three leather straps, with buckles. A large number of these Travelling Cases are being used.

Given for one new subscriber and 30 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Lady's Morocco Pocket-Book.

Given for one new subscriber.

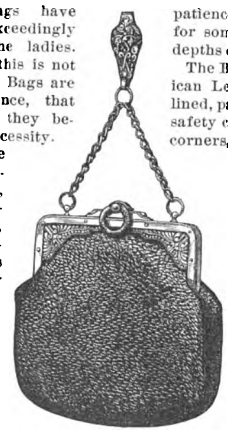


This is a new style, made expressly for coin and bills, and in the most convenient size and shape. Solid Oxidized Clasp and corner ornamented.

Given for one new subscriber. Price $1.00. **Postage and Packing 10 cents,** when sent as a premium or purchased.

Lady's Work-Basket and Fittings.

Given for one new subscriber.



These Baskets are made in Bohemia, and vary a little in shapes, but the cut gives you a fair idea of most of them. They are large and roomy, giving an abundance of space. Material brown willow and rush straw braid to match. Size, 6 in. high and 12 in. long.

We also include the following articles not seen in the cut: Emery Cushion, Steel Thimble, gold-plated. Set of English & Co.'s Knitting Needles, Darners and Imperial Needles and Pins in Case.

Given for one new subscriber. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Lady's Chatelaine Bag and Chain.

Given for one new subscriber.

Chatelaine Bags have now become exceedingly popular with the ladies. The reason for this is not far to seek. The Bags are such a convenience, that when once worn they become an actual necessity.

As a receptacle for the handkerchief, the purse, the card case, samples to be matched, and the innumerable other articles that we feel our masculine incompetence to name, we know of nothing better.

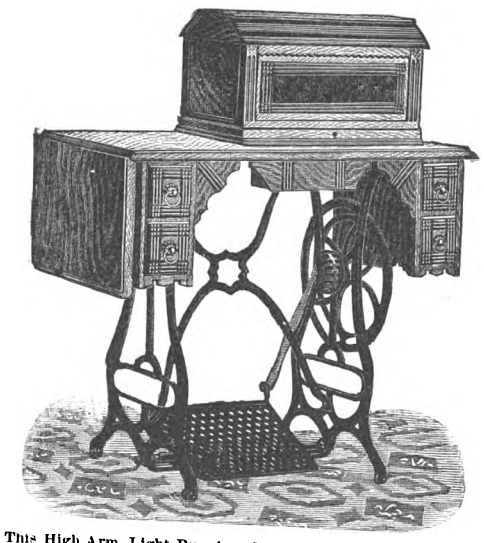
The lady who possesses this Bag need no longer lose time and patience in a nervous search for some article hid in the depths of her dress pocket.

The Bag is made of American Leather, half leather lined, patented nickel frame safety catch, solid oxidized corners, and belt hook and chain. They are worn without a belt by simply attaching the hook to the binding of the waist.

We believe that our subscribers will be more than satisfied with this Bag.

The style offered is the very latest, and the Bag is made in a thorough manner.

The Chatelaine Bag and Chain are given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.



A "Gladstone" Travelling Bag.

We have not room to show a cut of this magnificent 18-inch Bag. It is made of the best quality of russet grain leather, cloth-lined, with inside flap and pockets, and inside and outside straps.

Any one looking for a fine Bag, larger and differently shaped from our No. 49, will be more than delighted with the "Gladstone."

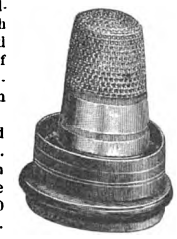
Given for two new subscribers and $2.25 additional. Price $5.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Lady's Favorite Sewing-Machine.

This High Arm, Light Running, Lock-Stitch Machine is supplied with an Automatic Bobbin Winder and a complete Set of nickel-plated attachments.

It is simple in construction. Has a self-setting Needle, nickel-plated Balance Wheel and parts. Does a wide range of work, either fine or coarse, and has the Fish Patent Loose Balance-Wheel. All the running parts of the machine are made of the finest steel, case-hardened. The wood-work is Walnut, highly polished, with Extension and Drop Leaf, four Drawers and Bobbin Drawer. No better Machine is made. It gives great satisfaction.

Western orders shipped direct from Chicago. Eastern orders from Boston.



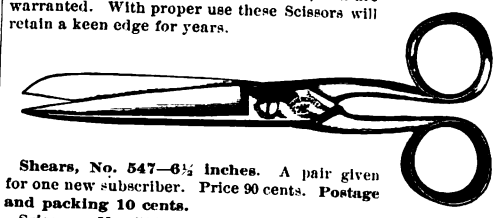
Given for fifteen new subscribers and $8.00 additional; or ten new subscribers and $10.50 additional; or five new subscribers and $13.00 additional; or for thirty-one new subscribers. Price $22.00 to our subscribers.

On receipt of $23.00 we will send you this Sewing-Machine, complete, with all attachments, and renew your subscription to THE YOUTH'S COMPANION for one year.

SPECIAL. When this machine is ordered as a Club Present, we require six Five-Subscriber Clubs, and $1.00 additional.

Gold-Plated Thimble, and 3-Ft. Nickel Tape-Measure.

Given for one new subscriber and 15 cts. additional.



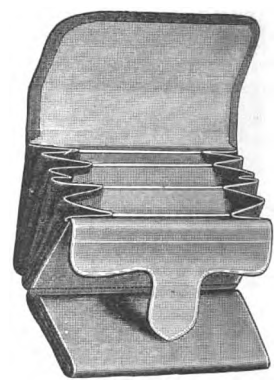
This Thimble is made of rolled gold-plate. The base is hard metal, which renders it more durable than a solid silver or solid gold Thimble. State size of Thimble wanted. Each Thimble is enclosed in a fine Morocco Case, lined with velvet.

All given for one new subscriber and 15 cents additional. Price of all, $1.10. **Postage and packing 10 cents,** when sent as a premium or purchased. Price of Thimble and Morocco Case, only 80 cents. Tape-Measure only, 25 cents. **Postage and packing 10 cents additional on each.**

Henckel's Shears and Scissors.

More than one hundred years ago, twin brothers by the name of Henckel started the cutlery business at Solingen, Germany. They soon acquired a world-wide reputation as manufacturers of cutlery.

The succession of sons are known to-day as the makers of the **best cutlery** in the world. The Scissors, Shears and Button-Hole Cutters are full polished and nickeled, and are warranted. With proper use these Scissors will retain a keen edge for years.



Shears, No. 547—6½ inches. A pair given for one new subscriber. Price 90 cents. **Postage and packing 10 cents.**

Scissors, No. 502—5 inches; Button-Hole Cutters, No. 520. Both given for one new subscriber and 30 cents additional. Price of two, $1.30. **Postage and packing 10 cents,** when sent as a premium or purchased.

Price of the Scissors, No. 502, 70 cents, post-paid; the Button-Hole Cutters, No. 520, 75 cents, post-paid.

Gentleman's Pocket-Book. No. 524.

Given for one new subscriber and 10 cents additional.

This is a special Pocket-Book we have had made to our order. It is made in first-class style. The leather is French Morocco, and is made of one piece of stock, except the bill-fold. This makes a very durable Book, as there is no sewing at the corners to wear out, and a gentleman can use the book for several years.

We consider it the most practical Pocket-Book for gentlemen's use that we can offer our subscribers.

It has five pockets, and a convenient fold for all bills.

Given for one new subscriber and 10 cents additional. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

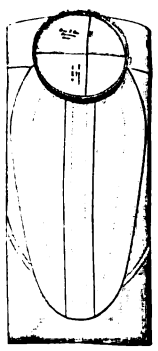
Fine Leather Bill-Book. Given for one new subscriber.

This book is well-made of imitation seal, leather pockets and lined leather cover, five pockets, thoroughly stitched throughout. The book is made with round corners, and is designed for service. Size 8½ x 4 inches.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Russet Leather Travelling Bag, No. 49. For Lady or Gentleman.

This fine Travelling Bag is a thoroughly well-made article. It is made from the very best quality of russet grain leather, with a soft finished lining throughout. The Bag is "club-shaped," is 14 inches long, with molded handle, reënforced corners, and patent snaps. Also inside pocket, improved arrangement for holding the Bag open when being filled, and six metallic bottom guards. This Travelling Bag is first-class in every respect.



Given for two new subscribers and $1.00 additional. Price $3.50. **Postage and packing 65 cents,** when sent as a premium or purchased. Or sent by express and charges paid by receiver.

Wearing Apparel, Fans and Other Specialties.

Gentlemen's Shirts, The "Favorite."

One Shirt given for one new subscriber.

In the "Favorite" we offer what we consider the nearest approach to a Custom Shirt that is made. It has a perfected bosom, which yields a perfect fit. It will not break nor bunch up in the neck. Each Shirt is 36 inches long—full body width.

The Shirt is made of Williamsville cotton, which is the best shirting cotton in the United States. Four-ply bosom, 1,900 linen, reënforced back and front, double-stitched on facings and sleeves, and continuous facing on back and sleeves. Hand-made button-holes. We have different lengths of sleeves. When ordering please say whether short, medium or long sleeve is desired. This gives you all the advantage of a Shirt made to order.

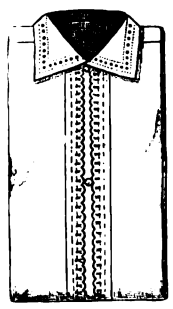
Price 85 cents each. **Postage and packing 15 cents each,** when sent as a premium or purchased.

We will sell six or more Shirts at one time for 75 cents each. **Postage and packing 75 cents** for the six. Size, 13½ to 16½ inches.

Lady's Fine Nightgown. Our Special Leader, No. 1.

Given for one new subscriber.

This Nightgown is our special leader. The quality of the material used, together with the tucking and stitching, is all that could be desired.



We offer it for sale at a price which scarcely covers the cost of material and labor in making.

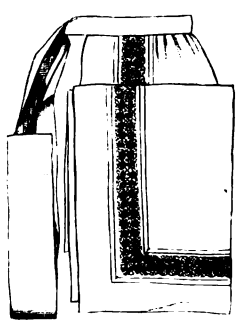
We do this to advertise our Household and Furnishing Department among our lady subscribers. When ordering give size of collar usually worn.

Given for one new subscriber. Price 69 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

Gentleman's Nightshirt.

Given for one new subscriber.

This Shirt is made of a good quality of cotton, and in a most thorough manner.



It has two rows of colored Hamburg edging down the bosom, and colored gimp border around the collar and across the pocket and cuffs. Is reënforced across the shoulder, is double-stitched, and has well-made button-holes. When ordering be sure to give size of collar usually worn.

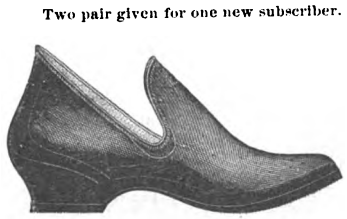
We believe that our gentlemen subscribers will be more than pleased with this Shirt. We offer it at a low price.

Given for one new subscriber. Price 85 cents. **Postage and packing 20 cents,** when sent as a premium or purchased.

Fine Embroidered Apron and Corset Cover.

Both given for one new subscriber.

These two articles have been selected with special reference for quality and utility.



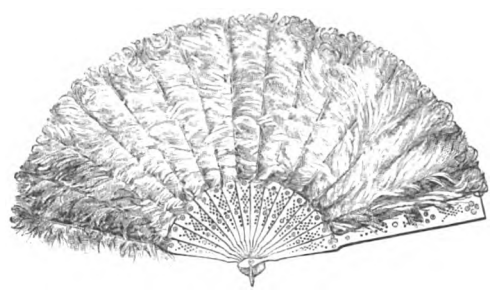
The Apron has a Hamburg insertion running down both sides and across the bottom. Very handsome and popular.

The Corset Cover has a yoke, with three rows Hamburg insertion and eight rows tucks. Hamburg edging is also around the collar and down the face of the yoke. When ordering give bust measure.

The Apron and Corset Cover are both given for one new subscriber. Price of both, 70 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The "Storm Slipper" Rubber.

Two pair given for one new subscriber.



These Rubbers are so shaped that protection from dripping skirts is amply secured. Every lady will appreciate this feature. The enormous demand for these Rubbers can only be accounted for from this fact.

We can supply sizes from No. 2½ to No. 8. When ordering give the size of boot worn. These Rubbers are manufactured by the Boston Rubber Shoe Co., which is a sufficient guarantee of their superior quality and construction.

Two pair given for one new subscriber. Price of two pair, $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased. One pair sent post-paid to any address on receipt of 60 cents.

Feather Fan, No. 126.

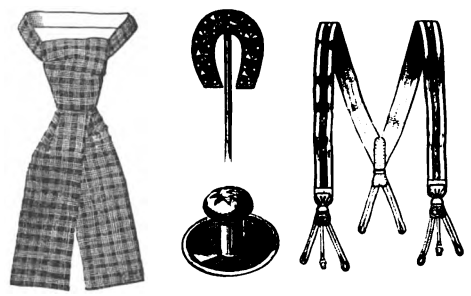
Given for one new subscriber and 10 cents additional.

The Fan that we offer has a fine cut white bone handle, and is mounted with good quality down feathers. We offer the Fan in either white, pink or blue. State which color you prefer. Fan opens 2 feet wide; 12 inches high. Back of Fan covered with linen serge.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 15 cts.,** when sent as a premium or purchased.

The F. P. Robinson Co.'s Detachable Umbrella Covers.

There is now no necessity for throwing away an Umbrella when the cover has become worn-out or torn. If the handle and frame are still sound it can be re-covered and made as good as new by means of these Detachable Umbrella Covers.



They can be easily applied to the frame by any one in less than five minutes, without sewing or trouble.

When ordering send us the exact length of one of the ribs of the umbrella which you wish to cover, measuring from the two extreme *ends* of the rib, and we will guarantee fit.

Cleanfast Gingham Umbrella Cover, No. 13, given for one new subscriber. Price 75 cents.

"Gloria" Silk Umbrella Cover, No. 56, given for one new subscriber and 60 cents additional. Price $1.75. **Postage and packing on either Cover, 10 cents,** when sent as a premium or purchased.

Useful Articles for Young Men's Wear.

"Four-in-hand" Silk Necktie. Full length, and 2 inches wide, satin-lined. It is the latest thing in neck-wear.

Garnet Horse-Shoe Scarf Pin. Imported from Bohemia. Eight real garnets set in gold.

A Pair of Fine Suspenders. Excellent webbing. Kid and nickel-trimmed; worsted ends, and stays with clasp for underwear.

Gold-Plated Collar Button. Set with a brilliant.

All four of these articles given for one new subscriber and 20 cents additional. Price of the combination, $1.25. **Postage and packing 10 cents,** when sent as a premium or purchased. Price of either Necktie, Scarf Pin or Suspenders, 40 cents, post-paid.

The "Inverness" Cloth Surface Waterproof Garment.

The "Inverness." This is the latest and most stylish article in the Waterproof line. It is made of a superior quality of material, with a long English Cape, tight-fitting back, roll collar, loose front, straps on cape, and has an open back, by which perfect ventilation and freedom of movement of the arms is absolutely assured.

We warrant every Garment to be waterproof. Sizes, from 40 to 60 inches. When ordering be sure and give the length you wish, measuring from the collar to the bottom of the Garment.

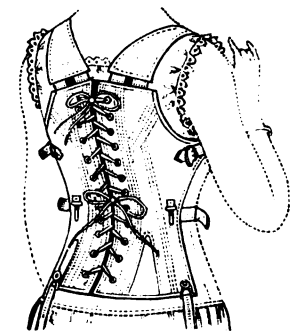
Given for one new subscriber and $1.50 additional. Price $3.00. **Postage and packing 40 cents,** when sent as a premium or purchased.

Gentleman's Rubber Coat. These Rubber Coats are made for actual service in driving rain-storms, and are fully warranted by us. They have a throat-strap and outside flap to the pockets, are double-breasted and are made with a dull finish. When ordering, measure loosely around the breast, under the arms and over such clothing as you propose to wear the coat, and send us size in inches. Sizes from 34 to 46 inches.

Given for one new subscriber and $1.15 additional. Price $2.75. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Knickerbocker Shoulder-Brace and Suspenders Combined. Given for one new subscriber.

As far as we know, these are the best Combined Braces and Suspenders on the market.



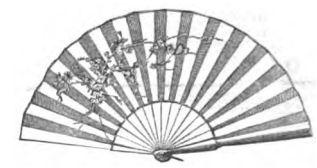
Many gentlemen will be benefited by wearing these Braces, as they tend to expand the chest, and promote free respiration.

They are well made, and will wear a long time. Worn as a Suspender, they give perfect satisfaction.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

These are for gentlemen only, and are not adapted for ladies' use. Sizes, 26 to 40 inches, chest measure. Be sure and send the size when you order.

Dr. Gray's Lady's Back-Supporting Shoulder-Brace. Given for one new subscriber and 20 cents additional.



Hardly anything disfigures the female form more than round shoulders and projecting shoulder-blades. And there is hardly a more frequent ailment among ladies than a weak back. Dr. Gray has sought in his Shoulder-Brace to remove the tendency to the former, and to support the latter.

Provision is made for attaching Skirts and Stocking Supporters, thus relieving the hips from their drag. They are made in four sizes. No. 1 measures, round the waist, 16 to 20 inches; No. 2, 18 to 23; No. 3, 24 to 27; No. 4, 28 to 33.

Given for one new subscriber and 20 cents additional. Price $1.35. **Postage and packing 15 cts.,** when sent as a premium or purchased.

Black Satin Fan. Given for one new subscriber.

There has been great demand for a black Fan.

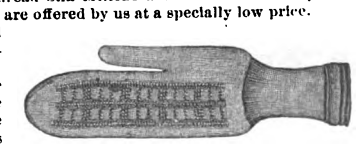
To meet this demand we offer a Fan that is made of black satin and is hand-painted. When fully extended it is 24 inches in length.

Given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Zero Paper-Fabric Health-Protective Vests.

It is a fact that a few layers of paper afford more protection against severe cold or draughts than the heaviest of woollen clothing.

This valuable principle has been utilized in the construction of the Zero Paper-Fabric Vests. They are made of a specially prepared cloth-interlined paper fabric. To persons liable to exposure to inclement weather they are invaluable.



In ordering these goods state whether you wish the lady's or gentleman's garment, giving bust measure only.

Two Vests given for only one new subscriber and 10 cents additional. Price of two Vests, $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Price of single Vest, post-paid, 60 cents.

Lady's Elegant Black Silk Mittens.

These fine pure thread Silk Mittens are made with a fancy back and ribbed cuff, and are offered by us at a specially low price.

The quality is all that could be desired.

Silk Mittens can be worn throughout the greater part of the year. Their use has become popular.

One pair given for one new subscriber and 10 cents additional. Price per pair, 90 cents. **Postage and packing 5 cents,** when sent as a premium or purchased.

When ordering state whether Ladies' or Misses' size is wanted.

Real Russia Black Hare Muff, Feather-Filled.

The Muff is intended for either ladies or misses. It is made of Russia Hare Fur. The skin is first quality, long hair, and very black and glossy; the Muff is satin-lined, and filled with solid feathers.

Last year the demand for this Muff was so great that we found difficulty in filling our orders. This year we would advise our subscribers to give an early order, and thus avoid a possible delay.

Given for one new subscriber and 70 cents additional. Price $1.75. **Postage and packing 20 cts.,** when sent as a premium or purchased.

Kensington Embroidery and Stamping Outfit.

Given for one new subscriber.

Beautiful Homes.

We believe in making home the most attractive and beautiful spot in the world. We believe, too, that the girls of our homes should be taught to "do something" that will develop in them a taste for the beautiful, and a love for decorating their homes. We know of nothing in this line so popular and so inexpensive for this purpose as Kensington Art Embroidery.

A Pleasure.

It would be a pleasure for us if we could look into the tens of thousands of homes into which these Outfits have entered, and see the beautiful decorations so skilfully wrought with needle and silk.

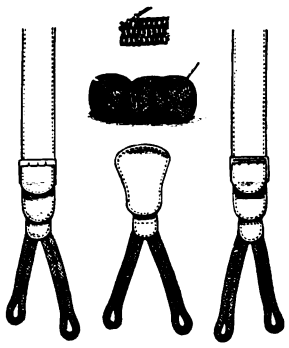
Each year we have improved our Stamping Outfits until our Mammoth Art Embroidery Outfit now contains an assortment of Embroidery Patterns that are larger in size, and more artistic in design, than any other Outfit that has ever been placed on the market.

The Kensington Outfit.

The following is a list of the Stamping Patterns, with the size of each, that we give with the Outfit: Splasher, 9 x 25; Lambrequin, 8 x 25; Flannel Skirt or Blanket, 2¼ x 10; Repeating Border, 3½ x 9; Umbrella Bag, 2 x 24; Cane Pocket, 2 x 24; Pine Pillow, "Balmy Sleep," 14 x 15; Corner Piece, 7½ x 7½; Dressing Case Scarf, 4 x 18; Sideboard Scarf, 4 x 15; Table Scarf, 4 x 17; Sofa Pillow, 12 x 15; Baby Blanket Corner Piece, 7 x 7; Table Spread Corner, 14 x 14; Chair or Sofa Tidy, 9 x 12; Slipper Pattern, 8 x 11; Tea or Tray Cloth, 6 x 8; Apron Corner, 8 x 10; Large Table Scarf, 9 x 18; "Good Morning" Pillow Sham, 12 x 13; "Good Night" Pillow Sham, 12 x 13; Duster Pocket, 4½ x 9; Small Spray, 4½ x 4½; Panels or Tidies, 7 x 15; Doilies, new style, 4 x 4; Braiding Pattern, repeating, 3½ wide; Apron, 9 x 17; Braiding Pattern, repeating, 3 wide; Doilies, 4 x 4; Carver's Tray Cloth, 5½ x 13; Wreath, for Hat Crowns, Centres, etc., 5 x 5; Laundry Bag, 6 x 8; School Bag, 3½ x 9; Shoe or Slipper Pocket, 6 x 10; Slumber Roll, 7 x 13; Beautiful Spray, 7 x 9; Rose, 7 x 8; Outline Design, 5 x 18; Outline Design, 7 x 18; and Complete Alphabet, 2-inch initial. For complete contents of the Outfit see the next column.

Profitable Home Industry.

With this Outfit you can not only decorate your home with beautiful art needle-work, but you can also do a profitable business by making your home the headquarters for novelties in Art Embroidery.



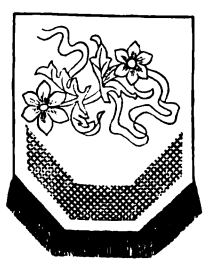
Two years ago we secured the services of a chemical expert, who invented for us a Blue, Black and White Powder that we can warrant to be indelible on all goods. It is far superior to the so-called liquid stamping. Ours is the only Outfit which contains Indelible Stamping Powder.

The Outfit now contains the entire assortment of Perforated Stamping Patterns mentioned elsewhere, 3 Boxes of the P. M. Indelible Stamping Powder, 3 Distributing Pads, 1 Chart, with Lessons, and 1 Illustrated Lesson in Art Embroidery.

The complete Outfit given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

A Special Offer. When you order the Stamping Outfit, and enclose 10 cents additional, we will send you a copy of the Jenny June 50-cent "Lady's Manual of Fancy Work," containing 500 illustrations.

Elegant Satin Suspender Mountings.



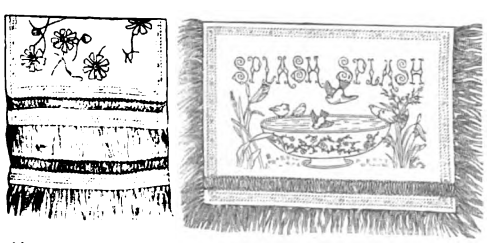
There can be nothing more popular as a present for a gentleman than a pair of Knitted Black Silk Suspenders.

For this purpose we offer all the materials required, consisting of a Set of Black Satin Mountings and Trimmings of elegant quality, Black Satin Ribbon for the lining, one No. 2 Star Crochet Hook, and one and one-half ounces of pure Florence Knitting Silk for knitting the straps.

With this material a lady can make a pair of handsome Suspenders, complete, which any gentleman would be proud to wear.

The Materials complete given for one new subscriber and $1.35 additional. Price $2.25. **Postage and packing 15 cents.**

Fine Momie Cloth Sideboard or Bureau Scarf.



This fine momie cloth Scarf has Mexican drawn-work ends with knotted Fringe, and is stamped with popular designs, suitable for Roman or Outline Embroidery.

This Scarf is designed for either Sideboards or Bureaus. It is 70 inches long, and a very superior article. We offer it at a very low price.

Given for one new subscriber and 50 cents additional. Price $1.40. **Postage and packing 15 cents,** when sent as a premium or purchased.

Handsome Splasher and Washstand Scarf.

This premium offer consists of a linen Splasher, 20 x 30 inches, stamped with an appropriate design, with handsome drawn-work and fringed edge.

Also, a pure all-linen Washstand Scarf, 16 x 48 inches, stamped with outline designs, with finished fringed edges and drawn-work.

Both given for one new subscriber. Price of both, 80 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Handsome Mantel Lambrequin.

Given for one new subscriber and 15 cents additional.

Mantel Lambrequins give a most pleasing effect to the furnishings of a room, and are very fashionable. This Lambrequin is made of the best quality of rich garnet felt, and is cut out and pinked, and also stamped with beautiful designs, all ready for working. We give with the Lambrequin, Polished Brass-head French Nails, and two large skeins of real Scotch Old-Gold Embroidery Thread. The size is 18 x 72 inches.

This Lambrequin is suitable for furnishing either a chamber, sitting-room, parlor or dining-room. Its use will add largely to the attractiveness of the room.

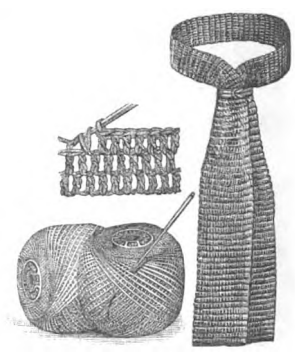
All given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Outfit of Brigg's Transfer Patterns.

Given for one new subscriber.

We feel sure that this Grand Outfit of Artistic Transfer Patterns will be fully appreciated by our subscribers. The Outfit consists of 150 Brigg's Transfer Patterns for Sorrento Work, Roman Embroidery, Cut Work, and for the Outline Work that is now so popular, also 1 Alphabet and 48 Initials of any one letter, suitable for Handkerchiefs, Table Cloths, Napkins, Towels, Doilies, etc., etc. These Initials come in assorted sizes.

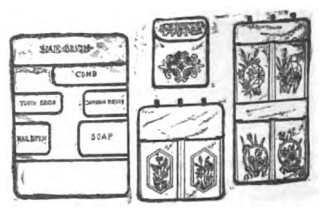
The Patterns can be transferred to the material desired by simple pressure of a warm flatiron. When so transferred the pattern cannot be rubbed off, but will look bright and clear until it has been worked. The assortment of Patterns given with the Outfit covers a wide range of work. They have been designed especially for us by a New York Artist of recognized ability.



If the Patterns were purchased separately they would cost at least $10.00. Our offer, therefore, is a most generous one.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Materials for Knitted Silk Scarf.

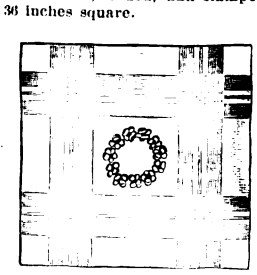


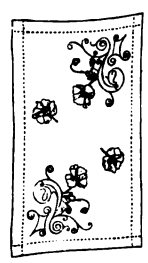
Knitted Silk Scarfs are now very popular. They are exceedingly durable, can be cleansed when required, and are also very handsome.

We give with each Outfit two balls Florence Knitting Silk, either white or black, one Crochet Hook, and full instructions for Knitting the Scarf.

These Materials are given for one new subscriber. Price 90 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Outfit of Stamped Linen Pockets and Cases.



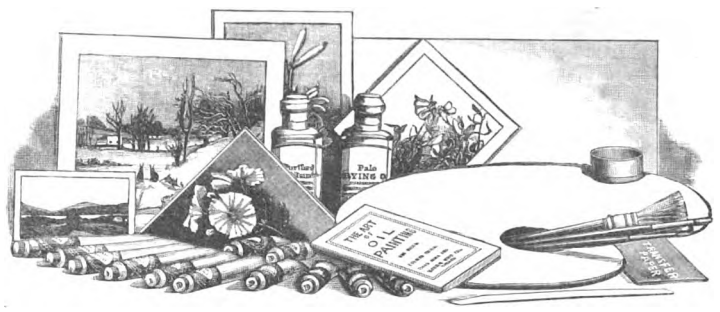


This package consists of sufficient Linen and Binding to make one full size **Toilet Case** for travellers, one **Duster Bag,** one **Two-Pocket Slipper** or **Shoe Case,** and one **Four-pocket Catch-all**; also, a sufficient quantity of real Scotch Scarlet Flourishing Linen for working the designs.

Given for one new subscriber and 10 cents additional. We offer it for sale for 90 cents. **Postage and packing 15 cents.**

Victoria Lawn Pillow Shams and Fine Linen Tray Cloth.

This premium offer consists of a pair of handsome Victoria Lawn Pillow Shams, corded, and stamped with wild roses. Each Sham is 36 inches square.



The Tray Cloth is pure Irish Linen, fine quality, hemstitched and stamped. Size, 17 x 28 inches.

We give both the Pillow Shams and Tray Cloth for one new subscriber. Price of both, 85 cents. **Postage and packing 10 cents.**

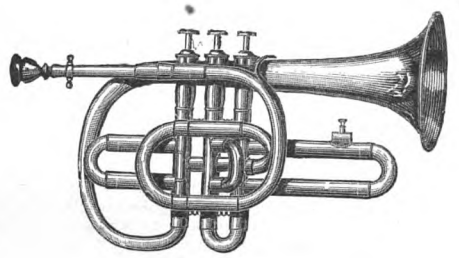
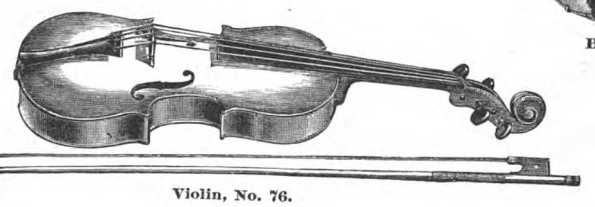
Superior French, German and American Musical Instruments.

The Companion Guitar. We do not use the cheap Guitars, for they are expensive at any price. The "Companion" is a domestic Guitar, made specially to our order. We warrant it unexcelled by anyin richness of tone, and it is fully warranted against warping and splitting, with proper care. It is a beauty. We prefer to use less and establish a solid reputation on a good article. Mahogany body, mahogany neck, raised frets, machine head, rosewood finger-board. A very light and highly polished instrument. Complete Instructor with each Guitar. There is no nicer Guitar made at any price. Given for four new subscribers and $5.00 additional. Price $10.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.



Guitar.

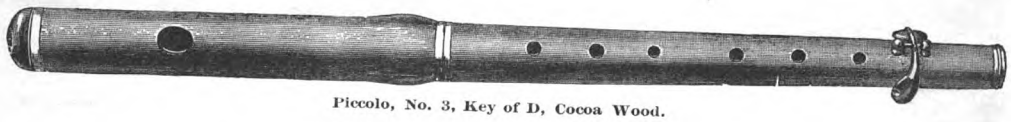
B Flat Cornet, No. 275. This is a real French Cornet. Henry Pourcelle, Paris, maker. It has a Case. Given for five new subscribers and $6.50 additional. Regular price $22.50. Our price $12.00, with Instruction Book. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.



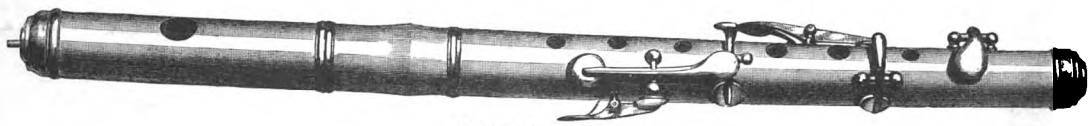
No. 275.

B Flat Cornet, No. 199. This instrument is of good quality, and is made in a thorough manner. It is the standard in tone and finish. It is packed in a substantial Cornet Case, with a handle. We give free a Cornet Instruction Book. Given for five new subscribers and $3.00 additional. We offer it for sale for $8.00; the usual price is $10.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. On receipt of $1.00 extra we will send the Cornet nickel-plated. An extension is included, so the key can be changed to A.

No. 199.

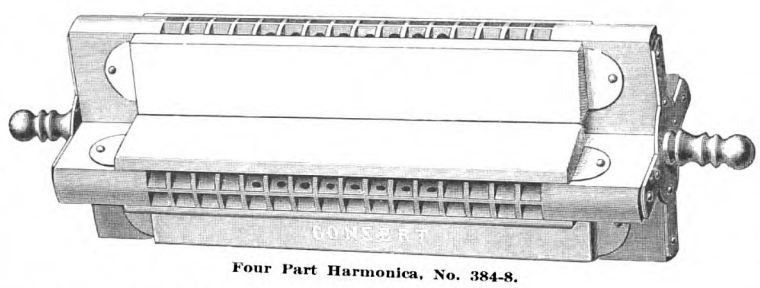


Straduarius Violin, No. 76, with Inlaid Bow. We recommend this as a superior instrument. The Violin is finished in a rich dark-brown shade, and very highly polished. The Finger-Board, Pegs and Tail Piece are solid ebony. The Bow has extra quality French hair, red polished Stick, Ebony Frog, Pearl Slide and Eye, German silver Button and Tip. The Case is extra fine, and is made of ebonized wood varnished, brass handle and hook, and is half lined with red flannel. We give with the Outfit a box of Rosin, and an extra set of Strings. This Outfit given for only three new subscribers and $2.75 additional. Price only $6.50. We pack the Outfit in a box. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased. We will include free a Violin Instruction Book with the Outfit.



Violin, No. 76.

U. S. Military Fife.



Piccolo, No. 3, Key of D, Cocoa Wood.

D Piccolo, No. 21.

Concert Four Part Harmonica, No. 384-8. This is a genuine "Thie" Harmonica. We have never seen for double the price so good a Harmonica as this. Its finish is excellent. The wood parts are made of European bird's-eye maple, and the metal trimmings are nickel-plated. Each set of Reeds contains 32 notes, and gives a separate key. The power is equal to a small Accordion, and much more easily played. These Harmonicas are used by professional players throughout the country. It is probably one of the most popular premiums that we now offer our subscribers. This fine Harmonica is given for one new subscriber and 35 cents additional. Price $1.25. **Postage and packing 20 cents,** when sent as a premium or purchased.

Four Part Harmonica, No. 384-8.

Banjo.

Banjo, No. 136½. This is a first class instrument in every respect. The Banjo is 33 inches long. The head is 11 inches in diameter, and is covered with fine calf-skin. It has a nickel rim and 24 polished nickel brackets. Solid walnut neck, oil finished; pegs, ebony finished. Given, with a full set of Strings, and Instruction Book, for only three new subscribers and $1.75 additional. Price only $5.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

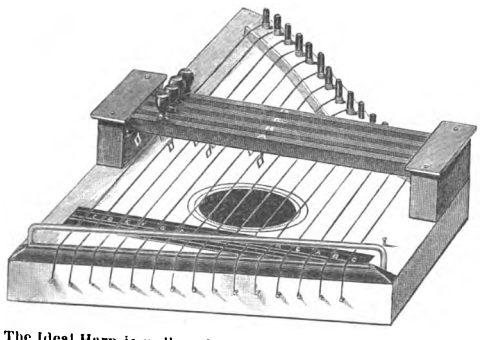
The U. S. Military Fife. This regulation Fife is made from solid brass, nickel-plated, and has a vulcanized rubber mouth-piece and raised finger-holes. It is the best instrument made, and is warranted. The tone is clear and sharp, which makes this Fife very desirable for use in drum corps. Being made of metal, it will never crack. We include Instruction Book. Given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Piccolo, No. 3. It is made from cocoa wood, and is mounted with German silver rings and key. It is made in two sections. With it we give Winner's Self-Instructor. Given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Piccolo, No. 21, Key of D. This is made from Grenadilla wood. It has six keys, cork joints, and German silver tips, rings and keys. First joint metal-lined. Winner's Self-Instructor included free. We offer it for sale for $2.35. Given for two new subscribers and 25 cents additional. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Gatcomb Student Banjo. The reputation of this Banjo is national. Each instrument is numbered, registered and fully warranted in tone and perfection of workmanship. German silver rim, polished walnut arm, ebony finger-board, raised frets, 20 nickel brackets, safety nuts, ebony pegs and tail-piece. Best calf head. No finer Banjo is needed for concert or exhibition use. Complete Instructor with each Banjo. Given for five new subscribers and $3.50 additional. Price $9.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or sale.

Improved Musical Xylophone. Of all the harmonic instruments for music the Xylophone is most pleasing and easily learned. Plain music and instructions accompany each. Eighteen bars of tuned wood and the 10 bars of half notes, all mounted on neat frames. Size each about 24 x 13 inches. Given for one new subscriber and 50 cents additional. Price of both instruments $2.00, and charges paid by receiver, when sent as a premium or purchased. We offer the 18-note Xylophone for one subscriber only. Price $1.00, and charges paid by receiver, when sent as a premium or purchased.



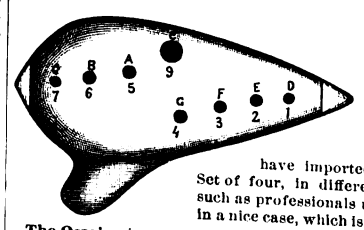
A CARD. Many of the articles on our Premium List are heavy, and can be transported by express quite cheaply—much cheaper than by mail. We would suggest that neighbors wishing to purchase goods from our Premium List can save the mail charges by clubbing their orders and having them forwarded to one address by express.

The Ideal Harp.

Given for one new subscriber and 50 cents additional.

This is the most popular musical instrument of recent times. It is easily learned. Both air and accompaniment can be played together. Is so light it can be carried on a picnic, an excursion, or to a party. An accompaniment can be played upon it in the dark. This renders it invaluable for out-door evening singing.

When the Chord Bars are pressed, the dart-shaped Pickers strike the wires and produce the chords. Each Bar strikes a separate chord,—four in all. Three major and one minor.

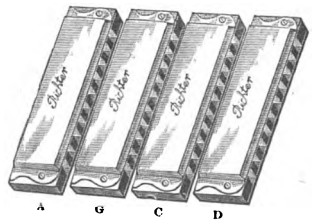


The Ideal Harp is well made, 18½ inches long and 9 wide. Two octaves. Tuned to the key of C. Is furnished with an ivory Plectrum, a Tuning Key and six Charts. Each Chart enables a tune to be played at sight, and with almost no previous practice.

Given for one new subscriber and 50 cents additional. Price $2.00. **Postage and packing 50 cts.,** when sent as a premium or purchased.

Case Ludwig Harmonicas and Italina Ocarina,

Key of D. Both given for one new subscriber and 10 cents additiona..



The Ludwig "Thie" Harmonica is one of the most perfect instruments made. Its sweet music always gives unbounded satisfaction. We have imported from Germany a Set of four, in different keys. They are such as professionals use, and are enclosed in a nice case, which is not shown in the cut.

The Ocarina is a peculiar-looking instrument, but it will play well, and make fine imitations of the notes of cuckoo, or mocking-bird.

This has been one of our most popular musical premium offers during the past five years. Notwithstanding that the new tariff has increased their cost, we shall continue to sell these goods at the old price.

We give the Set of four Harmonicas in a Case, and Ocarina, with printed instructions, for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Ocarina Self-Instructor. We will send a complete Instructor, with musical score of many tunes, on receipt of 25 cents.

Accordion, No. 780.

Given for one new subscriber and $1.25 additional.

This is a really good instrument for a small sum. It has two sets of reeds, ten keys, besides two sub-bass keys. It is a well-made instrument. It is 12 inches long and 10 inches wide. Two bass stops and double bellows, ebony and nickel finish.

We have sold this Accordion for a number of years. It has given universal satisfaction. It is the best low-cost Accordion now on the market.

This imported Accordion is given for one new subscriber and $1.25 additional, or for three new subscribers and 25 cents additional. Price $2.75. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Popular Games for the Home Circle.

Table Croquet Set, 8 Balls and Mallets.

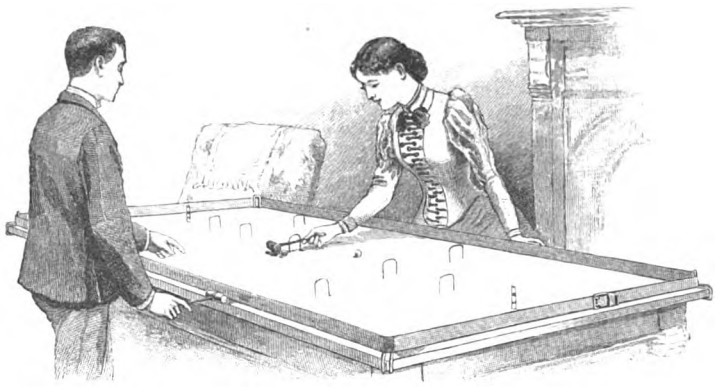

Table Croquet is one of our most popular and pleasing Games. It can be played by any number of persons not exceeding eight. For the long winter evenings it is especially appropriate.

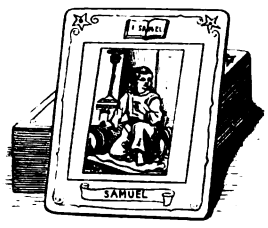
This Set consists of eight Balls, eight Mallets, Bridges, Stakes, Copper Wire Standards and Webbing. Stretch the Webbing around the edge of an ordinary dining-table by means of the Standards, and you have a good Croquet Table. The Set is beautifully polished and striped.

This Set of Table Croquet given for one new subscriber. Price $1.00. **Postage and packing 35 cts.**

The Royal Game of Parcheesi, Complete.

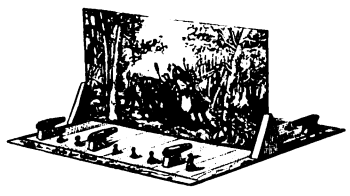


We have probably used a larger number of the Royal Games of Parcheesi than of all our other Games combined. It is very entertaining for the family circle. It can be played by either two, three or four persons at a time, besides greatly interesting the lookers-on. It is a Game of which people seldom tire, being full of exciting critical moments when a false move may result in the loss of any advantage gained during the entire game. Full instructions accompany each Game.

The Game of Parcheesi given for one new subscriber. Price $1.00. **Postage and packing 30 cents.**

Biblicards, or Six Games in One.

Given for one new subscriber.



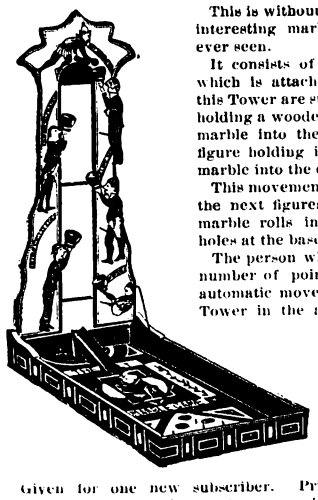
This new, delightful and instructive Game should be in every household.

It consists of a pack of sixty-six gilt-edged Cards, on which appear handsome Biblical illustrations taken from drawings and paintings by Doré, Raphael, and other famous artists. These illustrations are faithful Photogravure reproductions, and are printed in neutral tints.

The complete Set of Cards affords an opportunity to play six different Games. The Cards may also be used on the Sabbath for teaching and interesting the children in the Bible.

Given for one new subscriber. Price $1.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

Basalinda. A Game for Small Children.



This Game is designed for the use of children. It is a very popular Game, and its sale has reached an enormous number.

Basalinda was invented by the author of Halma.

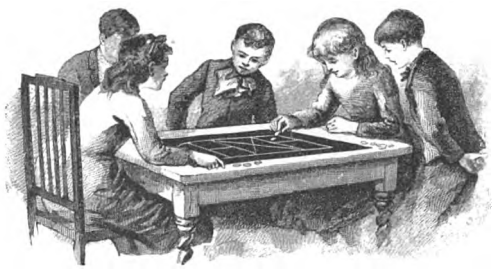
Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 40 cents,** when sent as a premium or purchased.

The Jolly Marble Game.

This is without exception one of the most interesting marble games that we have ever seen.

It consists of a Tivoli Board Base, to which is attached a high Tower. Upon this Tower are suspended five figures, each holding a wooden cup. The dropping of a marble into the highest cup causes the figure holding it to bow and deposit the marble into the cup next lower down.

This movement is repeated with each of the next figures in turn, until finally the marble rolls into one of the numbered holes at the base.

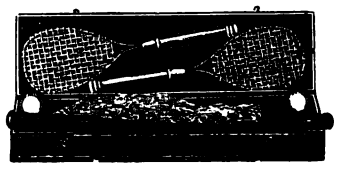


The person who thus scores the highest number of points wins the Game. The automatic movements of the men on the Tower in the act of dropping the balls into the wooden Cups add to the feeling of expectancy regarding the final position and count of the balls.

The Game is of interest to both old and young, and we predict for it an enormous demand.

Given for one new subscriber. Price $1.00. **Postage and packing 45 cents,** when sent as a premium or purchased.

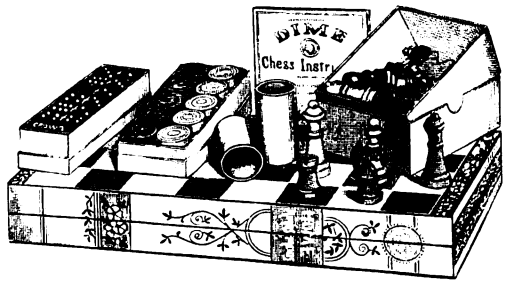
Tiddledy-Wink Tennis and Hop Scotch.



Two Distinct Games. Both given for one new subscriber.

Tiddledy-Wink Tennis and Tiddledy-Wink Hop Scotch are probably the most popular Games on the market. Hundreds of thousands have been sold, and still the demand continues. The Games are so well known that a description is not necessary.

Both Games given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.



Parlor and Lawn Toy Tennis Set.

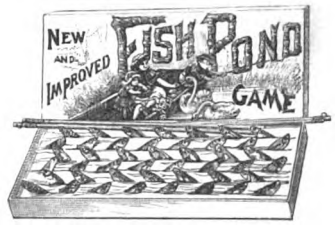
This Set consists of two Metal-Strung Rackets, one Net, two Poles, two Balls and a Book of Instructions. This Set can be used in the summer time or as a parlor amusement in the winter.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 40 cts.,** when sent as a premium or purchased.

Our Combination Game Offer.

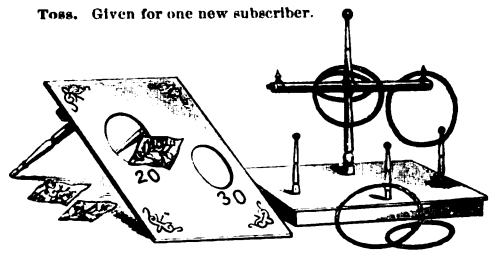
This Offer consists of a Combination Checker, Chess and Backgammon Board, 1 Set Patent Embossed Crown Dominos, 1 Set Chessmen, 1 Set Checkers, 2 Dice Boxes, 4 Dice, and a complete Chess Instructor.

The complete Combination given for one new subscriber. Price $1.00. **Postage and packing 40 cents,** when sent as a premium or purchased.



Improved Game of Fish Pond.

Given for one new subscriber.



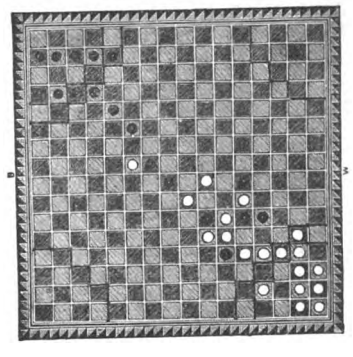
This is one of the best and most interesting of Games.

The Set we offer is put up in a handsome and durable manner. Its sales have been enormous.

Given for one new subscriber. Price $1.00. **Postage and packing 25 cents.**

Two Popular Games, Bean-Bag and Improved Ring Toss. Given for one new subscriber.

These Games are adapted for the lawn or parlor, and can be played by any number of persons. They are too well known to require description.



As a source of amusement for a large gathering, there can be nothing more desirable.

Both given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Game of Halma. Given for one new subscriber.

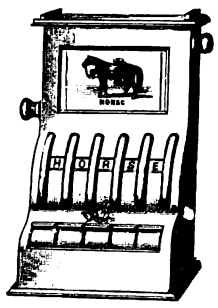
A new scientific Game, combining the interest of Checkers and Chess. It is the only important board-game, purely of skill, that has been invented since these Games were first introduced, more than two thousand years ago.

There seems to be no limit to the interesting problems and situations involved in this Game, both as a social game and as a solitaire. We give a large folding flat paper Board and Box, with Men and instructions.

Given complete for only one new subscriber. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Ten Social Games for the Home Circle.

We believe in Social Games for the home circle. To this end we have selected ten of our most popular Games, and have grouped them into a Home Entertainment Outfit, which is offered by us at a low price. Each Game is packed separately in a box. The Outfit consists of one each of the following popular Games: Authors, Jack Straws, Go-Bang, Puzzles, Leap-Frog, Auction, Trips of Japhet Jenkins, Game of Fortunes, Beast, Bird or Fish, and Spelling School. These ten Games are selected with reference to older members of the family as well as the younger, and may be played by a large number. This is a very special premium offer.



The entire Set of Ten Social Games for the Home Circle, as shown in the cuts, are given for one new subscriber. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

Beautiful Dolls, Toys and Specialties for the Children.

The Kindergarten and Mechanical Speller.

Given for one new subscriber and 10 cents additional.

This is one of our most pleasing Toys for children.

By simply pressing the keys in the base of the Speller any word of 2, 3, 4 or 5 letters can be spelled.

The pictures in the Panorama at the top are revolved by turning the Button shown on the side.

The Five Keys, when struck, bring any desired letters into view, spelling the name of any object represented, or any word desired. With this simple device a child learns to spell and to read almost in spite of itself.

It is beyond doubt "the" Toy of the present and future.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

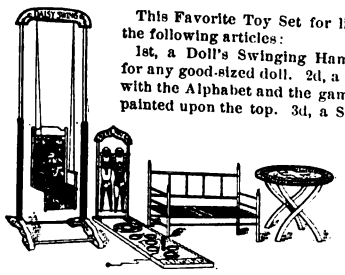
The Treasure Outfit for Children.

Given for one new subscriber.

This Outfit for Children will be found a treasure indeed.

It consists of Dennison's Outfit of Tissue Paper for making Paper Dolls, Dresses, etc., and one each of the following favorite old Nursery Stories, bound in paper and elegantly illustrated in colors: Cinderella, Jack and the Bean Stalk, Red Riding Hood, The Babes in the Woods, Goody Two-Shoes, Puss in Boots, The Three Bears, and Tom Thumb.

All given for one new subscriber. Price 90 cents. **Postage and packing 20 cents,** when sent as a premium or purchased.



Child's Toy China Tea Set.

This Tea Set is an entirely new shape, with hand-painted decorations. We import it fresh this season. The cut shows you the number of pieces and the assortment, and gives a fair idea of its beauty. The little housekeeper will find these dishes "just splendid" to play "5 o'clock tea" with.

Given for one new subscriber and 10 cents additional. Price $1.00 per Set. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Little Girl's Favorite Toy Set, No. 1.

This Favorite Toy Set for little girls consists of the following articles:

1st, a Doll's Swinging Hammock, large enough for any good-sized doll. 2d, a Folding Round Table with the Alphabet and the game of Fox and Geese painted upon the top. 3d, a Settee for a doll or a doll house, and the amusing marble game of "Here You Go."

The complete combination, as shown in the cut, given for one new subscriber. Price 90 cents. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Kitchen Set and Dishes.

All given for one new subscriber.

This Set consists of a Range, different from cut, Stove and Furniture, and about 50 useful Tin Dishes, Water Cooler, etc. The cut gives you a little idea of the variety. No Rolling Pin goes with this Set. This premium is about double the value of the one given last year for one new subscriber.

We give the Kitchen Set entire, with Dishes, for one new subscriber. For sale by us for 90 cents. **Postage and packing 40 cents,** when sent as a premium or purchased; or sent by express and charges paid by receiver.

Beautiful French Doll, "Marguerite."

See My Beautiful Doll. We've had nice times together. She's so pretty and good that I must hold her right up. Look at her! see her sweet face and her light blue eyes and long, flowing hair. Her slippers—how dainty they are, and how beautifully her dress fits. Her hat, with its pretty trimming, is so becoming to her complexion. I've had my Dolly for a year. Don't you want a Dolly just like mine?

The publishers of THE YOUTH'S COMPANION have their dressed dolls made in Europe after the celebrated Jumeau model, having the ball and socket joints at the elbows, shoulders, knees and hips, also joint at the neck. It has a beautiful Bisque head, with "natural" eyes and flowing hair.

Given for one new subscriber and 25 cents additional. Price $1.25. **Postage and packing 40 cents,** when sent as a premium or purchased.

Children's Amusement Package.

This collection consists of 1 Box of Crandall's Building Blocks, famous the world over as an entertainer of children; 1 Box of Shadow Transformations; 1 Box Picture Sewing, by which little girls can be interested to take the first steps in the art of sewing; and 1 Box Social Hours, containing a collection of games, tricks, puzzles, etc., for entertainment of the home circle.

All given for one new subscriber. Price 90 cents. **Postage and packing 35 cents,** when sent as a premium or purchased.

Dolly Dimple and Her Trunk of Treasures.

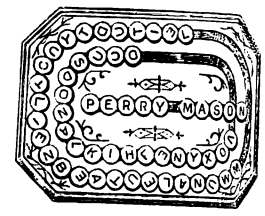
This Premium consists of a French Doll, with her Trunk of Treasures. These articles are as follows: Dolly Dimple, a beautiful little French Doll, who stands six inches high, has a real Bisque head, light hair, and movable head, arms and legs, and is dressed in the latest French Style. She is supplied with an extra Dress and Set of Underwear, also 1 Mirror, 1 Brush, 1 Comb, 1 Necklace, 1 Fan and one Watch and Chain.

In addition to Dolly Dimple and her complete Outfit of Treasures, we give a Doll's Saratoga Trunk, that is large enough to hold the Doll and the other articles named.

Dolly Dimple and her Trunk of Treasures are all given for only one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

The Whirling Musical Doll.

Given for one new subscriber and 10 cents additional.



Edison, the Great American Wizard, as he is sometimes called, has invented a Talking Doll that will say "Little Bopeep," etc., but it is very expensive. This Musical Doll is the nearest approach to a Toy of that kind that we have ever seen at a moderate price. A music box is inserted in the body of the Doll; by giving the handle a twisting motion the Doll both waltzes and plays a tune. It has a pretty Bisque head and curly hair; the Clown's cap and dress are made of satin and lace. It is 12 inches high. The whole makes a very pleasing Doll Toy for our youngest subscribers.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

The Universal Spelling Board.

Given for one new subscriber.

These Boards are 13¼ inches long by 9 inches wide, and have 56 lettered blocks.

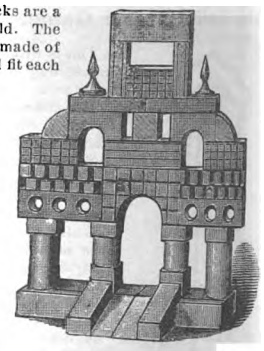
This device will not only amuse, but will also instruct the children. It will teach them the alphabet, also the art of spelling. The lettered blocks cannot be removed from the Board, to be scattered around the floor and lost. All mothers will fully appreciate this very special feature.

Given for one new subscriber. Price $1.00. **Postage and packing 30 cents,** when sent as a premium or purchased.

Doll's Toy House Set.

Given for one new subscriber.

This Set comprises the articles of furniture shown in the cut. They are made of imitation Ebony and Gold, upholstered in figured cretonne, and are much handsomer than the cut shows.

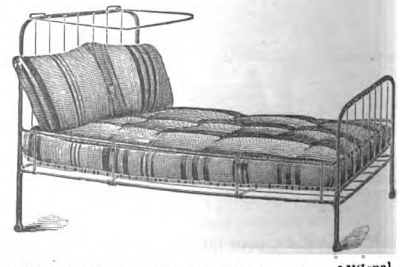


There are also paper Dolls and Wardrobe, with full directions for cutting, etc. These Sets come in assorted combinations, and will be sure to delight the little girls.

Given for one new subscriber. Price 90 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

Gilt Edge Building Blocks, No. 4.

The complete Set of Blocks given for one new subscriber.



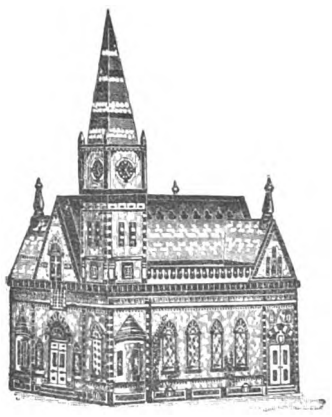
Well-made Building Blocks are a source of delight to a child. The Blocks which we offer are made of fine-grained hard wood, and fit each other with great accuracy.

The variety and quantity of Blocks are sufficient to build the most elaborate models, while the number of combinations that can be made is almost unlimited. They stand firmly, are indestructible, and will afford a profitable and fascinating pastime. A sheet of building designs is given with each Box. The engraving shows a few of the Blocks only. The Set complete contains 163 Blocks. The complete Set of Blocks given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Doll's Metal Bedstead, with Mattress and Pillows.

Given for one new subscriber and 10 cents additional.

This beautiful Bedstead will be a delight to a "little mother" for all the year round. It is made of solid metal, bright finish. It is very durable, and can be folded flat. Size, 11 x 18 inches. The handsomely striped Mattress and Pillows are all made up ready for use.



Given for one new subscriber and 10 cents additional. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

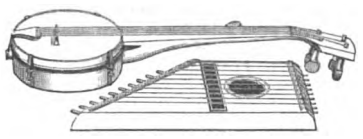
Digitized by Google

Popular Toys and Specialties for the Young People.

The Village Church. Given for one new subscriber.

This Toy is composed of a number of parts that, when put together, form a Church.

On the inside of the blocks composing the different parts of the Church, Scripture Texts from the Bible are printed.



Any child can easily put it together. It is durable, and will last for years. Last year the demand for this Toy was greater than the supply.

It will entertain the children, and also interest them in Bible History.

Given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

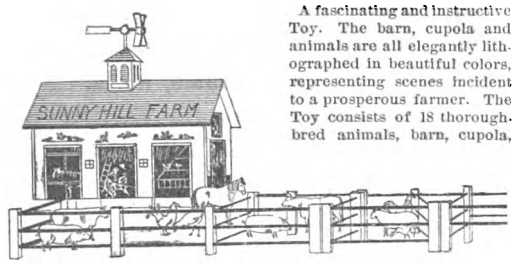
A Fine 10-String Zither and a Small Toy Banjo.

Both given for one new subscriber and 10 cents additional.

This premium offer is a very liberal one. It consists of a Fine Musical 10-String Zither, with Key, well strung and put together, and polished, and a small Toy Banjo with real skin drum-head and metallic strings.

We give the Zither and Banjo for only one new subscriber and 10 cents additional. Price of both, $1.00. **Postage and packing 50 cents,** when sent as a premium or purchased.

An American Panorama. Given for one new subscriber.

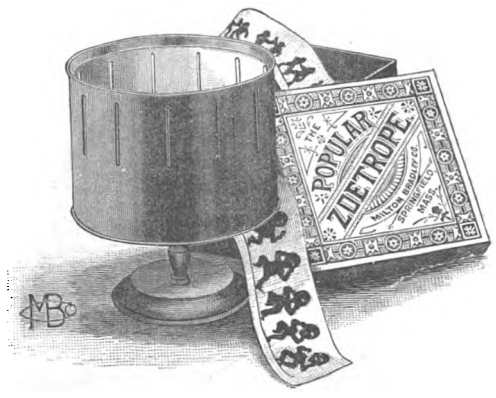


The thirty-five historical pictures forming this Panorama are lithographed on a continuous roll many feet in length. The pictures are beautifully colored.

We give with it a Descriptive Lecture, 42 Tickets for admission, and an attractive Show Bill,—a grand chance for the young people to make a little money.

Given for one new subscriber. Price 90 cents. **Postage and packing 20 cents,** when sent as a premium or purchased.

Sunny Hill Farm. Given for one new subscriber.



A fascinating and instructive Toy. The barn, cupola and animals are all elegantly lithographed in beautiful colors, representing scenes incident to a prosperous farmer. The Toy consists of 18 thoroughbred animals, barn, cupola, windmill, basement, driveway, and 6 feet of fence, every part of which is well-made. All parts pack into the barn, making a neat package nicely wrapped and labelled. Height of barn to top of cupola, 14 inches; length 13 inches; width 6 inches.

Given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The Popular Zoëtrope. Given for one new subscriber.

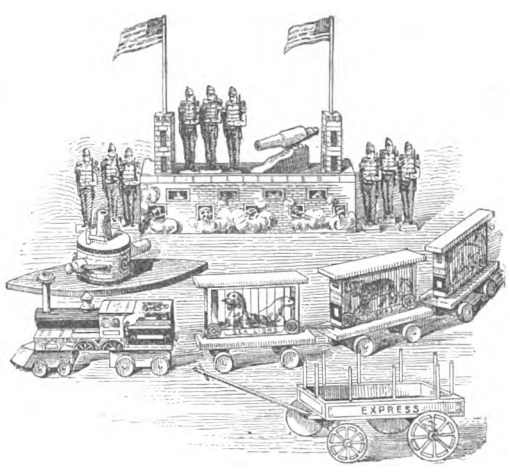
This curious instrument will help entertain a company of young or older people for hours at a time. The optical illusion is perfect.

The Zoëtrope causes simple figures printed on a strip of paper to become animated, so that life-like movements are imitated in the most natural manner. We give with each a Set of twelve pictures.

Given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

The Young Storekeeper's Outfit.

Given for one new subscriber and 10 cents additional.



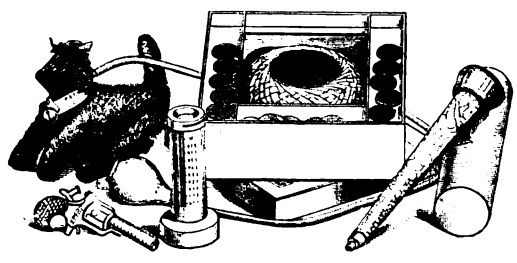
This is one of our most attractive premiums for the young people. It consists of: 1st, A Box containing an assortment of Toy Money, representing gold and silver coin to the amount of $100; 2d, Four sheets of Labels, 140 in all, to be cut up and attached separately to packages of bran or sawdust, supposed to contain whatever is printed on the Label; 3d, A form for making Paper Bags, with an assortment of bag paper; 4th, A price list of merchandise, groceries, dry goods, fancy goods and hardware; 5th, One Rapid Transit Cash Carrier. The Cash Carrier is complete, ready to set up, as seen in the cut. A bright boy and girl will need no instruction as to the proper way to "run a store."

Not only will this novel premium serve to amuse and entertain, but it will teach the children in a very practical way the use of money, how to make change rapidly, how to buy and sell, and to transact business.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 25 cents,** when sent as a premium or purchased.

The Boy's Favorite Toy Set.

Given for one new subscriber.

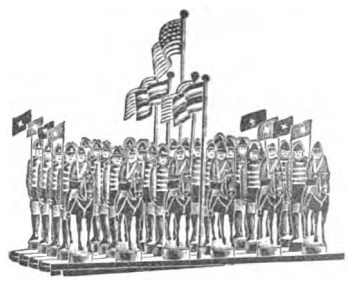


This Set of Indoor Toys will make the eyes of the little fellows sparkle with delight. It consists of a Toy Menagerie Train, a nicely-made Express Wagon, a Fort with Soldiers and Cannon, and a Monitor, with revolving turret in which is a Magazine Cannon. Last year this package of Toys for boys was one of our most popular premiums.

Given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The "Bonanza" Premium Package.

Given for one new subscriber.



This is our leading Premium Package for the young people.

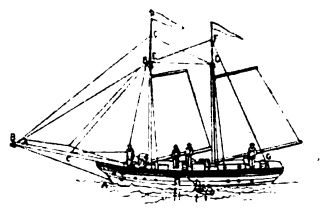
It consists of a Wizard Bubble Blower,—a most wonderful invention for blowing Twin, Double, Balloon and Dome Bubbles,—a Pocket Savings Bank that cannot be opened until it is full, a Dog that can be made to jump around the floor by simply pressing upon a rubber bulb, a Game of Tiddledy Winks, and a Toy Revolver for snapping caps. Powder cannot be used in this Revolver.

We give the "Bonanza" Premium Package, complete, for one new subscriber. Price 90 cents. **Postage and packing 25 cents,** when sent as a premium or purchased.

The Famous Royal Guards.

Given for one new subscriber.

The toy is sure to please the boys.



It consists of a company of soldiers mounted upon an extension base. The cut shows the Famous Guards standing in close marching order.

By means of the extension base, on which the Royal Guards stand, they can be made to go through the various drill movements and marches of an organized company. When fully extended the Guards stand in single file, the length of which is about eight feet.

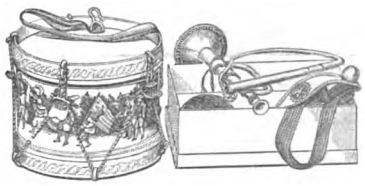
Given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Sail-Boat "America," on Wheels.

Given for one new subscriber.

This Boat on wheels is designed for an indoor amusement. It is a model of beauty, and will be sure to please the boys.

Its hold is capable of being filled with various articles, thus adding interest to its use as a toy.



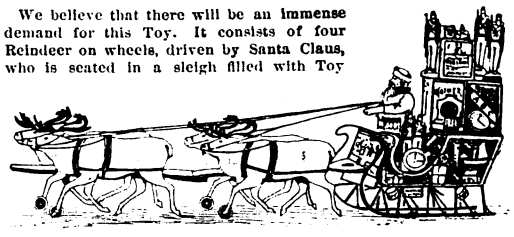
The Boat, including crew and several articles designed for the cargo, are all given for one new subscriber. Price $1.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Boy's Brass Snare Drum and Rein Set.

Given for one new subscriber and 10 cents additional.

This very attractive combination will be sure to please the boys.

It consists of a Snare Drum with 8-inch skin head and brass side, beautifully ornamented in lithographic colors. Also, a Boy's Rein Set that consists of 1 Nickel-plated Trumpet, 1 Braided Whip with Japanned Handle, and 1 Harness Rein with 2 Brass Bells.

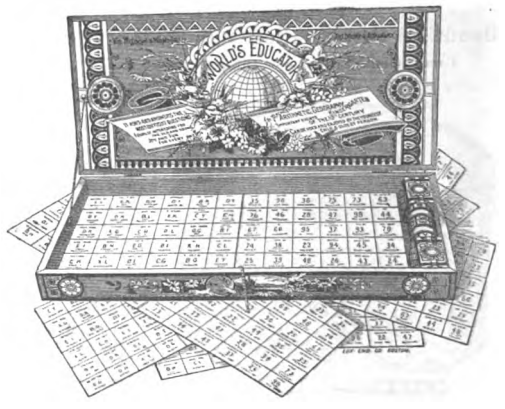


These articles are always very popular with the boys. We expect a large demand.

The Boy's Brass Snare Drum and Rein Set are all given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Santa Claus and His Reindeer Team.

Given for one new subscriber.



We believe that there will be an immense demand for this Toy. It consists of four Reindeer on wheels, driven by Santa Claus, who is seated in a sleigh filled with Toy Books, Drums, Marbles, Soldiers, Watch and Clock, all printed in colors.

Given for one new subscriber. Price $1.00. **Postage and packing 50 cents,** when sent as a premium or purchased.

The World's Educator. Given for one new subscriber.

This Game is a perfect treasure-box of knowledge and fun. It asks and answers the most difficult questions, and is equally adapted for old or young. Amusement and education are most happily combined in this Game.

Given for one new subscriber. Price $1.00. **Postage and packing 30 cents,** when sent as a premium or purchased.

Heavy Solid Gold Initial Ring, No. 255½. This massive Initial Ring is made of solid gold. It has an Onyx setting, with a solid gold Initial mounting. These Rings are very popular, and have a constantly increasing demand. When ordering be sure to give the initial desired. Given for two new subscribers and $1.50 additional. Price $3.50.

Friendship Ring, No. 602. This is solid gold, ornamented with two tiny enamel Forget-me-nots, with gold bangle. Given for one new subscriber. Price $1.00.

Solid Gold Amethyst Ring, No. 460. The stone-setting is a genuine Amethyst of fine quality. Given for one new subscriber and 20 cents additional. Price $1.50.

Ruby, Sapphire and Moonstone Ring, No. 669¼. This beautiful Ring is made of solid gold, with a Ruby, Sapphire and Moonstone setting. Given for one new subscriber and 25 cents additional. Price $1.50.

Rhine Stone Ring, No. 530. A heavy Ring of filled gold, set with a Rhine Stone Brilliant. Makes a handsome Ring. Given for one new subscriber and 25 cents additional. Price $1.50.

No. 3, Heavy Gold-Plated Ring. Large and handsome shape. Excellent quality. Given for one new subscriber. Price 85 cents.

No. B, Plain Solid Gold. This Ring is made of solid gold, but is much lighter than the one shown in the cut. Given for one new subscriber. Price $1.00.

The Improved Trenton Lever Watch, Chains, and Charms.

Curb Vest Chain, No. 274.

The "Curb" link Chain is always a great favorite among gentlemen. The Chain offered by us is made of heavy 12k. gold plate, and we feel confident that it will not disappoint our subscribers.

Given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 5 cents,** when sent as a premium or purchased.

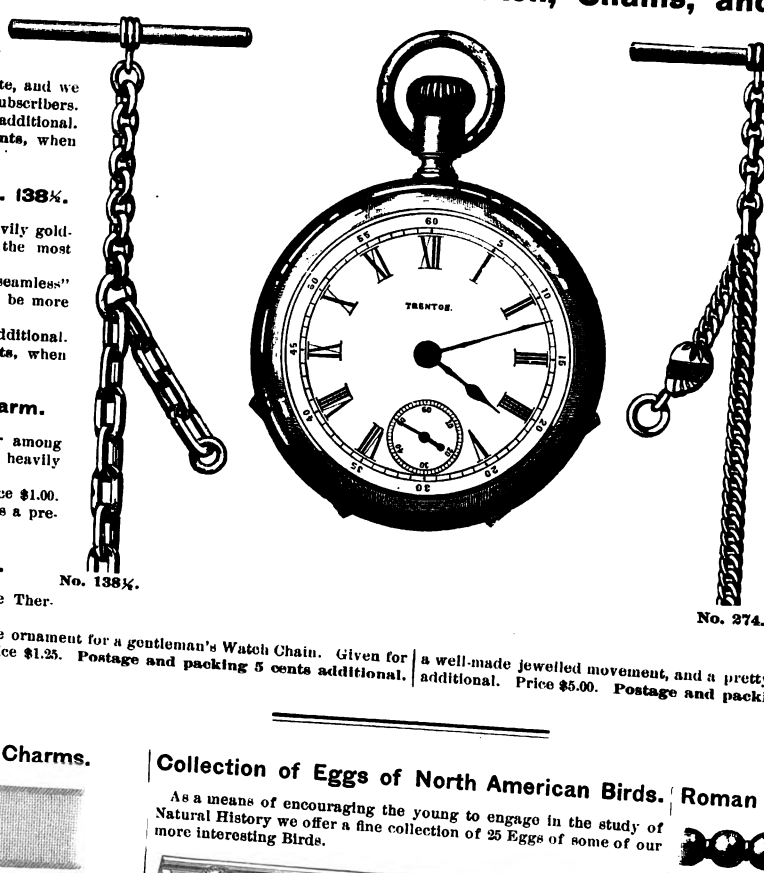
Gentleman's Watch Chain, No. 138¼.

This beautiful Chain for gentlemen is heavily gold-plated, and the pattern offered is one of the most popular now on the market.

The Chain is made of the well-known "seamless" links, and we feel that our subscribers will be more than pleased with it.

Given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 5 cents,** when sent as a premium or purchased.

Lady's Victoria Chain and Charm.



"Victoria" Chains are exceedingly popular among the ladies. This Chain is the latest pattern, is heavily gold-plated, and also very handsome.

We offer it for only one new subscriber. Price $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Thermometer Watch Charm.

This Watch Charm is made with a miniature Thermometer face and a polished Onyx stone back.

It is gold plated, and makes a very attractive ornament for a gentleman's Watch Chain. Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 5 cents additional.**

No. 138¼.

No. 274.

Trenton Lever Watch.

This is a genuine American Watch, made by the Trenton Watch Company.

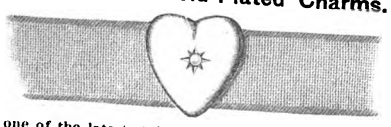
Description.—Gilt Movement; ¾ Plate; Stem-wind and Stem-set, with improved Back Racket (fitting any standard make of 18 size Case), quick-train (18,000 beats per hour); straight line Lever Escapement; Jewelled Balance Holes and End-Stones; Iridium Pallet Stones. The Case is solid Nickel Silver.

Special Notice.—This is not a cylinder, neither is it a Duplex Escapement. It is a genuine Lever Escapement, which all watchmakers will tell you is the best Escapement made.

A Reliable Watch.

This is the fourth year that we have offered these Watches to our subscribers. They have given satisfaction to the thousands who have obtained them.

It is in every way a better Watch for the price than can be purchased abroad.



Given for two new subscribers and $1.50 additional; or for one new subscriber and $2.00 additional. Price $4.00 each. **Postage and packing 10 cents,** when sent as a premium or purchased.

Note.—With each Watch we give an appropriate Nickel Chain and Charm. Some, however, may wish a fine gold-plated Chain. Send us $1.00 extra when you order the Watch, and we will include either of the elegant $1.75 Chains described on this page.

Lady's Watch, No. 2.

This is an attractive Watch for young ladies. It has a well-made jewelled movement, and a pretty nickel Case. Given for one new subscriber and $2.50 additional. Price $5.00. **Postage and packing 10 cents,** when sent as a premium or purchased.

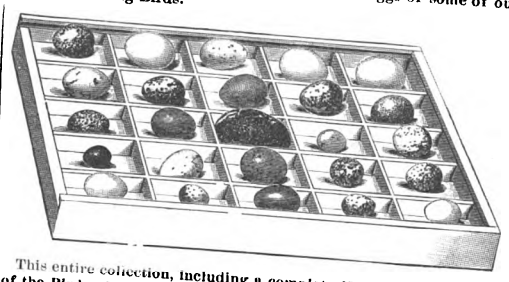
Sterling Silver and Gold-Plated Charms.

This is one of the latest styles of neck jewelry, and has become very popular. The Charm is attached to the neck by means of a satin ribbon, which encircles the neck. It gives a most stylish effect, and is very beautiful. We can supply these Charms either in Sterling Silver or heavy Gold-Plate. The Sterling Silver Charm is beautifully hand-engraved, while the Gold-plated Charm is set with a Pearl. When ordering be sure and state which kind is wanted.

Either Charm given for one new subscriber. Price 90 cents. **Postage and packing 5 cts.,** when sent as a premium or purchased.

Beautiful Combination Pincushion and Jewel Case. Given for one new subscriber.

This handsome Pincushion and Jewel Case is one of our most attractive premiums, for which we expect a large demand.

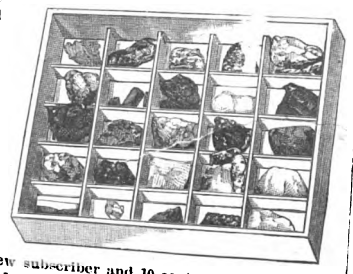


It consists of an Oxidized Silver-plated Jewel Case, with a Stuffed Plush Cover that can be used as a Pincushion.

The cover and box are lined with sateen. It is 2¼ inches deep and nearly 5 inches in width.

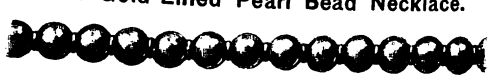
This beautiful Jewel Case is given for one new subscriber. Price $1.00. **Postage and packing 15 cents,** when sent as a premium or purchased.

Collection of Eggs of North American Birds.



As a means of encouraging the young to engage in the study of Natural History we offer a fine collection of 25 Eggs of some of our more interesting Birds.

This entire collection, including a complete Numbered Check List of the Birds of North America, are all given for one new subscriber. Price only $1.00. **Postage and packing 10 cents.**



A Mineral Collection.

This collection has been arranged and classified for us by a professional mineralogist, and consists of twenty-six large specimens, with descriptive list, giving the name, composition, and locality where found. We also include a copy of E. H. Richards's "First Lessons in Minerals."

All given for one new subscriber and 10 cents additional. Price $1.00. **Must be sent by express and charges paid by receiver.**

Roman Gold-Lined Pearl Bead Necklace.

This style of neck jewelry is very fashionable. Each Necklace is thirteen inches in length, is made by hand, and is warranted.

These beautiful Beads are made of Roman Pearl, with an inside lining of pure Gold. In appearance this Necklace cannot be distinguished from the solid goods. It will wear well, and always look handsome. Given for one new subscriber and 40 cents additional. Price $1.50. **Postage and packing 5 cents,** when sent as a premium or purchased.

Solid 14k. Gold Bead Necklace, No. 1. This beautiful Necklace is made of solid gold, but has a smaller bead than that shown in the cut. Given for five new subscribers and $2.50 additional. Price $6.00. **Postage and packing 5 cts.,** when sent as a premium or purchased.

The Beehive Registering Savings Bank.

The Beehive is the latest, best and prettiest of Registering Savings Banks.

They are made of cast iron, nickel-plated, and are so constructed that it is impossible to open the Bank until the full amount has been deposited for which the lock is set.

Save your nickels or dimes and the dollars will take care of themselves.

The Dime Bank opens at $10.00, and the Nickel Bank at $5.00. When ordering state which Bank is wanted

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 35 cts.,** when sent as a premium or purchased.

Fine Jewelry, Diamonds, and Other Specialties.

Solid Gold Scarf or Stick Pin, No. 1.

This Scarf Pin is made of solid gold, and is very handsome. It is supplied with either a Rhine Stone or Moonstone Setting. When ordering be sure to state which one is wanted.

Given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Engagement Ring, Diamond Setting. This beautiful Engagement Ring is made of 18k. gold, set with a ¼ carat perfect and pure white Diamond, and is very beautiful. For an Engagement Ring nothing better or more desirable could be found. We will furnish either a Tiffany or Belcher style of setting.

Given for ten new subscribers and $20.00 additional. Price $30.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Beautiful French Pearl Necklace.

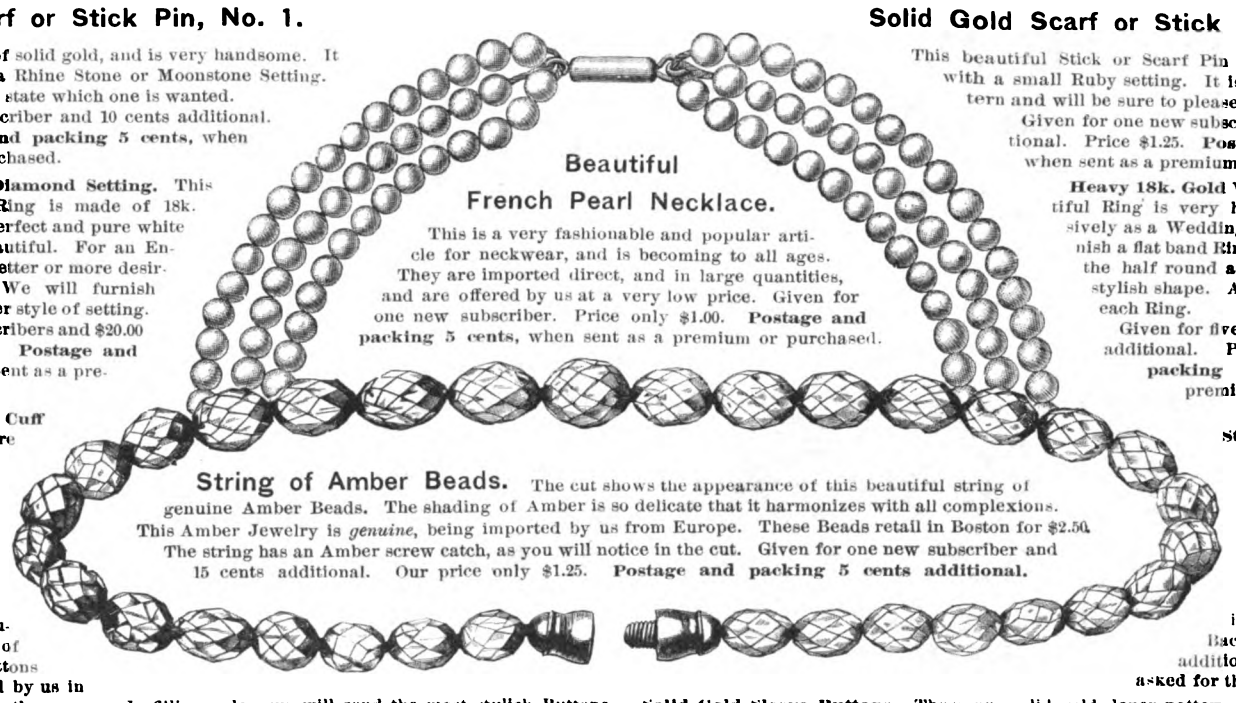
This is a very fashionable and popular article for neckwear, and is becoming to all ages. They are imported direct, and in large quantities, and are offered by us at a very low price. Given for one new subscriber. Price only $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Solid Gold Scarf or Stick Pin, No. 2.

This beautiful Stick or Scarf Pin is made of solid gold, with a small Ruby setting. It is a very attractive pattern and will be sure to please our subscribers.

Given for one new subscriber and 30 cents additional. Price $1.25. **Postage and packing 5 cents,** when sent as a premium or purchased.

Heavy 18k. Gold Wedding Ring. This beautiful Ring is very heavy, and is used exclusively as a Wedding Ring. While we can furnish a flat band Ring, yet we would recommend the half round as being the latest and most stylish shape. A handsome Box given with each Ring.



Given for five new subscribers and $2.50 additional. Price $7.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

No. 1. **The American Lever Cuff Buttons.** The Buttons are made from the best rolled gold-plate, with Figured Fronts, and are set with assorted Agates, Tiger-eye, Blood, Onyx and Gold Stones, etc. Many thousand pairs of these Cuff-Buttons have been sold by us in the past, with great satisfaction to the wearer. In filling orders we will send the most stylish Buttons that we have on hand at the time the order is received. We carry a very large assortment of patterns.

We give any two pairs for only one new subscriber. For sale by us for $1.00 for two pairs. **Postage and packing 5 cents,** sent as a premium or purchased. Price for single pair, 60 cents post-paid.

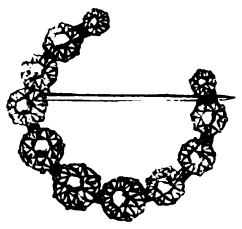
String of Amber Beads.

The cut shows the appearance of this beautiful string of genuine Amber Beads. The shading of Amber is so delicate that it harmonizes with all complexions. This Amber Jewelry is *genuine*, being imported by us from Europe. These Beads retail in Boston for $2.50. The string has an Amber screw catch, as you will notice in the cut. Given for one new subscriber and 15 cents additional. Our price only $1.25. **Postage and packing 5 cents additional.**

No. 2. **Gentleman's Diamond Stud.** Diamond Studs are once more very popular. Only the very finest gems should be selected. Examine our price-list of Diamonds offered elsewhere. We will mount any of these Diamonds in Solid Spiral Back for $2.50, in addition to the price asked for the Diamond.

Solid Gold Sleeve Buttons. These are solid gold, lever pattern, and for real gentility and wear they are very desirable. Just the thing for presentation gift. Given for three new subscribers and $1.00 additional. Price $4.00 per pair. **Postage and packing 5 cents,** when sent as a premium or purchased. For 50 cents extra we will engrave a beautiful Initial on each Button.

Gold-Plated Brooch, Moonstone Setting.



This Brooch is made of the very best of gold plate, and is set with a fine Moonstone.

It is very handsome, and will be sure to please the purchaser. It is an exact copy of a popular solid gold Brooch, and in appearance cannot be distinguished from it.

Given for one new subscriber and 30 cts. additional. Price $1.35. **Postage and packing 5 cents,** when sent as a premium or purchased.

Real Brilliant Rhine Stone Brooch.

This is one of our leading premium offers for ladies. It consists of a heavy rolled-gold Brooch, crescent pattern, set with eleven beautiful Rhine Stones.

This class of Brooches is now being largely worn. The stones are very brilliant. The Brooch is very showy and attractive.

This beautiful Brooch is given for one new subscriber. Price 90 cents. **Postage and packing 5 cts.,** when sent as a premium or purchased.

Fine Gold-Front Baby Pins, Hand Engraved.

These Pins have solid gold fronts with half pearls, and are hand-engraved. For the use of young children these Pins are a real necessity. They are also ornamental in appearance and are very attractive.

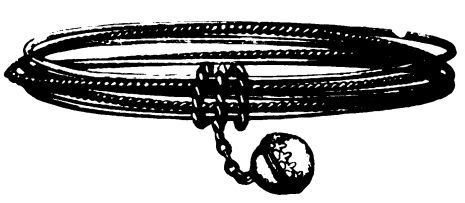
A pair of these fine, hand-engraved, Gold-Front Baby Pins given for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Solid Gold Bar Pin. Moonstone Setting.

This Pin is made of Solid Gold, with a Moonstone setting. The design is very chaste and beautiful.

Given for one new subscriber, and 40 cents additional. Price $1.50. **Postage and packing 5 cents,** when sent as a premium or purchased.

Oxidized Silver-Plated Forget-me-not Pin.



This Pin is made of white metal, Sterling Silver-Plated, and is formed of Forget-me-not blossoms.

The Pin is of superior quality and very beautiful.

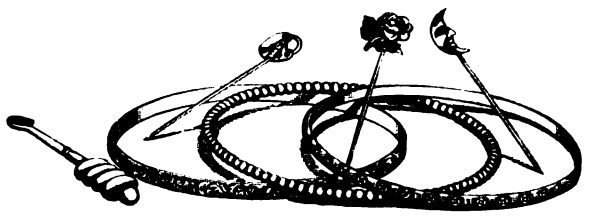
The Pin is given for one new subscriber. Price 75 cents. **Postage and packing 5 cents,** when sent as a premium or purchased.

Cluster Bangle Bracelet. Given for one new subscriber.

This is the fashionable Cluster pattern Bracelet. Heavy gold plated, with a pretty Chain and Ball Bangle. The combination makes one of our most attractive and popular premium offers.

This Bracelet is given for one new subscriber. Price $1.00. **Postage and packing 5 cents,** when sent as a premium or purchased.

Diamonds. Pure White and Perfect.



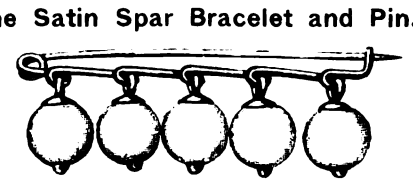
1-16 ⅛ ¼ ⅜ ½ ⅝ ¾ ⅞ 1

We are now able to offer Diamonds at importers' prices. They are warranted to be absolutely **perfect, pure white** and **brilliant.** Inferior Diamonds can be supplied at a less price. The prices given below are for the unmounted Stones, and are as follows:

1-16 carat, $4.00.	⅛ carat, $8.00.	¼ carat, $15.00.
⅜ carat, $24.00.	½ carat, $36.00.	⅝ carat, $50.00.
¾ carat, $70.00.	⅞ carat, $90.00.	1 carat, $122.00.

Special attention given to supplying solid gold mountings in the latest styles and at very low figures. The diagram shows approximate sizes of the Stones we offer. Write to us for prices.

Sterling Silver-Plated Jewelry Offers.



For value and beauty these goods are almost equal to the solid silver. Each article is handsomely oxidized.

Offer No. 1. Three heavy Bangle Bracelets and two Stick Pins given for one new subscriber and 10 cents additional. Price 90 cents.

Offer No. 2. One Bangle Bracelet, one Stick Pin and one beautiful Glove Buttoner given for one new subscriber and 10 cents additional. Price 90 cents.

Postage and packing on either of these Offers 5 cents.

Genuine Satin Spar Bracelet and Pin.

The pendants to the Pin and Bracelet are made of Satin Spar. The Wire is gold-plated. The Spar has a beautiful Satin effect. The Pin only is shown in the cut. The Bracelet matches the Pin.

We give the Spar Bracelet and Pin for one new subscriber and 10 cents additional. Price $1.00. **Postage and packing 5 cents.**

Gentlemen's Solid Gold Bosom Studs.

These Studs are made of solid gold, and are very stylish and handsome. They match the Solid Gold Sleeve Buttons offered elsewhere.

We offer them as premiums because there is a large demand among gentlemen for just such a Stud.

The Set of three Studs given for one new subscriber and 50 cents additional. Price $1.50. **Postage and packing 5 cents.**

Gold-Plated Stud Set, with Chain.

These Stud Sets are used largely by ladies and children, and are not only a great convenience, but are also very handsome. Made of fine gold-plate, satin finish.

Given for one new subscriber. Price 90 cents. **Postage and packing 5 cents,** when sent as a premium or purchased.

Real Hand Painted Brooch. Heavy Gold-Plated Setting. Given for one new subscriber and 20 cents additional.

We expect that there will be a large call for this elegant Brooch, as it is the very latest and most stylish article of jewelry for neck wear.

It is made of heavy gold plate with a real hand-painted mounting, and is surrounded with the beadwork which is now so popular.

It is very handsome, and one of our most attractive premium offers.

The quality of material and workmanship is all that could be desired.

Given for one new subscriber and 20 cents additional. Price $1.10. **Postage and packing 5 cts.,** when sent as a premium or purchased.

Beautiful Garnet Pin. No. 426.

This pin is made to our special order in Bohemia, Germany. It is composed of 35 cut Garnets, set in gold fashioned to resemble a spray of Forget-me-nots. It is the most beautiful Pin that we have ever offered our subscribers. The garnets are rich in color, and are so mounted as to give a most elegant effect. The demand for this Pin has been very large.

Given for one new subscriber and 70 cents additional. Price $1.75. **Postage and packing 5 cents,** when sent as a premium or purchased.

Handsome Sterling Silver Bracelet.

This Bracelet is made of Sterling Silver, bead pattern, and is very handsome.

It can be used as a necklace, if so desired, by simply unwinding the coil. It is self-adjustable, and should conform itself to any ordinary-sized wrist. Given for only one new subscriber and 25 cents additional. Price $1.15. **Postage and packing 5 cents,** when sent as a premium or purchased.

Garnet Bracelet, with Gold-Plate Guard Chain.

This beautiful Bracelet is set with about 50 fine cut and brilliant Garnets. The Bracelet is made of heavy rolled gold-plate, with hinge and spring catch, and has a gold-plate Guard Chain not shown in cut. We have used many thousands of this popular Bracelet. The demand is as large as ever.

One Garnet Bracelet given for one new subscriber and 45 cents additional. Price $1.75 each. **Postage and packing 5 cents.**

Real Tortoise Shell Hair-Pin.

Given for one new subscriber and 15 cents additional.

Articles made of this shell are always rare and expensive. We import this Pin direct, in no other way could we make such an offer. If made here it would cost twice our price. These Pins are good color and handsomely mottled. The hand-carving is fine. Size 4½ x 2 inches. Remember this is guaranteed the genuine article.

Given for one new subscriber and 15 cents additional. Price $1.00. **Postage and packing 5 cts.,** when sent as a premium or purchased.

Digitized by Google

The Extra Quality Revere Granulated Sugar has long been conceded by consumers to be the best in this country, and now this fact is emphasized by some of the wholesale grocers charging more for it than for any other. All first-class retail grocers supply it to their customers at the same price as any other granulated, the Revere Refinery enabling them to do this by its policy of still continuing to fill orders for twenty barrel lots at the same price as for a larger quantity. A Childlike Confidence—in the efficacy of Carlsbad Sprudel Salts is universal throughout the world. Nature's remedy for Constipation, Gout, Rheumatism, Kidney Troubles, Diabetes, Fatty Degeneration, and all Liver Troubles.

Our rich Americans visit Carlsbad. The crowned heads of Europe have been visiting this historic spot, when in search of health, for the past 500 years.

You can now get the same treatment at any drug store, in the shape of Carlsbad Sprudel Salts.

Not a nauseating remedy.

Men and women of sedentary habits will find life a pleasure after taking this treatment for one week.

The genuine have the signature of "Eisner & Mendelson Co., Sole Agents, New York," on every bottle.

A sample bottle mailed upon receipt of 35 cts. in postage stamps.

DIXON'S Graphite Paint.

Graphite is as pure, sweet and healthful as charcoal. It is not affected by acids or any known chemical.

DIXON'S GRAPHITE PAINT is unequalled for Tin, Wood or Iron. It is the most economical as well as the most durable. It covers 2 to 3 times more surface and lasts 4 to 5 times longer than lead, mineral or metallic paints. It is used on new work or over old paints. It is used as a priming coat for light-colored paints. It is not a new, untried article. It has been in the market for 25 years. We know of roofs painted with DIXON'S GRAPHITE PAINT that have not been repainted in from 10 to nearly 20 years.

GRAPHITE PAINT is beautiful as well as durable. No other paint should be used on roofs which shed water for drinking or cooking purposes.

"There goes another buttonhole!" Perhaps, next to having your collar-button roll under the bed or bureau when you are in a hurry, there is nothing more exasperating than to have a buttonhole tear out just as you are congratulating yourself that your collar is safely buttoned.

This only happens with laundried Collars where the chemicals used to eat off the dirt eat up the fibre of the collar.

This cannot happen with the **LINENE Reversible Collars.**

One laundried collar costs from 15 to 25 cents.

One **BOX** of **TEN Linene Collars** costs only 25 cents.

Send for samples; wear them and decide for yourself!

"Linene" TRADE MARK.

The Linene Collars are superior to Laundried Collars in comfort and convenience. They are made in all the Correct Styles and are unsurpassed in appearance.

It will cost you **only 6c.** to get a sample of any style collar and a pair of cuffs, or you can get a box of TEN collars or five pairs of cuffs for 25c. **They are comfortable and cheap, and are made of fine cloth with both faces finished alike.**

ZULEIKA.

In Three Chapters.—Chapter I.

A Norseman in Stamboul.

Colonel Ring was a Norwegian officer who had entered the Sultan's service. In the war of 1877-78, between Russia and Turkey, he distinguished himself on many occasions and won the friendship and admiration of his general, Osman Pasha.

After the retirement of the victorious Russians, Colonel Ring desired to take his leave and return to his own country; but the Sultan begged him to remain and detained him from year to year, for he found great advantage in the Colonel's services, and became attached to him personally. The frank and open manner of this blue-eyed Norseman, in whom he had complete confidence, was particularly pleasing to the sombre and suspicious ruler of the Moslems, surrounded as he was by dangers and intrigues.

Colonel Ring soon had an opportunity to demonstrate his good faith; for it was he who discovered the formidable conspiracy of palace officials, whose design it was to assassinate the Sultan and proclaim his nephew Ishmael.

Prince Ishmael, who was the oldest son of the harem and the heir to the throne, was a boy of sixteen. He was quite innocent of any connection with the conspiracy in his behalf. It was owing to the Sultan's fondness for Colonel Ring that the Prince was permitted to pass much of his time in the company of the Colonel's son Claude.

The Prince was a tall, slender lad, with a dark complexion and large, inscrutable black eyes. He looked sickly, and though he had tutors who instructed him in many things, he was not overburdened with learning.

The poor fellow was never allowed to do anything that he liked to do, and though he was to be the ruler of the Ottoman Empire, he could not have bought the liberty to play leap-frog, run a foot-race or turn hand-springs, with all his splendid possessions.

He was never left alone for a minute by day or by night, and the elaborate mummery of bows and prostrations and salutations which every one must go through who approached him, made his life a burden to him. When Claude Ring, introduced for the first time, refused to kneel or to perform any of the antics which Turkish custom required, the Prince was seized with a great liking for him and asked him to come back often.

It was a great annoyance to Ishmael that he could not learn to sit a horse well. Riding with a master, in a ring strewn with tan-bark, was exceedingly wearisome to him, and neither martial music nor respectful praise nor blame could make him hold his body erect and carry himself like a warrior and the future ruler of an empire.

Prince Ishmael's bearing was listless and self-conscious. His arms and legs were loosely hung on their joints, and in spite of his gorgeous, gold-embroidered uniforms he made an impression of weakness rather than of strength.

Claude Ring, though half a year his junior, weighed ten pounds more than the Prince, and with his broad chest, strong, wiry limbs and well-knit frame, was greatly his physical superior.

Claude's horsemanship was so good that it occurred to Ishmael's head tutor that the young Norseman might perhaps be able to teach something of his skill to the Prince. The Sultan found the suggestion a good one, and gave his consent.

From that time on a change came over the Prince's behavior.

He copied, in innocent fashion, Claude's bearing and manner, particularly the fling of his head and his turns of speech. Little by little, as he rode at Claude's side, in the parks and suburbs of the city, along the smiling shores of the Bosphorus, he began to open his heart to his companion.

Claude told him about his childhood in Norway; about the shells and conchs with which he played on the beach, making believe that they were cows and horses; about the fish he caught, and the snares he set for thrush and ptarmigan, and the little mill-wheels, made with his own hands, which he set going in the little waterfalls of brooks and rivulets.

No tale of the Arabian Nights could have been more wonderful to Ishmael than these simple narratives of boyish sport. He longed with all his heart to be a boy instead of a prince.

Claude chooses Zuleika.

About a month after his engagement as Prince Ishmael's companion, Claude was summoned to an audience with the Sultan. He could not imagine what the Commander of the Faithful wanted of him, and feared that it meant something unpleasant. He waited for half an hour in an ante-room of the palace, and was then ushered into the presence of a dark, sad-looking man of about forty years, who wore a gold-embroidered fez on his head, and the breast of whose coat was ablaze with diamonds.

"I wish you to accept a reward for your kindness to Prince Ishmael," said the Sultan, having nodded in response to Claude's respectful greeting.

"Kindness, your majesty, ceases to be kindness when it is rewarded," answered the boy.

This answer seemed to please the Sultan. He smiled in a sad but friendly way and said:

"When you are older, my boy, you will learn that a Sultan cannot accept a kindness from any man. He must spoil it by paying for it."

"If that is so, your majesty, I submit. I will accept whatever it may please your majesty to give me."

"You are an excellent horseman. How would a fine horse please you?"

"Nothing would please me better."

"Then you may go to my stables to-morrow, and there you shall select any horse that you like, except my saddle-horse, Nouredin."

"I thank your majesty with all my heart."

The Sultan made a slight motion of dismissal with his hand. Claude made a profound bow and backed out of the audience room.

Mudir Pasha, the Sultan's Master of the Horse, called on Claude the next day, and conducted him to the Imperial Stables. The boy spent the entire forenoon examining one splendid horse after another, as it was led out before him and put through its paces. He had tried many fine horses, and was half-ashamed of his indecision, when he caught sight of an exquisite animal in a box-stall, in a remote corner of the stable.

"Please open that window," he said to the groom, "and have the kindness to lead that horse out, so that I may look at it."

From the glance the groom exchanged with the Master of the Horse he soon perceived that there was some design in keeping this animal, as far as possible, out of sight.

"Oh, you don't want that vixen," said the equerry. "She is the most vicious beast in the whole stable."

"Never mind," Claude replied. "I should like to have a look at her any way. What is her name?"

"Zuleika."

Zuleika was led out into the court-yard before the stable, and Claude's heart thrilled at the sight of her. She was a dapple-gray Arabian mare, not very large, but of noble shape, and with a head so exceedingly beautiful that it was impossible to look at it without being filled with earnest admiration of it. There was fire and intelligence in her black eyes, and an alertness and restrained vigor in the small, silky, forward-pointed ears, which showed her mettle.

Her slender legs were absolutely faultless. Claude fancied he could see them bearing him across the country at a graceful canter or a long, swirling trot.

He put his hand gently on her shoulder and limbs, and she gave a quick start as if she resented it. Claude was greatly pleased with her. She was a princess if ever there was one. Never did noble blood declare itself more plainly in shape and look and demeanor.

The shy, resentful glance she gave him, as he ran his hand down along her hind-legs, did not disturb him. She had a personality, this lovely beast, not the mere passive docility of what is called a good horse, but a sensitiveness like that of an intelligent human being.

"I think this will be my choice," said Claude to the Master of the Horse. "I'll ride her home now, if you'll kindly lend me a saddle."

"Don't be rash, young man," the Turk replied, with a malicious laugh. "You'd better try the mare before you make up your mind."

"All right," said the boy; "but my mind is made up already."

It made Claude a trifle uneasy to remark the by-play of swift protestations and glances which went on between Mudir Pasha and his underings when they supposed they were unobserved. It began to dawn upon him that he had selected the most precious horse in the Imperial Stables, and he knew enough of the Turkish character to be aware that a "Giaour," or Christian, would not be permitted to carry off such a prize if these men could prevent it.

He therefore took the precaution, when the mare was returned to him, to examine the bucklings of the various straps and to push his hand under the saddle.

He thought for a moment that his suspicion had been groundless. But as he inserted his finger under the saddle-lining he felt a scratch, as of a sharp metallic point. A steel rowel, shaped like a burr, with a dozen keen needle-points, had been so placed that the very instant he added his weight to the saddle, the cruel needles would pierce into the back of the horse.

Claude had been too long in Turkey to be astonished at this exhibition of treachery. He knew, too, the folly of showing the manly wrath which he felt. With the utmost coolness he pulled out the rowel, and without the moving of a muscle in his face, tossed it away.

Having tightened the saddle-girth he then mounted Zuleika, and raising his hat to the Master of the Horse, was about to gallop away.

Scarcely had he turned his head when the riding-whip which the Turk held in his hand whizzed through the air and cut with vicious force across the haunches of the mare.

With a wild snort Zuleika reared, tossed her head in the air, whirled about the court with furious swishing of tail and clatter of hoofs, and struck out madly with her hind-legs; but seeing that her rider still held her with his powerful knees as in a vise, she gave a bound that almost wrenched him from his seat, and then shot out of the gate.

"He is a dead man," said Mudir Pasha to the equerry, as he lighted a cigarette and flung the match on the pavement.

"Allah is great," answered the groom. "He will not let a Giaour carry off the pride of the Moslems."

It looked for a while as if the Turk's prophecy were to come true.

Zuleika dashed away through the narrow, winding streets with a blind and headlong speed, leaping over all obstacles. Now she upset a pedlar's cart, now she knocked down a soldier, and now she made havoc in a pack of street dogs that had congregated at a corner.

Like a continuous salvo of musketry sounded the sharp, furious hoof-beats upon the stone pavement, as with outstretched neck, ears laid back, foaming bit and distended nostrils the excited animal darted away past shops and bazaars, past gardens and villas, and out into the open country.

Now Claude had the wide country before him with broad avenues and little traffic. It was simply a question of grit and endurance. He seemed to perceive a slight slackening of Zuleika's speed, though she was yet rushing on at a desperate pace. It was still impossible to bring her to a stop.

On his left the shining Bosphorus expanded, like a burnished mirror. From the villas along the water-front piers ran out into the strait.

A daring thought flashed through Claude's brain. What if he gave Zuleika a bath in the Bosphorus? That would cool her ardor and

Digitized by Google

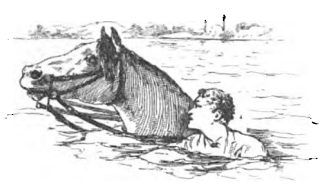
bring her to her senses, before she had run herself to death. With him to think was to do, and in a moment Zuleika was headed for the water. She beat a quick tattoo on the boards of a pier, and then plunged with a tremendous splash into the Bosphorus.

It was a stratagem for which she was wholly unprepared, and she had not swum a dozen rods before there was a sudden relaxation of effort, and she quietly turned her head about toward her rider, as if to see what manner of man he was.

"Zuleika, my beauty," he said, leaning forward and patting her neck, "it was not I who struck you, you lovely creature; no indeed, it was not I."

In her effort to turn her head, Zuleika swallowed some salt water and began to cough. He soothed her again and patted her, talking to her as he would to a wilful child, and headed her gently for the shore. But, unhappily, the strong current through the strait was too much for the exhausted animal. Claude perceived that the shore, instead of drawing nearer, was moving away from him. Was he being swept out to sea?

With quick resolution he flung himself off Zuleika's back, and taking the rein between his teeth swam with powerful strokes at her side.



Claude began to repent of his recklessness. He saw unmistakable evidence of exhaustion in Zuleika.

There were no boats near by, though there were some not very far away. One of these seemed to have caught sight of him and to be tacking toward him, for a slight wind had sprung up and swept with light undulations over the smooth strait.

The question was now whether Zuleika could keep afloat until the boat overtook them. The current which had dealt so treacherously with them was now serving them well, for it was carrying them in the very direction from which the boat was coming.

But Zuleika's body settled deeper in the water. She panted violently, and now and then a very human groan broke from the depth of her powerful breast.

They drifted steadily toward the boat. Claude was now near enough to decipher the crescent moon in the imperial arms on the sails, which

were of yellow silk. That was odd, indeed. There was no one in Turkey except the Sultan and Prince Ishmael who had the right to display those arms.

The yacht was presently within hailing distance, and a young man, in whom he instantly recognized the Prince, raised a field-glass to his eyes and cried out:

"Why, it is Claude! Claude, my friend, what are you doing in the middle of the Bosphorus?"

"Swimming," said Claude.

"Do you want to be taken aboard?"

"Should not object, if you can also take my horse."

Prince Ishmael spoke to the sailing-master, who was seen to shake his head.

"We can't get the horse aboard," he said to Claude; "but we can tow him ashore."

"Thank you."

"But you come aboard yourself."

"I can't. I prefer to keep my horse company."

Two ropes were now flung overboard and Claude managed to attach one to the ring of Zuleika's bit, while he secured the other under his own arms. The breeze freshened a trifle; the yacht again hoisted her sails, which she had let fall. With gentle speed she towed the two swimmers toward a bit of beach, about a mile below where they had taken their first plunge. There they landed safely.

Claude forgot to express his thanks to Prince Ishmael, so anxious was he about Zuleika's condition. She had won a place in his heart; their friendship had been cemented by danger.

Zuleika trembled like a leaf, as she stood dripping at the roadside, and Claude did not think it best to return to the city with her before she had rested. He walked her slowly up and down. Fortunately the day was warm and sunny, and there was no danger of her catching cold.

The exquisite beauty of her head, the slenderness and delicacy of her form, and the noble proportions of her whole frame struck him afresh, as his eyes lingered fondly at each detail of her perfections.

She steamed, as the warm rays of the sun beat upon her back and flanks, and in a short time she was dry. Claude himself, too, steamed; but his underclothes remained uncomfortably moist even though his coat and trousers dried rapidly. He spent the time in calling Zuleika pet names and establishing himself in her friendship.

Claude, fearing to attract attention, led Zuleika into the shadow of a boat-house. Then he began to cast about him for a safe means of returning to the city. Remembering that Galbraith Effendi, a Mohammedanized Englishman, and a friend of his father, had his villa in this neighborhood, he determined to avail himself of his hospitality. He reached the Englishman's dwelling and was cordially received.

A message was sent to Colonel Ring, with an account of the morning's adventure, and Zuleika was tended, waited upon and cared for as if she had been a princess of royal blood—which, in fact, she was.

HJALMAR HJORTH BOYESEN.

FAITH OF EXPERIENCE.

Who thinks, at night, that morn will ever be?
Who knows, far out upon the central sea,
That anywhere is land? and yet, a shore
Has set behind us, and will rise before.
A past foretells a future.

—*Bayard Taylor.*

For the Companion.

A GHOST HUNT.

They were four cousins—Jim and Bessie Dodd, Dudley and Ada Day. The boys were about sixteen years old; their sisters were a year or two younger. They had come from their homes in the country to stay with their Grandmother Dodd, and to attend school in the city.

The evening was a warm one in late September. The windows were open wide to cool the room where, grouped upon a tiger-skin rug before an open fire, these four young people, armed with long, sharp-pointed sticks, sat in the dim firelight roasting marshmallows over the coals and telling ghost stories.

Outside, the autumnal wind, not cold but noisy, was soughing drearily through the leaves; nature seemed in sympathy with the pleasantly gloomy feelings of the marshmallow-roasters.

Jim was concluding his tale in a whisper of harrowing quality:

"Then, giving one awful shriek, she swooned. Sir Harold heard and rushed in. Too clearly, across that face, white as the pillow it rested upon, could be seen the burning red marks of the Spectral Friar's icy hand. Poor Alice never came out of the swoon—she was dead!"

"O Jim, how ghastly!" exclaimed Ada. "I know I sha'n't sleep a wink to-night, after hearing all these deliciously dreadful stories. But the candy is all eaten, the fire is going out, and it is ten o'clock. I am afraid we shall have to go to bed, for there is nothing else to do."

"Here is the letter grandmother left for the boys to mail when she went to bed. Let's all take it around to the lamp-post on Norman Street," said Bess.

"No, no!" said Ada; "that would take us by the haunted house on Saxon Street, and I shouldn't dare go near it to-night—after Jim's awful stories."

"You girls are all alike," chuckled Jim, much pleased with the effects of his eloquence. "You're so easily worked up into scares. Now Dud and I wouldn't mind going *into* the house, if we could get in."

"Hurrah, the very thing!" exclaimed Dudley, excitedly. "Here is a glorious wind-up to our evening. We *can* get in! I stopped there last week to get some autumn leaves for grandmother off that vine on the porch, and I found that my latch-key fitted that door. I thought then that we would explore the house some day, but it will be ever so much jollier to do the thing by night.

"Come on, girls—don't be geese. We dare you to it!"

"Of course we dare go, if you do," responded Bess. "And oh, Ada, it will be such fun to tell the girls at school to-morrow! They've been telling us such absurd stories about that house. The last people who lived there complained of a woman in yellow who roamed about, opened and shut doors noiselessly, and sat by their beds at night."

"Why," said Ada, "the house has got such a bad reputation that the owners can't rent it, in spite of the beautiful grounds about it."

"Rats and wind!" exclaimed Jim, contemptuously; "only idiots would believe such stuff."

"But you know," put in Ada, timidly, "something awful did happen there once—that poor young lady who went crazy over a love affair; they kept her in that wing room with the barred window, and she died there and —"

"Oh, yes, I've heard all about that, and how she is supposed to wander about there now, rattling the chains they used to bind her with!" replied Dudley, scoffingly. "We will ask her politely if we can't relieve her of her load, if we happen upon her in one of the corridors. What a lark!

"Hurry up, girls! Will you go? *dare* you?"

"It is a dare, Ada. We really must go," said Bess, so determinedly that Ada put on her hat and cloak at once.

Very quietly, in order not to waken old Mrs. Dodd, all four stole out into the street, where the sky now lowered inky-black above them.

"We must not strike a light or make a sound while we are about this work," said Dudley, solemnly. "If passers-by should see or hear anything, it would only add to the bad name of the place, and we might get into trouble with the owners.

"Stop giggling, girls! If you are going to get silly and nervous, you can just go back. Jim and I really want to look into the thing, and discover what is at the bottom of these queer reports."

Bess and Ada promptly assumed a more severe demeanor and, indeed, felt little inclination to laugh when they passed through the gateway of the gloomy-looking grounds.

No one was in sight. The long path wound in and out of thick clumps of fir and pine, and they followed it up to the porch.

"Isn't there a light in that corner room?" whispered Ada.

"Goose! It's a reflection from the street-lamp," replied her brother, quenchingly. "Shall we give the bell a pull? Maybe the maiden in chains will clank along and let us in!"

Jim jerked at the old bell as he spoke. The knob came off in his hand, and sent him staggering back against the pillars of the porch, while the sound of the bell went clanging through the rooms within.

"Here goes the key; walk in, ladies!" Dudley threw open the door. "Now remember, no talking. Oh, but it's dark! Hark! what's that!"

A creaking sound on the dark stairs made them all start and look up. There was nothing but black darkness.

Ada grasped Bessie's arm. "I *can't* go on, Dudley," she whispered; "I am frightfully scared. Come out on the porch with me, Bess."

As the girls darted outside, a blast of wind swept down the stairs, and with a bang the door was closed upon them. Bess tried to open it again but could not. She thought the boys had locked it to tease them, and they sat down until the boys should let them in.

They sat side by side, whispering occasionally, clutching each other nervously at every unusual sound. By and by Bess, rising resolutely, thumped upon the door and rattled the knob.

No response came, though strange and stifled sounds were heard within.

"Bessie," said Ada, in a trembling voice, after they had waited a few moments, "our boys would never leave us alone in this way if they could help it. There are more noises in there than they are making. Something must have happened to them, and we must do something just as fast as we can."

"Listen!" said Bess, "I think that is the night-policeman down on Hun Avenue. Come! We must run and stop him, and get him to come back with us and break in this dreadful door!"

Once more they listened at the key-hole. A clanking sound from within made their blood run cold, and they fled down the path to the street, and around the corner to Hun Avenue.

There, only a block distant, they could see a big policeman standing under an electric light, and they hastened toward him.

Meantime, strange proceedings had been taking place within the old house. When the girls fled out upon the porch, and the draft from above had shut the door, Jim, springing back, had found it fastened by a spring-catch.

"There!" he exclaimed, in a whisper, "the girls have locked themselves out. All right, let them stay there! We must go on and explore for five minutes, or they will think our courage failed us. What's that? Listen!"

The stairs were creaking again, and the old balusters rattled, while a sound of sobs and stifled wailing seemed to fall upon their ears. A feeling of horror came over both boys.

"Come on; we'd better be getting out of this," muttered Jim as, seizing Dudley's arm, he started, as he thought, toward the front door again. But he mistook the way; and stumbling through an open door, both boys hurried toward a faint glimmer from an electric light on the street, only to find their hands grasping the iron bars of a window.

"For goodness' sake, Jim!" gasped Dudley, "we have lost our way. We are in that wing-room—the prison!"

They turned in a panic to leave the unpleasant spot. They found the door; but it had been noiselessly closed upon them—closed and locked! They were prisoners; and prisoners of whom—of what?

They pounded and kicked, but the solid oak door was unyielding. It had been made to withstand even more frenzied attacks than theirs.

"Could the girls have done it?"

"Never! They would not have dared; and anyway, the front door was locked."

"Hark! I thought I heard something!" Dudley whispered.

There was perfect silence at first, and then, out in the corridor, a clanking sound was heard, far away at first but drawing nearer; and then the rattle of a chain just outside the door. Then silence again. Jim felt Dudley reel and, throwing out his arms, caught him in time to prevent his falling to the floor.

"Dudley, old fellow!" he urged, feeling his own courage coming back with the effort to rouse his fainting cousin, "this is sheer nonsense! You don't believe in ghosts! We are caught in a trap, certainly, but not by ghosts! Don't be a 'fraid-cat, Dud,—stand up! We'll get out of this all right enough, and whatever happens, we've got to act like men."

"But, Jim, that clanking chain, that door getting locked without a sound of footsteps, that crying and groaning? Nothing human would act like that."

"Tramps, probably," said Jim. "I've got two matches in my pocket, and we will just see what there is in this dungeon, anyway."

The matches flared for a minute. "Nothing for a weapon," said Dudley, gloomily; "not even a chair or a broomstick! These bars are so close together that we can't reach through and smash the glass. If we could, some one might hear our cries for help. But no one can hear us away down on the street. We shall be murdered!"

"Now, Dud! don't be so chicken-hearted! It's hard lines, but if we'll only wait, those girls will bring somebody."

The girls were bringing somebody. They had with some difficulty persuaded the big policeman to go off his beat and see what had become of their brothers.

"It's a black and crazy place, I'm thinkin'!" exclaimed the policeman, as they went up the thickly-shaded path. "What iver made the boys go in there, anyhow?"

"Why, don't you know?" said Ada. "Haven't you heard that the house is haunted? The boys wanted to discover what the ghosts were and so—Why, what's the matter? Where are you going?"

Ada fairly screamed the question, for the policeman had stopped, and was turning back.

"No, thin," he said. "I'll not be goin' on. I'll not sthir a stip into the house. 'Tis bad luck to have any d'alin's wid ghosts; and anyhow, 'tis off me bate, an' I'm goin' back to me juty. What good wad me pistols and clubs do against ghosts? Lave go me coat, I say! I'm too big for the likes of you to drag me aginst me will!"

That a policeman could be afraid of anything had never entered the head of either girl till this agonizing moment. But now, as they looked up and saw by the dim light about them the look of superstitious terror upon the man's face, they instinctively tightened their grasp upon the brass buttoned coat; for they knew that flight was in his mind, and that he must be held.

Just then a chorus of cries fell upon their ears from the haunted house. The voices were plainly those of women or girls.

"Police! Thieves! Help! Police! Police!"

"Them's no ghosts!" exclaimed the policeman, in a tone of relief. He bounded forward, club in hand.

"What's up?" he shouted. "Here's the police!"

The door was flung open. A curious and unexpected sight met their eyes. There, in the wide hall, in the light of a lamp which rested on the stairs, stood three young girls, armed with a poker, a broom and a pair of tongs, clinging to each other, and evidently in a state of great excitement.

"Oh, I am so glad to see you!" exclaimed the tallest, a girl of sixteen, as she darted toward the policeman. "There are robbers in the house—lots of them! The house is full of them!"

"I knew it, I knew it; and they've killed my brother. O Dud, Dud, Dudley!" wailed Ada.

The stranger girls, paying no attention to her, went on, "And we have caught four of them. They are there in this side room, inside that door."

The door was fastened on the outside by a heavy bolt. Just before it lay a big Newfoundland dog. Around his neck was a collar, and attached to that a heavy dog-chain. His nose was on the threshold, and his eyes glared watchfully.

"But our brothers—what have they done with our brothers?" cried Ada and Bess.

"Let there be tin or a dozen of 'em," said the policeman, "I'll be a match for 'em!"

Pushing back the bolt, he flashed the light from his "bull's-eye" into the room.

The five girls, peering timidly in, saw two figures over by the window, standing in much the attitude of the Two Princes in the Tower in the famous picture.

"Coom out of there, will ye? I arrist ye in the name of the law!" shouted the officer.

"Dudley! Jim! The thieves! Oh, how funny! Oh, you darling boys!"

"Why, they are boys, and only two! I saw four come in! Why, how dreadfully funny!" exclaimed the strange girl. "It must be some kind of a joke!"

"Who locked us in—you?" asked Jim, addressing the tallest girl. "How did you get here? What are you doing here?"

"Why, we are only just living here," she said. "We just came to-day, and everything is all upside-down and unsettled. Papa had to go down to the station to meet mamma, and the train must have been late, for they expected to be home by ten, and now it is nearly eleven. I thought it was papa when you rang that bell so loud, and I was just going to tear down-stairs to let him in, when the door opened and I saw four figures stealing in so quietly, and knew you were burglars."

"Oh!" exclaimed Jim, Dudley, Bess and Ada all together.

"Then Mamie and Fan came out, too, and joined me on the stairs, and poor little Johnny, he is only three,—there he is, all wrapped up in the blanket, on the stairs,—he woke up and began to cry. I almost smothered him for fear you would hear and dash up at us.

"Then I heard you stumbling into the wing-room,—all four of you I thought,—and I plucked up courage and tore after you,—you see these worsted slippers don't make a sound,—and oh, the relief when I found that the bolt worked all right, and that they were locked in!

"Then I remembered that Carlo was chained out in the wood-house, and I led him in and

Digitized by Google

whispered to him to watch. I flew back to the children, and made them go back and dress, for I thought if papa didn't come soon we would make a dash for the street and call for help.

"As I was listening at the door, I fancied I heard voices outside, so we all shrieked and then you rushed in!"

"Well, you are very good to be so pleasant about it, after our giving you such a fright. It was such a silly thing for us to do," said Bess; "but you see we had been telling ghost stories all the evening, and had worked ourselves up to such a pitch that we thought we would come here to see—because—you know —"

Bess glanced hesitatingly toward the younger children.

"Oh, yes, I see!" laughed the girl. "We know all about the stories about this house. You need not be afraid to mention it before the children. Papa found he could get the place very cheap just because of the ghosts, and so we all think that a haunted house is the nicest thing in the world. I hope you will all come here often; I'm sure we ought to be good friends after this queer beginning of acquaintance!"

They were soon good friends, for before Jim and Dudley and their sisters had gone home, Mr. and Mrs. Field, the father and mother of their new acquaintances, came in. They knew Mrs. Dodd very well, and the matter was explained satisfactorily to the policeman.

Many times that winter the old house echoed to the laughter of the young people of both families, as they recalled the thrilling incidents of their ghost hunt.

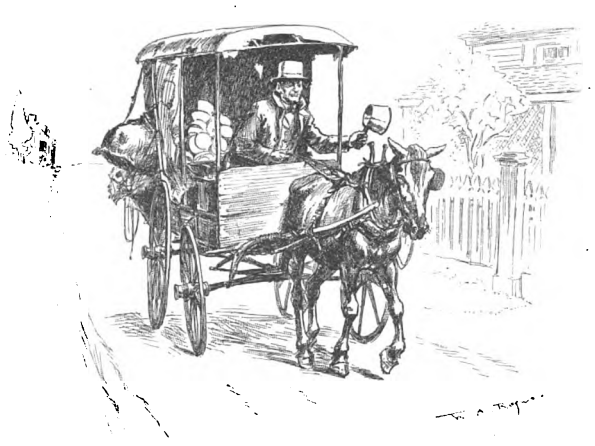
GRACE SCHUYLER.

For the Companion.

A GOOD EXAMPLE.

The scarecrow stood in the strawberry bed,
Where he'd stood through sun and rain;
His clothes were all tattered and torn and rent,
And he looked severely plain.

But never a thought did he give to his looks;
But faithfully day and night
He guarded the bed where the berries lay,
And put all the thieves to flight.



And some who would sneer at his rude attire,
Would better, I'm free to confess,
Like the old scarecrow, give more thought to their work,
And not so much to their dress.

J. P. L.

For the Companion.

LUCY SHORE.

John Shore was a tin-peddler. His wagon, a small and rather dilapidated affair, was seen mostly upon dusty country roads. John avoided

the larger villages. His best customers, wherever he went, were the farmers' wives.

When he drove up to the farm-houses the women would bring out their rag-bags to exchange the contents for tinware. Occasionally there was sharp dickering on both sides before the difference of a few cents between buyer and seller was overcome.

John Shore was a tinker as well as a tin-peddler. He was, indeed, one of those unfortunate men who can "do anything," but who, alas! can do nothing thoroughly.

He could repair clocks, set window glass, mend leaky vessels, re-seat chairs, cut hair, make biscuit and play on the fiddle, but his skill in all these directions was limited, and he was unfortunate in being unable to concentrate his energies on any one thing long enough to master all its details.

He was, like other scatterbrains, good-natured and easy-going. Of course he was also poor.

John's home was in a small rented house on the outskirts of the village of Waverley. There was where he left his wife and six children when he went out upon the road.

Lucy was the eldest of the Shore children. She was a tall, angular, freckled-faced girl of sixteen, old and womanly beyond her years. She had spent most of her life as an amateur nurse to her younger brothers and sisters. She was round-shouldered from carrying heavy, fretful babies about for so many hours every day, and when she was not carrying them she was usually bent half-double sewing at their clothes, or on her knees scrubbing the tracks of their muddy little feet from the bare floors of their home. A faithful, uncomplaining little drudge was Lucy.

The village talk was that Lucy was more of a mother to the Shore children than the mother herself, for Mrs. Shore was a fretful, inefficient woman, who spent much of her time in reading sensational story papers and in running about gossiping with her neighbors, leaving Lucy in full charge at home.

But the stronger and better qualities of some remote ancestor must have come down as a goodly inheritance to Lucy Shore, for she was energetic, keen-witted and more ambitious than one would have supposed possible, considering her depressing and discouraging surroundings.

Mrs. Shore died suddenly one August morning when her husband was away from home. Lucy won the admiration of the neighbors who came in to help, by her calm and self-possessed bearing at this trying time.

"I had to be calm on account of the children," Lucy said, simply. She faced the unpromising future bravely on their account.

Three weeks later her courage and self-possession were again put to the test. It was time for her father to return from his last trip. Lucy went to the door half-expecting to see the familiar team coming slowly around a bend in the road. Yes, it was just coming in sight.

"Father's coming! Father's coming!" she called out eagerly to the children, who were eating their frugal supper of bread and milk at the kitchen table.

Instantly five pairs of bare, brown feet, belonging to five bareheaded, shouting children, went flying down the dusty road to meet John Shore and to come riding gleefully home in the cart, munching the candy and the nuts their father always brought them when returning from one of his trips.

But when Lucy returned to the door after some hurried preparations for her father's supper, she saw to her surprise that the children were walking slowly toward the house by the side of the cart, and that a stranger sat on the seat driving the old horse. She hurried out to the gate, a startled, inquiring look on her face. When the cart stopped before the gate, Lucy heard her father call out feebly from beneath the cover of the cart:

"Don't be scared, Lucy. I'm all right, only I was clumsy enough to fall off the cart a few miles back and I'm all stove up by it."

"Yes, that's it," said the man who had been driving. "He ran over a little stump in the road out by my house, about four miles from here. The jar tumbled him off the seat of the cart. I'm sure one of his legs is broke, and his shoulder seems to be out of joint, so I drove the cart home for him."

The doctor had to be called, of course. His report was that John Shore would have to keep quiet for many weeks. This was a serious matter. John had brought home but a few dollars in money. There was but little food in the house. The bills caused by Mrs. Shore's sickness and death were still unpaid. What was worse, the team must be laid up during the very time that was the most profitable of the year for John's business.

"It's fruit and tomater-canning time," he said to Lucy, "an' the women folks use a sight of tin cans and tinware of all sorts. I've more orders than I ever had afore, an' here I am flat on my back an' likely to stay here until snow flies for all I know. It's mighty discouragin'. I don't know what we're goin' to do."

"I know, father," said Lucy, suddenly and with decision. "I'll take the cart and go out on the road."

"What! You, a gal of sixteen, go traipsin' out over the country on a three weeks' trip, peddlin' tinware, sleepin' nights in strange houses, an' bein' ketched out in storms an' all that. Why, Lucy Shore!"

"I'm not a bit afraid, father."

"I intended to go clear to Jackson Cross Roads next trip, an' that's sixty miles from here, child."

Lucy had an answer ready, as she did for every objection he made, and when the discussion was over she had won, and the next day she made ready for the trip.

Three or four of the kindly disposed neighbors gathered to see Lucy off and to wish her good luck. She had risen early and had done all that she could do for the comfort of her father and the children while she was gone. One of the neighbors had insisted on taking the two-year-old baby, Danny, home with her and keeping him until Lucy's return. It was a hot, dusty day in September, when Lucy set forth in the old cart, with Ned, the old horse, between the shafts. She had patched and mended the ragged cover of the wagon and had washed the cart and groomed old Ned until he looked better than usual; but her turnout was still a sorry-looking affair, and Lucy, having a degree of pride not usual in the Shores, felt keenly her own shabbiness and that of the cart and of old Ned, with his harness composed mostly of odds and ends of leather straps.

She wore her best gown, but that was only an ill-fitting, untrimmed brown calico; her head was covered by an ugly blue and white gingham sunbonnet with a pink lining.

But though Lucy was keenly conscious of the unattractive appearance she presented, she did not allow the thought of it to disturb her much. One or two of the neighbors had thought and said that her project was absurd, and had predicted its failure.

She was resolved that she would not return unsuccessful.

"Get along, get along, Ned!" she would call out, as she shook the reins over his back. "We have work to do, old fellow."

Her father had, so far as he was able, told her at what houses he had engaged to leave articles of tinware, and had also told her some of the farm-houses where the families would give her lodgings over night.

When the farmers' wives along the road saw the old wagon coming they would say, "There comes John Shore," and great was their surprise when, instead of noisy, singing John, they saw a slender, pale-faced and quiet young girl in charge of the cart.

They were sure to question her as to where her father was, and they were full of sympathy and outspoken in their admiration of her courage when they knew why she had taken her father's place. Many of them purchased tinware that they did not really need, and they did not try to "break prices," as they would have done with her father. They offered her food and lodging free of charge, but Lucy was conducting her business on strictly business principles, and she neither asked nor accepted favors, but paid for everything she received.

The days were hot, the roads dusty, and poor old Ned crept along in a wearisome way. But Lucy was more successful than she had dared hope to be, more successful than her father had ever been on any of his trips, and she bore the discomfort not only bravely but gaily.

On the tenth day she found herself within three miles of the large town of Windom with her stock of tinware nearly exhausted, although she had gone over barely one-half of the route usually travelled by her father.

Lucy suddenly decided on what she would do. She would go to Windom and there replenish her stock in trade instead of going back to Waverley with the empty wagon for a new supply.

It was late in the afternoon when she reached Windom. Inquiring the way to the largest tinware store in the town, she drove up to it and climbed down from the wagon. Several persons stopped and looked curiously at the queer-looking "outfit." Some of those who saw her were rude enough to make remarks that came to her ears about herself, her team, and that awful sunbonnet.

But the next moment she had forgotten all about this little hurt to her pride, for poor old Ned, worn out at last, dropped down before the store door, and in a short time was dead.

A crowd immediately gathered, as a crowd always does gather about a prostrate horse. A man lifted the old nag's head and let it fall, saying: "He's gone up, sure, poor old rack-o'-bones that he is."

Lucy stood by pale and tearful, quite overcome for the time by this calamity and saying to herself:

"What shall I do? What shall I do?"

A short, slightly-built man, who had been hurrying around and talking steadily ever since his arrival, now came up to Lucy and said, sympathetically, "Well, well, this is pretty rough on you, miss, aint it?"

"Yes, it is," said Lucy, her cheeks wet with tears.

"Isn't this John Shore's outfit?"

"Yes, sir."

His manner was kindly and his voice was so full of sympathy that Lucy was touched by it. "I've been peddling for him," she continued. "You see he's laid up with a broken leg, and I'm his daughter. I had to come out in his place. Do you know my father, sir?"

"Know him? Of course I do. I am Joe Keene. Your father and I were in the same regiment in the war and were messmates part of the time. He used to stay all night with me when he was in this part of the country. Come with me."

He led the way around the corner to a neat little white house, where they were met at the door by a tidy, motherly-looking woman, to whom Mr. Keene said:

"Here, ma, here's John Shore's girl. She's had an accident to her team 'round the corner and she's going to stay here to-night."

Mrs. Keene welcomed the girl and led the way into the house.

"Now let me take your sunbonnet," she said. "and then I'll show you to your room, where you'd better lie down and rest until you hear me ring the supper bell; you look clean fagged out. My husband will see to your team. You jest try to get a little rest."

Mr. Keene, meanwhile, went back to the crowd, which still surrounded the dead horse.

Climbing to the seat of the wagon he stood up on it, and said, briefly and to the point:

"Now look here, gentlemen. This miserable old outfit, wuthless as it seems, was everything in the world its owner had to make a living with, and he's an old soldier with six children, and I read in the paper that his wife died a few weeks back.

"He's a tin-peddler. Maybe some of you've seen 'im 'round in the country near here."

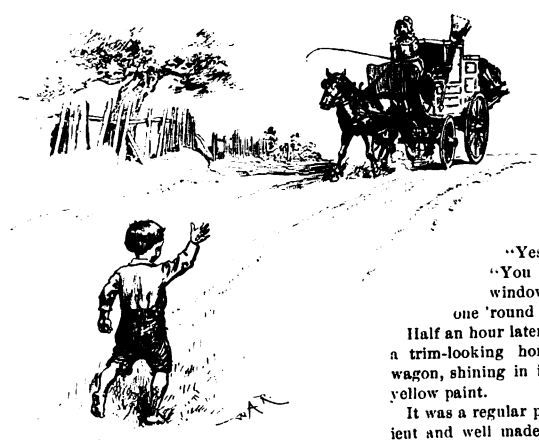
"I know him," said the proprietor of the tinware store before which the cart stood. "He bought goods of me sometimes."

"And he always paid for 'em, too, I'll warrant. John Shore's honest if he is poor and not the smartest man on earth. Well, he's lying flat on his back at home with a broken leg, and this girl is his oldest child, and she's had the grit to take his place on the cart and go out peddling, and you see what she's come to, gentlemen."

He pointed to the inanimate body of poor old Ned as he spoke, and then went on:

"Now the point is, how's she going to get home with her cart or how's she going to keep up the business and save those children and her father from starving? That's *our* business, gentlemen. It's my business to the extent of a ten-dollar bill."

He took a crisp ten-dollar note from his pocket and held it up, as he added:



"Who else is interested to the same extent, or more or less, as the case may be? Speak out quick!"

The crowd grew larger and the loquacious and eccentric but warm-hearted Mr. Keene waxed more and more eloquent.

Every one knew and respected him and many of the men present responded liberally to his appeals on Lucy's behalf.

The poor girl knew nothing about what was going on around the corner. Tired and nervous she sat in her cool, pretty room, indulging in a good cry over her misfortune. But by and by Mr. Keene came home to tea smiling and cheery.

"Now don't you worry, my child," he said, heartily. "You'll come out all right yet. Bless you, I expect to see you driving your coach and four yet, I do, indeed." But he told her nothing of the movement he had been making for her relief. She was up early the next morning. At the breakfast table she said:

"Now, Mr. Keene, I've thought it all over and the only thing I can think of is for me to hire a horse to make the rest of the trip with. Do you know where I can get one?"

"Yes, I do," he replied, promptly. "You sit here by the dining-room window a few minutes and I'll bring one 'round for you to look at."

Half an hour later he drove up to the gate with a trim-looking horse hitched to a neat, new wagon, shining in its coat of green and red and yellow paint.

It was a regular peddler's wagon, very convenient and well made, that had been on sale as a

Digitized by Google

second-hand cart, its former owner having died a few weeks before. It was as good as new—a very fortunate purchase for poor Lucy.

The harness on the horse was new and shining, and when Lucy went out in wide-eyed wonder she saw that the wagon was full of bright, new tinware.

"The tin stuff is the special present of a queer old fellow in this town that some people call mean and stingy, because he's so saving and doesn't live in much style," explained Mr. Keene. "But he often breaks out in reckless extravagances of this sort."

"But the wagon and the horse?" said Lucy.

"They're yours, my dear," said Mr. Keene, "yours and John Shore's. Tell him Joe Keene said so. It's just a little instance of the way Windom folks have of appreciating pluck in a girl like you. No, no, no crying, and no saying you can't accept it. You'll have to, you know."

Ten days later the Shore children were running to the door and window every ten minutes, looking for Lucy and the old cart and horse, for though she had written to them that she was coming, she did not tell the great news.

The neighbors knew that she was expected on that day, and they also were on the lookout.

"O Tommy, sis, come and see!" called out little Willie Shore, late in the afternoon. "See this wagon coming up the road. Aint it a dandy? And see how the harness shines! My! aint that a fine turnout? There's a girl driving, too; yes sir, and—why—why—it's Lucy, it's Lucy, Lucy, *Lucy!*"

He ran shrieking down the road, all the little Shores in swift pursuit. Lucy kissed them all as they climbed shouting into the wagon, which had hardly a single piece of tinware left in it—nearly all had been sold.

Joe Keene was right when he said that a girl like Lucy would succeed in life. She did succeed in all her undertakings.

She succeeded in imparting some of her own energy and pride and force of character to her father, and when, a year later, he brought a kind, good woman home to be a mother to his little children, Lucy found a way of giving herself some education and of fitting herself for the honorable and useful position she now holds in life.

J. L. HARBOUR.

For the Companion.

A YOKE AND A JOKE.

Father and mother had gone to Wolftown in the big wagon to meet the afternoon express train on the Kansas Pacific Railroad, and bring home Bruce and Jerry's cousin Effie, who was coming alone all the way from Kansas City to visit them. Bruce and Jerry were left alone on the claim to look after things.

Bruce was fifteen; not very large of his age, but active and strong. Jerry was only two years younger than Bruce, but he was dwarfed by an affection of the spine, which kept him bent over like a hunchback.

When he was very small he was thrown from a horse. The accident contracted some of the spinal muscles, and it appeared that he was doomed to go through life with the humiliating appearance of having a chronic case of colic.

Bruce and Jerry were great friends, which is not always the case with brothers. This was not due to the fact that other boys were few in that thinly-settled Kansas district; they were really very fond of each other.

All the morning, after their father and mother left, Bruce was very busy making a small yoke, modelled after the one that was used on Tom and Red, the oxen they had brought with them when they emigrated from Indiana.

Jerry sat on the framework of the grindstone in front of the cabin, and watched Bruce at his work with much interest. The yoke was now about completed, and the young mechanic was very proud of his workmanship.

"It's a dandy, an' no mistake," he remarked with satisfaction. "We'll have some fun, Jerry. I've been thinkin' for a long time that the calves are big enough to break, an' there's no time like the present. Won't it be a joke on pa and ma, though?"

"What'll be a joke?" asked Jerry.

"Why, to break Bell an' Nancy while they're gone. Won't they be s'prised to find us driving 'em around like Tom an' Red? Won't it be a joke, though?"

"Um," Jerry assented.

"An' we'll take Effie a-ridin' along by the corn-field, an' let her see the big tassels. I'll tell you what we'll do, Jerry; we'll go down the road an' meet pa and ma, an' we'll bring Effie home in our wagon. How's that?"

"First-rate," said the little cripple.

"Well, it's done," Bruce announced, presently. "Let's eat our pie first, an' then we'll yoke 'em up."

They had been too busy to notice that it was past noon; but now hunger reminded them that their mother had left for each of them "a big hunk o' pie." Very soon they were seated on the doorstep, munching their dinner.

This plan of yoking up the calves would have been instantly condemned by the father, had he been at home, for in the first place, the heifers were too young, and in the second place, they were intended for milch cows and not for beasts of burden. But it did not occur to them that he would object.

After the pie had all been washed down with a cup of milk, Bruce shouldered the yoke and led the way to the cow-pen, where the meek-eyed little heifers were lying in the sun.

Nancy and Bell were not in the least wild, for the boys had made pets of them; so there was no difficulty in approaching them. They were pretty animals; Bell was a "spot," of red and white, and Nancy was a deep red.

"Well, girlies," Bruce merrily saluted the heifers, "how do you find yerselves this fine, large day? Nice day, isn't it?—nicest in the neighborhood. Get up, now, an' act your prettiest; there's company comin', an' we want you to show off. Tie this string around Nancy's neck, Jerry."

While Jerry obeyed this instruction Bruce secured Bell, and then the heifers were led out of the cow-lot to a little old cart that stood by the front-yard fence.

The little animals were docile and tractable enough; indeed, they were provokingly slow and sleepy in their movements.

"You'll get waked up very soon," Bruce remarked, half-angry that Nancy would not "stand around."

It took some time to get them yoked satisfactorily to the cart, but at last Bruce announced that the arrangements for the start were complete. Jerry stood on one side, next to Bell, and Bruce on the other, by the side of Nancy.

"Get up, now!" commanded Bruce. "Get up, Nancy!"

"Get up, Bell!" called Jerry.

Both boys slapped the flanks of the heifers vigorously, and they moved on a few paces, in mild-eyed wonder at this new situation. Still they evidently thought this was a new way of petting them, and that it was all right.

The boys laughed delightedly.

"They're jest as easy-goin' as old Tom and Red," Bruce declared. "Get up, Nancy! Get up, Bell!"

There was some backing on the part of the team, and a mild inclination to turn around and inspect the arrangements, but the boys, urging them on, succeeded in getting them to advance a few more paces.

"We'll get in an' ride," Bruce decided. "They'll go better if they're talked to from behind."

He got a stick and sharpened the end of it for a goad, and then the two clambered into the cart. Once more the driving process was begun.

"Move along now, Nancy! Get ahead, there, Bell! Aint this fun, though, Jerry?"

"I didn't think it'd be so easy to break 'em. It's because they're pets, I guess."

"Aint it a great old joke on pa and ma? Won't they be s'prised? Get ahead there Bell!"

Suddenly there came the waking up which Bruce had predicted. A realization of their unprecedented situation seemed to dawn on the minds of the heifers, and as they felt the sharp goad in their tender flesh, it occurred to them that being yoked up was not as much fun as they had supposed.

All at once there was a tossing of hornless heads, a low bellow, a backing and a fidgeting, an angry switching of tails, and then the heifers started off on a swift run, frightened and ungovernable.

Bruce and Jerry looked into each other's faces with fear and astonishment. The old cart jerked and bumped over the ground, and faster and faster ran the unruly heifers.

The course was across the unfenced meadow-field toward the corn. In less than a minute the calves were going at a reckless pace, bellowing madly at every jump, their heels and tails flying in the air.

"Whoa, Nancy! Whoa, Bell!" yelled Bruce, desperately. Of course the command served only to frighten the animals the more. The cart was in danger of being turned over and wrecked at any instant. Any sudden turn of the runaway team would upset it, and the boys might be crippled or killed.

For the little cripple the situation was especially serious. A fall meant to him a terrible injury, perhaps. He clung to the seat with all his strength, his face white as wool. That other awful accident, which had injured and pained him so, was still strong in his memory, and it increased his fear ten-fold.

"We've got to jump," Bruce declared, regaining somewhat his presence of mind. He sprang to his feet. "I can do it all right, but you, Jerry—let me —"

Just what assistance he meant to lend Jerry did not appear, for at that moment there was a sudden lurch of the vehicle, and Bruce went flying into the air. He turned a somersault, and hit the ground with a violent shock.

When he caught his breath and sat up, he saw the heifers dashing along by the corn, with Jerry still clinging to the seat.

Truly the little cripple was in a most perilous position.

He did not dare to jump for fear the strain on his back would kill him. The fall—oh, he could never stand the fall! To suffer again that way—to know that horrible pain for weeks and weeks, to lie in one position day and night and endure again that awful anguish—the very thought of it blanched his delicate face, and sent a thrill of dread and terror to his heart.

The mad heifers did not slacken their speed.

The mad heifers did not halt nor slacken their speed. But presently they gave a sharp turn and plunged into the corn.

The sudden movement overturned the wagon, and Jerry was sent tumbling from his seat to the ground.

He fell heavily, and lay quite still.

The overturning of the wagon threw one of the calves on its side, where it was pinned down by the tongue; and this perforce brought an end to the runaway.

Bruce reached Jerry's side hatless and breathless, and his heart almost stopped beating as he bent anxiously above the white, inanimate figure of his brother.

"O Jerry!" he cried, "O Jerry! are you hurt? Oh, it's awful! I'm afeared he's killed! O Jerry, open your eyes—open your eyes, Jerry!"

Bruce was almost frantic. In a few moments Jerry opened his eyes, otherwise he did not move.

"Are you hurt much, Jerry?" Bruce asked, again and again. Finally Jerry answered:

"I reckon not."

Then a strange thing happened. Jerry got up on his feet, and stood straight—as straight as he used to stand before he was thrown from the horse; straight like Bruce!

The fall, instead of injuring him anew, had done a wonderful thing for him. It had somehow strained the cords of his back, or jerked them into their normal position, and he was a cripple no longer; weak and faint, but a cripple no longer.

Bruce carried him on his back to the house, where he put him upon the bed, and then went to the relief of the calves.

One of them had scrambled to her feet, and the other lay flat on her side under the cart-tongue. Both were once more in a very meek mood, and Bruce had little difficulty in releasing them and leading them back to the cow-pen.

When their parents came home they were told all about the dreadful event of the day which, strangely enough, had resulted happily instead of fatally.

"So you thought it would be a good joke to break the heifers while your pa and ma were away?" said Effie, laughing. "I should think the joke is on *you*."

But they all rejoiced over Jerry's wonderful cure, which proved permanent. Jerry is now a lithe, strong man.

A JINGLE PARTY.

The jingle party furnishes a pleasant variety for an evening's entertainment, and is comparatively new.

Preparations for the party must be made in advance. A week, or better, two weeks, should elapse between the sending out of invitations and the party, and sufficient amusement is furnished to last an entire evening if the company consists of as many as twenty people.

It is arranged in this way: Write on bits of paper the names of your guests, and if an equal number of boys and girls are to take part, write the girls' names on white, the boys' on blue, if you please. Let each prospective guest draw a name from the papers; if convenient, a girl drawing a boy's name, and the reverse.

If this is not practicable, send to each guest, with the invitation, the name of some person for whom a small gift is to be prepared, and to accompany this, a rhyme or series of rhymes, in which either the name of the person or the name of the gift shall have a jingle or rhyme to match it.

One need not necessarily be a great poet, or even a little one, in order to compose some very pretty or amusing jingles. But if it comes to the worst, and you positively cannot make a verse of any length, two lines containing the desired rhyme will meet the requirements of the game.

Consider, however, that if every one invited were hastily to scribble off two lines, when by a little effort he might as well compose a merry series of verses, there would be comparatively little pleasure in the game.

It is not in good taste to make a handsome gift unless an agreement has been made that all shall do so. A trifle of fancy-work, or any little article that has a modicum of usefulness or beauty, may be made or procured. Or if a difficult name is assigned to you, you are warranted in selecting a gift for which a rhyme may be easily found.

The articles should be nicely wrapped up, in boxes if possible, or at least in strong paper, the jingles being enclosed in a sealed envelope and slipped into the outside of the package, both the envelope and the parcel being plainly directed to the person for whom they are intended.

Much ingenuity is sometimes shown in wrapping with bright paper or in fanciful shapes. A small cabbage tied across with a bright scarlet satin ribbon was provided with a bouquet-holder and done up in a florist's box, while a jack-in-the-box in many wrappings of pink tissue was snugly bestowed in a ladies' bonnet-box.

The packages are delivered to the hostess on the evening of the party.

Our little company had a committee of two to receive them, and another committee of two whose duty it was to look over the rhymes as they were sent in, and to read them before the company in the parlor.

It is quite necessary to have them looked over beforehand, in order to make sure that nothing that could possibly give pain or excite ridicule has crept into the jingles.

A large clothes-basket, suitably draped with pink, blue or green cheesecloth or mosquito netting, and tied with a row of sleigh-bells if you can get them, or hung with tiny bells, is provided to receive the gifts.

When the company is assembled in the parlor, some one is seated at the piano to play a lively jingling or sleigh-bell march and the two readers come prancing in with their basket, dancing around the room two or three times, and finally deposit their treasure on a table in the centre of the room.

The readers are usually boys or men, and may be fantastically dressed with cap and bells or in any way that is desired.

The packages are now taken out by the readers in turn, the address read, followed by the rhyme, and then the name of the person for whom they are intended, who comes forward and receives the gift and the jingle. The readers, standing one on each side of the table, take turns in reading, and if they are bright and read well, they furnish a good share of amusement to the company.

As the verses are usually written in a disguised hand, and every possible pains is taken to conceal the writer's identity, much interest is excited in trying to discover the secret of each one's gift.

THE BRIDGE-BUILDERS.

"When a train passes over a great railroad bridge, I wonder how many of the people in the cars give a single serious thought to the way in which the bridge was built, or to the amount of brain-work and other hard labor that went into it."

So said the resident engineer, and his remark set me to meditating and making inquiries.

All at once a small army of men had arrived at New London, Connecticut, and for months they had been busy making a substructure under water, and afterward constructing piers for the longest railroad drawbridge in the world.

First, they sank into the mud at the bottom of the river enormous timber frames called "cribs," each of which was as high as a tall house, and from fifty to seventy feet square. The mud was then scooped out from inside the cribs, and the space filled with piles, which were driven down to the natural bed of gravel and sand, one hundred and thirty feet below the water surface.

After this, the tops of the piles were sawed off smoothly by a peculiar machinery, making a firm and even foundation for the piers far down out of sight.

Now you would naturally suppose that, the foundation being secured, the next step would be to begin the construction of the piers at that point below the water, and continue it upward until they reached the required height; but, on account of the great depth at which the foundation had to be fixed, it would have been impossible to send men down there to work in an ordinary caisson, because they could not be supplied with air from above.

So the engineers, instead of building the piers from below upward, were obliged to build them in a certain sense from above downward. The way they did this was: They floated in the river huge caissons, which were open at the top; and upon the bottom of these caissons the heavy stone work of the piers was laid, one course above another. The gradually increasing weight of this masonry, as it was put in place, caused the caissons to subside slowly, until they rested upon the solid basis of the piles, which, as I have said, had been fixed in place in the river-bed.

This was an entirely new method of making piers. Imagine building a house on a platform suspended by some means in the air, and then letting it come slowly down by its own weight until it settles firmly on the support of the cellar walls. Then you will have a vivid idea as to how these masses of granite were put together, and gradually brought down into position.

Only, instead of being suspended in the air, they were suspended in the water, and the sides of the big caissons were made high enough to keep the water from flowing in upon the workmen who were laying the masonry.

As soon as the piers were anchored in position, and their tops were sufficiently high above water, the wooden caissons that enclosed them were knocked away, and the men continued to lay stone until the piers were finished.

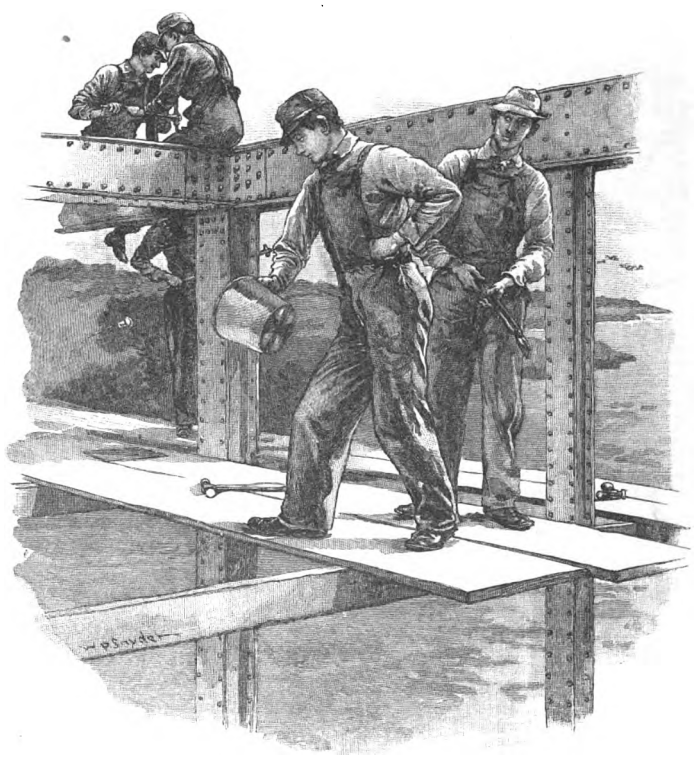
Then appeared a second little army, composed of men whom we may call distinctively the "bridge-builders," because they do that part of the work which forms a roadway, and makes the whole structure a complete and practicable thing.

These men put in place those great iron and steel pieces that, when fitly adjusted and firmly bound together, become the mighty spans which connect one pier with another, and support the track along which the train bears us from shore to shore as lightly as if we were birds.

They "erect" the bridge—to use the technical term; that is, they set up the superstructure, the portion which to us outsiders seems more important than the rest, since it is what we immediately rely upon to enable us to get across the stream.

"Where do the bridge-builders come from?" I asked the resident engineer. He told me in reply that they are a peculiar and interesting body of men, recruited from various parts of the country. Most of them are from the iron districts of Pennsylvania, where they naturally become familiar with all kinds of iron work in the great rolling-mills and machine-shops. Nearly all of them, too, are native Americans.

The work they do requires a larger proportion of skilled men than that of those who make the foundations and "substructure." On the substructure work, to every foreman of stone-masons or skilled mechanic there will be from four to ten unskilled laborers; but among the superstructure men there are much fewer unskilled workers.



For the most part, these bridge-builders who put the metal work together have gradually made their way into this particular line of employment, and have gained experience in it, which renders their service valuable. Each of them receives from two dollars and a half to three dollars a day in wages.

They take a great deal of pride in their business and in themselves, and have a certain clannish feeling which holds them together, although they are divided up into small groups of about half a dozen, each group attaching itself to a particular foreman. The members of each group follow their foreman from one place to another, engaging in jobs for which he may be hired in various parts of the country, because they understand him and like him, and he knows that he can depend upon them to do their duty.

The manner in which the bridge-building army composed of these little groups is assembled for a particular undertaking is as follows: The contract for the whole construction is given to one of the chief bridge-building companies. Then this company either attends to the matter directly, or sublets the contract to some other firm.

Whoever sets out to execute the contract must go to the foremen and engage them, with their several bands of trained adherents, and so the army is gathered.

If more men are needed for the service, they can be enrolled at the spot where the work is going on, since all that is demanded of them is merely to act as subordinates, who are instructed and controlled by the skilled toilers.

Catching the Rivets.

"These bridge-builders are fine fellows," said the resident engineer. "They are sturdy, healthy and sober. Indeed, they must be so, in order to do their dangerous work."

You would have agreed with him, if you had seen those brave fellows clambering all over the scaffolding of the bridge, and running up and down the open steel-work, as nimbly as squirrels.

First a lot of "false work" or wooden scaffolding is built out from the shore to the first pier, and then to the next, and so on. By means of this the long trusses of steel are set in place, forming the "deck" or floor, on which the tracks are to run. A lofty wooden frame called "the traveller," which moves on wheels along the outer edges of the truss, carries along the big steel posts and diagonals to the spot where they are needed; and there they are swung into place by rope and chain tackle, and riveted, pinned and bolted together.

One day, a man on the top of the traveller made a misstep, went tumbling down through the air, and struck the water, one hundred and twenty feet below. Luckily he fell between two barges, which were moored only six feet apart. Had he hit one of the barges, he would have been crushed to pulp.

A boat put out, to pick up his body; but the crew found him eagerly swimming after his hat, as if that were more important than his life.

He wanted to resume work the next day, but the contractors would not let him. He recovered in a short time.

"It was wonderful good fortune," said the engineer. "Yet the number of fatal accidents is much less than you would think."

Indeed, it seems marvellous that the men should not perish by dozens. At the Rondout Bridge, every day when the hour for their midday dinner arrived, they used to come down the iron work and staging, hanging by their hands and lowering themselves thus, for the whole sheer descent of two hundred feet; and after dinner, would climb up to their perilous perch again in the same daring way, without ladders.

This, too, was in winter, when the thermometer was sometimes below zero. But these hardy toilers are used to daily exposure in all kinds of weather; and extremes of cold and heat seem to have little effect on them, except to make them still tougher.

One of their nicest bits of construction is to fix the "eye-bars" in place; that is, the steel braces binding post to post along the side, which increase the solidity and the sustaining power of the whole structure.

Each bar has an opening or "eye" in the end, where it fits into the post. Ten or twelve of them are laid side by side in the base of the post, which has round openings in the base of its side pieces, corresponding with the holes in the eye-bars.

Now, through these concentric openings a solid metal pin must be driven, which is eight inches in diameter. Each opening is only *one sixty-fourth of an inch* wider than the pin itself. Hence the greatest accuracy must be observed in arranging the eye-bars, and placing the pin so that it will pass through.

The pin is suspended exactly opposite the opening; then a heavy beam of wood is hung opposite the pin, by ropes from above; and lastly the men, swinging the beam forward and backward, end on, use it as a battering-ram to force the pin through. The slightest deviation to one side or the other would frustrate the whole attempt.

But to the casual observer it is still more interesting, and even thrilling, to watch one of the builders who, high up in the intricate yet orderly tangle of steel-work,—like a colossal spider-web transmuted into an indestructible substance,—forges thousands of rivets, to be hammered into the posts.

At one time he will have his forge on the opposite side of the works to that where the riveters are; and then, as he forges each rivet, he will take it in a pair of pincers, and walk with it all the way across to the man who is waiting for it. He will take this walk, each time, on a beam only eight or nine inches wide, with the wind blowing at thirty miles an hour.

Most men would not dare venture that airy promenade, for fear of being blown off, or at least becoming dizzy. Yet this man steps along lightly and easily, although the least error of footing, or a sudden gust of wind, may hurl him down to certain death, in a moment.

At another time he will have his forge considerably below the men who are putting in rivets; and then he will toss up to them the red-hot rivets, which they catch in a pail. The fiery missiles are, in this way, often thrown as high as thirty feet.

The smith does these things for convenience; because convenience and rapidity in performing their task grow to be more important to these men than the occasional risk of life. And so, too, they step into all sorts of dangerous places with seeming unconcern. Often they stand on one foot in positions which it seems impossible to hold with safety, or jump from one spot to another, when climbing would seem a good deal more comfortable.

Or they will run along the top of the chord which holds up the span; then, when they come to the slanting piece at the end, they assume a sitting posture, and slide down the incline, with nothing to keep them from slipping off into the river.

A great deal of the risk which they take is as necessary as that which sailors must face. Occasionally one of them is killed; and then his fellows show the strong sympathy that binds them all together, by refusing to work on the day of his funeral.

But their labor is soon resumed briskly and each one again braves the fate of his lost comrade.

It is a wandering life that the bridge-builders lead; for they must be ready to go to any part of the country or the world where their service is wanted. They seldom see their homes. Most of them are single men; yet their great desire seems to be to get some fixed position connected with a bridge or railroad, and to marry and settle down.

The bridge-builders vanished suddenly from New London, as they had come. Most of them are now employed on the new Merchants' Bridge at St. Louis.

They vanished, but the result of their faithful work remains. They left an immense structure weighing thousands of tons, which yet, as it spans the Thames, looks as light as wicker-work. Ought we not to remember and pay tribute to their fidelity, their industry and their readiness to risk their lives?

There are many other men who are building bridges in the world; bridges of thought, of faith, of brotherhood. Those men, also, pass away; but their work remains.

GEORGE PARSONS LATHROP.

For the Companion.

A WILD RIDE.

It was the close of a pleasant day in August, 187–. The evening train from Albany, known as the "Day-Boat Special," stopped at Ballston Spa. The superintendent of the railroad alighted from the train, and stood for a moment watching it, as it sped on toward Saratoga Springs, the next station. He turned his face homeward, thankful that it was Saturday night, and that his busy week's work was ended.

Just then the telegraph operator ran out of the station, and handed him a message. It was from the superintendent of the Hudson River Railroad. It stated that a gentleman had left New York on the six o'clock train, who was very anxious to reach Saratoga Springs without delay, as he desired to obtain an order from a judge who was there in an important lawsuit; that, as it was Saturday, it was necessary to appear before the judge before midnight, and a special train was needed to take the gentleman from Albany to Saratoga, since the regular night train did not reach there until nearly one o'clock in the morning.

The message ended with the words, "Can you do it?"

The superintendent reflected a moment. The Hudson River Railroad train would be due at Albany at a quarter-past ten P. M. That would leave one hour and forty-five minutes for only thirty-eight miles.

Certainly it could be done. He turned back to the telegraph-office, and sent as answer the single word, "Yes."

Then he immediately ordered an engine that was in Saratoga Springs to be got ready; sent another order to the train-despatcher of the road in Troy, telling him what was to be done, and went home to get a heavy coat, for the first drops of a coming shower were already falling.

Returning to the telegraph-office, he watched the orders that were given by the train-despatcher, and saw that every agent and operator on the line between Albany and Saratoga Springs was notified of the special train that was to be run, and of the probable time it would pass each station.

By that time the engine was ready, and had come to Ballston. It stopped for a moment to take the superintendent on board, and then proceeded at a moderate rate to Albany.

There it arrived at about ten o'clock. The light shower which had begun about eight o'clock had become a heavy summer thunder-storm, and by that time had settled into a hard, driving rain, with a strong wind.

Through the midst of this the superintendent ran up to the station of the Hudson River Railroad, and asked the station-master, Mr. Foster, if the six o'clock train from New York was on time.

"Forty minutes late, and losing time," was the reply.

That meant that it would be at least eleven o'clock before it would arrive at Albany. Only one hour to midnight, and thirty-eight miles to go over a crooked road! The superintendent began to be anxious, but still he thought he could manage it, though it would not be pleasant.

He gave up at once the idea of taking a car for his passenger, and decided that he must ride on the engine. This he had brought up to the station yard of the Hudson River Railroad, and arranged details with Mr. Foster so as to save every minute after the New York train should arrive.

This took but a brief time, and then there was nothing to do but wait. Half-past ten came;

Digitized by Google

then ten forty-five, and a message arrived from Hudson: "Train is fifty minutes late!"

Eleven o'clock, and no further news. Eleven-five—the superintendent had his watch in his hand, counting every minute, and watching the long bridge that spans the Hudson River at Albany for some sign of the approaching train.

Eleven-ten, eleven-twelve, and then Mr. Foster cried out, "There she is!" The headlight of the train was seen coming over the bridge.

The next minute the train is in the station. Then the question was how to find the passenger who was to be carried to Saratoga Springs. The superintendent ran one way, Mr. Foster another, and in the confusion of the storm and of the alighting passengers from the long train, two or three more precious minutes were lost. Finally Mr. Foster called out, "Here he is!"

The gentleman was pushed upon the engine with scant ceremony, and placed in the fireman's seat. The superintendent took his place in front of him, and nodded to the engineer, and the race against time began.

It was just sixteen minutes past eleven when the engine left the Albany station — forty-four minutes for the thirty-eight miles. This perhaps will not appear anything very difficult for many of my readers, but to those who are familiar with the road, especially as it was then, it will be admitted that it was fast time.

There were then no safety switches in the track, no block signals, not even a light on any switch-stand to tell whether the switch was right or not. The agents and operators at each station showed a white light, to signify that all was right at their stations, but aside from that, the road was in absolute darkness its entire length.

The engine ran moderately through the upper part of the city of Albany, and when once clear of the streets the engineer pulled out the throttle-valve, and off they bounded. The rain poured, the wind blew fiercely, and before them the darkness was so thick that it seemed as if the gleam of the headlight only served to render the darkness more intense.

The superintendent stood with his head and shoulders out of one window, and the engineer with his out of the other; but neither could see more than four or five rods ahead of the engine.

The driving rain beat against their faces, almost blinding them with its fury, while the wind roared so about the engine that any ordinary tone of voice was inaudible, and even the whistle itself could hardly be heard.

In a few minutes the light at West Troy Junction was seen. "It's all right. Go on!" the signal meant. Then the up-grade into Cohoes caused a sensible diminution of speed.

At that time the Mohawk River at Cohoes was spanned by a long wooden bridge, high above the river, and all engineers had instructions to pass over it slowly. So before reaching the bridge the engineer shut off steam, and using his air-brake, reduced the speed of his engine.

A moment more, and they were rolling quietly and smoothly over the bridge. When they were once over it, the throttle-valve was again pulled out, and the engine bounded through Waterford, and down the long grade to the valley beyond.

Nothing was said in the cab as they tore along. The superintendent on one side and the engineer on the other stood steadily watching. The fireman on the footboard occasionally opened the fire-box door and threw in a shovelful of coal, while the passenger sat in his corner, perhaps enjoying the novelty of his experience, perhaps wondering if he should ever reach Saratoga alive.

Now Mechanicsville was passed, and the engine turned to the west, and began climbing the long gradient that the road takes from the valley of the Hudson to the plain upon which Saratoga lies.

Next appeared the light at Round Lake, and the superintendent could not help thinking of the road crossing just beyond the station, where not long before a train had been wrecked in the night by a plank maliciously driven in next to the rail. This had resulted in a serious accident, killing one man and severely injuring several others.

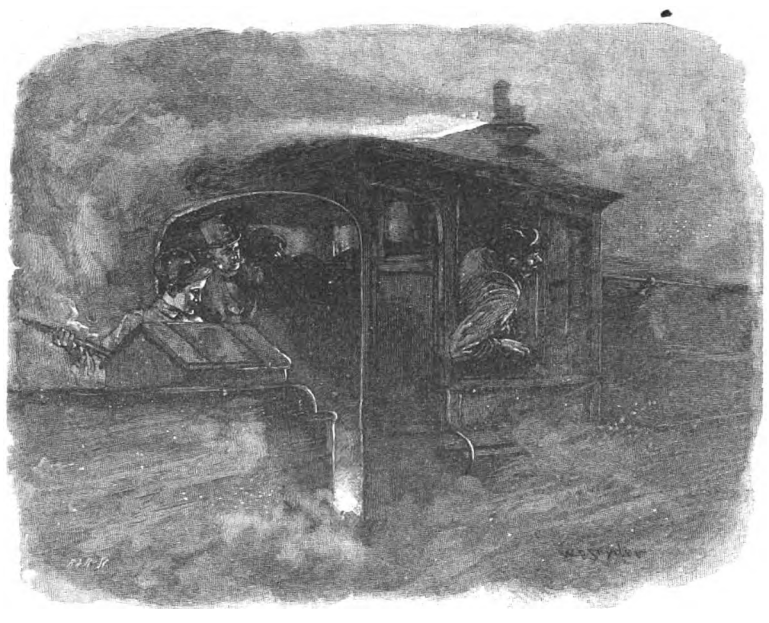
But before he could wonder whether that might perchance be their fate, Round Lake was behind them, and the fatal crossing, too; and he heard the thud of the switches at East Line. No agent there and no light; but the switches were all right, and on they went. Now they neared Ballston, and for the first time since leaving Albany the superintendent drew in his head and looked at his watch. The engine was running with steam shut off on account of the sharp curves at the station.

The watch said eleven fifty-two. Eight minutes left, and seven miles to go! "Let her go, Will!" he shouted to the engineer, and the curves at Ballston being passed, once more the engineer pulled his throttle wide open, and the engine raced toward Saratoga.

Now the bridge over the Kyaderosseras was crossed, a small stream with a long Indian name, that flows into Saratoga Lake, and so on to the Hudson River. Then the turnpike bridge, three miles from Ballston, apparently flew overhead, and the party dashed down the long straight stretch of descending grade that ends at the Saratoga station.

Now the lights of the village appeared, but still the throttle was left wide open, and the engine rushed on with undiminished speed. Not a moment could be spared in running slowly, or the whole effort might be of no avail. Past the freight-house, past the streets, and almost to the station the speed was maintained.

Then a quick shutting off of steam, the air-brake applied, and quietly, promptly the obedient engine stopped just at the entrance of the United States Hotel.



The rain had ceased. The passenger and the superintendent both jumped to the ground, looked at the watch, and found the feat had been accomplished. It still lacked one minute of twelve!

The gentleman was successful in his business, for the judge, inasmuch as he had arrived before midnight, heard him, and granted the order required.

The engineer who drove the engine that night carried a Testament in his pocket then and always. He was even then studying for the ministry, and is now a popular pastor in one of our Northern churches, no doubt doing as thorough work for his Master to-day as he did then for the railroad he served.

The superintendent has grown older since that night, and would probably hesitate now to order an engineer to make such a trip. He certainly would not unless he could go himself, and enjoy another such a wild ride.

PRINCESSES I HAVE KNOWN.

First Paper.—Margherita of Italy.

I have always thought the title of princess the very prettiest of all titles. Perhaps this came from reading the "Princess," by Tennyson, amongst the very first of my poetical readings, and that delicious creature, "the violet-hooded doctor," remains ever to me a reality, not a vision.

But as I went on in life, I came to understand that there are princesses and princesses; that "the real article," such as I considered it to be,—that is, the daughter of a reigning sovereign,—was in a very small minority as to the large crowd who are called princesses in Russia, Germany, Italy and France.

In these countries "Prince" is a common title, meaning little, and yet having had some reason behind it which gave the wearer a claim to some remote relation to royalty. Moreover, the title is widely diffused by the fact that every prince, even if he has seven sons, gives each son the title of prince; and if there is a prince in the family in Italy, every cousin feels entitled when once out of Italy to call himself prince.

I was destined to be disillusioned of my belief that every princess was as young, as pretty and as learned as Tennyson's violet-hooded doctor by one of my first experiences in Europe, when I was taken to the shop of—we will call her the Princess Punkermunker, to have some dresses made, and to the house of a sausage-seller who was also a princess.

These ladies had been of humble origin, but in marrying some broken-down old gamblers who were the third cousins of a princely house they had gained nothing but the title, which served them as a sign.

But I had my reward before I returned, for I saw the best specimen of a princess in Europe—a real, a beautiful, and a genuine princess, who was destined to be a great queen. This happened in Florence in eighteen sixty-something, when I first saw the Princess Margherita, now Queen of Italy.

She was as pretty a young girl as if she had been born in Boston, or down on Cape Cod—a regular spring beauty, as simple and sweet as a mayflower. The scions of old royal houses are seldom handsome.

This princess had more "blood" in her than any other royal person in Europe. The House of Savoy dates back to the beginning of creation—so its ardent lovers say. Indeed, the names Amadeus, Humbert, Emmanuel are found in the chronicles of 1160 as borne by Dukes of Savoy — always reigning, always princes, finally kings, until one of them leaped from his saddle to the throne of United Italy at the Quirinal, the *Rè Galantuomo*, Victor Emmanuel.

In addition to her Savoy blood, this pretty mayflower girl had a royal descent from Charles I. of England. Just look back through your history, and you will find that the unhappy beheaded monarch, Charles I., Oliver Cromwell's victim, left two daughters. The younger one, named for her beautiful mother, Henrietta Maria, became the wife of Philippe d'Orleans, the brother of Louis XIV. This Duchess of Orleans left two daughters. The elder married Charles II. of Spain; the younger married a Duke of Savoy, and became the ancestress of my lovely first princess.

When, after the Revolution of 1688, the succession to the English crown was settled by act of Parliament, all Catholic claimants were excluded, and thus the House of Savoy was forced to make way for the House of Hanover in finding a new king for England after the House of Orange had become extinct. According to the strict law of inheritance, King Humbert and Queen Margherita would to-day be governing England, instead of Queen Victoria.

However, the pretty Margherita did not care for that when I saw her. She was studying English with a niece of Mr. George P. Marsh, the famous and learned American Minister to Italy—a man who knew as many languages as did Mezzofanti. The light-haired, German-looking Princess Margherita and her friend, the dark-haired Miss Crane, would have looked well as violet-hooded doctors in Tennyson's poem.

The princess had a very noble father, the Duke of Genoa, Victor Emmanuel's favorite brother. He was a brave and accomplished prince, who died young, leaving two children. His wife was a German princess, the sister of the King of Saxony.

The fair-haired Savoy princess was perfect of face except as to her nose. The fairy who brought her all her other gifts brought her too much nose; but as a matron, which she is now, she has grown up to it. She had in girlhood, as now, the most winning smile I ever saw. She had, too, great talents and very remarkable industry, and her governess—Miss Arbessor, an Austrian—was full of praise of the peculiarly gracious and generous character of this queenly girl.

She has always been very sociable in her temperament, and dresses to perfection. As a young princess, she chose for a fancy party the costume of her Stuart ancestress, the Duchess d'Orleans. It was a hunting dress in mouse gray velvet over a long waistcoat of embroidered pink satin. On her head was a large Louis XIV. hat of gray velvet, embroidered with pearls, and heavy with pink and gray ostrich feathers.

She married her own cousin, Humbert of Savoy, then Crown Prince of Italy. The gossips said it was not a love match, but one made for them by

QUEEN MARGHERITA OF ITALY.

reasons of state. If so, the lovely character of the princess and the devotion of Humbert have made of it a marriage of true happiness.

But she had a hard task before her. The Italian Court had become thoroughly disorganized. There was not much social dignity about it. Great social revolutions were pending. The body of the Roman aristocracy looked on these "Savoyards" as interlopers. The Romans were attached to the Pope, whom Victor Emmanuel had displaced as a temporal ruler.

But Margherita triumphed over all obstacles. She had a royal memory,—she never forgot anybody,—and a tact which was born of a good heart. She conversed with every one in his own language. She showed such intelligence and social skill that she is now the most popular person in United Italy; she has a knowledge of the literature of all countries which is surprising. Was I not lucky in my first princess?

I will tell you when I saw her again. Twenty years later I went to Rome, and was presented at the Quirinal, and afterward received an invitation to a court ball. I thought my princess prettier by far than she had been twenty years before, when she was as slender as a pipe-stem. Now my may-flower had developed into a white rose.

She wore a purple velvet robe, with long train embroidered with gold. When I saw her first, she had a white muslin gown with a blue sash tied behind. Now she had grown into a great queen, and her robes were royal. Her purple dress fell over a white satin petticoat, which was covered with old lace at her shoulder, and down her side were blue feathers. This singular contrast of colors proved very pretty.

On her head was a magnificent crown of diamonds, which parted into rays, and was capped by pearls. On her neck was a network of diamonds which covered her like a cape, and high around the throat was a collarette of pearls, clasped by a huge sapphire. At her corsage she wore a spray of diamonds which fell from her neck to her waist like a waterfall. On her arms, which are very beautiful, she had bracelets of turquoises which matched her feathers.

The whole costume, though as splendid as the resources of velvet and lace and jewelry could make it, was still subservient to the woman, for her dress marks, as does every action of her life, the cultivated mind, the exquisite taste, and the lovely equanimity of my "first princess."

It is a magnificent ball-room, that of the Quirinal, and a ball there is one of the sights of the world. The Roman ladies wear all their jewels, and the men are covered with orders. It is all illuminated with electric lights, and there is a raised gallery for the musicians. I thought of Cinderella and the little glass slipper, and felt very shabby as I was conducted through vast and splendid halls hung with tapestries, through avenues of camellas and roses, through groups of the household troops,—gigantic men in brass cuirass and helmet,—through lines of servants in scarlet liveries, with powdered hair; and what a splendid and flashing picture it was, when the court entered the ball-room.

Yes! there was "my princess," leaning on the arm of her husband the King. All rose and courtesied. She made four courtesies, turning to right and left, and then motioned to Count Gianotti, the master of ceremonies, to bring her Baron Kendal, with whom she danced.

It was after dancing became general that I was permitted a little talk with the Queen, and then I felt like Cinderella no longer. I merely forgot myself, and all my foolish self-consciousness, as she spoke of America, of her fondness for Mr. Marsh, of her love of American poetry,—particularly Longfellow's,—of Miss Arbessor, whom I told her I had known. It was one lady entertaining another. Certainly every drop of "good blood" which flows in her veins shows itself, in the modesty, the courtesy, the sweet self-respect, the good temper of the Queen of Italy. I felt again, how bravely she had borne the drudgery of faithful studies, how she had met every enterprise of life from the simplest to the most complex with patience, how faithfully and with what courage she had played her difficult part, and I wished that I might play my humble rôle as well as she plays her great one.

I must tell a story which will illustrate her self control. One Sunday afternoon there was to be a splendid ceremony near the Church of Ara Cœli, where was to be laid the corner-stone of a statue to Victor Emmanuel. There is to be a vast Valhalla of columns and statues, all going up that famous Capitoline Hill which is crowned with the statue of Marcus Aurelius.

It was a sight never to be forgotten to see the Capitol dressed with the flags of all nations. The municipality, obeying a royal command, had decorated the amphitheatre with flowers, green boughs and colors. Steps were curtained off, a tent was arranged, and a scarlet baldaquin bore the words, "To Victor Emmanuel, the Father of His Country."

On each side of the royal tribune stood a column surmounted by the statue of Renown, holding a crown of laurel. On this tribune sat the King and Queen, surrounded by their courtiers and the diplomatic corps, amongst whom I remember the Burmese ambassador, most picturesque in his beautiful Eastern costume.

Following the royal pair was the mother of the Queen, the Duchess of Genoa, the only person in the world to whom the Queen yields the right-hand seat in her carriage. There were also the son of the King and Queen, the Prince of Naples, and the ministers and the dignitaries of the State. The King and Queen seated themselves, and the ambassadors did homage.

Then arose the venerable prime minister, Signor Depretis, who looked like an old Druid. An immense white beard fell to his waist. His long white hair seemed to have been swept by all the tempests which had passed over United Italy. As he rose slowly and essayed to speak, all the clocks began to strike three, and the prodigious bass voice of the clock of the Capitol thundered forth as if Hercules himself had been pounding on the Tarpeian Rock. Even the iron lungs of Signor Depretis were silenced; he could stem the torrent of parliamentary debate, but time was too much for him. The old Druid smiled, and the Queen hid her rosy lips behind her hand.

After an enforced silence of one minute which seemed hours, Depretis began:

"On this historical hill of the Capitol, we recall the words of Victor Emmanuel, those prophetic words, 'I am here, and here I shall remain.'"

Digitized by Google

Proceeding he eloquently traced the great traits of the work of restoration upon which Victor Emmanuel had not feared to risk his crown. Then, turning to the King, he said, "Heroism is hereditary in the House of Savoy," and as he recounted the event of the King's visit to Naples during the epidemic of cholera, the great audience rose and cheered. The blue eyes of "my first princess" filled with tears. The King with true royal dignity rose and pressed the hand of Depretis.

The *procès-verbal*, or official minute of the proceedings, was then read, and the King was asked to sign it. The King, the Queen, the Duchess of Genoa, the ministers and the ambassadors affixed their signatures.

Then occurred an accident which made cold chills run down every back.

General Pasi, a superb soldier, stepping forward to reach the hammer, overturned the ink-bottle, and pulled off the tablecloth. Everything rolled upon the floor. He tried to wipe up the ink with his handkerchief, which became a black rag. Everybody laughed—except the Queen!

General Pasi glanced at her, looking as if he would rather have lost a battle.

She did not seem to see it, but chatted with her mother until order was restored. The papers were signed, and put in a tin box. The King, who has a really royal dignity, put himself in the attitude of a mason, and laid the corner-stone. General Pasi had time to recover his dignity, and I was proud of "my first princess."

If she had laughed, I think General Pasi would have fainted, but she knows when to laugh and when not to laugh.

M. E. W. S.

EYES ARE HONEST.

The words of the lips are double and single,
True or false, as we say or sing;
But the words of the eyes as they mix and mingle
Are always saying the same old thing.

For the Companion.

FRICK WHARTON'S PERIL.

Frick Wharton was an old campaigner on the frontier, who had served his country from the time of the Custer massacre until the spring of 1890. His intimate knowledge of the Northwestern country, and of the Indians and their languages, his perfect horsemanship, his coolness, pluck and readiness of resource made him a most valuable man as either scout or interpreter.

He was fond of the life, and bade fair to spend all his active years in the government's service; but he encountered at last one person who did what no Sioux, Cheyenne or Ogallala was ever able to do—made him a captive.

That person was a certain blue-eyed young woman from the far-away New England hills, who had come West to teach an agency school, and who said "yes" to the most important question the brave scout ever uttered. As a consequence he withdrew from the service, and with his savings, which had reached a respectable sum, bought a ranch in South Dakota, and settled down into the quiet life of a raiser of cattle and tiller of the soil.

Wharton lived happily enough until the recent trouble with the Sioux nation began. He was quick to foresee the serious nature of the danger. He knew the superstitious nature of the Sioux, and their liability to intense and reckless excitement under a religious delusion. The craze over the expected Messiah, the ghost dances, and the frenzied appeals of the medicine men were sure to inflame the young warriors.

If a war was prevented, it would have to be done by men who knew the Indians well, and were not afraid of them.

As the signs of trouble deepened, Frick grew more and more restless. He longed to leap once more into the saddle, and ride to the scene of the trouble. It was to be a battle of wits as well as of arms, for no people surpass the Sioux in subtilty and cunning.

He was sure his services would be welcome, for no one knew these people better than he.

One day he broached the matter abruptly to his wife.

"Jennie," he said, "I've made up my mind to see the government through in this thing."

"I knew it was coming," she said, "and I have wondered why you didn't speak of it before."

"How did you know it was coming?" he asked. "I haven't said a word."

His wife laughed. "Why," she said, "you've been absent-minded, you've had little appetite, you've walked aimlessly about, you haven't slept well, and you've acted as if there was some heavy trouble on your mind. It was as plain as could be what was the matter."

"Well," he asked, "what did you think about it?"

"I thought that if you didn't mention it pretty soon, I should ask you what in the world you meant by not offering your services when your country needed them!"

Frick did not say much, but kissed his wife affectionately, and was prouder than ever of her. He had made no mistake in estimating the sort of stuff she was made of.

Within a few hours Wharton and his wife rode away toward Pierre, where Jennie was left with friends, and Frick set out alone for the Pine Ridge Agency. He intended to offer his services at once to General Miles.

It was a long ride, but he knew every mile of the way. It was also a dangerous ride, for although no open outbreak had as yet taken place, Frick had picked up enough information on the road to enable him to decide that the conflagration was at hand.

On the afternoon of the second day, when the sun was shining in a clear sky and the air was crisp and keen, an Indian horseman rode over a swell of the prairie, and by his course showed his wish to make a closer acquaintance with the scout.

Frick was not in the habit of running away from solitary Indians, so he drew the rein of his pony, and with the animal at a moderate walk, awaited the coming of the warrior, who was in native costume.

Frick kept a sharp eye on him, and held his Winchester ready, but he detected no hostile movement. Presently he was surprised and pleased to recognize the Indian as an Ogallala whom he knew very well, and who, through some queer whim, had received the unexplainable name of Brother-of-his-Father-and-Mother.

Who was responsible for this amazing title it is impossible to say, but since it was too long to be used except on state occasions, Frick had shortened it to "Briff" when he had occasion to call the Indian by name.

Briff had been a friendly Indian for years. He had been Frick's companion on several of his most dangerous scouts. The two had camped together in the dismal gorges and cañons of the Black Hills and Big Horn Mountains. They had faced the awful blizzard in the land of the Assinaboine, and starved, suffered and hunted together until it would seem that the ties of friendship could not have been welded more strongly.

But this was an extraordinary occasion. Wharton knew that many friendly Indians had come under the influence of the prevailing superstition and had joined the ghost-dancers. He shook hands cordially with Briff, but kept a watchful eye upon him.

Briff declared that he was as "good" an Indian as ever, and that he was on his way to Pine Ridge Agency to "help General Miles."

The weather grew colder as the day declined, and when the sun had neared the horizon the horsemen headed toward a wooded ridge, at the base of which they hoped to find shelter against the cutting wind, and fuel for a fire. There was dry grass, too, for their ponies.

They rode on silently. Wharton had not seen another Indian during the day, and was sanguine of reaching the Agency without collision with them. It was his wish to avoid any conflict or skirmish until after reporting at headquarters, for grave consequences sometimes flow at such a juncture from even a trifling collision.

Jim's Warning.

The scout, therefore, uttered an exclamation of surprise when, just before reaching the spot selected for their camp, he saw the gleam of a fire through the trees.

"Hello!" he exclaimed, bringing his pony to a halt. "Some of them are there!"

"What matter?" answered Briff. "They are my people; they will not harm you when I am with you."

Frick was not entirely satisfied, but he had now full faith in his companion, and went on. The two rode side by side until they reached the edge of the wood.

Briff slipped from his pony first, and hurried forward as if to open the way for his friend, who was but a few steps behind him. There were three Ogallalas, and they had noted the horsemen before the latter saw them. They greeted Briff stolidly, and each one as stolidly offered his hand to Frick, as he came forward to the camp-fire where they stood.

It was a proof of Frick's wide acquaintance with the red men that he knew every one of these Ogallalas and accosted them by name, in their own language. Two were young bucks—both striking specimens of their race, finely formed, tall and graceful, and all were well armed.

The third, known among the white people as Jim, was an older Indian. Frick had met him on the reservation several times during his service as scout, and had never known him to be engaged in any trouble. He was taciturn and reserved, like most of his people, and it was evident that he, too, recognized the white man, whom he called by name, and referred to the time when they smoked their pipes together at Pine Ridge Agency.

Jim was the last to take the hand of Frick, who noticed that his behavior was peculiar. He pressed Frick's hand with a warmth not at all like an Indian, and fixing his black eyes on those of Frick, looked searchingly into his face, without speaking.

Exactly what he meant by this curious procedure was more than our friend could guess, but it had the effect to make him watch the two young Ogallalas closely.

They had prepared a joint of venison, of which all partook. The Ogallalas showed no disposition to "turn in" for the night; they mounted soon, and rode to the eastward, and Wharton thought it best to press on toward the Agency. He and Briff, therefore, said good-by formally to their late hosts, and rode southward in the gathering dusk.

Frick had become convinced that the three Ogallalas were hostile, and that when the outbreak came they would be among the fiercest of the warriors.

The young bucks showed suppressed excitement in every movement, and Wharton was sure that nothing but Briff's influence restrained them from pouncing upon him.

Briff had exchanged whispered words with the bucks. Frick had no doubt that these words were in his behalf. But had the Ogallalas disappeared for good when they vanished across the prairie in the gloom?

As the scout and the Indian rode along Briff was silent, communing with himself. When Frick questioned him, he said that he had sought to dissuade Jim and his companions from joining in the hostilities that were soon to break out, but that his good words were thrown away.

Briff showed no disposition to talk further, and Frick did not press him. They rode on in silence.

The weather was still keenly cold, but the ground was free from snow, and the ponies loped forward at an easy gait. The full moon rose. It was obscured now and then by drifting clouds, so that sometimes they saw but a little way, while at other times their view was unobstructed for a considerable distance.

Less than an hour after starting, the observant Frick noticed that his companion, instead of keeping his pony beside his, showed a disposition to fall to the rear. When he first discovered it, Briff was twenty feet behind him.

Frick looked suddenly back and abated his own gait, so as to permit the Indian to draw up again.

"Is your horse tired?" asked Frick.

"I'm afraid so."

"Then we'll go slower."

Briff rode up, and they went side by side again. But as Frick strained his eyes looking at some object in a distant belt of moonlight, he noticed that Briff was again dropping behind.

Without appearing to divert his attention from the distant object, Wharton watched the Indian, and made sure that he was holding in his animal. Frick did the same, and they were side by side again.

Frick said nothing, but just at this moment he caught the sound of horses' hoofs on the prairie to the eastward.

"Those fellows are coming back," he thought, "and there will be trouble."

The noise of the hoofs was heard only for a moment, as though it had been thrown forward by a puff of wind, or an animal had stumbled. Without attracting the attention of the Indian, Frick glanced in the direction whence the sound came, but could see nothing of the horsemen from whom he had parted but a short time before. He said nothing of what he had heard, and Briff held his peace, though he must have noted it.

With a belief that a crisis was at hand, Frick held himself keenly on the alert. He was looking for the new-comers, and for the moment withdrew his attention from Briff, who was on the opposite side of him. A scout, however, never quite loses sight of anything, and he quickly turned to look at his companion.

He was not a moment too soon. Briff had brought his pony to a stop, less than twenty feet distant, and was in the act of levelling his Winchester at Frick. The scout had no time in which to anticipate him in firing; he dropped, therefore, on the other side of his animal, with the quickness of lightning.

The bullet intended for the white man missed him by an inconceivably narrow chance, and almost at the same instant, Briff tumbled headlong from his horse.

The clouds at that moment brushed past the face of the moon, and its light shone out full and clear. Through the gloom, the figure of an Ogallala horseman assumed shape, as he galloped toward Frick. The scout, with his rifle pointed across the saddle of his pony, waited to receive him.

He held his fire, however, for he had already perceived that it was the new-comer's weapon which had brought down Briff in the very act of shooting at his friend.

It was Jim, the Ogallala, who, with a friendly greeting to Frick, made clear the meaning of what had just taken place.

Briff, he said, had become one of the most fanatical of all the ghost-dancers, and his sudden hatred of the white people was intense. When he joined Frick, he undoubtedly meant to kill him at the first opportunity. Well aware of the bravery and skill of the white man, and cowardly at heart as he must have been, Briff had shrunk from acting until he seemed to have Frick quite at his mercy.

When Jim saw the two in company, he read Briff's purpose at a glance. His retention of Frick's hand, and the searching look into his eyes, was meant to warn him of his peril, and to learn if he suspected it.

Briff's whispered words to the two young warriors were really an urgent counsel to them to fall upon the scout and kill him then and there. They would have done so but for the course of Jim, who told them that if they tried it he would join the white man in defending himself. Briff had then declared that he would manage it alone.

Jim knew his intention, and after riding a short distance with the two bucks, he told them to keep on their course, and that he would join them soon. Then he rode back, determined to warn Frick of his danger.

He arrived in the nick of time.

"I fight you when we meet in battle—not like *him*," said Jim, as he wheeled and rode off to rejoin his companions.

Jim did fight after the manner of his people at Wounded Knee, where he was one of the first to go down. Frick was not present at that fierce conflict, but when he learned of his fall, he said

"Some Indians may be devoid of gratitude and honor. Briff was one of that kind, but Jim was not."

EDWARD S. ELLIS.

For the Companion.

ON THE CAROLINA BANKS.

"Bogue Banks" is the name given to the strip, or rather the strips, of land which lie off the coast of North Carolina, and follow its course from Beaufort Inlet toward Wilmington. The banks vary in width from a few hundred yards to two or three miles, but whether wide or narrow, they are nothing but sand-banks.

Along the entire seaboard of North Carolina the main land is separated from the ocean by a narrow fringe of such sand-banks, leaving Currituck, Albemarle and Pamlico Sounds on the land side of them, and forming a frail and insignificant-looking but impassable barrier to the ocean waves. At intervals these banks are perforated by inlets, which form a means of passage from the sound to the ocean.

Since they are composed almost entirely of fine white sand, the surface of these banks is constantly moved and shifted by the winds, and heaped up into conical hillocks called sand dunes, which are from fifty to a hundred feet in height.

Along the ocean side the banks are almost entirely destitute of vegetation, and no sooner does the wind drift the sand into a little hillock than it begins to tear it down and move it elsewhere, or to carve it into fantastic shapes by its ever varying changes of direction.

Sometimes a hill of considerable size seems to move bodily in one direction without a change of shape, and even to overwhelm houses if they happen to be in the way.

The movement is merely one of the surface sand, and if the wind happens to blow for a long time in one direction, the constant movement of loose particles from one side steadily cuts away that side of the hill, only to deposit the material on the lee side of the hill, where the draught is not so strong. This will account for the apparent movement of the whole mass together.

It is a curious sight to stand on a tall dune and see miles of these conical hills of snow-white sand, with the constant thunder of the Atlantic waves on one side, and the placid waters of the sound and its fleet of little fish and oyster-boats on the other.

During heavy gales from the east, the ocean spray is blown entirely across the narrow places, and the waves sometimes bury many acres out of sight for a time, making such places too dangerous for a habitation. A complete system of life-saving stations is in operation during the winter months.

Occasional areas of tall marsh grass, with patches of live oak and palmetto, form the only green coloring to the scene. Droves of wild ponies, called "bankers," subsist on the scanty vegetation. They wade far out into the sound for the marsh grass, and paw holes among the sand-hills to procure fresh water.

Once a year these ponies are corralled by the owners, and the occasion is called a "pony-penning." At such times the young colts are branded, and the surplus stock is carried to the main land for sale.

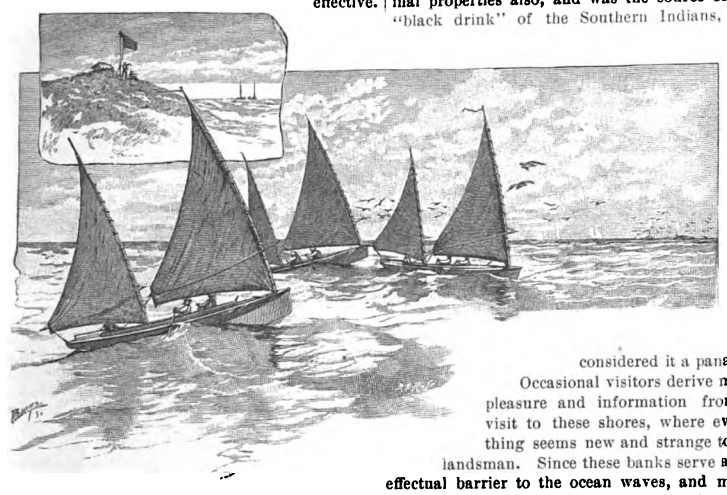
They are rough and hardy little animals, and need to be broken to the saddle or harness like the wild horses of the Western prairies. When first taken from their native shores, they know no food except marsh grass, and need to be taught to eat in a civilized manner of hay and oats. Sometimes one will almost starve before learning to take strange food out of a manger.

A sparse population of hardy fishermen inhabit these banks, and subsist mainly on fish and game. They are practically cut off from the rest of the world, and seem to know and care nothing for its fashions and follies. They are content to eke out a scanty subsistence with an occasional windfall in the way of a wrecked vessel or the capture of a whale.

Perched on the very top of a tall sand-hill, near Fort Macon, there is a strange-looking hut or wigwam built of rushes or tall grass. Its thatched sides and roof have a queer, foreign look, reminding one strongly of the huts used by the native tribes of Africa.

It is the shelter of the fisherman on the watch for whales, which are frequently seen and captured near Cape Lookout in February and March. From his elevated place the sentinel can overlook all of that great bend of the shore just south of the cape, and if a whale "blows" within ten miles, he hoists a flag to warn the fishing crew at Beaufort, several miles away, and on the opposite side of the sound.

An exciting chase now begins. If there are several boats in the chase, the different crews strain every nerve to be first in the battle.



The fishermen here use a peculiar kind of sail boat called a sharpie, which has a flat bottom, a very sharp bow, and an immense centre-board. It spreads a large area of canvas, in triangular sails, on fore and main-mast.

This style of boat is not often seen except on this coast, although it is reputed to sail "closer to the wind" and be faster than any other. The sails are strained very taut and flat by means of a

Digitized by Google

peculiar boom across the lower and widest part of the sail, and this will explain, in part, its remarkable sailing qualities.

The equipment of a crew consists of the ordinary harpoons and lances with the addition of the modern bomb-gun. The last named weapon is the main dependence of our whalemen, and is usually very effective.

Fancy a very heavy, short, single-barrel gun with the stock and barrel all of one piece of iron. It is about one and a quarter inches inside the muzzle, and weighs eighty pounds.

The projectile or bomb is made of iron gas-pipe two feet long, and welded into a sharp triangular point at one end. At the other end it is provided with a "feather," made of gum belting in the style of an Indian arrow. The blades of the feather fold or bend down sidewise, when the bomb is placed in the gun to be fired, but will spring out into the proper shape to cause the missile to fly in a straight line with its point foremost.

A short fuse is fixed at the rear end of the bomb, and protected by a coating of beeswax. Only a moderate charge is put in the barrel, but the bomb itself carries a charge of about eight ounces of rifle powder. The explosion of that amount of powder in the body of the largest whale usually kills it instantly.

Our Beaufort fishermen do not hesitate to follow a whale many miles out to sea, for if successful, their reward is great. A good-sized whale is worth from fifteen hundred to two thousand dollars. The oil and baleen, or commercial whalebone, is carefully saved, but the rest of the carcass is usually allowed to waste.

Large numbers of porpoise are caught near these banks in seines made for the work. They furnish some oil, but are sought for mainly for their hides, which make an excellent leather, very soft, strong and flexible. Much of it is cut into shoe-laces, to which it is specially adapted.

The wooded parts of these banks afford hiding-places for deer, and being not very accessible, the deer are not often hunted. During the winter months the sounds swarm with many varieties of wild fowl. Ducks, brant, geese and swans may be seen in countless flocks. To a sportsman fond of this kind of shooting there is abundant opportunity to test his skill and endurance.

In the summer and autumn months the waters about the different inlets are alive with fish. Here the sport with hook and line is probably better than it is anywhere else on the Atlantic coast.

"Trolling" for bluefish and Spanish mackerel is the favorite method of fishing, and is quite exciting. It does not differ except in minor details from the bluefishing in more northern waters, but is rather more exciting on account of the speed of the boats.

In the more shallow waters of the sounds "bottom fishing" is much practised, both for pleasure and profit. The boat is anchored in three or four fathoms of water, and the fish lines are dropped over the side.

Trout, blackfish, sheepshead, small sharks and many other kinds of fish are thus caught. Ladies and children often derive much pleasure from this style of fishing, and it is a frequent occurrence to haul in three or four fish at once.

In places along the shore are still to be seen mounds and shell-heaps of considerable size. They are supposed to have been made by the various tribes of Indians who frequented that part of the coast before the discovery of America by Columbus, and who probably subsisted mainly on fish. Bits of broken pottery and stone implements leave no room to doubt that these shell-heaps were the work of the aborigines.

It was in the waters of Pamlico Sound, near Ocracoke Inlet, that the famous pirate, Edward Teach, commonly called Blackbeard, had his rendezvous in the year 1713.

Teach was a daring pirate, commanding a ship of forty guns, and spread terror among the inhabitants wherever he went. He was finally captured in an engagement with Lieutenant Maynard in 1719, and his gang was broken up. There is a cove still known as "Teach's Hole," where the more superstitious fisher-folk believe that great treasure is buried. In many places along the banks the Carolina tea, called yaupon, may be seen growing. Its botanical name is *Ilex Cassine*, and it is of the same genus as the mate, or Paraguay tea of South America.

The natives often use the yaupon as a beverage, as a substitute for tea or coffee, and by many it is highly esteemed. It possesses valuable medicinal properties also, and was the source of the "black drink" of the Southern Indians, who considered it a panacea.

Occasional visitors derive much pleasure and information from a visit to these shores, where everything seems new and strange to the landsman. Since these banks serve as an effectual barrier to the ocean waves, and many rivers continue to pour into the sounds their constant streams of water and sediment, it is merely a question of time that the sounds will become more and more shallow, until they will finally appear as marshes of reeds and grass and afterward dry land.

THOS. C. HARRIS.

THE SABBATH.

Six days may rank divide the poor,
O Dives, from thy banquet hall;
The seventh the Father opes the door
And holds His feast for all!

Selected. —*Sir E. Bulwer Lytton.*

CANADIAN SCANDALS.

During almost a half of the present year committees of the two Houses of the Canadian Parliament have been engaged in investigating charges of dishonesty brought against men of the highest position in the public affairs of the country.

It has been for many years the practice of Canadian politicians to hurl accusations of corruption and general depravity against their opponents. There is a similar practice in this country. Politicians make charges at random, and, as a matter of fact, rarely expect to be taken as meaning in all seriousness what they say.

So it was in Canada. Accusations have been made so freely, and they have been made so indiscriminately against men who were suspected and men whom no one believed to have been guilty of wrong-doing, that the guilty persons were able to escape inquiry behind the ridicule excited by the false charges.

But at last the charges were made in definite form, and under such circumstances that it became necessary to make an investigation.

As it proceeded new witnesses were found, fresh facts were brought to light, and new lines of inquiry were suggested. Abuses that had been suspected were proved to exist; public men long in service were found to have been fattening on public plunder; the reputations of others were destroyed because, having been in a position to stop the corruption, they had failed so to do; therefore they must be either sharers in the spoils or incompetent officers.

The worst case developed was that of Mr. McGreevy, formerly a Senator of Canada. The Government of Canada has engaged in vast public works which have cost tens of millions of dollars. These works are performed by contract.

Senator McGreevy was shown to have secured for his brother a partnership in a firm of contractors. For the share so obtained no money was paid. Then the Senator used his political influence to secure contracts for this firm. He had access to department secrets, and used them to promote the interests of the contractors; he assisted them corruptly to get lower bidders for works to be performed for the government out of the way; he procured certain changes in contracts which enabled the firm to get much money for little work.

For these services he received large sums of money from the favored contractors. All this was proved, and Mr. McGreevy virtually confessed his guilt by fleeing from the country. He committed the frauds as Senator, but resigned his Senatorship upon the last election, and ran for the Commons, to which he was elected.

It was inevitable that the suspicion of complicity in these irregularities should attach also to Sir Hector Langevin, through whose official negligence all these misdoings became possible. McGreevy and Sir Hector were bosom friends, and the Senator had not only entertained the Minister at his house, but had paid large amounts for Sir Hector's political expenses.

While the committee was not agreed upon the question of Sir Hector's guilt, and while a majority, all his own political friends, exonerated him, the fact that such wholesale plunder of the Treasury had been going on before his face destroyed his usefulness in public life, and he resigned from the Cabinet.

Sir Hector is, nevertheless, one of the oldest politicians in Canada, has been in public affairs for a generation, and was the leader of that branch of the Conservative party composed of French-Canadians.

This is but one of many scandals that were brought to light, although it is one of the worst. Great abuses were discovered in several of the departments, and many old officials were summarily dismissed.

There were other charges that still remain to be investigated. One such accusation hangs over the head of the Premier of Quebec, M. Mercier, and another over that of the Postmaster-General of the Dominion.

Of course a vast majority of the officials of Canada, high and low, are honest and untouched by the breath of scandal. It is due to them that the evil-doers are expelled from the places they have disgraced. It is to the credit of the people of Canada that the revelations of the past few months have excited deeply their indignation, and that they are resolved that the public service shall be purged.

For the Companion.

A REASSURANCE.

With what anxious eyes, oh sparrow,
Thou regardest me,
Underneath yon spray of yarrow,
Dipping cautiously.
Fear me not, oh little sparrow,
Bathe, and never fear,
For to me both pool and yarrow
And thyself are dear.

ARCHIBALD LAMPMAN.

THE WORLD'S FAIR.

In April, 1890, an Act of Congress was passed providing for a World's Fair in Chicago, to commemorate Columbus's discovery of America. New York, St. Louis and Washington had each put forth a claim to the Fair, but after a sharp struggle the honor was awarded to Chicago.

Originally it was intended to open the Fair on October 12, 1892, the four hundredth anniversary of the discovery; but the time was too short for the necessary preparation. Accordingly the buildings will be dedicated with imposing ceremonies on the day of commemoration, while the Fair itself will not be opened until May 1, 1893.

The Chicago World's Fair will have twelve main buildings, in the general style of those in the Paris Exhibition of 1889. They will be erected in Jackson Park, an open area of six hundred and forty-six acres lying along the shore of Lake Michigan.

Nine of the buildings are already under construction, and three thousand workmen are employed upon them.

Though these twelve buildings will contain the greater part of the exhibits, there will be many smaller buildings erected later on for special exhibits, besides an enormous lake pier and a great imitation battleship, to be built of brick. The reason for adopting this very unusual material in marine architecture is that an existing treaty with England forbids the floating of warships in the Lakes.

A World's Fair occasions enormous expenditure of money at the start, and rarely, if ever, wholly repays the outlay in a direct form.

In asking Congress for the Fair, Chicago pledged itself to raise ten million dollars. Half of this sum the city is to raise by issuing bonds; the other half has been subscribed by private citizens, and the greater part of the money is already paid in.

This amount by no means represents the full cost of the Fair. The States of the Union, and the foreign nations, most of whom are preparing special exhibits, will be put to heavy expense to arrange their own part of the exhibition. Many, if not all of them, will erect State buildings, and exhibit the distinguishing products of the soil.

Already the legislatures of the States have appropriated over two million seven hundred thousand dollars, and this will probably be largely increased before the opening. About three million four hundred thousand dollars has been appropriated by foreign governments for the same purpose, and this will be more than doubled.

The management of the "Columbian Exposition," as it is officially called, is distributed in a somewhat novel way.

The detail management is in the hands of the director-general and a board of directors chosen from Chicago's citizens. Questions of general scope come before the "World's Columbian Commission," made up of commissioners from the various States, appointed under the Act of Congress.

In addition to these, there is a "Board of Lady Managers," comprising two women from each State of the Union, with eight more chosen at large, and nine from the city of Chicago.

The dedication of the Fair, on October 12, 1892, will be made the occasion of elaborate ceremonies, lasting four days, participated in by the President, the Cabinet, the State governors, and a detachment of the United States army. It is the purpose of the managers to make this Fair peculiarly an exhibition of the recent industrial progress and growth of the United States, especially in the interior States, of which most foreigners know so little.

CONTROLLING THE FLOODGATES.

A little girl of eight years sat perched upon a high mantel. Traces of tears were on her flushed cheeks, her hands were clinched, her under lip was fiercely bitten. Her little form quivered with suppressed emotion.

"Good, my daughter! Are the tears quite conquered?" A gentleman, of whom the child was a miniature edition, rose from his writing-table, took her in his arms, kissed her, placed her on the floor, and held the door open for her to pass, as respectfully as if she were a little princess.

"Poor baby," he remarked to the caller who had looked on with astonishment. "She has her father's own temper, but she is braver than I was, and will learn self-control far sooner. When she was very small I used to put her up there to keep her from kicking, breaking and tearing. It became a regular place of durance, and later, as to-day, she comes to it of her own accord. It seems to be the only ark that can bear her above the floods."

"Ah," returned the caller, "if I had only been taught in childhood to restrain my tears, there would be fewer lines in my face to-day. In those times, girls were encouraged to weep.

"As Rochefoucauld says, we sometimes wept to avoid the disgrace of not weeping. But it was all wrong. We ought to have been treated like our brothers who were called cowards and cry-babies, and shamed into self-control."

Dorothea Dix once wrote to a friend that she was so early taught to shed tears that "Now, when sudden joy lights up, or unexpected sorrow strikes my heart, I find it difficult to repress the full and swelling tide of feeling. Even now, though alone and with no very exciting cause of grief or joy, I am paying my watery tribute to the genius of Letitia Landon."

Perhaps it was over the woes of that very heroine upon whose bosom "great drops had fallen like rain," and yet whose sorrows consisted merely in the knowledge of her own changefulness.

Did the lovely heroine, and did the noble-minded Miss Dix go to their mirrors after such dissipations in tears? Did they think how bloodshot were their eyes, how swollen their noses, how hot their foreheads, how weakened their brains?

Ladies in novels may be able to weep without those unbecoming results, but flesh and blood heroines cannot. Dewy eyelashes sound better than they look.

The White Queen in the Chess Country gave some very good advice to Alice, when she said, "Consider what a great girl you are; consider what a long way you have come; consider what o'clock it is; consider anything, only don't cry."

"IN DEBT."

A man who attempted to raise some money on a subscription paper for a necessary church out West relates his experience thus:

"The first man I went to said he was very sorry, but the fact was he was so involved in his business that he couldn't give anything. Very sorry, but a man in debt as he was owed his first duty to his creditors.

"He was smoking an expensive cigar, and before I left his store he bought of a peddler who came in a pair of expensive Rocky Mountain cuff buttons.

"The next man I went to was a young clerk in a banking establishment. He read the paper over, acknowledged that the church was needed, but said he was owing for his board, was badly in debt, and did not see how he could give anything.

"That afternoon, as I went by the base-ball grounds, I saw this young man pay fifty cents at the entrance to go in, and saw him mount the grand stand where special seats were sold for a quarter of a dollar.

"The third man to whom I presented the paper was a farmer living near the town. He also was sorry, but times were hard, his crops had been a partial failure, the mortgage on his farm was a heavy load, the interest was coming due, and he really could not see his way clear to give to the church, although it was just what the new town needed.

"A week from that time I saw that same farmer drive into town with his entire family, and go to the circus, afternoon and night, at an expense of at least four dollars.

"The Bible says, 'Judge not, that ye be not judged,' but it also says, 'By their fruits ye shall know them.' And I really could not help thinking that the devil could use that old excuse, 'in debt,' to splendid advantage, especially when he had a selfish man to help him."

NAPOLEON'S REMEMBRANCE.

Madame Junot, in her "Memoirs of Napoleon," relates many interesting and amusing anecdotes of the Emperor's youth. He was, as a lad, quick-tempered, sensitive, and somewhat vain of his personal appearance, but possessed sufficient good judgment to control his temper upon occasion, and to give no evidence of injured vanity.

"I well recollect," writes Madame Junot, "that on the day when he first put on his uniform, he was as vain as young men usually are on such an occasion. There was one part of his dress which had a very droll appearance—that was his boots.

"They were so high and wide that his little slim legs seemed buried in their amplitude. Young people are always ready to observe anything ridiculous, and as soon as my sister and I saw Napoleon enter the drawing-room we could not restrain our laughter.

"At that early age, as well as in after life, Napoleon could not relish a joke, and when he

Digitized by Google

found himself the object of merriment, he was certain to become angry.

"My sister, who was some years older than I, said that since he wore a sword he ought to be gallant to ladies, and instead of being angry, should be happy that they joked with him.

"'You are nothing but a child—a little *pensionnaire*!' said Napoleon, in a tone of contempt.

"Cecile, who was then twelve or thirteen years of age, was highly indignant at being called a child, and she hastily resented the affront by replying to Bonaparte, 'And you are nothing but a *puss in boots*!'

"This excited a general laugh among all present, except Napoleon, whose rage I will not attempt to describe. Though not much accustomed to society, he had too much tact not to perceive that he ought to be silent when personalities were introduced, and his adversary was a child.

"Though deeply mortified at the unfortunate nickname which my sister had given him, yet he affected to forget it, and to prove that he cherished no malice on the subject, he had a little toy made, and gave it to me. This toy consisted of a cat in boots, and in the character of a footman running before a carriage. It was very well made, and must have been rather expensive to him considering his straitened circumstances.

"He brought along with it a pretty little edition of the popular tale 'Puss in Boots,' which he presented to my sister, begging her to keep it as a token of his remembrance."

LINCOLN'S GOOD SENSE.

When Abraham Lincoln found an opponent too prejudiced to listen to solid argument he would often dismiss the subject with a bit of humor, thus gaining the good will if not the convictions of his adversary.

On one occasion, having been discussing the condition of the South with a large levee contractor from New Orleans, and having found the gentleman wholly unreasonable, Lincoln remarked that it would be useless to prolong the conversation.

"You are right," angrily responded the other; "there can never be a single point in common between us."

"Oh yes, there can," answered the President, "for you know that I occasionally hold a levee to promote sociability while you build them to promote commerce."

While Lincoln was practising law in Springfield, Illinois, there came to him one day a young farmer who desired to study for the bar.

The applicant was not only totally unfit for the profession, but also sadly needed at home to take care of his widowed mother and her little family. After giving a long list of his qualifications the would-be lawyer said:

"And now, Mr. Lincoln, do you not think that the law is the vocation for which I am specially fitted?"

"Young man," replied the attorney, "the vocation in which you are at present engaged, is searching for the pot of gold at the foot of the rainbow, but the one for which you should try to fit yourself is the care and maintenance of your aged mother."

The earnest manner in which Lincoln spoke made a deep impression on his hearer, who never again gave his mother reason to think that he was selfish or lacking in filial duty.

WORK AND WAGES.

At the recent meeting of the learned British Association there was a discussion of the difference in the wages of men and women doing the same work. The conclusion seemed to be that there is no great difference, after all, and therefore not much to discuss.

The same matter is debated now and then in this country. All right-thinking people will agree that a woman is entitled to the pay which a man would receive for the same work, equally well done.

Nevertheless, this does not mean that Alice Jones, who is a clerk in Rupert & Co.'s dry goods store, and who stands at the counter beside James Stark, should have the same weekly wages as he. It is the universal custom to put more work and heavier upon the men, and usually the greater responsibility is laid on them.

Moreover, it is a matter of common experience that men are less frequently compelled by illness to be absent from their work, and their power of endurance is, in general, greater.

This is not all, for while it takes one man to marry one woman, the man usually continues at his employment after marriage, while the woman does not. It follows that a man, being more likely to stay and to learn the ins and outs of trade, is worth more to an employer than a woman who may marry and leave him at any time.

It follows also that in any employment where men and women are at work together, the average experience of the men is the greater.

These facts do not excuse unfairness in giving wages to men and women, but they do explain away some things that seem unfair, and that turn out not to be so.

SATISFACTION.

A little affair in which Incledon, the once famous singer, was involved, shows that there is more than one way of settling what is called an "affair of honor."

Incledon had never fought a duel, and he never intended to fight one, but he was an unsophisticated man, and said and did a great many queer things out of sheer simplicity.

On one occasion some remarks of his gave offence to a man with whom the singer happened to fall into company, and the offended gentleman resolved to have "satisfaction" for his wrongs. Accordingly he hunted up Incledon the next afternoon, finding him at dinner in a noted hotel.

"Mr. Incledon," said the waiter, "a gentleman wishes to see you, sir."

"Show him up, then," said the singer.

"Sir," said the visitor, entering the room in a towering passion, "you have been making free with my name in a very improper manner, and I've come to demand satisfaction!"

After some parleying, Incledon rose, and striking a graceful attitude in the centre of the room began to sing "Black-eyed Susan," in his most delightful style. When he had finished the song, he said, coolly:

"There, sir, that has given complete satisfaction to several thousand people, and if you want anything more, I've only to say you're the most unreasonable fellow I ever met!"

Large Prizes for Serial Stories.

The Publishers of "The Companion" offer four magnificent prizes for the Best Serial Stories to be written expressly for "The Companion."

TWO THOUSAND DOLLARS for the Best Serial;

ONE THOUSAND DOLLARS for the Second Best;

ONE THOUSAND DOLLARS for the Third Best; and

ONE THOUSAND DOLLARS for the Fourth Best.

The competition will be governed by rules, to which all who enter it must conform.

For the terms of the competition send your name and address and a two-cent stamp, to

THE YOUTH'S COMPANION, Boston, Mass.

TRANSFERRING A BIRTHDAY.

This is an age of ingenious contrivance, yet it has remained for Mr. Robert Louis Stevenson to surpass his contemporaries in original invention. Only his astonishingly fertile mind could probably have hit upon the project of transferring a birthday from one person to another. He has decided upon the sacrifice of his own natal day, and solemnly sets forth his intentions in writing. The document, ruthlessly shortened, runs thus:

I, Robert Louis Stevenson, advocate of the Scots bar, author of the "Master of Ballantrae," etc., being in sound mind and pretty well I thank you in body:

In consideration that Miss A. H. Ide, in the town of St. Johnsbury, Vermont, U. S. A., was born out of all reason upon Christmas Day, and is therefore denied the consolation and profit of a proper birthday:

And considering that I, Robert Louis Stevenson, have attained an age when Oh, we never mention it, and that I have no further use for a birthday of any description:

Have transferred and do hereby transfer to the said A. H. Ide all and whole my rights and privileges in the thirteenth day of November, formerly my birthday, now hereby and henceforth the birthday of the said A. H. Ide, to have, hold, exercise and enjoy the same in the customary manner, by the sporting of fine raiment, eating of rich meat, and receipt of gifts, compliments and copies of verse according to the manner of our ancestors:

And I direct the said A. H. Ide to add to the name of A. H. Ide the name Louisa—at least in private; and I charge her to use my said birthday with moderation and humanity, the said birthday not being so young as it once was, and having carried me in a very satisfactory manner ever since I can remember.

And in case the said A. H. Ide shall neglect or contravene either of the above conditions, I hereby revoke the donation, and transfer my rights in the said birthday to the President of the United States of America.

ACHIEVEMENTS OF PHOTOGRAPHY.

Almost every day photography presents some fresh achievement to show that it is an art whose development has, in many respects, but just begun. This is especially true of the services which photography is able to render to science. It is continually widening our knowledge of the universe beyond the earth. Telescopes alone, no matter how large and powerful they might be, would, probably, never have revealed the crowding multitudes of new stars, and the strange wisps, rings and spirals of nebulous matter that have been photographed in the heavens.

At a recent meeting of the Royal Astronomical Society of Great Britain some photographs were exhibited which clearly brought out the importance of such additions to knowledge.

Some of these photographs prove that the Milky Way really extends right across spaces which, to the eye, seem bare of stars.

Every one has read of the "Coal sack," an apparently barren spot or hole in the Milky Way, visible in the Southern Hemisphere, and so evident to the naked eye that it catches the attention at once, and ranks among the celestial wonders of the South.

But a photograph of the "Coal sack" lately made at the Sydney Observatory, in New South Wales, shows it all sprinkled over with faint stars, so that, as has been remarked, "At first sight of the photograph you wonder where the Coal sack is."

After the camera has been applied to search all the depths and corners of space we may have a very different idea of the structure of the universe from any that is now entertained.

THE WRONG INFERENCE.

An anecdote told in the *North American* illustrates that a woman does not always draw the right inference, though, as Dryden says, she "can draw you to her with a single hair."

Doctor Thompson, Archbishop of York, who recently died, suffered, while Bishop of Glouces-ter, from toothache, and resorted to narcotics to relieve the pain. One morning, after a night of suffering, he left the house to consult the doctor. Mrs. Thompson begged him not to allow the physician to persuade him to take a narcotic, as it affected his brain for some hours afterward.

On his way the bishop met the postman, who handed him a large official envelope. He opened it in the street and read, to his surprise and gratification, his appointment to the see of York. He hurried back to communicate to his wife the exciting news.

"Zoe! Zoe!" he exclaimed. "What do you think has happened? I am Archbishop of York."

"There! there!" she rejoined. "What did I tell you? You've been taking that horrid narcotic again, and are quite out of your head!"

Did you see the wonderful music offers on page 563 of COMPANION, October 22d? Look them up. [*Adv.*

CHRISTMAS CARDS BY MAIL.

Christmas comes but once a year,
And when it comes it brings good cheer.

Our cards and booklet packets have become a necessity in thousands of families at Christmas time.
We will send the **first six packages for $3.25, post-paid,** or the complete set of **nine packages for $5.40, post-paid.** Satisfaction guaranteed.

No. 1.—For 50 Cents, and 4 Cents for Postage, 17 Prang & Co.'s and other fine Christmas Cards, together with a cut-out fancy-shaped Card, and a fine Birthday Card.

No. 2.—For 50 Cents, and 4 Cents for Postage, 10 large and finer Cards from the above publishers, together with **a shaped** monotint Booklet.

No. 3.—For $1.00, and 6 Cents for Postage, a choice selection of **25** Beautiful Cards, of **L. Prang & Co.'s, also a** handsome Souvenir Booklet.

No. 4.—For $1.00, and 8 Cents for Postage, a selection of **10** of our largest and finest Cards, together with a Santa Claus Letter, illustrated, and a folding **Calendar** for **1892.**

No. 5.—For 25 Cents, and 2 Cents for Postage, 10 Prang's, Tuck's, Ward's, and other beautiful cards.

No. 6.—For 50 Cents, and 4 Cents for Postage, 5 Christmas Booklets, including one shaped Booklet, cut in form of an animal.

No. 7.—For $1.00, and 8 Cents for Postage. 7 handsome Souvenir Booklets, together with a colored Picture Book by Marcus Ward & Co.

No. 8.—BIRTHDAY PACKET. For 50 Cents, 17 Fine Cards of Prang's and others.

No. 9.—SUNDAY-SCHOOL PACKET. For 50 Cents, 25 Cards of Marcus Ward's, Prang's Cards, assorted.

FOR TEACHERS, 50 Prang's, and other beautiful cards, no two alike, for **$1.00,** and **8** cents for Postage. Better assortment **$2.00,** and **10** cents for Postage. A very choice selection, **$3.00,** and **20** cents for Postage. And for **50** cents, and **4** cents for Postage, 25 cards, no two alike.

STAMPS AND POSTAL NOTES RECEIVED. Novelties, at 15, 25, 50, 75 Cents, and $1.00 each, for **Birthday** or **Anniversary,** which will be selected with **care** for different tastes and ages as specified.

PAPER. BEACON HILL LINEN. For Fashionable Uses is the Best Paper made.
COMMONWEALTH LINEN. A Medium-priced but Fine Grade.
U. S. Treasury Bond, Toughest Paper made. Is very fashionable.
CARTER'S TYPE-WRITING PAPERS. "Best and cheapest in the market."

PAPER BY THE POUND. We guarantee our prices **lowest** in America. Sample sheets of paper and envelopes from **10 cents** a pound and upwards, with prices and number of **sheets** to a pound, sent on receipt of **15 cts.** These papers are the correct size and finish for fashionable correspondence.

SPECIAL OFFER. On orders of $10 and over we will prepay freight charges to nearest railroad station. Club your orders with friends and take advantage of this. Agents and Dealers should correspond with us.

ENGRAVED VISITING CARDS. For $1.75 we send a copper plate, finely engraved, with 50 cards. Estimates furnished for Wedding and Class-day Invitations. Street Dies, Crests, and Stamping. Samples free on application. All the work is done on our premises. We employ only the best workman and use the finest cards. We Guarantee satisfaction.

Handsome boxes of fine stationery, plain or illuminated, for 35 cents, 50 cents, 75 cents, $1.00 to $2.00 each, sure to give satisfaction.

H. H. CARTER & CO., 3 Beacon Street, Boston.

If Santa Claus

Will but glance through our new MAMMOTH PREMIUM LIST, the usual vexations which have attended his efforts to fill

Christmas Stockings

will be an experience of the past.

This Premium List has been ENLARGED, and is CROWDED with SPECIALTIES for HOLIDAY GIFTS. It is of no use to even attempt a description. Our space is too limited. Look the Premium List through. You will be sure to find a host of articles that would make the hearts of both little and big folks beat with delight.

Goods can be sent safely to any part of the country, either by mail or express. Show our Premium List to your friends. Several orders can be packed together in one bundle and sent by express at one-half the usual mail charges.

Please send your Christmas orders EARLY, before the Holiday rush begins.

SUGGESTIONS.

YOUR STATE.

What are the chief agricultural products of your State?
Has it mineral wealth?
What manufacturing industries are carried on?
What colleges, seminaries and academies has it?
What is the condition of its public schools?
Has industrial education been anywhere introduced?
What noted men and women were born in your State?

For the Companion.

MORNING ON MARGUERITE.

O wild and sweet the sea-wind sings
This morn round tawny Marguerite!
The sea leaps up, and bowing, flings
A million foam-flowers at her feet;
The sun on her mysterious hills,
And slumberous forests, lays his heat,
And glory as of Eden fills
The hundred vales of Marguerite!

The gracious skies bestow their balm
On her, the ocean streams their wine;
Their grace and health are in her palm,
Their strength and fire are in her vine.
And all her year-long summer through
Her vales shed fruits and nectared sweet
To argosies that haunt the blue
That circles tropic Marguerite.

The dusky streams rush into light
From out her columned, dim arcades,
Where they have lingered all the night,
And dreamed beneath enchanted shades;
Deep in the glens a songster wakes,
And pipes a carol wild and fleet,
Whereat an answering chorus shakes
The haunted glades of Marguerite.

On coast and slope her cities gleam,
That dark, umbrageous palms embay,—
Abodes of fairyland they seem,
And indestructible as they;
The hoary convent's walls are hung
Aloft, where sky and mountain meet,
And hark! their mystic, solemn tongue
Speaks through the shades of Marguerite!

It rings to prayer for hapless souls
Entangled in Circean snares,
Through whose enchantment rarely rolls
The call of Heaven to nobler cares.
Blindly they troop among the graves,
With chains of roses round their feet,
And live or die enamored slaves
In glorious, deadly Marguerite.

O. C. AURINGER.

For the Companion.

TWO MEN.

A singular story was brought to light a few years ago at the death of a noted capitalist in one of our Southern States.

This man had been for thirty years the head of a large banking interest, and was honored for his strict integrity; he was prominent in the charitable and humane societies of the city in which he lived; he was the leading member of a church, to which he gave liberally; in social life also he held high position, and no company of the notables of the city was complete without him.

Not an accusation had ever been brought against his morality or honor. Yet men of keen perception and all women doubted him; there was something unwholesome in the atmosphere about him; his eye evaded and shrank from the eye of an honest man.

When he died, it was discovered that he had for many years secretly defrauded his partners, and in an obscure part of the city had led a vile, immoral life.

A companion picture to this true history is that of a man, who at eighteen was sentenced to prison for grand larceny for a long term of years.

Upon the terrible despair which at first overwhelmed him there dawned a hope—feeble and uncertain, but still a hope. He should come out of that prison some day. He should be a man past middle age, but he should come out. He should be free, a man among men, and he could then live a new life, serving the God Whom he had first learned to know in a prison cell.

The confinement was solitary in this prison. He was taught the trade of a weaver. All day long, month after month, year after year, he worked at his little loom, making the blue fabric in which the convicts were clothed, and thinking of this hope.

He rarely saw any man but his keeper; there was no way for him to practise the honesty, the kindness and the love which he hoped to show some day to his fellow-men. He could only hope and pray.

He aged rapidly in these years. When the time came for his discharge he was a bent, white-haired old man. But in his long solitude, he had come very near to his God, and he went out from the abode of crime with a manly bearing, and a face marked by a life of noble thought and high purpose.

He was always an obscure, poor man. He made no boast of his religion; but real goodness is not easily hidden, and no one came near him who was not made better and happier for contact with him.

The one man who zealously made pure and lustrous the outward parts of his life, wholly forgot to look to the heart inside. The other, held down to evil and debasing surroundings for many years, tried only to make his soul fit for God's eye.

"Keep thy heart with all diligence," says the great preacher of all ages, "for out of it"—not out of our circumstances—"are the issues of life."

We may be pure and true in spite of the most unfavorable surroundings, or we may play the hypocrite in the very face of the Divine mercy.

OPPOSITION.

There is a natural desire on the part of some great and powerful men to be opposed or crossed occasionally. Ordinarily men of this sort insist upon having their own way, but instances are not lacking in which persons who have opposed them with some violence have seemed to excite their admiration and win their gratitude. Two cases of this sort, one occurring in the career of the great Napoleon, and one an incident of a recent voyage of a living monarch, are interesting.

The memoirs of General Marbot upon the first French Empire, recently published, relate that, on the occasion of a very formal distribution of rewards made by Napoleon before Ratisbon, an old grenadier came forward and demanded somewhat sharply, to the astonishment of all, a cross of the Legion of Honor.

"But what have you done?" said Napoleon.

"Why, sire," said the soldier, "it was I who, in the desert of Jaffa, when it was terribly hot, and you were parched with thirst, brought you a watermelon."

"Thank you," said Napoleon, "but a watermelon for a general is not worth a cross of the Legion of Honor."

The grenadier flew into a violent rage.

"Well, then," he shouted, "I suppose that the seven wounds that I got at Arcola and at Lodi and at Austerlitz and at Friedland go for nothing, eh? My eleven campaigns in Italy, in Egypt, in Austria, in Prussia, and in Poland you don't count, I suppose?"

"Tut, tut, tut!" exclaimed the Emperor. "How you do get excited when you come to the essential point of the whole matter! I make you now a chevalier of the Legion for your wounds and your campaigns; but don't tell me any more about your watermelon!"

A similar outburst from a general would have won dismissal and disgrace, but the Emperor was pleased with it when it came from a simple soldier.

The young Emperor of Germany is the hero of the other incident. The German papers relate that, during his visit to Helgoland, the Emperor, wishing to study the fortifications of the island, expressed an intention to make an ascent in a balloon which is kept for the purpose.

Against this project the Emperor's brother and other officers protested, alleging that the Emperor should not risk his personal safety in a balloon—even a captive one.

The Emperor persisted, when General von Hahnke placed himself bodily in his sovereign's way, blocking the path, and at the same time declaring that a law of Prussia forbade the King to risk his person unnecessarily, or to "travel outside of Europe" without the permission of the upper branch of the Prussian legislature. The Emperor would violate this law, he declared, if he ascended in the balloon.

The Emperor, who has the reputation of being a very headstrong man, stood still a moment, while the officers about looked on in wonder at the spectacle of a subject opposing physical force to the monarch's will.

Then the Emperor embraced General von Hahnke, assured him that he was entirely right, and afterward presented him with the grand cross of the Order of the House of Hohenzollern.

WONDERS OF CRYSTALS.

One of the greatest mysteries in the world is the growth of crystals, and one of the most delightful occupations in the world is the search for some of the crystalline forms that adorn the museums of geology and mineralogy. There is something almost startling in the suggestion of life-like forces presented by the regular shapes of many crystals. A *Companion* contributor recalls with a thrill of interest the summer afternoon when he found the first native specimen he had ever picked up.

It was a large crystal of troostite,—a mineral containing zinc and manganese,—and as the breaking of the containing rock revealed one of its pointed ends, and the beautifully formed angles of its long, flesh-colored sides, it seemed almost a living thing suddenly released from imprisonment.

The resemblance between crystalline growth and the growth of animals and plants is especially striking in regard to the power of healing and repairing injuries. This resemblance was dwelt upon by Professor Judd in a lecture before the Royal Institution in London last winter.

If some of the lowest and simplest animals are torn asunder, they are not killed, but each separate part grows into a perfect animal. In plants this power is much more completely developed, while crystals possess it to a remarkable degree. It has even been shown that a crystal which has been injured will, under certain circumstances, suspend its growth over the remainder of its surface until the injured part has been repaired. Yet there is no real life in the crystal, but simply a force which causes its particles to arrange themselves in geometrical forms.

Some crystals, it is believed, have had their growth suspended during millions of years, after which enormous lapse of time the growth has been renewed. Such a process would be impossible to animals and plants, although some imaginative story-writers have treated their readers to wonderful accounts of suspended animation in man.

In one respect, as Professor Judd has pointed out, crystals possess a great advantage over living beings like ourselves—they are able to renew their youth! This is not because they have discovered a counterpart of the marvellous fountain that Ponce de Leon so vainly searched for, but because the forces of crystallization are able to renew their action even after the greater part of a crystal has been destroyed through age or accident.

LION-SHOOTING.

Every hunter of ferocious wild beasts knows what Job meant when he exclaimed, "I am escaped with the skin of my teeth." Gerard, the famous lion-killer, was one dark night waiting at the ford of a brook in Algiers, at a spot where a certain black lion usually crossed to get his weekly supply of beef from the Arabs' cattle, corralled on the plain. The hunter sat on a stone that overlooked the steep sides of the ford, bracing his feet on a root which curved out of the bank.

Suddenly, from the other side of the brook, half a mile up the hill, he heard the heavy moaning that precedes the lion's roar, and then his full-toned voice belched forth its detonations.

In a few minutes, opposite to where he was sitting, came a sigh and a long moan. He looked and saw the eyes of the lion, like two burning coals, fastened on him. They disappeared, and he heard the lion splashing in the water. Then he saw the eyes again, glowing at him six paces distant.

Taking aim as accurately as the darkness would permit, he pulled the trigger of his rifle, and the flash revealed the lion struggling in the water. Gerard withdrew his foot from the root, and stood ready to fire the second barrel; but he could see and hear nothing except the swirl of the brook and the flashes of its foam. Unwilling to explore such a region of shadows, with a wounded lion waiting somewhere in it, he returned to the Arabs' camp.

The next morning, on going to the spot of his night adventure, the first thing he saw was the root on which he had braced his feet cut in two by the lion's teeth, and the bank beneath furrowed by his claws. At the edge of the brook a small piece of bone was found. The ball had broken the lion's shoulder, but not a trace of him could be found that day.

The next day the Arabs found him on the side of the mountain. He charged them, and would have made short work of men and horses had he not dragged after him a broken leg. Gerard found him halting in a small opening, lashing his tail and growling. On the other side of the brook were sixty armed but trembling Arab horsemen.

Gerard dismounted and started after the lion, who had gone into a thicket. A stone thrown in caused the lion to dash out. The hunter fired; his ball struck the beast in the forehead. He fell, but instantly reared on his hind-legs. The second ball pierced the heart, and he fell over dead.

For the Companion.

THE LOST HARVEST.

Beneath the crimson sunset waved fields of amber grain,
Inlaced with slanting sunbeams, like skeins of golden rain;
And in the rustling billows the winds were charmed to rest—
The weary winds of even whose home was in the west.
The last bright eve of Autumn waned softly into gray—
But fair, deserted harvest, no reapers came thy way!

No silver sickle gleaming, no ringing of the scythe,
No songs from out the barley of busy workers blithe,
No faces glad and ruddy amid the bending wheat,
And on the dusty road-side no sound of coming feet.
The darkness gravely falling, the owl's despondent call,
The ghostly mists arising, the sadness—that was all.

And so the west grew sober, its melting beauty spent,
And night raised in the welkin her star-lit shadow tent.
And Winter, swift returning, like some pale exile old,
Shook out his frosty garments and brought the deathly cold;
And all the harvest's glory was bound with snow and frost—
O reapers of the harvest—too late!—The fields are lost!

Alas! for life's rich promise, when thus it finds a doom,
And death o'ertakes its splendour before God's reapers come.
Awake! Arise, O reapers! Why wait the deathly frost,
And then, half-blind with weeping, behold the harvest lost?
Awake! Arise! Already ye see the waning light—
Go forth! The skies are fading. The Winter comes to-night.

ERNEST WARBURTON SHURTLEFF.

LAST OF HIS RACE.

When Lady Duff-Gordon was in Cape Colony, in 1863, she paid a visit to Gnadenthal, a Moravian missionary station, founded in 1736. "A lovely spot," she calls it; "a large village nestled in a deep valley, surrounded by high mountains on three sides, and a lower range in front." But the approach to it was "over a mighty queer road and through a river," and in the Cape cart, driven by a Hottentot driver, she and her fellow-passengers were rattled "like dice in a box." She writes to her mother:

I must tell you what struck me most. I asked one of the Herrnhut brethren whether there were any *real* Hottentots, and he said, "Yes, one;" and the next morning, as I sat waiting for early prayers under the big oak-trees in the square, he came up, followed by a tiny old man hobbling along with a long stick to support him.

"Here," said he, "is the last Hottentot; he is a hundred and seven years old, and lives all alone."

I looked at the little, wizened, yellow face, and was shocked that he should be dragged up like a beast to be stared at. A feeling of pity which was something like remorse fell upon me, and my eyes filled as I rose and stood before him, so tall and like a tyrant and oppressor, while he uncovered his poor little old snow-white head, and peered up in my face.

I led him to the seat, helped him to sit down, and said in Dutch, "Father, I hope you are not tired; you are old."

He saw and heard as well as ever, and spoke good Dutch in a firm voice. "Yes, I am above a hundred years old, and alone—quite alone."

I sat beside him, and he put his head on one side and looked curiously up at me with his faded, but still piercing little wild eyes. Perhaps he had a perception of what I felt—yet I hardly think so. Perhaps he thought I was in trouble, for he crept up close to me, and put one tiny paw into my hand, which he stroked with the other, and asked, like most colored people, if I had children.

"Yes," I said, "at home in England;" and he patted my hand again, and said, "God bless them!"

It was a relief to feel that he was pleased, for I should have felt like a murderer if my curiosity had added a moment's pain to so tragic a fate.

His look was not quite human, physically speaking: a good head, small wild-beast eyes, piercing and restless; cheek-bones strangely high and prominent, nose *quite* flat, mouth rather wide; thin, shapeless lips, and an indescribably small, long, pointed chin, with a very little soft white woolly beard; his head covered with extremely short close white wool, which ended round the poll in little ringlets.

His hands and feet were like those of an English child of seven or eight, and in person he was about the size of a child of eleven. He had all his teeth, and though shrunk to nothing, was very little wrinkled in the face and not at all in the hands, which were dark brown, while his face was yellow.

COWHIDE BOOTS.

The cowhide boot, writes a correspondent who wore a pair forty years ago, was neither a thing of beauty nor a joy forever. It was plain even to ugliness, and a constant source of discomfort as long as it lasted. It was always so short that it tortured the toes, or so long and so roomy in the instep that the heel was perpetually rubbing up and down, like the modern elevator. When new its symmetry was like that of a stove-pipe elbow, but after a few wettings it became as wrinkled as a calf's neck.

The boy of that period almost invariably removed his boots at night in a thoroughly soaked condition,—in spite of a reputation for being waterproof, they took in water like a sponge,—and as they were sure to dry in the most inconvenient shape, or rather shapelessness, it was a work of patience for their owner to force his feet into them again the next morning.

With a clothespin inserted in each strap, to save his fingers from being cut to the bone, the unhappy youth tugged and pulled until his arms were almost dislocated at the shoulder, and around the base-board and at the door-bottoms were the marks of his vigorous kickings, without which his utmost strength would have come to nothing.

There was no right-and-left nonsense about a pair of cowhide boots. Each boot was constructed on the utility model, and was quite as bad a misfit for one foot as for the other. It would have been possible, no doubt, to mold it into something like the contour of one's foot, but this was prevented by the watchful oversight of the boy's father, who insisted that the same boot should never be worn on the same foot two days in succession.

When the boots were pulled off at night, they were carefully placed side by side in such a way that there could be no mistake as to which foot each had encased during the day, and next morning came the reverse wear—not by any means the least serious reverse of the boy's life.

And with Sunday came the duty of making the boots presentable. What a task it was to coax a polish upon them! If they were not as red as brick-dust, they were saturated with grease, and in either case to bring forth a shine was impossible.

The boy of to-day, in his neatly fitting, finely fashioned shoes of calfskin, can have no conception of the sufferings of his sire in his cowhides. If he could have, he would perhaps smile audibly at his father's occasional laudation of the good old times.

SIMPLE BUT EFFECTIVE.

A certain skilful practitioner had a number of charity patients, whom he faithfully attended as occasion required, expecting and receiving only such reward as comes from the comfort of doing good. Among these patients was old Martha, a well-preserved relic of "befo' de wah." Being up to all the ways of her white neighbors, she took the "grippe," and immediately sent for her medical adviser.

"Why, Aunt Martha, you don't mean to tell me that you're under the weather."

"I'se a way undah it, doctah, away undah it."

"Well, what is it?"

"I doan know what it is, doctah, but I got it pow'ful bad."

The doctor readily comprehended the trouble, and writing out the proper prescription, he gave it to the excellent but aching Martha, and told her to put it in a tumbler of water, stir it well each time, and take a teaspoonful three times a day. Then assuring her that he would look after her attentively, he departed.

The next day he found his patient much improved, and by the third day she was in an advanced stage of convalescence.

"O doctah," she exclaimed, "yo' med'cine am simply pow'ful. I stir it and I take it jes' like you say, and I feel better ebery time."

"Well," said he, "perhaps you won't need any more; let me see how much you have left."

Old Martha lumbered across the room, and brought from the shelf a tumbler half-full of water.

"Why, what's this?" he inquired.

"Why, dat, doctah, is the med'cine yo' lef' me, and I was very cahful to stir it every time jes' like you say."

"Yes; well, Martha, I don't believe you'll require any more of it; the fact is, I didn't know myself how powerful it was." And fishing out his prescription, which was rather the worse for its three days' bath, he went away impressed with the belief that the mysteries of medicine had not half been told.

MEXICAN MANNERS.

Mrs. Gooch, in her book, "Face to Face With the Mexicans," says that again and again, on halting to admire the flowers in the court of a handsome house, she was invited by the lady of the house to enter and inspect them. After she had looked at the plants, she was sure to be invited into the *sala*, where chocolate was served, and on departing, with her hands full of flowers, she received a warm embrace, a cordial shake of the hand, and a "God be with you."

If friends meet twenty times a day, the ceremony of hand-shaking is gone through with each time. In passing a friend, driving, riding, or walking, the hat is removed entirely from the head.

Mrs. Gooch saw on the Calle Plateros one day two splendid carriages, each occupied by one man. On approaching each other, the carriages were halted, both men alighted, removed hats, shook hands, embraced, talked for a few moments, again embraced, shook hands, bowed, took off hats, and each entered his carriage and went his way.

A vein of sentiment runs through the intercourse of ladies with each other. A spray of flowers sent by one lady to another will be first pinned over the donor's heart, and the pin left in the spray to indicate that she has worn it.

COMPLETE LETTER-WRITERS.

Manuals of correspondence or "complete letter-writers" are dangerous things to depend upon. Not many years ago, a young man who wished to win the hand of a young lady pondered long over the proper and most effective way of addressing her.

At last he found, in a manual of somewhat wide circulation, a form for a letter which pleased him very much. It seemed to express his sentiment exactly. The letter bore the title:

"From a young gentleman to a young lady, making an ardent but dignified offer of marriage."

He copied out the letter, signed it with his name, and sent it to the lady.

After some days of anxious waiting, he received a letter the superscription and postmark of which indicated surely that it came from the young lady. He tore open the envelope eagerly and read:

"Turn over the leaf in your manual; you will find my answer at the top of the opposite page."

He seized his manual, and in the place indicated, found a brief and sharply formal letter, entitled:

"From a young lady to a gentleman, peremptorily refusing an offer of marriage."

She was the possessor of a copy of the same manual!

THE "OLD WOMAN."

Sailors commonly speak of the captain of the ship as "the old man." It was left for a stout Norwegian quartermaster to invent an equally appropriate designation for the captain's wife.

The young wife of a certain commander in the navy was expected to visit her husband's ship. The gig had been sent ashore for her, and the captain stood on deck watching for her return.

The quartermaster also was on the lookout, and with the aid of his telescope caught sight of the returning boat first. He walked up to his commanding officer, touched his hat respectfully, and said:

"The gig's coming, captain, and I think the old woman is in her, sir."

The captain looked at the Norwegian's innocent face, and saw that no disrespect was intended. If the captain was "the old man," naturally enough his wife must be "the old woman." The intelligence was accepted, therefore, in the spirit in which it had been offered.

DAISY'S CALENDAR.—XI.

Here's N-o-v with a flurry of snow,
And a north wind rioting high and low;
We can hear him shout, "Come out! Come out!
And we'll wrestle and race and whirl about
Till your hearts beat quick and your faces glow."
We will! We will! though the air is chill,
We'll race to grandma's over the hill,
For that's the place where we love to go.
And we'll peep at the turkeys, Daisy, my dear,
And perhaps we'll hint that we'd like to know
Just how many dozens of aunts and cousins
Thanksgiving will bring to share her cheer,
And to make us remember the bleak November
As the rarest, rosiest time o' the year.

For the Companion.

THE LIVE DOLL SHOW.

WE were getting up a fair, and were on the lookout, of course, for everything novel and attractive in the way of entertainment. The various exhibitions of dolls which have been recently given in the city suggested to one active mind the idea of a live doll show, and this, as planned and carried out by a special committee, proved so popular and successful a feature of the fair, that I have thought a description of it might be interesting to some one else in like search for ideas.

The dolls were represented by children and young girls from six to sixteen years old, the parts being allotted according to age and size.

Two of the youngest children were baby dolls, and were dressed in long white slips and close caps, from which escaped soft curls of "real hair."

One lay in a crib with closed eyes, which popped open when she was lifted up. Her head, arms and hands were movable, and were placed in various positions by the exhibitor.

The other baby sat in a high chair with a rattle in its hand. It was a crying doll, and when pressed at the waist, uttered a shrill, mechanical squeak.

The Edison Talking Doll was a little girl about ten years old. She was dressed in a pretty peasant costume, and when wound up with a watchman's rattle, after the fashion of Mrs. Jarley's wax figures, recited "Jack and Jill" with a monotonous, indistinct utterance, and an immovable countenance.

The bride doll was, of course, gorgeous in white satin and tulle, and carried a bunch of white roses, which she lifted to her face and lowered again with a jerky motion. One little boy doll was dressed as Lord Fauntleroy, and another as George Washington.

These were jointed dolls, and could be made to sit down or stand up, turn their heads, etc.

"Ounie San" was in full Japanese costume, and when wound up, waved her great fan slowly to and fro.

There was a nun, a walking doll and a rag doll, which lay limply across a chair, and flopped about helplessly when it was handled.

In fact, all the favorite styles of dolls were represented in this remarkable show.

The dolls were arranged around the sides of the room, each having about its neck a placard bearing its name, its price, which was generally absurdly high, and the name of its donor or lender.

The names of Mrs. Harrison, Queen Victoria, the little King of Spain, the Mikado, and other well-known characters appeared as contributors of dolls, which in some cases were said to have been dressed by the fair hands of the giver.

Spectators of the show were admitted in groups, and the young ladies in charge of the room acted as exhibitors, winding up the mechanical dolls, and adding much to the general entertainment by their descriptions and comments.

The dolls were allowed intervals of rest from their constrained attitudes, and were further refreshed by relays of ice-cream and cake, which they ate with an appetite scarcely to have been expected of wood, wax and china.

Two rehearsals were found to be sufficient to train the youthful actors in their parts, and even the youngest succeeded in preserving the necessary rigidity of muscle and immobility of countenance to a surprising degree.

The Live Doll Show was pronounced a great success by the managers of our fair, and I hope it may prove equally successful in the hands of any one who cares to repeat the experiment.

THE LIVE DOLLS.

OUR LITTLE BLACK FLY.

A little black fly outlived his kin,
And when frosty and cold grew the weather,
Through our wide-open window he softly flew in,
For he thought our house fine as a feather.

So daily from kitchen to parlor he flits,
And he eats as much as he's able;
On sweetmeats and cakes he familiarly sits,
As he dines at the family table.

For the Companion.

TOD'S HALF-DOLLAR.

Tod was curled in a heap on the back kitchen stairs, studying his spelling lesson.

He heard the washerwoman talking to Mary, the cook, but he was too absorbed to hear what they were saying. Gradually Bridget stopped her rubbing, and began to tell Mary how her little sick Nora had lost her one treasure, an old wooden doll, which had accidentally fallen from the window ledge into the cistern and was quite ruined.

Nora's mother had a soft, Irish voice, and when she told how her little one grieved for her lost baby, while she herself could not get her another, having scarcely enough money to pay the rent, a surprised expression crept into Tod's round face. He had been listening several minutes without really intending it.

He closed his speller, and dropping his chin into his hands had a long, still talk with Toddy Benton.

The result was that he walked into mamma's room and asked, soberly, "Mamma, can I spend the fifty cents uncle gave me for anything I want?"

"Certainly, dear."

He slipped quietly behind the curtains in the bay-window and had another argument with Toddy, while mamma, who understood that some sort of a struggle was going on, watched him silently.

At length he remarked, "Well, mamma, I'm going to spend my silver piece right straight away," and crossing to the mantel he slipped the hoarded half-dollar into his pocket.

Then he trudged down town to the doll counter in a large store. The array of dollies confused him a little, but the kind-hearted shop-girl helped him select a blushing, blue-eyed baby with a mop of tight, flaxen curls, for which, after one last glance, Tod parted with his shining silver wheel.

He ran straight home and into the kitchen, where Bridget was pinning on her shawl.

"Here, Bridget," he said, "here's a doll for Nora. I heard what you said about hers, so I bought her this one all myself."

He grew suddenly shy, and ran upstairs to his own room.

Bridget kissed the doll and Tod's sealskin cap which had fallen on the floor, and finally went home leaving fervent messages of thanks and blessing with Mary.

Mamma kissed Tod tenderly as she tucked him into bed that night.

"I am glad you bought Nora a doll, my boy," she said, smiling down at him. "Was it hard to give up the knife, Tod?"

"Awful hard, mamma," sighed Tod, wistfully. "I did want that white-handled one."

"But aren't you happier?"

"*Yes, I am*," he declared, thumping his pillow into a great dent, and nestling his head in it. "Yes, mamma."

And ten minutes later he was having a beautiful dream. LILLIAN L. PRICE.

CHILDREN'S SAYINGS.

Mamma wished to call on a near neighbor, and she thought that Millie would be contented to stay at home with Nero, the great Newfoundland, as she would be away only a few minutes. "No, I don't want to!" said Millie. "What is the reason?" asked mamma. "Nero will keep you safe." "Oh," cried Millie, "Nero isn't folks, and I don't want to stay all by my lonesome!"

"G'an'ma," said Dora, with a wise and important air, "Tarrie tan't say her words plain 'tall. She alwus says 'roos'er.'" "And what do *you* say?" asked grandma. "Oh," said Dora, confidently, "I alwus say 'roo'ter!'"

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

First.

In truth I am a welcome sight
To weary travellers, day or night.

Second.

I paint you pictures manifold
That mortal eyes may not behold.

Whole.

The earliest grief, the earliest glee
Of every child is found in me.

2.

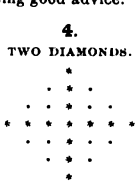
NUMERICAL ENIGMA.

The answer, composed of 43 letters, contains a question that now agitates the public mind, and the answer to the same.

The 1, 2, 5, 16, 25, 21, 14, 12 is the name of a living American poet.
The 20, 13, 10, 4, 8, 3, 11, 24, 43 is the title of one of his poems.
The 6, 34, 32, 9, 7, 38 is the name of a deceased American poet.
The 17, 18, 19, 26, 23, 15, 41 is an excuse.
The 36, 37, 40, 39, 22, 42 is to separate.
The 29, 35, 31, 28 is an excavation.
The 27, 30, 33 is an exclamation.

COUSIN FRANK.

3.



CUTTINGS.

1. Cut off the last three letters of the goddess of justice, and leave an article in daily use.
2. Cut off the last two letters of to place, and leave the highest perfection.
3. Cut off the last four letters of one who twists silk, and leave a stroke.
4. Cut off the last three letters of frequently, and leave noting reference to time.
5. Cut off the last three letters of robberies, and leave a useful article.
6. Cut off the last three letters of a genus of fossil conchifers, and leave a game.
7. Cut off the last three letters of the religion of Mahomet, and leave a verb.
8. Cut off the last two letters of to tune, and leave noting nearness.
9. Cut off the last letter of a turner's lathe, and leave to cast.
10. Cut off the last letter of a subject for discussion, and leave a pronoun.
11. Cut off the last four letters of aside (obsolete), and leave at a distance.

The remaining words, connected, will form a well-known proverb containing good advice.

4.

TWO DIAMONDS.

I.

1. In peace and plenty. 2. A plant and its fruit used for food. 3. An Athenian philosopher, 427—347 B.C. 4. An American philanthropist who died on Nov. 4, 1869. 5. To expiate. 6. A short poem. 7. In many and plenty.

II.

1. In hill and dale. 2. Track worn by a wheel. 3. Families. 4. A city in India, captured on Nov. 12, 1857. 5. An opinion. 6. A drunkard. 7. In work and win. C. D.

5.

RIDDLE.

You may hunt me in the highlands,
Over hills and dales;
You may hear me in the parlor
When you practise scales;
Anon I'm in the kitchen,
And though I have no feet,
I often rise to change my guise
And then I'm good to eat. A. M. P.

Conundrums.

Why is George MacDonald, the novelist and poet, like a handsome cradle? He is a nice Scot (nice cot).

When is a tree most polite? When its boughs (bows) are many.

What fort is guarded by lovers? Beaufort.

What is England's most precious stone? Gladstone.

Which is the longest night of the year? A fortnight.

When does a fearless mountaineer meet more than his match? When he comes across a boulder (bolder).

Answers to Puzzles in October 22.

1. 1st stanza—Alone, lane. 2d stanza—Well, ale. 3d stanza—All, hall, he. 4th stanza—Anew, Alene, ween. 5th stanza—Low, ah! ha! 6th stanza—Hal, Hallowe'en.

2. Stars, Upharsin, Mocking-bird, Mowis, Evangeline, Roebuck, Ohio, Flute, Acadie, Lotus, Louisiana, Spider, Asphodel, Ishmael, Nut-shell, Trumpet-flower, Sycamore. — Summer of All Saints.

3. H-ere, A-gain, L-anguish, L-end, O-rally, W-ill, E-late, E-at, N-either.—Hallowe'en.

TWO VERSIONS.

People who are frightened are not always conscious of what they do or say at the time; they frequently report themselves to have been perfectly calm and self-possessed in cases of real or fancied danger, while eye-witnesses tell a very different story. Little Mary Woods had spent most of her life in the country, and she had no more fear of a cow than of a kitten; but when her seventeen-year-old city cousin Frances came to the farm one summer, Mary learned that there was at least one person in the world to whom a cow was an object of terror.

Frances had gone berrying with her little cousin, and as the bars between the berry pasture and the adjoining field happened to be down, a gentle, harmless cow had wandered through the opening till she came quite close to the children. Frances, in describing the scene to her aunt, said:

"Of course, Aunt Sally, I didn't want Mary to know I was afraid of a cow, but I really thought I should scream when I looked up and saw that dreadful, glaring-eyed creature close at our heels. Still I was perfectly calm, and I just walked quickly but firmly to the stone wall, taking Mary by the hand, and I said, 'Let's climb over this wall, Mary; I see some splendid bushes over on the other side!' and she followed me right over.

"She asked me a little while afterward if I was afraid of cows, but I was very busy picking berries just then, and the child didn't repeat her question. I wouldn't have had her suspect I was so frightened for anything."

That night, when the small Mary was getting ready for bed, she said, "Mother, do you know I truly think cousin Frances is afraid of cows!"

"Why?" said Mrs. Woods.

"Well," said the supposed-to-be unsuspecting child, "you know we were picking berries in grandpa's hill-pasture, and Mr. Fox's 'Brindle' got in there, and she came close up to us. Cousin Frances had been busy picking, and she didn't hear Brindle till she gave a little 'moo.' And then cousin Frances turned just as pale; and she grabbed my hand, and dragged me along to the wall as fast as ever she could, and she said, 'Let's climb over this *cow*, Mary; I see some splendid *cows* over on the other side!'

"It was the very worst place in the whole wall to get over, and the berries weren't big at all! And," concluded the small sage, "I asked her if she was afraid of cows, and she didn't answer me; so I *presume* she didn't want to tell a wrong story!"

OBEYING ORDERS.

"Government employees include a good many very odd men," said a chief clerk of a government bureau, lately. "Some of them are very hard to manage, and none more so than the painfully matter-of-fact and over-exact men, who require an explicit order for every bit of work they undertake, and literally can do nothing at all without a copy.

"One of the most singular of these was Blifkins—Granny Blifkins, as we used to call him, somewhat unkindly. He was the most literal man I ever knew.

"Once, before I became chief clerk, we had a chief who was extremely economical of government property—which was a good fault, if it was a fault at all.

"One time he came into the room and, looking over Blifkins's shoulder, found him making a small official computation on a large sheet of white paper.

"'When you have a memorandum or a computation to make,' said the chief, pleasantly, 'it would be better to take a small piece of paper for it than a large one.'

"'Yes, sir,' said Blifkins, respectfully.

"Then he proceeded to tear up the large sheet and throw it in the waste-basket, and taking out a small piece, recommenced his computation on that!"

BREAD LAWS.

A recent number of the *Baker's Helper* gives an account of the laws which regulate the making and selling of bread in various countries. The laws of France in this respect are very strict, and are enforced with the utmost vigor.

The French baker is not only required to conform to laws regarding weight, but he is also told at what price he must sell his bread. He is further required to deposit a certain sum of money in the hands of the municipal authorities as a surety of good behavior. In the large fortified cities he has to keep a specified quantity of flour on hand to provide for warlike emergencies.

In Germany laws of similar import are in existence, and are enforced with such severity that no baker ever dreams of defying them.

The British law regulates the weight of loaves and makes provision for the cleanliness and ventilation of the bakeshops. The price is left to regulate itself by trade competition.

The Ontario act empowers municipalities to engage officers for the prevention of fraud, and clothes them with authority to confiscate all bread found to be of light weight. The bread seized in this way is turned over to charitable institutions for the use of the inmates.

POLITENESS.

The fine courtesy of the old-time "knights of the road," who robbed people of quality with their hats in their hands, and made profound obeisances before and after taking their purses, is not, it seems, unrivalled in the present less formal age.

A gentleman, who lives in a retired and lonely district just outside a great city, has met thieves on two or three occasions when going home late at night.

One evening he was seized by a man who demanded his watch.

"Oh!" gasped the gentleman, "you are the same rascal who took my watch two months ago."

"I hope," said the thief, very politely, but without loosening his hold on the gentleman's throat, "I surely hope your honor has been able to purchase another!"

A SENTIMENTAL young Bostonian is fond of sauntering about the Common in the very early morning. At that hour, he says, the place is so still that one can almost hear the bark of the trees.

ALLCOCK'S POROUS PLASTERS

ALLCOCK'S POROUS PLASTERS are unapproachable in curative properties, rapidity and safety of action, and are the only reliable plasters ever produced.

They have successfully stood the test of over thirty years' use by the public; their virtues have never been equalled by the unscrupulous imitators who have sought to trade upon the reputation of ALLCOCK'S by making plasters with holes in them, and claiming them to be "just as good as ALLCOCK'S."

ALLCOCK'S POROUS PLASTERS stand to-day endorsed by not only the highest medical authorities, but by millions of grateful patients who have proved their efficacy as a household remedy.

Beware of imitations, and do not be deceived by misrepresentation. Ask for ALLCOCK'S, and let no solicitation or explanation induce you to accept a substitute.

HIS DISADVANTAGES.

Heber Jenkins was one of those people who are ready to prove at all times that their lack of success in what they undertake is due to causes quite apart from themselves. It cannot be said that this faculty made Heber Jenkins happy, but it seemed to afford him a certain degree of satisfaction. "It doos beat all," he often said, "haow everythin' hes allus gone right th' other way o' th' grain w'th me ever sense I was born!

"In th' fust place, thar was my brother Abe's dyin'; he was the oldest, an' ef he hedn't 'a' died when he did, like's not I wouldn't 'a' hed ter lay aout time tryin' ter git eddikation over t' th' Ashville 'Cademy,—whar I never larnt a nameable thing,—jest 'cause 'twas *fittin'* th' oldest Jenkins sh'd hev a taste o' books!

"Well, then, when I come home, in course my hand was all aout, 's fur's farmin' was consarned, but I hed ter put right to, and work like all possessed, hoein' an' grubbin' raoun', an' frequent not gittin' more'n a couple of haours' stiddy rest fr'm mornin' till sundaown, 'xcept when it come meal-time; an' father all the time kinder haoundin' of me on ter work ev'ry time he see me settin' daown er leanin' up anywheres. Seemed ter consider 't I was *lazy* if I stopped workin' ter kinder look raound 's much es a minute.

"Well, then, ther' was my marryin'! I was so well-favored by nater thet all the gals they smiled on me continerous, an' finally I tuk up with 'Mandy Hobbs.

"She was a pooty gal, an' hes been a good woman, an' I aint got nothin' ter say agin *her;* but ye see her father kep' a shoe shop, an' ther' warn't no special call fer shoes, so he didn't git very forehanded.

"To be sure he made *some*, peggin' an' mendin'; but I warn't no hand ter peg, try 's I might; so after hitchin' 'long a spell t'gether, him an' me giv' up tryin' ter kerry on the trade in comp'ny; an' es we hed a few words 'baout it, I tuk 'Mandy an' nour two little gals an' come over t' this farm; an' it proved ter be 'baout all run aout, though 'twas rep'sented ter be in a prosp'rous state b' the man I bought it of!

"I hed an openin' ter go to Headbury in the haouse-paintin' bus'ness, an' I'd better 'v' took up with it.

"Then ther's my gals! Not a boy 'mongst 'em ter help keep things straight on th' farm. *Six gals!* To be sure, they do what they *ken*, hoein' and horse-rakin', an' sech light work; but all the heft comes on me, an' here I be, gettin' on ter be fifty years old, most!"

"I tell ye," Heber remarked one day, as he sat in the barn doorway and watched a thunder-storm roll up, while his daughters, with a small "hired boy," got in two big loads of hay, "I tell ye ef Abe hedn't 'v' died when he did, er ef *I'd* died 'stead o' him, er ef I'd stayed single an' married 'Miry Hallet an' gone inter butcherin' w'th her father, er ef 'baout three o' my gals hed been good, likely boys, er ef I'd a stayed with 'Mandy's father an' gone ter Headbury, like's not I sh'd 'a' been willin' ter set at m' ease naow an' agin, in my old age; an' been able ter favor my rheumaticks some, thet I laid th' faoundations of goin' ter church so stiddy, when I was lookin' towards 'Mandy!

"But laws! I ken put up with my lot, I s'pose, though ther's some would 'a' sunk under sech trials long ago," concluded the afflicted man, quite unconscious of the meaning of the smile on his visitor's face.

YAP.

A writer in *Chambers's Journal* gives a slight but loving biography of two prairie-dogs which were sent him from Texas, and which succeeded in becoming really domesticated in their English home. At the end of a year the older of the two died, but Yap, livelier and more hardy, has now reached the advanced age of six years.

His food is strictly vegetable, and his diet light. Dry oatmeal, oats, or a bit of oatmeal cake, are his favorite dishes. The average temperature of England being so much lower than that of Texas causes him to creep close to the kitchen fire, where he sits beside the cat, fondling her and bestowing on her loving pats with his little paws. When out of doors he is particularly fond of keeping close beside a little bantam hen.

One peculiarity of both dogs was that they lacked the sense of *vertical* distance. Whenever they had mounted a table, chair or window-sill, they were liable to fall as if unaware, sometimes hurting their faces quite seriously. When they attempted to leap from one chair to another, they would miscalculate and fall between them. Now, however, experience has taught Yap to estimate distance and direction.

Yap is never satisfied until he has thoroughly examined any new piece of furniture which appears in the room. At one time, when a new rug was placed temporarily before the fire, he sat down on it with great enjoyment, but as soon as the old one reappeared, he showed unmistakable resentment by tearing and gnawing it.

He expresses his affection mainly by pressing gently with his teeth the hand of him he loves. If a stranger touches him with firmness he offers no objection, but should the action be timid or hesitating, he is apt to give him a pinch. Like the nettle of the warning rhyme, Yap must never be grasped "tender-handed."

BY ANOTHER NAME.

Delicacy of feeling is not confined to gentle people, commonly so-called. It is well known, for example, by those who have to do with men confined in prison, that such convicts never speak the hated word "prison," but invariably use some euphemistic substitute, "this institution" being perhaps the one oftenest adopted.

In my girlhood, wrote Mrs. Andrew Lang, the favorite housemaid of a friend of mine "gave warning," as she was going to be married.

"Indeed," said the lady, "and what is your future husband?"

"Please, ma'am, he's an asker."

"A what?"

"An asker."

"I don't understand. What does he do?"

"Well, ma'am, he—he goes about the streets, and if he sees any one coming along that looks kind he—well, he just stops 'em and aska 'em to give him a trifle, and he makes quite a comfortable living that way."

"Do you mean a beggar?"

"Well, ma'am, some people do call it that; we call it 'asker.'"

GRATEFUL—COMFORTING.

EPPS'S COCOA

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame." — *"Civil Service Gazette."*

Made simply with boiling water or milk. Sold only in half pound tins, by Grocers, labelled thus:

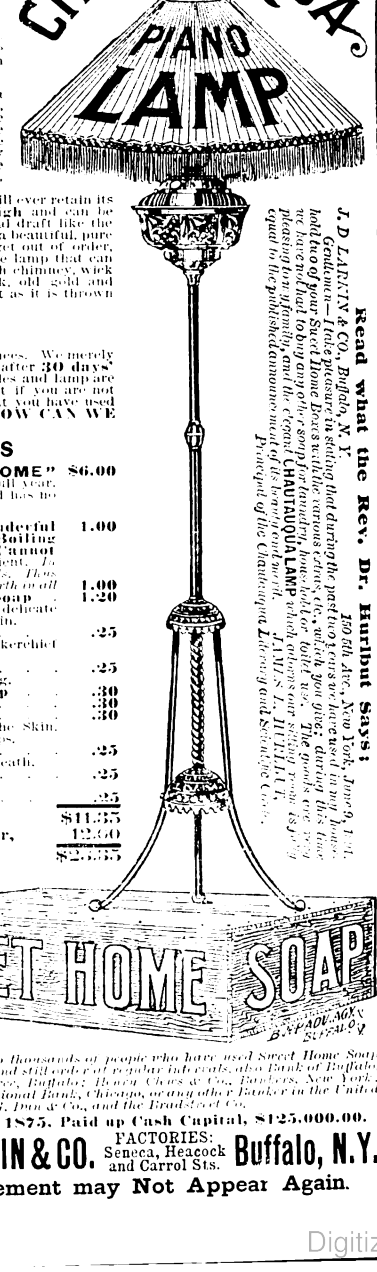
THE LONDON TEA CO., 793 Washington Street, Boston.

WE GIVE THIS BEAUTIFUL



LAMP FREE

TO EVERY BUYER OF OUR SOAP.

YOU MUST HAVE SOAP it is an absolute necessity, the only question is where you shall buy it; we make it a decided object for you to buy of us direct from factory to consumer, and save all dealers' profits.

THE "CHAUTAUQUA" PIANO LAMP is a happy combination of the useful and the ornamental, beautified by the artisan, improved by the inventor, one of the most successful and appreciated products of the 19th century, which we give to induce you to buy these necessary household supplies from us. No matter how many other lamps you may have, this one will be welcome because it is so good and handsome and gives such a clear, strong light.

It is made of solid brass, polished and lacquered so it will ever retain its lustre without burnishing. **It stands 1 1-2 feet high** and can be extended to **6 1-2 feet bright. The Burner** is central draft like the **"Rochester"** and cannot smoke or smell; it throws a beautiful, pure light of forty candle-power. Easy to regulate, cannot get out of order, and is, in fact, equal in every way to the most expensive lamp that can be purchased. It is shipped complete, ready for use, with chimney, wick and handsome shade; colors—red, orange, lemon, pink, old gold and bright blue (with silk fringe and tassel), giving the light as it is thrown out into the room a mellow and subdued effect.

YOU RUN NO RISK.

We do not ask you to remit in advance, or take any chances. We merely ask permission to send you a Combination Box, and if after **30 days' trial** you are fully convinced that the soap and toilet articles and lamp are all we claim, and you can then pay the bill—**$10.00.** But if you are not satisfied in every way, no charge will be made for what you have used and we will take the box away at our own expense: **HOW CAN WE DO MORE?**

EACH BOX CONTAINS

One Hundred Cakes (full size) **"SWEET HOME" Family Soap,** enough to last an average family one full year. It is made for all laundry and household purposes, and has no superior.	$6.00
10 BOXES BORAXINE, a New and Wonderful Discovery! How to Wash Clothes Without Boiling or Rubbing, by the use of BORAXINE. Cannot Possibly Injure the Fabric. One English Jar Modjeska Cold Cream Delightfully Pleasant, Soothing, Healing. Beautifies the Skin. Improves the Complexion, Cures Chapped Hands and Lips.	.50
One Bottle Modjeska Tooth Powder Preserves the teeth, hardens the gums, sweetens the breath.	.25
One Package Clove Pink Sachet Powder Delicate, Refined, Lasting.	.25
One Stick Napoleon Shaving Soap	.25
Price of Articles if Bought Separately,	$11.35
Price of Lamp if Bought of Manufacturer,	12.50
ALL FOR—$10.00.	$23.85

Some people prefer to send cash with order; we do not ask it, but if readers of this paper remit in advance and send us the names of ten lady housekeepers with full address (street, number and town) we will place in the box—in addition to this beautiful Piano Lamp—a valuable present.

When paid for in advance, we ship same day order is received. All other orders are filled in their regular turn.

Persons remitting in advance can have their money refunded without argument or comment at the Box or Lamp does not prove all they expect.

Price of Box Complete, only Ten Dollars ($10.00).

We can refer to thousands of people who have used Sweet Home Soap for many years and still order of regular jobbers, also Bank of Buffalo, Bank of Commerce, Buffalo; Bowen, Chase & Co., Baltimore, New York; Metropolitan National Bank, Chicago, or any other Banker in the United States. Also R. G. Dun & Co. and the Bradstreet Co.

Established 1875. Paid up Cash Capital, $125,000.00.

FACTORIES: Seneca, Heacock and Carrol Sts.

J. D. LARKIN & CO. Buffalo, N.Y.

Order To-Day! This Advertisement may Not Appear Again.

Read what the Rev. Dr. Hurlbut Says!

J. D. LARKIN & CO., Buffalo, N. Y.

Gentlemen—I take pleasure in stating that during the past two years we have used in my household your Sweet Home Soap with the various premiums, etc., which you give; during this time we have proved that to buy any other soap for laundry, household or toilet use, is a waste of money. The goods are pleasing to a family and the coupon of the elegant **CHAUTAUQUA LAMP** *which always accompanies our shipping goods is equal to the published amount of the investment with.*

Yours truly, JAMES L. HURLBUT,
150 5th Ave., New York, June 9, 1891.

Postscript of the Chautauqua Literary and Scientific Circle.

SYRUP of FIGS.

ONE ENJOYS both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in **50c.** and **$1** bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute. Manufactured only by

THE CALIFORNIA FIG SYRUP CO., San Francisco, Louisville, New York.

"THE MORGAN"

ODORLESS BROILER

AND TOASTER, FOR 10 CTS.

Sent to any part of U. S. on conditions named below

It is a most remarkable meritorious invention; thousands of housekeepers say so. Broils steaks, chops, oysters, fish, etc., allowing no odor to escape in the room, is entirely odorless. Saves all the juices and applies them to basting the meat at each turning, making it palatable and tender. Fits any kind or make of stove or range (excepting 10 inch), including Gas, Oil, Gasoline, Wood or Coal Burners. **Toasts bread perfectly over a Smoky Fire.** Made of steel; weight only 2 lbs.

SATISFACTION GUARANTEED.

In order to further introduce this wonderful Broiler we will send one, all complete, **charges paid by us,** to any express office in the United States upon receipt of only 10c (silver or postage stamps taken). You examine Broiler at express office, and if satisfactory, pay the remaining 90 cts. If not satisfactory, however, you are under no obligations to take it. Further: If, after using 6 or 8 times, you are not perfectly satisfied, we will refund your money and remove the broiler.

Better act promptly and secure this household treasure. You are certain to be delighted with the investment. If you send us the dollar with order, we will put in a first-class little article FREE. Excellent terms to agents and dealers. Made by **SUN STAMPING CO. 404 Pitcher KALAMAZOO, MICH.**

VAN HOUTEN'S COCOA

MR. PECKSNIFF

"Best & Goes Farthest."

"Thank heaven, I Am quite well. May I be permited to say: Thank heaven and VAN HOUTEN? *"Is it not his Cocoa That makes me feel so Well?"*

PERFECTLY PURE.

VAN HOUTEN'S PATENT PROCESS increases by 50 PER CENT. the solubility of the flesh-forming elements, making of the cocoa bean an *easily* digested, delicious, nourishing and stimulating drink, readily assimilated, even by the most delicate.

Sold in **1-8, 1-4, 1-2** and **1 lb.** Cans. ☞If not obtainable, enclose 25 cts. to either VAN HOUTEN & ZOON, 106 Reade Street, New York or 45 W. Lake Ave., Chicago, and a can containing enough for 75 to 40 cups, will be mailed. *Mention this publication.* Prepared only by the inventors VAN HOUTEN & ZOON, Weesp, Holland. n5,

MYSTERIES OF ELECTRICITY.

Electricity in the many forms in which it has been made useful to man has become so familiar to most persons in recent years that it is rather a matter for surprise that in some of its most interesting manifestations it remains to-day as mysterious an agent as it ever was. The tremendous power of a stroke of lightning is beyond all possibility of imitation by artificial means, and yet that power is seldom exercised twice in precisely the same manner. Sometimes the lightning appears to exert its full might like an angry giant, and its blow then resembles a shot from a hundred-ton gun—nothing can withstand it, and it rends, tears and scatters broadcast whatever object it encounters.

An instance of this terrific capacity for destruction possessed by a bolt of lightning was the instant demolition in England, a year or so ago, of a great oak-tree which for generations had been the pride of a neighborhood.

Occasionally all this fearful power is expended upon an insignificant object, as happened near West Louisville, in Kentucky, last June, when a turkey-buzzard, sailing high in the air at the beginning of a thunder-storm, was suddenly annihilated in the sight of several spectators by a bolt of lightning that darted from a cloud.

The same mysterious force manifests the variety of its powers by such performances as photographing—for a sort of photographing it really is—the forms and colors of neighboring objects upon the surface of whatever thing has felt the fury of its assault. Near the town of Warren, in Ohio, last July, a young man who had taken refuge under a tree during a thunder-storm was killed by lightning, and upon his breast and other parts of his body appeared wonderfully distinct images of the leaves and branches of the tree.

We often hear accounts of the strange behavior of what is called ball lightning; and still another form in which the electricity of the atmosphere occasionally manifests itself, is the so-called St. Elmo's fire, which illuminates the yards of a ship as with ghostly lanterns. The European scientific papers have recently contained an account of a very singular appearance of this kind of electric light which was witnessed near the town of Gottschee.

Two gentlemen, walking along a country road during a snow-storm, saw what seemed to be a glimmer coming out of the new-fallen snow. It was presently discovered that the light enveloped the iron cap on the end of the cane carried by one of the pedestrians. When he raised the cane in the air little sparks seemed to dance forth from it.

There are many of these electrical exhibitions furnished by nature which occur in the presence of persons who do not take the trouble to observe them carefully, and afterwards to report what they have seen. Some of the things that now appear mysterious would cease to be so if more people would learn to use their eyes and their brains at the same time.

THOUGHTLESS WOMEN.

The expression, "as cross as a quarter-gunner," is often employed in the navy, writes a correspondent, and he tells a story to show that the uncomplimentary adage is not altogether misapplied. One part of the quarter-gunner's duty is to polish the guns, and especially any brass-work that may be attached to them.

A company of ladies were visiting a receiving ship, and paused for a moment on the gun-deck to examine the cannon. Their admiration was excited by the shining condition of the black monsters, and one of the younger members of the party, standing near a gun, placed her delicately-gloved hand on the brass mountings, at the same time making some remark about its beautiful polish.

The quarter-gunner did not appear to be greatly pleased with these feminine compliments, and the ladies had no sooner moved away than he seized a cloth, sprang to the cannon which the young lady had touched and commenced rubbing it fiercely, all the while casting malevolent glances after the retreating guests.

The officer of the deck noticed his action and remarked:

"Well, Smith, you don't seem to be so tickled as I should think a man would be with all that flattery."

"Flattery!" said Smith, bitterly. "'Taint enough for them to come and look at it,"—rub, rub, rub,—"but they've got to go and put their dirty old paws all over it," and he kept on scrubbing the brass-work.

STRANGE OVERSIGHT.

It is dangerous as well as wicked to do wrong in the presence of children. The Pittsburg *Dispatch* says that an observant little boy was in a street-car in that city the other day, and followed every movement of the conductor with the greatest interest.

A very stout woman boarded the car and sat down next to the small boy. She took a ticket out of her purse, but when the conductor came along he somehow failed to notice her. He passed and repassed her several times, and finally, with a nervous glance around, she replaced the ticket in her purse.

This was too much for the small boy, who had all the while kept his eye on her, and the next time the conductor came along he exclaimed:

"You didn't get her money, mister. I don't see how you missed her. She's the fattest lady in the car. Anybody could see her."

This complimentary allusion to the woman's weight caused a blush to play over her broad face, and she quickly produced a ticket, while all the other passengers smiled.

MODERATE.

A colored "friend and brother" in a Southern State, twenty years or more ago, was made a trial justice, says the Lewiston *Journal*, and presently heard his first case.

He listened to the evidence and the arguments of the lawyers, and then seemed at a loss what to do next. Seeing his dilemma, one of the lawyers nudged him.

"Now charge the jury," said the lawyer; "charge the jury."

The justice thereupon rose and said:

"Bredren, dis am a small case, an' I shell charge but a dollar an' a half."

A TURKISH DIOGENES.

There is reason to believe, writes Dr. Buckley in the *Christian Advocate*, that, except in their supernatural elements, the stories of the "Arabian Nights' Entertainments" have been paralleled over and over in the history of Constantinople. One of the Sultans, not so very long ago, was in the habit of going about like the famous Caliph Haroun-al-Raschid in disguise. On one occasion, passing a place where a man was excavating a cesspool, he heard him say to himself in a loud voice, "Persevere, my soul, or I will plunge thee into deeper filth than this."

A few hours afterward an officer approached the man, and said to him, "Come with me."

Horror took possession of the laborer, who, when found by the officer, was dressed like a gentleman, and was taking his ease in a café. He tried to ascertain from the person who had him in charge why he was wanted,—for some went into the secret place under the control of the government and never came out,—but no satisfactory answer could be given.

After being detained for a long time in fearful suspense, he was at last brought into the presence of a high official, and detained there. Finally, he was taken into the very presence of the Sultan.

The Sultan was astonished to see the man, who had been covered with filth a short time before, so well dressed and intelligent in appearance. He said to him, "Are you the man whom I saw at work in a cesspool?"

"I am."

"How is it that I find you dressed in this way?"

"I am well paid for my work, which is very filthy and disagreeable; and afterward I cleanse myself and take mine ease."

"But what did you mean when you said, 'Persevere, my soul, or I will plunge thee into deeper filth than this?'"

The man trembled, knowing that at a word his head might be smitten from his shoulders. "Speak!" said the Sultan. He answered that a man often says in anger what his heart will not acknowledge.

"But what dost thou mean?"

He hesitated, and the Sultan reiterated his command: "What dost thou mean? What deeper filth is there than that in which thou dost work?"

He still hesitated. The Sultan assured him that no harm should come to him, and the man then replied:

"My work was disagreeable, and I was almost tempted to leave it when I thought, 'I am still free, I am obliged to flatter no one; if I give up this work I may be compelled to take service under the government, to live by flattery and falsehood,' and so I said to my soul, 'Persevere, or I will plunge thee into deeper filth than this.'"

The Sultan, according to the story, was so pleased with this answer that he gave him a handsome present and allowed him to go away unmolested.

CLOVES.

From Zanzibar, the principal source of the world's clove supply, United States Consul Pratt writes of clove culture as it is carried on there and in the neighboring island of Pemba. The clove-tree was recently introduced into the islands, and its cultivation is now their chief industry.

The seeds are planted in long trenches and kept well watered, and in the course of forty days the shoots appear above ground. They are carefully watered and looked after for two years, when they should be about three feet high. Then they are transplanted—about thirty feet apart—and well watered until they become rooted. From that time they require only ordinary care.

In five or six years they come into bearing, when they are of the size of ordinary pear trees, and very shapely. Then the young plantation is a pretty sight. The leaves of various shades of green tinged with red serve to set off the clusters of dull red clove-buds.

The limbs of the tree being very brittle, a peculiar four-sided ladder is used. As fast as the buds are collected, they are spread in the sun until they assume a brownish color, when they are put into the storehouse ready for market. A ten-year-old plantation should produce twenty pounds of cloves to a tree. Trees of twenty years frequently produce upwards of one hundred pounds each.
